Customer Services

Find the Heater or Accessory You Need Right Now Using Your PC to Access Tempco's Over 100,000 In-Stock Items

Tempco's finished product inventory is available for viewing on the web at www.tempco.com by clicking the **In-Stock Products** link. This inventory list is updated daily.

Need a Non-Stock and/or Custom Manufactured Product...

YESTERDAY?

Pronto Service is your answer to a crisis or emergency situation.

This service drastically reduces normal delivery times to meet the customer's needs on non-stock and custom manufactured products.

A Custom Terminated Cartridge Heater from Stock?

YES! Terminator offers 1 to 3 day delivery on custom terminated Hi-Density Cartridge heaters.

The Terminator lead assembly program takes a semi-finished stock heater and adapts it with one of the many terminations listed in this catalog. This termination process can be applied to our extensive inventory of over one thousand standard cartridge heater sizes and electrical ratings. Complete details can be found in Section 2, pages 2-12 through 2-21.

Terminator is the solution to your custom cartridge heater needs!

Flexible Credit Options

How to open an account:

Supply us with your company name, shipping and billing address and three industrial credit references where credit has been extended for over two years.

Open account to approved purchasers.

Terms are net 30 days from date of invoice.

We also accept the following major credit cards:

All purchases are subject to Tempco's Terms and Conditions of Sale. Additional information on pages 957 through 959.

GETTING TO KNOW US

Our Engineers, Sales Force, Customer Service Representatives, Accounting Department, Purchasing Department, Human Resources, Media Production Team, and Shop Manufacturing Supervisors with their more than 300 amazing Craftsmen, Salute You and Thank You for Trusting Us with Your Business.

TEMPCO'S COMMITMENT TO OUR CUSTOMERS

1 Superior Products. Tempco is dedicated to creating superior products for our customers through a passionate commitment to discover and utilize new technology. The core of our business is dedicated to providing complete engineering solutions in thermal components and thermal loop systems designed for

specific process heating applications. Our skilled engineers design customized solutions for a wide range of applications in many diverse industries worldwide. Many of our products are recognized and/or certified under third party approvals such as UL, CSA, and CE.

2 Expertise in engineering and manufacturing. As a company, we strive for our customers to view Tempco as their business partner. We meet the challenges of industry either by simplifying the completion of a new project or improving upon a trouble-

some existing application. Ongoing change is inevitable and our industry is demanding and fast paced. Tempco is at the forefront of addressing the challenges of original equipment manufacturers (OEMs) and maintenance (MRO) applications.

Engineering

Section 16 contains engineering information pertaining to process heating, temperature sensing and control, plus useful reference data.

Part # Prefixes

An alphabetical index of Part Number Prefixes on pages 954 through 956 identifies catalog page numbers of particular products.

Pictorial Index

Band Heaters

Used to heat cylindrical surfaces and available in several construction styles to perform under different operating environments.

Catalog Pages
1-1
through
1-94

Mi-Plus[®] *Mi-Plus (mineral insulated) Band Heaters*

See Pages 1-2 through 1-23

Mineral insulated heater assembly is formed under pressure to a precise diameter with a thin low-mass cross section, assuring fast heat-up rates and reduced cycle times.

PERFORMANCE RATINGS

Max. Sheath Temperature: 1400°F (760°C)

Nom. Watt Density:

Nozzle Bands
under 3" diameter: 30-100 W/in² (4.7-15.5 W/cm²)

Barrel bands

3" and greater in diameter: 20-70 W/in² (3.1-10.9 W/cm²)

Max. Watt Density:

150 W/in² (23 W/cm²)

Dependent on heater size, operating temperature and termination.

Special Features:

High Temperature and High Watt-Density Capabilities

Duraband[®] *Duraband Mica Band Heaters*

See Pages 1-24 through 1-59

A mica insulated heater incorporating a Low Thermal Expansion Alloy outer sheath that is used as a uniquely designed Built-In Strap.

PERFORMANCE RATINGS

Max. Sheath Temperature: 900°F (482°C)

Nom. Watt Density: 20-45 W/in² (3-7 W/cm²)

Max. Watt Density:

Dependent on heater size and operating temperature.

Special Features:

Most Economical, Versatile and Commonly Used Band Heater

Rectangular Band
See page 1-47

Hexagon Band
See page 1-47

Custom Engineered/Manufactured Mica Insulated Heaters for Specific Applications

See Page 1-49

Ceramic Band

Ceramic Band Heaters

See Pages 1-60 through 1-77

Ceramic Band Heaters consist of a helically wound resistance coil made from nickel-chrome wire precisely strung through specially designed ceramic insulating bricks, forming a flexible heating mat.

PERFORMANCE RATINGS

Max. Sheath Temperature: 1400°F (760°C)

Nom. Watt Density:
20-45 W/in² (3-7 W/cm²)

Max. Watt Density: 45 W/in²

Special Features:

Fully Flexible Ceramic Fiber Insulated Heater Conserves Electrical Energy.

Tubular Band

Tubular Nozzle Band Heater

See Pages 1-78 and 1-79

Tubular Band Heaters are recommended for heating applications where premature nozzle band heater burn-out on plastic injection molding machines is a constant problem due to contamination from plastic overflow or other contaminants.

PERFORMANCE RATINGS

Max. Sheath Temperature: 1000°F (540°C)

Nom. Watt Density: 45 W/in² (7 W/cm²)

Max. Watt Density: 45 W/in²

Special Features:

Rugged Contamination-Proof Construction

Maxiband®

Maxiband® Heaters

See Pages 1-80 through 1-94

The channels in the specially designed extruded aluminum track have been precisely sized to accept a .315 diameter tubular heating element, and provide an excellent heat sink for rapid heat transfer and good temperature uniformity.

PERFORMANCE RATINGS

Max. Temperature: 650°F (350°C)

Nom. Watt Density: 35 W/in² (5.4 W/cm²)

Max. Watt Density: 45 W/in²

Special Features:

Rugged Contamination-Proof Construction with Excellent Heat Transfer

Heat Only

Heat & Cool Cool Only

Cast-In Band Heaters are in Section 3

Cartridge Heaters

Section 2

Cartridge heaters are typically inserted into drilled holes to heat platens and molds or used as liquid immersion heaters.

Catalog Pages
2-1
through
2-62

2 CARTRIDGE HEATER TYPES – Hi-Density (HDC) and Low Density (LDC)

See pages 2-39 through 2-60 to Select the Cartridge Heater Termination(s) and/or Option(s) Best Suited for Your Application

Hi-Density Cartridge Heaters

Coil & Cable Heaters

Section 5

The flexibility of mineral insulated cable allows the Mightyband™ heater to be coiled, formed, wrapped around pipes or used straight. It can also be cast-in to metal or welded onto machine component parts.

Catalog Pages
5-1
through
5-30

Mightyband Coil Heaters with Built-in Thermocouple

See Pages 5-2 through 5-9

Tempco's introduction of the Mightyband Heater in 1977 offered the plastic injection molding industry a more effective heating system to be placed in their products. Today, Tempco offers many options to meet customer specifications.

OEM Replacement Heaters for Hot Runner Systems

See Pages 5-11 through 5-14

Direct Replacement square and rectangular cable heaters.

Mightyband Coil Heaters with Square MI Cable

See Page 5-10

This mineral insulated square-sheathed nozzle heater with built-in thermocouple offers a larger sheath contact area than its round counterpart, allowing for faster start-up cycles and supplying a full 360° of heat to the distributed wattage coil.

Oxygen Analyzer Heaters

See Page 5-15

Inconel® 600 Seamless Nickel Alloy Sheath Material for process temperatures up to 1400°F (760°C).

Tempco-Pak Cable Heaters

See Pages 5-16 through 5-23

The densely compacted MgO insulation used in Tempco-Pak heaters produces excellent high temperature insulation resistance and dielectric strength.

Sinuated (Formed) Tempco-Pak Heater Cables

See Page 5-16

Forced Gas or Air Tempco-Pak Heaters

See Page 5-16

Star Wound Coil Tempco-Pak Heaters

See Page 5-16

.125 & .153 Diameter Cable Heaters
With and Without Thermocouples
 See Page 5-20

Bulk Round Heater Cables
 See Pages 5-24 and 5-25

Typical Applications

- * Blown Film Die Heaters
- * Heat Tracing
- * De-icing Car Wash Door Rails
- * De-icing Outside Stairways

Mini Coil Heaters for OEM
Hot Runner Systems
 See Pages 5-26 and 5-27

Mini Coil Band Heaters are designed and manufactured under the tightest tolerances so that they may be used in hot runner/runnerless injection mold tooling with complete confidence in maintaining the manufacturer's original balanced heating.

Cast Bronze and Aluminum
Nozzle Heater Bushings
 See Pages 5-28 and 5-29

Cast bronze nozzle heater bushings eliminate uneven temperature profiles and short heater life, and with their precision machining, also eliminate poor fit and the need for clamping bands while providing maximum heat transfer.

Gamma Series Dual Sleeve Mini Coil Heater
 See Page 5-30

Gamma Series mini coil heaters for hot runner tooling are constructed with the heating element tightly sandwiched between a nickel plated copper inner sleeve and a stainless steel outer sleeve.

Heat Trace Cable

Section 6

Heat trace cables are used to counteract the effects of heat loss from process piping systems.

Catalog Pages
6-1
through
6-14

Constant Wattage Heating Cables are all parallel resistance, low watt density electrical heaters designed to be cut to the desired lengths in the field, eliminating the need for prefabrications and reducing or eliminating many design and installation costs.

KE Style Constant Wattage Heat Trace Cable

Maximum Temperature: 500°F (260°C)

See Pages 6-8 and 6-10

FE Style Constant Wattage Heat Trace Cable

Maximum Temperature: 400°F (204°C)

See Pages 6-9 and 6-10

Self Limiting Heating Cable is a low watt density parallel circuit electrical heater. The multi-stranded bus wires are extruded in an irradiated self-regulating conductive polyolefin that increases and decreases its heat output with changes in the ambient temperature.

SL Style Self-Limiting Heat Trace Cable

Maintains Temperatures up to 150°F (65°C)

See Pages 6-11 and 6-12

Heat Trace Temperature Controls

See Page 6-13

Closed Cell Elastomeric Insulation

See Page 6-14

Infrared Heaters

Section 7

Infrared radiant heat energy can be delivered to concentrated areas at a very fast rate with individual heaters or arrays.

Catalog Pages
7-1
through
7-102

CRP 12" × 12" Modular Panels

See Pages 7-24 through 7-27

Design Features

- * *Standard colors are metamorphing yellow and traditional white.*
- * *Low noise type K thermocouple mounted internally in center heater.*
- * *Standard operating temp range: 750 to 1300°F*
- * *2.5 to 6µm infrared radiation wavelength*

ARA Arrays Assemblies See Pages 7-28 through 7-37

Design Features

- * Custom array housings and large multiple panel arrays designed to fit your thermoforming or wide area infrared heating application
- * For use with any style ceramic E-Mitter, quartz mini-tube E-Mitter or quartz tubular elements
- * Heater wattage, voltage and column/row spacing customized to meet your specifications
- * Can be factory wired with companion control panels for ease of installation
- * Suitable for use in horizontal or vertical orientations

Chemical Bath Immersion Heaters

See Pages 11-84 through 11-103

TEMPCO Over-the-Side Chemical Bath Immersion Heaters are available in a variety of sheath materials and heater configurations to cover the widest possible spectrum of chemical heating applications. From plain steel to Teflon® covered, Tempco is sure to have the correct heater for even the most difficult application. Built-in thermal overload protection prevents premature heater burnout in low liquid level conditions. This thermal protection also guards against a potentially hazardous situation should the heater be in close proximity to combustibles such as a plastic tank, or the medium being heated.

- * Single pole
- * Double pole
- * Double pole with high limit
- * Thermostat kits, enclosures and thermowells

Bulb & Capillary High Limit Switch
See Page 13-80

- * Single pole
- * Manual reset button

Surface Mount Thermostats
See Page 13-81

- * Adjustable and pre-set setpoints
- * Ranges from 50 to 570°F (10 to 300°C)

1/2" Disc Thermostats
See Pages 13-82 and 13-83

- * Pre-set snap action
- * High limit with manual reset
- * Setpoints from 50 to 500°F (10 to 260°C)

One Shot Thermal Cutoffs
See Page 13-84

- * Small size: 0.55" long x 0.16" diameter
- * Cutoff temperatures from 151 to 464°F (66 to 240°C)

Cartridge Type Thermostats
See Pages 13-85 through 13-87

- * Diameters include 1/4", 1/2" and 5/8"
- * Adjustable range from -100 to 600°F (-73 to 260°C)
- * Styles include: straight cartridge, block head, pipe thread, coupling head and flange

Single Phase Solid State Relays
See Pages 13-88 through 13-91

- * Single phase – Load current: 10 to 75 Amps
- * Three phase – Load current: 25 and 50 Amps
- * AC and DC control inputs

Solid State DIN Rail Relay Modules
See Pages 13-90 and 13-91

- * With built-in heat sink, AC and DC control inputs
- * Single phase models – Load current: 10 to 45 Amps
- * Three phase models – Load current: 25 Amps

Mercury Relays

See Pages 13-92 through 13-94

- * One to three poles
- * Load current: 30 to 100 Amps

DIN Rail Mounted Mechanical Relays

Thermocouples, RTDs, Thermistors and related accessories

Catalog Pages
14-1
through
14-126

General Purpose Thermocouples

See Pages 14-2 through 14-11

Tempco has a wide variety of standard designs and a large stock of thermocouples specifically manufactured for the plastics and commercial industry as well as light to medium duty applications where more costly types of thermocouples are not necessary. All thermocouples are available in ANSI Type J (Standard), K, T and E calibrations.

Mineral Insulated Thermocouple Assemblies

See Pages 14-12 through 14-31

Tempco manufactures a wide variety of standard and custom designs for many diverse industries and applications in temperature ranges from cryogenic -200°C (-328°F) to 2315°C (4200°F). When you have a special requirement or a difficult application, consult Tempco.

Multipoint Thermocouples

See Pages 14-28 through 14-31

Industrial Process Thermocouples

See Pages 14-32 through 14-45

Tempco manufactures many styles of industrial thermocouple assemblies for a wide range of industries, from petrochemical to textile applications, where one or more protection tubes may be necessary to protect the thermocouple; available with Base Metal and Noble Metal thermocouples.

Accu-Ohm RTDs and Thermistors for Industrial, Plastics and Medium and Light Duty Applications
See Pages 14-46 through 14-66

Tempco's RTDs (*Resistance Temperature Detectors*) are designed to meet IEC Publication 751, DIN43760, JIS1604-1989 and BS1904-1984. They are normally supplied to Class B, but can be manufactured to Class A as an option. RTDs offer greater repeatability and interchangeability than thermocouples or thermistors over the standard temperature scale from -260°C to 630°C (-436 to 1166°F).

Sanitary RTDs
See Page 14-60

Special Application Thermocouples
See Pages 14-68

Jack Panels and Accessories
See Pages 14-69 through 14-75

Tempco's Jack Panels are made from rugged, .090" thick aluminum and allow for easy installation of multi-circuit thermocouple or RTD Quick Disconnect Jacks in your panel or housing.

Thermowells, Ceramic and Metal Protection Tubes
See Pages 14-76 through 14-86

Tempco offers standard and custom manufactured Thermowells and Protection Tubes that give you an excellent variety of ways to protect your temperature sensor from high velocity, high pressure and corrosive and harsh environments.

See Pages 14-107 through 14-110

Insulated Thermocouple and Extension Wire

See Pages 14-102 through 14-113

This section presents the most commonly used insulated thermocouple and thermocouple extension wire available from stock in all the ANSI recognized calibrations. All thermocouple and thermocouple extension wires are supplied to meet Standard Tolerances of ANSI Circular MC96.1-1982. Special tolerances to ANSI MC96.1 are available at an extra charge.

Metal Sheathed Mineral Insulated Thermocouple Cable (MI T/C Cable)

See Pages 14-114 through 14-124

Tempco offers a wide variety of sheathed, mineral insulated thermocouple cable. We stock many varieties of sheath diameters and materials in ANSI recognized thermocouple types and can manufacture a multitude of non-stock combinations of sheath materials, O.D.s, insulations, wire types and wire configurations on special request; consult Tempco with your specific requirements.

Mi-Plus® Construction Characteristics

The *Mi-Plus* is the solution for applications that require high watt densities (W/in^2) and/or high operating temperatures.

Mi-Plus band heaters are capable of temperatures up to 1400°F (760°C) and watt densities up to 150W/in² (23.25W/cm²). The recommended maximum watt density for a specific application will depend on the heater size and its operating temperature.

Specially formulated mineral insulated tape providing excellent thermal conductivity and dielectric strength is used to insulate the nickel chrome resistance wire from the stainless steel sheath. The heater assembly is formed under pressure to a precise diameter with a thin low-mass cross section, assuring fast heat-up rates and reduced cycle times.

UNBREAKABLE Power Screw Terminals

Only Mi-Plus offers this unique screw terminal design...

The stainless steel power screw terminals are resistant to over-torquing. *For complete selection of screw terminal arrangements, see pages 1-14 and 1-15.*

SUPERIOR Clamping Mechanism

The clamping brackets are formed from the outer sheath of the heater, providing a unique one-piece built-in construction strap. The clamping power is generated through barrel nuts and socket head screws, which as an

integral part of the built-in strap, provide superior clamping force for maximum performance and optimal heater life. *For details, see pages 1-12 and 1-13.*

INNOVATIVE Lead Terminations

Smaller size *Mi-Plus* band heaters are powered-up by means of lead wire terminations. To insure a resilient connection that will withstand abrasion, mechanical abuse and keep contaminants out of the transition area, a specially designed stainless

steel transition cap with a built-in strain relief was developed. The cap is welded to the sheath and the cavity is filled with insulating cement, sealing the band heater from contaminants. *For details, see pages 1-16 through 1-19.*

UNIQUE Igloo™ Ceramic Covers

To eliminate exposed wiring/screw terminals on band heater installations, single and double port ceramic caps were designed. These unique and exclusive Igloo ceramic terminal

insulators fit over the entire terminal and lug, leaving no exposed wiring. *For additional details on Igloo insulators, see page 1-15.*

Mi-Plus Specifications

Mi-Plus® Standard Specifications and Tolerances

PERFORMANCE RATINGS

Maximum Temperature: 1400°F (760°C)

Nominal Watt Density:

Nozzle Bands — under 3" diameter:
30-100 W/in² (4.7-15.5 W/cm²)

Barrel bands—3" and greater in diameter:
20-70 W/in² (3.1-10.9 W/cm²)

Maximum Watt Density: 150 W/in² (23 W/cm²) Dependent on heater size, operating temperature and termination.

ELECTRICAL RATINGS

Maximum Voltage: 480VAC per termination

Dual Voltage: Available depending on heater configuration

Maximum Amperage: lead wire termination: 10A
screw terminations: 8-32UNF—20A
10-32UNF—25A

Resistance Tolerance: +10%, -5%

Wattage Tolerance: +5%, -10%

Exposed electrical wiring on band heater installations is a violation of Electrical Safety Codes including O.S.H.A.

PHYSICAL SIZE CONSTRUCTION LIMITATIONS

Nominal Gap—Built-In Bracket:

less than 1-3/4" dia. 1/4"
1-3/4" to 2" dia. 5/16"
2" to 5" dia. 3/8"
5" to 18" dia. 1/2"
greater than 18" dia. . . . 3/4"

If a larger gap is required for probes or thermocouples, specify when ordering.

Maximum Inside Diameters:

One-Piece *14" (355.6 mm)
One-Piece Expandable .. *14" (355.6 mm)
Two-Piece 25" (635.0 mm)
Over 25" (635.0 mm) will require multiple segments. Consult Tempco.

* Tempco recommends two-piece construction for heaters 10" ID and greater

Standard Widths: 1" to 8" (25.4 mm to 203.2 mm)

Width Tolerance: ±3/32" (2.4 mm)

If non-standard widths or tighter tolerances are required, consult Tempco.

Diameter/Width Limitations

Width		One-Piece Construction Inside Diameter		Expandable Construction Inside Diameter		Two-Piece Construction Inside Diameter	
in	mm	in	mm	in	mm	in	mm
1	25.4	1 to 10	25.4 to 254.0	N/A	N/A	3 to 25	76.2 to 635.0
1½	38.1	1 to 14	25.4 to 355.6	2½ to 14	63.5 to 355.6	3 to 25	76.2 to 635.0
2	50.8	1½ to 14	38.1 to 355.6	2½ to 14	63.5 to 355.6	3 to 25	76.2 to 635.0
2½	63.5	1½ to 14	38.1 to 355.6	2½ to 14	63.5 to 355.6	3 to 25	76.2 to 635.0
3	76.2	1½ to 14	38.1 to 355.6	2½ to 14	63.5 to 355.6	3 to 25	76.2 to 635.0
3½	88.9	1¾ to 14	44.5 to 355.6	2½ to 14	63.5 to 355.6	3 to 25	76.2 to 635.0
4	101.6	2 to 14	50.8 to 355.6	2½ to 14	63.5 to 355.6	3 to 25	76.2 to 635.0
4½	114.3	2¼ to 14	57.2 to 355.6	2½ to 14	63.5 to 355.6	3 to 25	76.2 to 635.0
5	127.0	2½ to 14	63.5 to 355.6	2½ to 14	63.5 to 355.6	3 to 25	76.2 to 635.0
5½	139.7	2¾ to 14	69.9 to 355.6	3 to 14	63.5 to 355.6	3 to 25	76.2 to 635.0
6	152.4	3 to 14	76.2 to 355.6	3 to 14	76.2 to 355.6	3 to 25	76.2 to 635.0
6½	165.1	3¼ to 14	82.6 to 355.6	3¼ to 14	82.6 to 355.6	3¼ to 25	82.6 to 635.0
7	177.8	3½ to 14	88.9 to 355.6	3½ to 14	88.9 to 355.6	3½ to 25	88.9 to 635.0
7½	190.5	3¾ to 14	95.3 to 355.6	3¾ to 14	95.3 to 355.6	3¾ to 25	95.3 to 635.0
8	203.2	4 to 14	101.6 to 355.6	4 to 14	101.6 to 355.6	4 to 25	101.6 to 635.0

Additional Limitations

- For heaters less than 4" in diameter, the maximum width is twice the diameter.
- Heaters with standard brackets are available from 1" to 8" wide, while heaters with low profile brackets are available from 1" to 6" wide.
- 1" diameter heaters are only available in 1" and 1-1/2" widths.
- For heaters from 10" diameter up to 25" diameter, Tempco recommends using 2-piece construction for superior clamping. Over 25" diameter, 3 or 4 segments are recommended.
- Combinations of some minimum and maximum variations may not be available. Consult Tempco with your special requirements.
- Post terminals are only available on heaters greater than 2-1/2" in diameter and 1-1/2" in width.

Mi-Plus® Maximum Watt Densities

MAXIMUM ALLOWABLE WATT DENSITY

The chart displays the maximum Watt Density curves for various diameter heaters. Use this chart when determining the appropriate wattage value for your chosen heater.

Be aware that certain factors will require you to derate the watt density (W/in²) of your heater selection.

CAUTION Failure to adhere to the maximum allowable watt density per heater size will result in poor operating life.

CALCULATING MAXIMUM WATT DENSITY

Factors to be taken into consideration:

- Type of controls
- Voltage variations
- Machine cycling rate
- Type of resin being processed
- Coefficient of thermal expansion and conductivity of the cylinder.
- Designing a heater that closely matches the wattage requirement will decrease the frequency of cycling and temperature overshoot, thereby increasing the life of the heater.

Once these factors have been established, proceed with the following steps:

- Determine the maximum operating temperature.
- Calculate the total wattage required to obtain the maximum operating temperature.
- Determine the quantity and size of the heater bands to be used. Due to clamping concerns, 2" through 3" wide band heaters have long proven to be the most efficient and reliable in most cylindrical heating applications.
- Determine individual band heater wattage by dividing the total required wattage by the quantity of band heaters selected.

- Determine the band heater's heated area by subtracting unheated (cold) areas created by screw terminals, gaps, holes, and cutouts.

Nominal Unheated Areas	
Construction Style	Cold Area to Subtract
One-piece band	1" × width
One-piece expandable band	1½" × width
Two-piece band	2" × width

For each hole or cutout add to the cold area from the Table the (Hole size + ½") × heater width. This is total cold area to use in the following formula to calculate the heater watt density.

Watt Density Formula

$$\text{Watt Density (W/in}^2\text{)} = \frac{\text{Wattage}}{(3.14 \times \text{Band ID} \times \text{Band Width}) - (\text{Cold Area})}$$

- Check in the above graph that the calculated watt density does not exceed the maximum recommended watt density. Locate the maximum cylindrical temperature required on the left-hand side of the graph, follow the horizontal line until it intersects with the line of the band heater being used, and read directly down to obtain the maximum recommended watt density (watts/in²).
- If the calculated watt density is higher than the recommended value, it must be corrected or it will cause poor heater life. This can be accomplished by using more band heaters or lowering the heater wattage.
- Should you have a problem in selecting the proper band heater or establishing watt density for your application, consult Tempco.

CORRECTION FACTORS

For heaters wider than 3" (76.2 mm), reduce maximum allowable watt density from chart by 20%.

For applications using insulating shroud, reduce maximum allowable watt density from chart by 25%.

CAUTION Do not use insulating blankets if heater temperatures are above 1200°F (649°C). Failure to adhere will result in premature heater failure.

Mi-Plus[®] Band Heater Terminator Program

These Mi-Plus Band Heaters are in-stock, semi-finished (substrates), offering the option to finish them by choosing from the 6 program-qualified lead end terminations listed above.

Mi-Plus Terminator Band Heaters will be ready for shipment within 48 hours.

Stock Mi-Plus® Nozzle Band Heaters Available Through the Terminator Program

Part Numbers listed are for Heaters with Type W2 Termination – Right-Angle Wire Braid Leads (12" leads, 10" SS braid). Other Terminator Program terminations and options can also be applied to stock heaters (see Ordering Information below).

Ordering Information

Order by Part Number for stock Mi-Plus heaters with Type W2 termination. Call Tempco for part numbers for stock heaters with other Terminator Program (see page 1-6) terminations and options.

Custom Engineered/Manufactured

Mi-Plus Heaters can be application specific; therefore for sizes, electrical ratings, terminations and any other design features not listed in this catalog **TEMPCO** will custom manufacture to your specifications. Consult us with your requirements.

Standard Sizes and Ratings

Stock and Standard (Non-Stock) Mi-Plus Barrel Band Heaters

Part Numbers listed are for Heaters with Screw Terminal Terminations – Type T2 or T3X.

Part numbers for heaters with other terminations will be assigned at time of order.

Stock Items Are Shown In **RED**

Stock Mi-Plus Barrel Band Heaters are ready for immediate shipment with Screw Terminals.

Complete termination details are on pages 1-14 and 1-15.

Ordering Information

Stock Heaters

Select a Mi-Plus Barrel Band Heater from the list above.

Stock heaters can be modified to the following terminations:

- Type C—Outlet terminal box.
- Type P2—Low profile high temperature quick disconnect.
- Type C6, C7 and C8—Igloo™ ceramic terminal covers.

Custom Engineered/Manufactured Heaters

An electric heater can be very application specific; for sizes not listed **TEMPCO** will design and manufacture a Mi-Plus Barrel Heater to meet your requirements. **Standard lead time is 5 weeks.**

Please Specify the following:

- Inside Diameter
- Width
- Wattage
- Voltage
- Quantity
- Termination (see pages 1-14 through 1-21)
- Lead Cable/Braid Length
- Construction Style (see pages 1-10 and 1-11)
- Clamping Variation (see pages 1-12 and 1-13)
- Features/Options (see page 1-22)

WARNING: Cancer and Reproductive Harm - www.P65Warnings.ca.gov.

Special and Unique Mi-Plus® Band Heater Designs

Throughout our catalog we show Tempco's standard specifications and most popular designs. However, as a custom heating element manufacturer, we recognize that many applications require non-standard and unique designs.

At Tempco, we are constantly challenged by our customers to solve their heating applications. We have the experience, technical knowledge and manufacturing capability to solve all your heating problems with unique heater designs. Use Tempco's talent and capabilities to your benefit to solve your specific heating problem in an expeditious and cost-effective manner.

The following pictures show some of the heater designs that we have developed for special applications. Next time, when you have a special application and you want someone to work with you and "think outside the box" to solve your specific heating application, call Tempco.

We haven't seen all heating applications, but most likely our experienced staff has seen and solved more heating problems than you have seen.

*Put our knowledge and experience to work for you.
Challenge us! You will be glad you did.*

Partial coverage with spring-loaded clamping and wire braid leads

Two independent electrical circuits in a single heater with dual wattage and dual voltage option and thermocouple clearance hole

Two-piece heater with spring-loaded clamping and single leads for easy wiring

Heater with insulating shroud to minimize energy losses

Heater with separate strap designed for three-phase operation, with ground terminal and thermocouple clearance hole

Nozzle heater for magnesium machine

Four-piece heater with spring loaded clamping and independent electrical circuits on each segment

Mi-Plus® Construction Styles

Do not open Non-Expandable One-Piece Mi-Plus Band Heaters during installation. Opening this construction style will cause internal damage.

Shown with Type NB Built-In Strap

Shown with Type NS Built-In Strap

It is not recommended to open a One-Piece Expandable Band Heater more than two times.

Shown with Type NE Built-In Strap

Mi-PLUS BAND HEATERS...

Note: Refer to page 1-4 for complete Limitations on Physical Size Construction.

Non-Expandable One-Piece Band Construction

One-piece heaters are the most efficient construction, as they provide the most heated surface area. This style can only be used where the entire heater can be slipped over the end of the barrel. One-piece heaters have built-in, full-width clamping bars.

Two-Piece Band Construction

Two-piece construction satisfies the need for a heater that can be placed anywhere along the machine barrel with a minimum of time and labor. Two-piece construction is recommended for larger diameter heaters because two-piece construction employs two sets of built-in clamps that deliver maximum clamping force.

The two-piece construction style also provides dual voltage capability. The heater halves may be wired together either in series or parallel, providing two voltage options. Two-piece heaters are rated at full voltage and 1/2 the total wattage for each half. On very large custom applications, Tempco may suggest going to multiple Mi-Plus heater segments with spring-loaded clamping.

One-Piece Expandable Band Construction

The expandable construction style allows the heater to be opened up and placed anywhere along the machine barrel, as well as minimizes the unheated area as compared to a two-piece heater.

With two heater circuits in a common case this heater naturally lends itself to a dual voltage system, a 240/480 volt package being the most common. When wired in parallel these heaters can run at 240 volts, and when wired in series, at 480 volts.

Expandable heaters are rated for each circuit at full voltage and one half of the total wattage.

Mi-Plus® Construction Styles — Special Variations

Partial Coverage Band 2-Piece with Built-In Brackets

Partial coverage band heaters are required when an obstruction on the barrel would interfere with a full coverage band.

The preferred method of construction is the 2-piece Band Heater with Built-In Brackets as illustrated below. The heater is bolted down to the cylinder at the ends and the built-in low thermal expansion strap pulls the heater tightly against the cylinder being heated. The standard center of hole to edge of heater dimension is 1/4".

When ordering, specify the angle of coverage from center to center of the mounting screw holes as shown.

Partial Coverage Band 1-Piece with Separate Strap

The alternate method of partial coverage construction is the 1-piece Band Heater with a separate 2-piece strap.

The 2-piece strap itself is bolted at the padded ends, allowing the heater to float between the pads as illustrated below. When tightening the strap, it will pull the heater against the cylinder being heated. The standard center of hole to edge of heater dimension is 1/4".

When ordering, specify the angle of coverage from center to center of the mounting screw holes as shown.

Clamping Variations

Mi-Plus® Standard Built-In Clamping Strap

The clamping brackets of the Mi-Plus Heater are formed from its outer sheath, producing a unique Built-In Strap. Clamping power is generated through barrel nuts and socket head cap screws, which are an integral part of the Built-In Strap.

High operating temperatures require superior clamping force to maintain ultimate contact between the inside diameter of the band heater and the barrel, which is essential for maximum heater operating life. Only Tempco's Mi-Plus offers you this unique Built-In Strap feature.

TOUGH IN EXTREME CONDITIONS

Even under the most extreme conditions, the Built-In Strap Clamping will remain functional for the life of your Mi-Plus band heater. The steel clamping bars are the full width of the heater to distribute the forces evenly for superior heater contact. Tempco uses 1/4-20 alloy steel socket head cap screws to maximize the clamping power.

Standard on all Mi-Plus heaters 3" in diameter & larger

Limitations **Minimum Width:** 1-1/2" (38.1 mm)
Minimum Diameter: 3" (76.2 mm)

Type NB — One-Piece Band

Type NS — Two-Piece Band

Type NE — One-Piece Expandable Band

Consult Tempco for multiple segment heaters.

Mi-Plus Separate Clamping Straps

The Mi-Plus is available without built-in brackets. This option uses a separate strap to properly clamp the heater. A separate strap is useful when clearance is limited or there is an obstruction. Separate straps are made strictly to customer specifications. Consult Tempco with your requirements.

Bolt Size	Clearance	Suggested Diameter Range
8-32	.50"	1" – 3"
10-32	.56"	2" – 6"
1/4-20	.62"	> 3"

Note: The number of straps is dependent on heater width. Tempco recommends the use of the largest bolt size that clearance allows.

Type SB — One-Piece Band

Type SS — Two-Piece Band
(Requires Minimum Heater Diameter of 3")

Type SE — One-Piece Expandable Band
(Requires Minimum Heater Diameter of 3")

Consult Tempco for multiple segment heaters.

Mi-Plus® Built-In Clamping Strap Variations

Mi-Plus Low Profile Built-In Clamping Strap

When space is limited use Tempco's low profile clamping, a design that doesn't sacrifice strength for size. This compact design uses 10-32 alloy socket head cap screws.

Standard on all Mi-Plus heaters less than 3" in diameter

Limitations **Minimum Width:** 1-1/2" (38.1 mm)
Minimum Diameter: 1-3/8" (34.9 mm)

Type LB — One-Piece Band

Type LS — Two-Piece Band

Type LE — One-Piece Expandable Band

Consult Tempco for multiple segment heaters.

Mi-Plus Outrigger Built-In Clamping Strap

This design is unique to 1" wide heaters from 1-3/8" diameter and greater. Two 8-32 alloy socket head cap screws are used to give 1" wide heaters the required clamping power.

Standard on Mi-Plus heaters 1" wide and 1-3/8" in diameter and greater.

Type OB — One-Piece Band

Type OS — Two-Piece Band

Consult Tempco for multiple segment heaters.

Mi-Plus Spring Loaded Built-In Clamping Strap

Spring loaded clamping with alloy steel socket head cap screws is standard on heaters over 8" in diameter and offered as an option on any heater with standard brackets. The extra heavy duty compression springs serve to combat thermal expansion of the heater by self adjustment, thereby ensuring excellent contact of the heater surface with the machine barrel or die. This type of clamping is also useful on heaters that are mounted vertically.

Limitations

Minimum Width: 1-1/2" (38.1 mm)

Minimum Diameter: 3-1/2" (88.9 mm)

Type SL — One-Piece Band

Type NSL — Two-Piece Band

Type NEL — One-Piece Expandable Band

Consult Tempco for multiple segment heaters.

Mi-Plus Weld-On Bracket

The Mi-Plus is available without built-in brackets. For this option, brackets are welded onto the heater plate at user-specified locations. A weld-on bracket is useful when clearance is limited or there is an obstruction for using separate straps. Consult Tempco with your requirements.

Limitations **Minimum Width:** 1" (25.4 mm)

Minimum Diameter: 1" (25.4 mm)

Type WB — One-Piece Band

Type WS — Two-Piece Band

Type WE — One-Piece Expandable Band

Bolt Size	Clearance
8-32	.50"
10-32	.56"
1/4-20	.62"

Note: The number of weld-on brackets is dependent on heater width. Tempco recommends the use of the largest bolt size that clearance allows.

Terminations

Screw Terminals: Type T2, Type T3X & Type T3Y

The specially designed Stainless Steel Power Terminals are internally connected to the heater and are resistant to over-torquing. The screw terminals are virtually unbreakable. Secure tightening of the electrical connections is essential for safety and long heater life.

Mi-Plus Type T2 — Screw Terminals

One-Piece Band

Standard Termination Location:
opposite the gap; center of width

- * **Minimum Inside Diameter:** 2-1/2" (63.5 mm)
- * **Minimum Width:** 1-1/2" (38.1 mm)
- * **Post Terminals:** 10-32 or 8-32
- * **Maximum Volts:** 480VAC
- * **Maximum Amps:** 25A (10-32) or 20A (8-32)

Only Tempco's Mi-Plus has these unique Torque-Resistant Power Terminals.

Two-Piece Band

Standard Termination Location:
center of each half; center of width

- * **Minimum Inside Diameter:** 3" (76.2 mm)
- * **Minimum Width:** 1-1/2" (38.1 mm)
- * **Post Terminals:** 10-32 or 8-32
- * **Maximum Volts/Amps:** 480VAC/ 25A (10-32) or 20A (8-32) each half

One-Piece Expandable Band

Standard Termination Location:
two sets of terminals opposite the gap; center of the width

- * **Minimum Inside Diameter:** 2-1/2" (63.5 mm)
- * **Minimum Width:** 1-1/2" (38.1 mm)
- * **Post Terminals:** 10-32 or 8-32
- * **Maximum Volts/Amps:** 480VAC/ 25A (10-32) or 20A (8-32) each half

Mi-Plus Type T3X — Screw Terminals

One-Piece Band

Standard Termination Location:
opposite the gap; across center of width

- * **Minimum Inside Diameter:** 2-1/2" (63.5 mm)
- * **Minimum Width:**
with 10-32 Post Terminals — 2-1/2" (63.5 mm)
with 8-32 Post Terminals — 2" (50.8 mm)
- * **Maximum Volts/Amps:** 480VAC/ 25A (10-32) or 20A (8-32) each half

One-Piece Expandable Band

Standard Termination Location:
two sets of terminals opposite the gap; across center of width

- * **Minimum Inside Diameter:** 2-1/2" (63.5 mm)
- * **Minimum Width:**
w/ 10-32 Post Terminals — 2-1/2" (63.5 mm)
w/ 8-32 Post Terminals — 2" (50.8 mm)
- * **Maximum Volts/Amps:** 480VAC/ 25A (10-32) or 20A (8-32) each half

Two-Piece Band

Standard Termination Location:
center of each half; across center of width

- * **Minimum Inside Diameter:** 3" (76.2 mm)
- * **Minimum Width:**
w/ 10-32 Post Terminals — 2-1/2" (63.5 mm)
w/ 8-32 Post Terminals — 2" (50.8 mm)
- * **Maximum Volts/Amps:** 480VAC/ 25A (10-32) or 20A (8-32) each half

Type T3Y — Screw Terminals, Next To Gap

Two-Piece Band

Standard Termination Location:
next to same gap on each half;
across center of width

- * **Minimum Inside Diameter:** 3" (76.2 mm)
- * **Minimum Width:**
with 8-32 Post Terminals — 2" (50.8 mm)
with 10-32 Post Terminals — 2-1/2" (63.5 mm)
- * **Maximum Volts:** 480VAC each half
- * **Maximum Amps:** 25A (10-32) or 20A (8-32) each half

Note: Type T3Y is not available on One-Piece or One-Piece Expandable Mi-Plus Band Heaters

Optional Igloo™ Ceramic Covers for Heaters with Screw Terminals

Igloo™ ceramic terminal covers consist of two individual ceramic parts. With a tight-fitting cap and a solid base, an Igloo will fully insulate any standard #8 or #10 terminal lug used for electrical wiring hookups. Igloos can be assembled onto any standard Mi-Plus Band with 8-32 or 10-32 screw terminals. Igloo Double Port 90° are recommended on expandable heaters with Type T3X Termination. Igloo Double Port In-Line will not fit on expandable heaters with Type T3X termination.

Minimum Inside Diameter: 2-1/2" (63.5 mm)

Minimum Width: 2-1/2" (63.5 mm)

Three types of Igloo™ bases are available:

- Type C6** — Double Port In-Line P/N CER-101-104
- Type C7** — Double Port 90° P/N CER-101-106
- Type C8** — Single Port P/N CER-101-107

Igloo™ caps are available in the three screw terminal sizes:

- 10-32** — P/N CER-102-101
- 10-24** — P/N CER-102-104
- 8-32** — P/N CER-102-105

When ordering, specify the type of Igloo and the screw terminal size.

Exposed electrical wiring on band heater installations is a violation of Electrical Safety Codes including O.S.H.A.

Terminations

Mi-Plus® Type W1 — Abrasion Resistant Straight Wire Braid Leads

The lead wires exit straight out through a stainless steel eyelet. Flexible stainless steel wire braid leads are highly recommended for improved abrasion resistance. Wire braid leads offer sharp bending not possible with armor cable.

This stainless steel braid is loosely wrapped around two mica insulated lead wires rated for 842°F (450°C). The standard leads are 10" of stainless steel loose wire braid over 12" of flexible leads. *If longer leads are required, specify when ordering.*

One-Piece Band

Standard Termination Location:
opposite the gap; center of width

- * **Minimum Inside Diameter:** 1" (25.4 mm)
- * **Minimum Width:** 1" (25.4 mm)
- * **Maximum Volts:** 480VAC
- * **Maximum Amps:** 10

Two-Piece Band

Standard Termination Location:
center of each half; center of width

- * **Minimum Inside Diameter:**
3" (76.2 mm)
- * **Minimum Width:** 1" (25.4 mm)
- * **Maximum Volts:** 480VAC each half
- * **Maximum Amps:** 10 each half

One-Piece Expandable Band

Standard Termination Location:
two sets of leads opposite the gap;
center of width

- * **Minimum Inside Diameter:**
2-1/2" (63.5 mm)
- * **Minimum Width:** 1-1/2" (38.1 mm)
- * **Maximum Volts/Amps:**
480VAC/10A each half

Mi-Plus Type W2 — Right-Angle Wire Braid Leads, 90 Degrees to Heater Diameter

This style of wiring is the most prevalent for nozzle band heaters, as it contributes to the most flexible and space saving installation.

Mica insulated lead wires rated for 842°F (450°C) with tightly wrapped stainless steel overbraid are used, providing protection in abrasive environments. The stainless steel braid exits parallel to the heater centerline through a low profile stainless steel cap. This cap also acts as a strain relief, guarding against excessive flexing or pulling of the lead wire.

This termination style is located 180° from the gap for one-piece heaters and 90° from the gap for two-piece heaters and exits the heater near the edge. By keeping the lead wires away from the heater, less damage from high temperature contact is likely to occur.

The standard leads are 10" of stainless steel wire braid over 12" of flexible leads. *If longer leads are required, specify when ordering.*

One-Piece Band

Standard Termination Location:
opposite the gap; near edge of width

- * **Minimum Inside Diameter:** 1" (25.4 mm)
- * **Minimum Width:** 1" (25.4 mm)
- * **Maximum Volts:** 480VAC
- * **Maximum Amps:** 10

LOW PROFILE

ABRASION RESISTANT

LEAD TERMINATIONS

Two-Piece Band

Standard Termination Location:
center of each half; near edge of width

- * **Minimum Inside Diameter:** 3" (76.2 mm)
- * **Minimum Width:** 1" (25.4 mm)
- * **Maximum Volts/Amps:**
480VAC/10A each half

Mi-Plus® Type W5 — Right-Angle Wire Braid Leads, 90 Degrees to Heater Width

The stainless steel braid exits parallel to the heater surface through a low profile stainless steel cap, which also acts as a strain relief guarding against excessive flexing or pulling of the lead wire. Mica insulated lead wires rated for 842°F (450°C) with tightly wrapped stainless steel over-braid are used, providing protection in abrasive environments.

This low-profile termination is convenient where space limitations are a concern.

The standard leads are 10" of stainless steel wire braid over 12" of flexible leads. *If longer leads are required, specify when ordering.*

One-Piece Band

Standard Termination Location:
opposite the gap; center of width

- * Minimum Inside Diameter: 1" (25.4 mm)
- * Minimum Width: 1" (25.4 mm)
- * Maximum Volts: 480VAC
- * Maximum Amps: 10

Two-Piece Band

Standard Termination Location:
center of each half; center of width

- * Minimum Inside Diameter: 3" (76.2 mm)
- * Minimum Width: 1" (25.4 mm)
- * Maximum Volts: 480VAC each half
- * Maximum Amps: 10 each half

Mi-Plus Type R1 — Abrasion Resistant Straight Armor Cable

Stainless steel armor cable provides vastly superior lead wire protection in cases where abrasion is a constant problem. The lead wires are mica insulated and rated for 842°F (450°C).

The standard leads are 10" of stainless steel armor cable over 12" lead wire.

If longer leads are required, specify when ordering.

Selection TERMINATION Guide

One-Piece Band

Standard Termination Location:
opposite the gap; center of width

- * Minimum Inside Diameter: 1" (25.4 mm)
- * Minimum Width: 1" (25.4 mm)
- * Maximum Volts: 480VAC
- * Maximum Amps: 10

Two-Piece Band

Standard Termination Location:
center of each half; center of width

- * Minimum Inside Diameter: 3" (76.2 mm)
- * Minimum Width: 1" (25.4 mm)
- * Maximum Volts/Amps: 480VAC/10A each half

One-Piece Expandable Band

Standard Termination Location:
two sets of leads opposite the gap;
center of width

- * Minimum Inside Diameter: 2-1/2" (63.5 mm)
- * Minimum Width: 1-1/2" (38.1 mm)
- * Maximum Volts/Amps: 480VAC/10A each half

Terminations

Mi-Plus® Type R2B — Abrasion Resistant Right-Angle Armor Cable

One-Piece Band

Standard Termination Location:
opposite the gap; center of width

- * **Minimum Inside Diameter:**
1" (25.4 mm)
- * **Minimum Width:** 1" (25.4 mm)
- * **Maximum Volts/Amps:**
480VAC/10A

Stainless Steel Right-Angle Armor Cable will provide excellent lead wire protection. This space saving termination will give long-term abrasion protection. The lead wires are mica insulated and rated for 842°F (450°C).

The standard leads are 10" of stainless steel armor cable over 12" of lead wire.
If longer leads are required, specify when ordering.

Two-Piece Band

Standard Termination Location:
center of each half; center of width

- * **Minimum Inside Diameter:**
3" (76.2 mm)

Mi-Plus® Type C — General Purpose Terminal Box

General purpose terminal boxes are a simple & economical way to protect employees from electric shock or prevent electric shorts that can result from exposed wiring on band heater electrical installations.

The Heavy Duty Stainless Steel Terminal Box has a 1/2" trade size knockout (actual diameter 7/8") that will accept standard armor cable connectors. To simplify installation, Mi-Plus band heaters with terminal boxes can be pre-wired.

Type CA – Box only (*shown*)

Type CD – Box with prewired SS wire braid

Type CC – Box with prewired SS armor cable

Type CE – Box with prewired plain leads

The standard abrasive protection leads are 10" of protection over 12" of flexible leads. The standard lead length for plain leads is 10" long.

If longer leads are required, specify when ordering.

Box: One-Piece Expandable Construction

Box: One-Piece & Two-Piece Construction

One-Piece Band

Standard Termination Location: opposite the gap; center of width

- * **Minimum Inside Diameter:** 3" (76.2 mm)
- * **Minimum Width:** 2" (50.8 mm)
- * **Maximum Volts/Amps:** 480VAC/25A

Two-Piece Band

Standard Termination Location: center of each half; center of width

- * **Minimum ID:** 3" (76.2 mm)
- * **Minimum Width:** 2" (50.8 mm)
- * **Maximum Volts/Amps:** 480VAC/25A each half

One-Piece Expandable Band

Standard Termination Location: opposite the gap; center of width

- * **Minimum ID:** 3" (76.2 mm)
- * **Minimum Width:** 2" (50.8 mm)
- * **Maximum Volts/Amps:** 480VAC/25A each half

Selection TERMINATION Guide

Mi-Plus Type L1 — Plain Wire Leads

Plain wire leads are available on all construction styles. The lead wires exit straight out through a stainless steel eyelet. High-temperature 842°F (450°C) mica insulated lead wire is standard. The standard lead length is 10" long. *If longer leads are required, specify when ordering.*

One-Piece Band

Standard Termination Location: opposite the gap; center of width

- * **Minimum Inside Diameter:** 1" (25.4 mm)
- * **Minimum Width:** 1" (25.4 mm)
- * **Maximum Volts/Amps:** 480VAC/10A

Note: Plain wire leads do not offer protection against contamination or abrasion.

Two-Piece Band

Standard Termination Location: center of each half; center of width

- * **Minimum Inside Diameter:** 3" (76.2 mm)
- * **Minimum Width:** 1" (25.4 mm)
- * **Maximum Volts/Amps:** 480VAC/10A each half

One-Piece Expandable Band

Standard Termination Location: two sets of leads opposite the gap; center of width

- * **Minimum Inside Diameter:** 2-1/2" (63.5 mm)
- * **Minimum Width:** 1-1/2" (38.1 mm)
- * **Maximum Volts/Amps:** 480VAC/10A each half

Mi-Plus® Type P1 — High Temperature Quick Disconnect Plugs

Cup Assembly Only

Cup Assembly with 90° Plug

High Temperature Quick Disconnects are a simple, safe and quick way to apply power to a band heater installation. The combination of plug and cup assembly along with stainless steel armor cable or stainless steel wire braid eliminates all live exposed terminals or wiring that can be a potential hazard. The assembly is available with a straight or right-angle plug. To simplify installation, Mi-Plus band heaters with Quick Disconnects can be pre-wired with stainless steel armor or stainless steel wire braid.

- P1A** — Cup Assembly only
- P1B** — Cup Assembly with straight plug
- P1C** — Cup Assembly with 90° plug
- P1E** — Cup Assembly with straight plug and stainless steel armor cable
- P1F** — Cup Assembly with straight plug and stainless steel wire braid
- P1H** — Cup Assembly with 90° plug and stainless steel armor cable
- P1J** — Cup Assembly with 90° plug and stainless steel wire braid

The standard abrasive protection leads are 10" of protection over 12" of flexible leads. *If longer leads, armor cable or braid are required, specify when ordering.*

Type P1A Shown

One-Piece Band

Standard Termination Location:
opposite the gap; center of width

- * **Minimum Inside Diameter:** 3" (76.2 mm)
- * **Minimum Width:** 2" (50.8 mm)
- * **Maximum Volts:** 250VAC
- * **Maximum Amps:** 16
- * **Maximum Temperature:** 572°F (300°C)

- * **Maximum Amps:** 16 each half
- * **Maximum Temperature:** 572°F (300°C)

Type P1H Shown

Note: Type P1 is not available on One-Piece Expandable Mi-Plus Band Heaters

Mi-Plus® Type P2 — Terminal Box and High Temperature Quick Disconnect Straight Plug

This lower profile terminal box and high temperature quick disconnect plug assembly offers a solution where clearance is a problem. The combination of plug and cup assembly along with stainless steel armor cable or stainless steel wire braid eliminates all live exposed terminals or wiring that can be a potential hazard.

The assembly is available with straight plug only. To simplify installation, Mi-Plus band heaters with Quick Disconnects can be pre-wired with stainless steel armor or stainless steel wire braid.

P2A — Box and Cup only

P2B — Box and Cup with straight plug

P2D — Box and Cup with straight plug and stainless steel armor cable

P2E — Box and Cup with straight plug and stainless steel wire braid

The standard abrasive protection leads are 10" of protection over 12" of flexible leads.

If longer leads, armor cable or braid are required, specify when ordering.

Features/Options

Thermocouple Coupling

The Thermocouple Coupling facilitates the installation of an external thermocouple with a threaded fitting. The standard location for the coupling is 90° from the gap at the center of the width. Specify without through hole for heater sensing or with through hole for load sensing.

The bushing sizes available are:

Thread	D	H
1/8-27 NPT	9/16"	5/8"
1/4-20 NPT	3/4"	11/16"
3/8-18 NPT	7/8"	5/8"
M12-1.75mm	3/4"	1/2"

Note: The minimum heater width with a coupling is 1-1/2". If heater width is smaller than 1-1/2", heater gap will be used for coupling location.

Thermocouple Bayonet Adapter

A standard Bayonet Adapter facilitates the installation of an external thermocouple with a standard bayonet cap. The standard location for the adapter is 90° from the gap.

Refer to pages 14-3 and 14-4 for a complete selection of thermocouples available from stock.

Note: The minimum heater width with a T/C adapter is 1-1/2". If heater width is smaller than 1-1/2", heater gap will be used for T/C location.

Built-In Thermocouple

A built-in thermocouple can be factory installed on Mi-Plus band heaters. ANSI type J or K thermocouples are available on Type L1, R,1 R2, W1, W2 and W5 lead wire terminations. Thermocouple junction is located inside the exit termination stamping, providing a relative heater temperature.

Thermocouple can be located in various positions on the heater. Consult Tempco with your requirements.

Stock Heavy Duty Quick Disconnect Plugs and Connectors

Heaters with pre-wired plugs allow quick and easy installation of the heater. These plugs can be attached to armor cable or stainless steel wire braid.

For other types of plugs, consult Tempco or specify the manufacturer's part number when ordering.

See page 15-15 for additional Twist-Lock electrical plugs.

Reference	NEMA P or R	Amps	Volts	Plug Part No.	Connectors (Female) Part No.

Installation RECOMMENDATIONS

1. Disconnect electric power to the machine and/or heaters prior to installing or replacing heaters.
2. Do not install heaters in areas where combustible gases, vapor, or dust is present.
3. Use a heater that closely matches the wattage requirements. This will decrease the frequency of cycling and temperature overshoot, thereby increasing the life of the heater.
4. Make certain that all barrel surfaces are clean and have a smooth finish. Any contaminants or imperfections on the surface can cause premature heater failure.
5. Tempco expandable type Mi-Plus Band Heaters may be opened once at the gap, to fit on the barrel. Do not open these heaters beyond their specified heater diameter.

Do not open Tempco One-Piece Non-Expandable Type Mi-Plus Band Heaters. Opening of these heaters can cause internal damage

6. Position heater bands on the barrel.
7. Securely tighten heater bands around the barrel. Clamping force must be equally distributed on heaters with more than one set of clamping brackets.
*Recommended Clamping Bolt Torque:
10 ft./lbs. (13.6 Newton/meters)*
8. For heaters with screw terminals, remove the top nut and flat washers from the power screw terminals. Do not loosen or remove the bottom nut on the screw terminals. The bottom nut is tightened to 60 inch/lbs. at our factory. A loose bottom nut can cause internal elements to shift and will result in premature heater failure.

All Items Available from Stock

9. All electrical wiring of heater bands should be done by a qualified electrician using proper, dry, personal protective equipment.

- a. Use only Stainless Steel or other high temperature lugs to prevent material degradation when exposed to high temperatures over a prolonged period of time.

DO NOT USE COPPER OR PLATED COPPER LUGS.

- b. Heaters must be wired using the proper gauge wire with a minimum temperature rating of 842°F (450°C). All Mi-Plus Heaters supplied with lead wire terminations or factory pre-wired screw terminals use mica insulated lead wires rated to 842°F (450°C). **Never allow lead wires to lie directly on the heater surface. This can cause degradation of the lead wires and cause a short circuit.**

- c. When connecting power leads to screw terminals make certain that barrels of terminal lugs are not facing down toward the heater case, which will create a short circuit.

*Recommended Screw Terminal Torque:
30 in./lbs. (3.4 Newton/meters)*

- d. Make certain power lead wires do not make contact with hot heater surfaces to avoid degradation of lead wire, as this can cause electrical short circuits.
- e. Ensure that leads are not kinked or sharply bent around other obstructions.
- f. Make sure the voltage input to the heater bands does not exceed the voltage rating that is stamped on the heater bands.
- g. It is recommended that an amperage reading is taken for each heater to verify proper wiring. (Amps = Watts/Volts)

10. Insulate all live electrical wires per applicable safety standards.

11. Begin heater band re-tightening procedure. Be sure to wear protective gloves.

- a. Energize heater bands and allow the heater sheath to reach 400°F (usually 3–5 minutes).

- b. Turn power off and immediately re-tighten the Mi-Plus Bands to 10 ft./lbs. Turn power on.

12. Install shrouds around the machine to meet applicable safety requirements.

13. Once installed, check surroundings to make sure that contaminants won't get on the heater while the unit is in operation. Accumulation of contaminants on heaters can cause premature heater failure.

14. Insulating blanket installations must have band heater retightening sequence (#12) completed before blanket installation. Lead wires must exit the insulation blanket as soon as possible; do not entrap lead wires between heater sheath and insulation blanket.

It is imperative that upon start-up of new machines at customer facilities, all of the aforementioned parameters are double checked by qualified field service personnel.

Exposed electrical wiring on band heater installations is a violation of Electrical Safety Codes including O.S.H.A.

DURABAND*

with **BUILT-IN STRAP**

A General purpose terminal box can be attached on Duraband diameters of 2-1/2" or larger. It offers excellent protection to exposed terminals. To simplify wiring, the box has a 1/2" trade size knockout (actual diameter 7/8") that will accept standard conduit or flexible armor cable connectors. It can be field assembled on most band heaters with screw terminals having a center distance of 7/8".

B Flexible armor cable for lead protection is available where abrasion is a problem.

C For maximum surface contact, the torque resistant and virtually unbreakable stainless steel screw terminals are securely fastened to a connecting jumper, assuring positive contact with the windings and providing maximum amperage carrying capacity. For other terminal or lead arrangements, see pages 1-36 through 1-41.

D Specially designed mounting brackets with 1/4"-20 socket cap screws are used to draw the Built-In Strap to a high degree of tension. This tension exerts the great amount of drawing power required to pull the heating element assembly against the cylinder evenly and tightly across its entire width, thus eliminating all air gaps that can cause premature heater failure. The number of bracket assemblies used increases as the width of a Duraband heater increases.

E Specially treated rust-resistant steel sheath casing provides the best combination of physical strength, high emissivity and good thermal conductivity to heated cylindrical parts, good for sheath temperatures up to 900°F (480°C).

F Specially selected grade and thickness of mica sheet is used to insulate the windings, providing excellent thermal conductivity and dielectric strength.

G The gauge of nickel-chrome resistance ribbon wire is selected to achieve the lowest internal element temperatures possible, resulting in maximum heater life. The ribbon wire is wound evenly spaced on a specially selected mica strip, providing even heat distribution and thus eliminating hot spotting that can cause premature heater failure.

H Duraband's Built-In Strap is a unique design feature developed and patented by Tempco. A Low Thermal Expansion alloy sheath is used for the outer sheath, covering the entire width of the band heater.

*U.S. Patent #3829657

makes handling and installation easier!

Typical Applications

- ↪ *Plastic Injection Molding Machines*
- ↪ *Plastic Extruders*
- ↪ *Oil Reclamation Equipment*
- ↪ *Food and Candy Extruders*
- ↪ *Drum Heating*
- ↪ *Extrusion Dies*
- ↪ *Holding Tanks*
- ↪ *Blow Molding Machines*
- ↪ *Vending Machines*
- ↪ *Barrels & Heads*
- ↪ *Food Service Warming*
 - ↪ *Autoclaves & Sterilizers*
 - ↪ *Metallurgical Analyzers*
 - ↪ *Fluidized Beds*
- ↪ *Hot Runner Molds*
- ↪ *Pulp and Paper Processing Equipment*

Designed For Trouble-Free Service

Tempco's Duraband heater design is the result of many years of research, development and testing for a reliable mica insulated band heater that can perform at the higher operating temperatures [up to 900°F (480°C)] essential to process high temperature resins, providing long, efficient service necessary for today's high productivity of plastic extruders, injection and blow molding machines.

Duraband is a proven heater design for good life efficiency and dependability. It assures maintaining the lowest winding temperatures possible, keeping a low-mass heating element assembly for fast heat-up and quick thermal response to controls. It incorporates the Low Thermal Expansion Built-In Strap, a unique design feature originally developed and patented by Tempco.

Advantages and Variations

Duraband mica insulated heaters are widely used on operations involving heating of cylindrical surfaces and are manufactured in a full range of standard construction variations, physical dimensions, electrical ratings, and a complete arrangement of screw terminals and lead terminations. (See pages 1-36 through 1-41).

However, these standard Duraband heater variations and terminations do not represent the full extent of our capabilities. Tempco's engineering staff, with many years of experience in heat processing and temperature control applications, can assist you in designing the right Duraband heater for your specific application.

Construction Characteristics & Features

- * *Built-in bracket for superior clamping*
- * *Unbreakable and torque-resistant screw terminals*
- * *Temperatures up to 900°F (480°C)*
- * *Full width stainless steel built-in strap*
- * *Flexibility to incorporate holes and cutouts*
- * *Available two-piece and expandable designs*
- * *Best mica insulated heater on the market*
- * *Faster delivery than any other type of heater band*
- * *Most economical among various heater bands*
- * *Most versatile and commonly used heater band*

Duraband Specifications

Duraband® Standard Specifications and Tolerances

PERFORMANCE RATINGS

Maximum Temperature: Standard Sheath: 900°F (482°C)
Nominal Watt Density: 20-45 W/in² (3-7 W/cm²)
Maximum Watt Density: Dependent on heater size and operating temperature.

ELECTRICAL RATINGS

Maximum Voltage: 480 VAC
Dual Voltage or 3-Phase:
 Available depending on heater design
Maximum Amperage: lead wire termination: 10 amp
 screw terminations: 8-32UNF—20 amp; 10-32UNF—25 amp
Resistance Tolerance: +10%, -5%
Wattage Tolerance: +5%, -10%

Exposed electrical wiring on band heater installations is a violation of Electrical Safety Codes including O.S.H.A.

PHYSICAL SIZE CONSTRUCTION LIMITATIONS

Minimum Width: 3/4" (19.1 mm)
Width Tolerance: ±1/16" (1.59 mm)
Minimum Inside Diameter: 7/8" (22.1 mm)
Nominal Gap: 3/8" (9.5 mm)—If a larger gap is required for probes or thermocouples, specify when ordering.

BUILT-IN BRACKETS

Heater Width	Number of Brackets
1-1/2" to 3" (38-76 mm)	1
3-1/8" to 5" (79-127 mm)	2
5-1/8" to 6-7/8" (130-145 mm)	3
7" to 10" (178-254 mm)	4
10-1/8" to 15" (257-381 mm)	5

If tighter tolerances are required, consult Tempco.

Minimum ID and Width for Construction/Clamping Styles

Style	Min. ID		Min. Width	
	in	mm	in	mm

RNS	10	254	1	25.4

Note: Refer to individual descriptions for further information. Actual heater minimums will be a combination of termination and construction/strap styles.

Duraband® Maximum Watt Densities

MAXIMUM ALLOWABLE WATT DENSITY

The chart displays the maximum Watt Density curves for various diameter heaters. Use this chart when determining the appropriate wattage value for your chosen heater.

Be aware that certain factors will require you to derate the watt density (W/in²) of your heater selection.

CAUTION Failure to adhere to the maximum allowable watt density per heater size will result in poor operating life.

CORRECTION FACTORS

For heaters wider than 3" (76.2 mm), reduce maximum recommended watt density from chart by 20%.

For applications using insulating shroud, reduce maximum recommended watt density from chart by 25%.

CALCULATING MAXIMUM WATT DENSITY

Factors to be taken into consideration

- A. Type of controls
- B. Voltage variations
- C. Machine cycling rate
- D. Type of resin being processed
- E. Coefficient of thermal expansion and conductivity of the cylinder
- F. Designing a heater that closely matches the wattage requirement will decrease the frequency of cycling and temperature overshoot, thereby increasing the life of the heater.

Once these factors have been established, proceed with the following steps:

1. Determine the maximum operating temperature.
2. Calculate the total wattage required to obtain the maximum operating temperature. (See engineering section.)
3. Determine the quantity and size of the heater bands to be used. 1-1/2" through 3" wide band heaters have proven to be the most efficient and reliable in most cylindrical heating applications.
4. Determine individual band heater wattage by dividing the total required wattage by the quantity of band heaters selected.
5. Determine the band heater watt density by subtracting unheated areas from the band heater diameter created by screw terminals, gaps, holes, and cutouts (see formula below).
6. Determine if the required watt density previously calculated exceeds the maximum recommended watt density. Note the maximum cylinder temperature required on the left-hand side of the graph, follow the horizontal line until it intersects with the line of the band heater being used, and read directly down to obtain the maximum recommended watt density (W/in²).
7. If the calculated watt density is higher than the recommended value, it must be corrected or it will cause poor heater life. This can be accomplished by using more band heaters, lowering the heater wattage, or using a different construction type or a different type of band heater.
8. Should you have a problem in selecting the proper band heater or establishing watt density for your application, consult with one of the qualified engineers at Tempco.

Nominal Unheated Areas	
Construction Style	Unheated Area to Subtract
One-piece band	1" × width
Two-piece band	2" × width
Holes and cutouts	Size + 1/2" × width

Watt Density Formula

$$\text{Watt Density (W/in}^2\text{)} = \frac{\text{Wattage}}{(3.14 \times (\text{Band ID}) - \text{Gap} - 1 - 3/8) \times \text{Band Width} - \text{Unheated Area (see table)}}$$

Unheated Area (See Table) = Unheated area for construction style + unheated area for any holes or cutouts

Duraband® Construction Styles

3 CONSTRUCTION TYPES

One-Piece Band

The one-piece construction is available on any screw or lead termination and clamping variation. It can be used where band heaters can be slipped over the end of the cylinder.

Shown with Type NB Built-In Strap

Two-Piece Band

The Two-Piece construction is available on any screw or lead and clamping variation. The Duraband two-piece design provides a **built-in hinge**, making handling and installation easier. It is used on large cylinders or where the heater cannot be slipped over the end of the cylinder. Two-piece band heaters are rated at watts and volts per each half when ordering.

Shown with Type NS Built-In Strap

NOTE: Multiple segment designs are recommended on larger diameter (typically larger than 15") heaters to improve the clamping force and

Shown with Type NE Built-In Strap

One-Piece Expandable Band

The one-piece expandable construction is available on any screw or lead and clamping variation. It can be used where a one-piece band heater would have to be expanded to fit over the barrel during installation, rather than slipped over the end of the barrel.

Note: The One-Piece Expandable Band should not be opened and closed more than twice.

Duraband® Construction/Clamping Variations

Standard Built-In Strap Clamping (Low Thermal Expansion)

The Built-In Strap is available with any screw or lead termination and construction variation. The Built-In Strap eliminates the use of awkward-to-handle separate straps, providing more drawing power than any other type of clamping system. The Duraband with Built-In Strap is standard on many designs.

Consult Tempco for multiple segment heaters.

Type NB Shown

Type NB—One-Piece Band
Min. ID: 2" (50.8 mm)
Min. Width: 1-1/4" (31.8 mm)

Type NS—Two-Piece Band
Min. ID: 3" (76.2 mm)
Min. Width: 1-1/4" (31.8 mm)

Type NE—One-Piece Expandable Band
Min. ID: 2-1/2" (63.5 mm)
Min. Width: 1-1/4" (31.8 mm)

Duraband® Construction/Clamping Variations

Wedge Lock

Wedge Lock clamping is designed for applications where mounting space is severely limited. It lends itself mainly to small diameter nozzle heaters.

Type TWL—One-Piece Band

- Min. ID:** 1" (25.4 mm)
- Min. Width:** 1" (25.4 mm)
- Max. Width:** 3-1/2" (88.9 mm)

Separate Straps

The Separate Strap clamping is available with any screw or lead termination and construction variation. It is strongly recommended that the Duraband with Built-In Strap design be used whenever possible because it provides more drawing power than any other type of clamping system.

Consult Tempco for multiple segment heaters.

Type SB Shown

Type SB—One-Piece Band

- Min. ID:** 7/8" (22.2 mm)
- Min. Width:** 3/4" (19.1 mm)

Type SS—Two-Piece Band

- Min. ID:** 2" (50.8 mm)
- Min. Width:** 3/4" (19.1 mm)

Type SE—One-Piece Expandable Band

- Min. ID:** 2-1/2" (63.5 mm)
- Min. Width:** 1-1/4" (31.8 mm)

Clearance Dimensions for Separate Strap Clamping

Separate strap clearance dimensions are dependent on heater ID. The strap dimensions are shown below.

< 2" ID — 6-32 Screw

2 to 3-1/2" ID — 8-32 Screw

> 3-1/2" ID — 1/4-20 Screw

Spring Loaded with Built-In Bracket

The Heavy Duty Stainless Steel Spring with Built-In Bracket is a variation on the basic Duraband design. It is available with any screw or lead termination and construction variation. It is recommended for heaters over 12" in diameter, and for any diameter heater used in the vertical position, to prevent the heater from slipping off the machine. The springs provide constant tension, therefore maintaining optimum surface contact against the cylinder being heated.

Consult Tempco for multiple segment heaters.

Type SL—One-Piece Band

- Min. ID:** 4" (101.6 mm)
- Min. Width:** 1-1/4" (31.8 mm)

Type NSL—Two-Piece Band

- Min. ID:** 4" (101.6 mm)
- Min. Width:** 1-1/4" (31.8 mm)

Type NEL—One-Piece Expandable Band

- Min. ID:** 4" (101.6 mm)
- Min. Width:** 1-1/4" (31.8 mm)

Duraband® Construction/Clamping Variations

Spring Loaded Quick Disconnect

This construction style is a hybrid between the Spring Loaded Clamp with Built-In Bracket and the Latch and Trunnion style clamping. Utilizing a built in bracket and heavy duty flanges, this clamping style is durable and easy to work with in the field. The spring provides relief for thermal expansion and provides strong clamping for the band. This clamping style is available with either lead or screw terminal type terminations.

Consult Tempco for multiple segment heaters.

Type SLQD One-Piece Band

Min. ID: 3.5" (88.9 mm)
Min. Width: 1.25" (31.75 mm)

Type NSLQD Two-Piece Band

Min. ID: 4" (101.6 mm)
Min. Width: 1.25" (31.75 mm)

Type NELQD One-Piece Expandable Band

Min. ID: 3.5" (88.9 mm)
Min. Width: 1.25" (31.75 mm)

Latch and Trunnion

The Latch and Trunnion Clamping System is available with any screw or lead termination and construction variation. It is ideal in absorbing thermal expansion due to the spring loading on the screws. The latch fully opens, facilitating installation on large diameter cylinders. The outer sheath is made from a Low Thermal Expansion alloy.

Consult Tempco for multiple segment heaters.

Type LT—One-Piece Band

Min. ID: 7" (177.8 mm)
Min. Width: 1-1/2" (38.1 mm)

Type LS—Two-Piece Band

Min. ID: 7" (177.8 mm)
Min. Width: 1-1/2" (38.1 mm)

Type LE—One-Piece Expandable Band

Min. ID: 7" (177.8 mm)
Min. Width: 1-1/2" (38.1 mm)

Bent-Up Flange (Ears)

The Bent-Up Flange clamping is available with any screw or lead termination and construction variation. The outer sheath is made from a Low Thermal Expansion alloy. The Bent-Up Flange design is best suited for narrow band heaters with small diameters.

Note: The Bent-Up flange design should only be used when other clamping methods are not suitable for a specific application. Tempco recommends Built-In Strap Clamping be used whenever possible, especially on large diameter heaters, because it provides superior clamping power.

Type FB—One-Piece Band

Min. ID: 1" (25.4 mm)
Min. Width: 3/4" (19.1 mm)

Type FS—Two-Piece Band

Min. ID: 2" (50.8 mm)
Min. Width: 3/4" (19.1 mm)

Type FE—One-Piece Expandable Band

Min. ID: 2-1/2" (63.5 mm)
Min. Width: 1-1/4" (31.8 mm)

Duraband® Internal Reverse Bands

Type RN□—Internal Reverse Band (with bracket clamping)

This construction style is used to heat cylindrical surfaces from the inside on heaters 5-1/2" diameter and larger.

Type RNB—Reverse 1-Piece Construction

ID: 5-1/2" (139.7 mm) to 10" (254.0 mm)
Width: 1" (25.4 mm) to 3-1/2" (88.9 mm)
Maximum Voltage: 240VAC

Type RNS—Reverse 2-Piece Construction

ID: 10" (254.0 mm) to 20" (508.0 mm)
Width: 1" (25.4 mm) to 3-1/2" (88.9 mm)
Maximum Voltage: 240VAC

For IDs greater than 20", consult Tempco with your requirements.

Type RTWL— Internal Reverse Band (with wedge lock clamping)

This construction style is used to heat cylindrical surfaces from the inside on heaters less than 5" outside diameter.

ID: Less than 5-1/2" (139.7 mm)
Width: 1" to 3-1/2" (25.4 - 88.9 mm)

Duraband Partial Coverage

Type NS — 2-Piece With Built-In Brackets

Partial coverage band heaters are normally required when holes and cutouts will not allow the heater to sufficiently clear the machine obstructions. The preferred method of construction is the Two-Piece Band Heater with Built-In Brackets as illustrated. The heater is screwed down to the cylinder at the ends and the built-in Low Thermal Expansion Strap pulls the heater tightly against the cylinder being heated. The standard center of hole to edge of heater dimension is 1/4". When ordering, please provide the angle of coverage from center to center of the mounting screw holes as shown.

Type PS — One-Piece with Two-Piece Separate Strap with Padded Ends

The alternate method of partial coverage construction is the One-Piece Band Heater with a separate Two-Piece Strap. The two-piece strap itself is screwed down at the padded ends, allowing the heater to float between the pads as illustrated. When the strap is tightened, it will pull the heater against the cylinder being heated. The standard center of hole to edge of heater dimension is 1/4". When ordering, please provide the angle of coverage from center to center of the mounting screw holes as shown.

Type NB — One-Piece with Built-In Strap Clamping

Another alternate method of partial coverage construction. The one piece with clamp screws on both sides allows it to be secured to anchor points on either side of a barrel without drilling holes into the barrel.

Terminations

Stainless Steel Power Terminals: Type T1, Type T2 & Type T3

Available on any clamping or construction variation, the specially designed Stainless Steel Power Terminals are internally connected to the heater and are resistant to over-torquing. The screw terminals are virtually unbreakable. Secure tightening of the electrical connections is essential for safety and long heater life.

Duraband® Type T1 – Screw Terminals

Considered standard on most band heaters unless otherwise specified.

One-Piece Band

Standard Termination Location:
each side of gap; center of width

- * **Minimum Inside Diameter:** 2" (50.8 mm)
- * **Minimum Width:** 7/8" (22.2 mm)
- * **Post Terminals:** 10-32 standard except 8-32 on < 1" wide heaters & heaters with ID < 3"
- * **Max. Volts/Amps:** 480VAC/ 25A (10-32) or 20A (8-32)

Two-Piece Band

Standard Termination Location:
next to gaps on each half;
center of width

- * **Minimum Inside Diameter:** 2" (50.8 mm)
- * **Minimum Width:** 7/8" (22.2 mm)
- * **Post Terminals:** 10-32 standard except 8-32 on < 1" wide heaters & heaters with ID < 3"
- * **Max. Volts/Amps:** 480VAC/ 25A (10-32) or 20A (8-32) each half

One-Piece Expandable Band

Standard Termination Location:
each side of gap; center of width

- * **Minimum Inside Diameter:** 2-1/2" (63.5 mm)
- * **Minimum Width:** 1-1/4" (31.8 mm)
- * **Post Terminals:** 10-32 standard except 8-32 on heaters with ID < 3"
- * **Max. Volts/Amps:** 480VAC/ 25A (10-32) or 20A (8-32)

Duraband Type T2 – Screw Terminals

Recommended for narrow band heaters where screw terminals are preferred or the C2 terminal box protection is required.

One-Piece Band

Standard Termination Location:
next to gap; center of width

- * **Minimum Inside Diameter:** 2" (50.8 mm)
- * **Minimum Width:** 7/8" (22.2 mm)
- * **Post Terminals:** 10-32 standard except 8-32 on < 1" wide heaters & heaters with ID < 3"
- * **Max. Volts/Amps:** 480VAC/ 25A (10-32) or 20A (8-32)

Two-Piece Band

Standard Termination Location:
next to same gap on each half;
center of width

- * **Minimum Inside Diameter:** 2" (50.8 mm)
- * **Minimum Width:** 7/8" (22.2 mm)
- * **Post Terminals:** 10-32 standard except 8-32 on < 1" wide heaters & heaters with ID < 3"
- * **Max. Volts/Amps:** 480VAC/ 25A (10-32) or 20A (8-32) each half

One-Piece Expandable Band

Standard Termination Location:
next to gap; center of width

- * **Minimum Inside Diameter:** 2-1/2" (63.5 mm)
- * **Minimum Width:** 1-1/4" (31.8 mm)
- * **Post Terminals:** 10-32 standard except 8-32 on heaters with ID < 3"
- * **Max. Volts/Amps:** 480VAC/ 25A (10-32) or 20A (8-32)

Duraband® Type T3 – Screw Terminals

The preferred design on band heaters over 3" (76.2 mm) wide or when C3 terminal box is required.

One-Piece Band

Standard Termination Location:
next to gap; across center of width

- * **Minimum Inside Diameter:** 2" (50.8 mm)
- * **Minimum Width:** 2" (50.8 mm)
- * **Post Terminals:** 10-32 standard except 8-32 on 2" to 2-1/2" wide heaters & heaters with ID < 3"
- * **Max. Volts/Amps:** 480VAC/25A (10-32) or 20A (8-32)

Two-Piece Band

Standard Termination Location:
next to same gap on each half;
across center of width

- * **Minimum Inside Diameter:**
2" (50.8 mm)
- * **Minimum Width:** 2" (50.8 mm)
- * **Post Terminals:** 10-32 standard except 8-32 on 2" to 2-1/2" wide heaters & heaters with ID < 3"
- * **Max. Volts/Amps:** 480VAC/
25A (10-32) or 20A (8-32) each half

One-Piece Expandable Band

Standard Termination Location:
next to gap; across center of width

- * **Minimum Inside Diameter:**
2-1/2" (63.5 mm)
- * **Minimum Width:** 2" (50.8 mm)
- * **Post Terminals:** 10-32 standard except 8-32 on 2" to 2-1/2" wide heaters & heaters with ID < 3"
- * **Max. Volts/Amps:** 480VAC/
25A (10-32) or 20A (8-32)

Optional Igloo™ Ceramic Covers for Heaters with Screw Terminals

Igloo™ Ceramic Terminal Covers consist of two individual ceramic parts. Unlike conventional ceramic caps, Igloo fully insulates any standard #8 or #10 terminal lugs used for electrical hook-ups.

Limitations

To assemble Igloo covers, terminals should be at least 7/8" apart.

Min. ID: 2" (50.8 mm) **Min. Width:** 1-1/4" (31.7 mm)

Three types of Igloo™ bases are available:

- Type C6** – Double Port In-Line P/N CER-101-104
- Type C7** – Double Port 90° P/N CER-101-106
- Type C8** – Single Port P/N CER-101-107

Igloo™ caps are available in the following three screw terminal sizes:

- 10-32** – P/N CER-102-101
- 10-24** – P/N CER-102-104
- 8-32** – P/N CER-102-105

When ordering, specify the type of Igloo and the screw terminal size.

Exposed electrical wiring on band heater installations is a violation of Electrical Safety Codes including O.S.H.A.

Terminations

Low-Profile Button Terminals: Type B1, Type B2 & Type B3

Available on any clamping or construction variation, the specially designed Stainless Steel Button Terminals are internally connected to the heater and are resistant to over-torquing

while offering a low profile for tight spaces. They are virtually unbreakable. Secure tightening of the electrical connections is essential for safety and long heater life.

Duraband® Type B1 – Button Terminals

One-Piece Band

Standard Termination Location:
each side of gap; center of width

- * **Minimum Inside Diameter:** 2" (50.8 mm)
- * **Minimum Width:** 1-1/2" (38.1 mm)
- * **Screw Size:** 10-32 standard except 6-32 on IDs < 5"
- * **Maximum Volts:** 480VAC
- * **Maximum Amps:** 25A (10-32) or 20A (6-32)

Two-Piece Band

Standard Termination Location:
next to gaps on each half;
center of width

- * **Minimum Inside Diameter:** 2" (50.8 mm)
- * **Minimum Width:** 1-1/2" (38.1 mm)
- * **Screw Size:** 10-32 standard except 6-32 on IDs < 5"
- * **Maximum Volts/Amps:** 480VAC/ 25A (10-32) or 20A (6-32) each half

One-Piece Expandable Band

Standard Termination Location:
each side of gap; center of width

- * **Minimum Inside Diameter:** 2-1/2" (63.5 mm)
- * **Minimum Width:** 1-1/2" (38.1 mm)
- * **Screw Size:** 10-32 standard except 6-32 on IDs < 5"
- * **Maximum Volts/Amps:** 480VAC/ 25A (10-32) or 20A (6-32)

Duraband Type B2 – Button Terminals

One-Piece Band

Standard Termination Location:
next to gap; center of width

- * **Minimum Inside Diameter:** 2" (50.8 mm)
- * **Minimum Width:** 1-1/2" (38.1 mm)
- * **Screw Size:** 10-32 standard except 6-32 on IDs < 5"
- * **Maximum Volts:** 480VAC
- * **Maximum Amps:** 25A (10-32) or 20A (6-32)

Two-Piece Band

Standard Termination Location:
next to same gap on each half;
center of width

- * **Minimum Inside Diameter:** 2" (50.8 mm)
- * **Minimum Width:** 1-1/2" (38.1 mm)
- * **Screw Size:** 10-32 standard except 6-32 on IDs < 5"
- * **Maximum Volts/Amps:** 480VAC/ 25A (10-32) or 20A (6-32) each half

One-Piece Expandable Band

Standard Termination Location:
next to gap; center of width

- * **Minimum Inside Diameter:** 2-1/2" (63.5 mm)
- * **Minimum Width:** 1-1/2" (38.1 mm)
- * **Screw Size:** 10-32 standard except 6-32 on IDs < 5"
- * **Maximum Volts/Amps:** 480VAC/ 25A (10-32) or 20A (6-32)

View Product Inventory @ www.tempco.com

Duraband® Type B3 – Button Terminals

One-Piece Band

Standard Termination Location:
next to gap; across center of width

- * **Minimum Inside Diameter:** 2" (50.8 mm)
- * **Minimum Width:** 2-3/8" (60.3 mm)
- * **Screw Size:**
10-32 standard except 6-32 on IDs < 5"
- * **Maximum Volts:** 480VAC
- * **Maximum Amps:** 25A (10-32) or 20A (6-32)

Two-Piece Band

Standard Termination Location:
next to same gap on each half;
across center of width

- * **Minimum Inside Diameter:**
2" (50.8 mm)
- * **Minimum Width:** 2-3/8" (60.3 mm)
- * **Screw Size:** 10-32 standard except
6-32 on IDs < 5"
- * **Maximum Volts/Amps:** 480VAC/
25A (10-32) or 20A (6-32) each half

One-Piece Expandable Band

Standard Termination Location:
next to gap; across center of width

- * **Minimum Inside Diameter:**
2-1/2" (63.5 mm)
- * **Minimum Width:** 2-3/8" (60.3 mm)
- * **Screw Size:** 10-32 standard except
6-32 on IDs < 5"
- * **Maximum Volts/Amps:** 480VAC/
25A (10-32) or 20A (6-32)

Plain Lead Wire Terminations: Type L1, Type L2 & Type L4

Available on any clamping or construction variation.

Duraband Type L1 – Straight Lead Wires

The lead wires exit through a brass eyelet. The standard flexible leads are 10" long with 3" of fiberglass sleeving.

If longer leads are required, specify when ordering.

One-Piece Band

Standard Termination Location:
next to gap; center of width

- * **Minimum Inside Diameter:** 2" (50.8 mm)
- * **Minimum Width:** 1" (25.4 mm)
- * **Maximum Volts:** 480VAC
- * **Maximum Amps:** 10A

Two-Piece Band

Standard Termination Location:
next to same gap on each half;
center of width

- * **Minimum Inside Diameter:**
2" (50.8 mm)
- * **Minimum Width:** 1" (25.4 mm)
- * **Maximum Volts:** 480V each half
- * **Maximum Amps:** 10A each half

One-Piece Expandable Band

Standard Termination Location:
next to gap; center of width

- * **Minimum Inside Diameter:**
2-1/2" (63.5 mm)
- * **Minimum Width:** 1-1/4" (31.8 mm)
- * **Maximum Volts:** 480V
- * **Maximum Amps:** 10A

Terminations

Duraband® Type L2 – Lead Wires

Continued from previous page...

L2 is the preferred termination on all small diameter and small width band heaters. The standard flexible leads are 10" long with 3" of fiberglass sleeving.

If longer leads are required, specify when ordering.

One-Piece Band

Standard Termination Location:
each side of gap; edge of width

- * **Minimum Inside Diameter:** 7/8" (22.2 mm)
- * **Minimum Width:** 3/4" (19.1 mm)
- * **Maximum Volts:** 480VAC
- * **Maximum Amps:** 10A

Two-Piece Band

Standard Termination Location:
each side of each gap;
edge of width

- * **Minimum Inside Diameter:**
2" (50.8 mm)
- * **Minimum Width:** 3/4" (19.1 mm)
- * **Maximum Volts:** 480V each half
- * **Maximum Amps:** 10A each half

One-Piece Expandable Band

Standard Termination Location:
each side of gap;
edge of width

- * **Minimum Inside Diameter:**
2-1/2" (63.5 mm)
- * **Minimum Width:** 1-1/4" (31.8 mm)
- * **Maximum Volts:** 480V
- * **Maximum Amps:** 10A

Duraband Type L4 – Lead Wires

L4 is a suitable lead termination for small band heaters. The standard flexible leads are 10" long with 3" of fiberglass sleeving.

If longer leads are required, specify when ordering.

One-Piece Band

Standard Termination Location:
same side of gap; edge of width

- * **Minimum Inside Diameter:** 7/8" (22.2 mm)
- * **Minimum Width:** 1" (25.4 mm)
- * **Maximum Volts:** 480VAC
- * **Maximum Amps:** 10A

Two-Piece Band

Standard Termination Location:
each side of same gap;
center of width

- * **Minimum Inside Diameter:**
2" (50.8 mm)
- * **Minimum Width:** 1" (25.4 mm)
- * **Maximum Volts:** 480V each half
- * **Maximum Amps:** 10A each half

One-Piece Expandable Band

Standard Termination Location:
same side of gap; edge of width

- * **Minimum Inside Diameter:**
2-1/2" (63.5 mm)
- * **Minimum Width:** 1-1/4" (31.8 mm)
- * **Maximum Volts:** 480VAC
- * **Maximum Amps:** 10A

Abrasion Resistant Lead Terminations:

Type W1, Type W2, Type W2M, Type W3, Type W4 & Type W5M

Available on any clamping or construction variation.
Wire braid leads offer sharp bending not possible with armor cable.

Duraband® Type W1 & W1T – Straight Wire Braid Leads

Type W1

Type W1T

Type W1 – Braided lead wire crimped in place for heaters under 2-1/2" I.D. and/or under 1-1/4" width.

Type W1T – Braided lead wire attached with a threaded fitting for heaters over/equal 2-1/2" I.D. and over/equal 1-1/4" width.

One-Piece Band

Standard Termination Location:
next to gap; center of width

- * Minimum Inside Diameter: 2" (50.8 mm)
- * Minimum Width: 1" (25.4 mm)
- * Maximum Volts: 480VAC
- * Maximum Amps: 10A

The standard leads are 10" of wire braid over 12" of flexible leads.

If longer leads are required, specify when ordering.

Two-Piece Band

Standard Termination Location:
next to same gap on each half;
center of width

- * Minimum Inside Diameter: 2" (50.8 mm)
- * Minimum Width: 1" (25.4 mm)
- * Maximum Volts: 480VAC each half
- * Maximum Amps: 10A each half

One-Piece Expandable Band

Standard Termination Location:
next to gap; center of width

- * Minimum Inside Diameter: 2-1/2" (63.5 mm)
- * Minimum Width: 1-1/4" (31.8 mm)
- * Maximum Volts: 480VAC
- * Maximum Amps: 10A

Duraband Type W2 – Wire Braid Leads

The W2 wire braid exits at 180° from the gap for special nozzle heating applications. Sleeving is used for additional protection. The standard leads are 10" of wire braid over 12" of flexible leads with 3" of fiber-glass sleeving.

If longer leads are required, specify when ordering.

Note: Type W2 is not available on Two-Piece or One-Piece Expandable Duraband Heaters

One-Piece Band

Standard Termination Location:
opposite the gap; edge of width

- * Minimum Inside Diameter: 7/8" (22.2 mm)
- * Minimum Width: 1-1/8" (28.6 mm)
- * Maximum Volts: 480VAC
- * Maximum Amps: 10A

CONTINUED

Terminations

Duraband® Type W3 – Single Wire Braid Leads

Continued from previous page...

Highly recommended for nozzle heating applications. The standard leads are 10" of wire braid over 12" of flexible leads with 3" of fiberglass sleeving.

If longer leads are required, specify when ordering.

One-Piece Band

Standard Termination Location:
each side of gap; edge of width

- * **Minimum Inside Diameter:**
3/4" (19.1 mm)
- * **Minimum Width:** 7/8" (22.2 mm)
- * **Maximum Volts:** 480VAC
- * **Maximum Amps:** 10A

Two-Piece Band

Standard Termination Location:
each side of each gap; edge of width

- * **Minimum Inside Diameter:**
2" (50.8 mm)
- * **Minimum Width:** 3/4" (19.1 mm)
- * **Maximum Volts:** 480VAC each half
- * **Maximum Amps:** 10A each half

One-Piece Expandable Band

Standard Termination Location:
each side of gap; edge of width

- * **Minimum Inside Diameter:**
2-1/2" (63.5 mm)
- * **Minimum Width:** 1-1/4" (31.8 mm)
- * **Maximum Volts:** 480VAC
- * **Maximum Amps:** 10A

Duraband Type W4 – Wire Braid Leads On One Side

A suitable termination for nozzle heating applications. The standard leads are 10" of wire braid over 12" of flexible leads.

If longer leads are required, specify when ordering.

One-Piece Band

Standard Termination Location:
next to gap; edge of width

- * **Minimum Inside Diameter:**
7/8" (22.2 mm)
- * **Minimum Width:** 1" (25.4 mm)
- * **Maximum Volts:** 480VAC
- * **Maximum Amps:** 10A

Two-Piece Band

Standard Termination Location:
next to same gap on each half;
edge of width

- * **Minimum Inside Diameter:**
2" (50.8 mm)
- * **Minimum Width:** 1" (25.4 mm)
- * **Maximum Volts:** 480VAC each half
- * **Maximum Amps:** 10A each half

One-Piece Expandable Band

Standard Termination Location:
next to gap; edge of width

- * **Minimum Inside Diameter:**
2-1/2" (63.5 mm)
- * **Minimum Width:** 1-1/4" (31.8 mm)
- * **Maximum Volts:** 480VAC
- * **Maximum Amps:** 10A

Duraband® Type W2M – Right-Angle Wire Braid Leads, 90° to Heater

Stainless Steel Wire Braid exits perpendicular to the heater centerline through a low profile stainless steel cap. This cap acts as a strain relief which protects against excessive flexing or pulling of the lead wire. The standard leads are 10" of wire braid over 12" of flexible leads.

If longer leads are required, specify when ordering.

Note: Stainless steel construction may be required for widths of 7/8" (22.2 mm) to 1-5/8" (41.3 mm).

One-Piece Band

Standard Termination Location:
opposite of gap; center of width

- * **Minimum Inside Diameter:**
1-1/2" (38.1 mm)
- * **Minimum Width:** 1-1/4" (31.8 mm)
- * **Maximum Volts:** 480VAC
- * **Maximum Amps:** 10A

Two-Piece Band

Standard Termination Location:
next to same gap on each half;
center of width

- * **Minimum Inside Diameter:**
2" (50.8 mm)
- * **Minimum Width:** 1-1/4" (31.8 mm)
- * **Maximum Volts:** 480VAC each half
- * **Maximum Amps:** 10A each half

One-Piece Expandable Band

Standard Termination Location:
next to gap; center of width

- * **Minimum Inside Diameter:**
2-1/2" (63.5 mm)
- * **Minimum Width:** 1-1/4" (31.8 mm)
- * **Maximum Volts:** 480VAC
- * **Maximum Amps:** 10A

Duraband Type W5M – Right-Angle Wire Braid Leads, Parallel to Heater

Stainless Steel Wire Braid exits parallel to the heater centerline through a low profile stainless steel cap. This cap acts as a strain relief which protects against excessive flexing or pulling of the lead wire. The standard leads are 10" of wire braid over 12" of flexible leads.

If longer leads are required, specify when ordering.

Note: Stainless steel construction may be required for widths of 7/8" (22.2 mm) to 1-5/8" (41.3 mm).

One-Piece Band

Standard Termination Location:
opposite of gap; center of width

- * **Minimum Inside Diameter:**
1-1/2" (38.1 mm)
- * **Minimum Width:** 1-1/4" (31.8 mm)
- * **Maximum Volts:** 480VAC
- * **Maximum Amps:** 10A

Two-Piece Band

Standard Termination Location:
next to same gap on each side;
center of width

- * **Minimum Inside Diameter:**
2" (50.8 mm)
- * **Minimum Width:** 1-1/4" (31.8 mm)
- * **Maximum Volts:** 480VAC each half
- * **Maximum Amps:** 10A each half

One-Piece Expandable Band

Standard Termination Location:
next to gap; center of width

- * **Minimum Inside Diameter:**
2-1/2" (63.5 mm)
- * **Minimum Width:** 1-1/4" (31.8 mm)
- * **Maximum Volts:** 480VAC
- * **Maximum Amps:** 10A

Terminations

Duraband® Cable Terminations: Type R1, Type R2 & Type R3

Available on any clamping or construction variation. Armor cable provides far superior protection to lead wires where abrasion is a constant problem. The standard leads are 10" of armor cable over 12" of flexible leads.

If longer leads are required, specify when ordering.

Duraband® Type R1 – Straight Armor Cable

Type R1A – Galvanized armor cable crimped in place for heaters under 2-1/2" I.D. and/or under 1-1/4" width.

Type R1AT – Galvanized armor cable attached with a threaded fitting for heaters over/equal 2-1/2" I.D. and over/equal 1-1/4" width.

Type R1B – Stainless Steel armor cable crimped in place for heaters under 2-1/2" I.D. and/or under 1-1/4" width.

Type R1BT – Stainless Steel armor cable attached with a threaded fitting for heaters over/equal 2-1/2" I.D. and over/equal 1-1/4" width.

Type R1C – Galvanized armor cable, tack welded

Type R1D – SS armor cable, tack welded

Type R1E – Galvanized armor cable, full silver brazing

Type R1F – SS armor cable, full silver brazing

One-Piece Band

Standard Termination Location:
next to gap; center of width

- * **Minimum Inside Diameter:** 1-1/2" (38.1 mm)
- * **Minimum Width:** 1" (25.4 mm)
- * **Maximum Volts:** 480VAC
- * **Maximum Amps:** 10A

Two-Piece Band

Standard Termination Location:
next to same gap on each half;
center of width

- * **Minimum Inside Diameter:** 2" (50.8 mm)
- * **Minimum Width:** 1" (25.4 mm)
- * **Maximum Volts/Amps:** 480VAC/10A each half

One-Piece Expandable Band

Standard Termination Location:
next to gap; center of width

- * **Minimum Inside Diameter:** 2-1/2" (65.3 mm)
- * **Minimum Width:** 1-1/4" (31.8 mm)
- * **Maximum Volts/Amps:** 480VAC/10A

Duraband Type R2 – Right-Angle Armor Cable

Type R2A – Galvanized armor cable, crimped

Type R2B – SS armor cable, crimped

Type R2C – Plain leads, no cable

One-Piece Band

Standard Termination Location:
next to gap; center of width

- * **Minimum Inside Diameter:** 1-1/2" (38.1 mm)
- * **Minimum Width:** 1-1/4" (31.8 mm)
- * **Maximum Volts:** 480VAC
- * **Maximum Amps:** 10A

Two-Piece Band

Standard Termination Location:
next to same gap on each half;
center of width

- * **Minimum Inside Diameter:** 2" (50.8 mm)
- * **Minimum Width:** 1-1/4" (31.8 mm)
- * **Maximum Volts/Amps:** 480VAC/10A each half

One-Piece Expandable Band

Standard Termination Location:
next to gap; center of width

- * **Minimum Inside Diameter:** 2-1/2" (63.5 mm)
- * **Minimum Width:** 1-1/4" (31.8 mm)
- * **Maximum Volts/Amps:** 480VAC/10A

Duraband® Type R3 – Removable Armor Cable

Type R3A – Plain Leads & Female Fitting

Type R3B – Leads, Male Adapter & Galvanized Armor

Type R3C – Leads, Male Adapter & SS Armor

Recommended on applications where removable armor is required. The fitting will accept the standard armor cable connector. The standard leads are 10" of armor cable over 12" of flexible leads.

If longer leads are required, specify when ordering.

Two-Piece Band

Standard Termination Location: next to same gap on each half; center of width

- * **Minimum Inside Diameter:** 2" (50.8 mm)
- * **Minimum Width:** 1-1/4" (31.7 mm)
- * **Maximum Volts/Amps:** 480VAC/10A each half

One-Piece Band

Standard Termination Location: next to gap; center of width

- * **Minimum Inside Diameter:** 1-1/2" (38.1 mm)
- * **Minimum Width:** 1-1/4" (31.7 mm)
- * **Maximum Volts/Amps:** 480VAC/10A

One-Piece Expandable Band

Standard Termination Location: next to gap; center of width

- * **Minimum Inside Diameter:** 2-1/2" (63.5 mm)
- * **Minimum Width:** 1-1/4" (31.8 mm)
- * **Maximum Volts/Amps:** 480VAC/10A

Duraband Type S1 – Lead Wire Spring Strain Relief

A strain relief spring is attached to the heater at the termination exit to reduce strain on leads subjected to excessive flexing. The spring is 2-1/8" long. The flexible standard leads are 10" long with 3" of fiberglass sleeving. *If longer leads are required, specify when ordering.*

Type S1A – Plain Leads and Strain Relief Spring crimped in place for heaters under 2-1/2" I.D. and/or under 1-1/4" width.

Type S1AT – Plain Leads and Strain Relief Spring attached with a threaded fitting for heaters over/equal 2-1/2" I.D. and over/equal 1-1/4" width.

Type S1B – Stainless Steel Wire Braided Leads and Strain Relief Spring crimped in place for heaters under 2-1/2" I.D. and/or under 1-1/4" width. 10" of braid over 12" of flexible leads is standard.

Type S1BT – Stainless Steel Wire Braided Leads and Strain Relief Spring attached with a threaded fitting for heaters over/equal 2-1/2" I.D. and over/equal 1-1/4" width. 10" of braid over 12" of flexible leads is standard.

One-Piece Band

Standard Termination Location: next to gap; center of width

- * **Minimum Inside Diameter:** 2" (50.8 mm)
- * **Minimum Width:** 1-1/4" (31.8 mm)
- * **Maximum Volts:** 480VAC
- * **Maximum Amps:** 10A

Two-Piece Band

Standard Termination Location: next to same gap on each half; center of width

- * **Minimum Inside Diameter:** 2" (50.8 mm)
- * **Minimum Width:** 1-1/4" (31.75 mm)
- * **Maximum Volts/Amps:** 480VAC/10A each half

One-Piece Expandable Band

Standard Termination Location: next to gap; center of width

- * **Minimum Inside Diameter:** 2-1/2" (63.5 mm)
- * **Minimum Width:** 1-1/4" (31.75 mm)
- * **Maximum Volts/Amps:** 480VAC/10A

Terminations

General Purpose Terminal Boxes: Type C2 and Type C5

Available with any construction or clamping variation. They are a simple & economical way to protect employees from electric shock or prevent electric shorts that can result from exposed wiring on band heater electrical installations.

The Heavy Duty Terminal Boxes have 1/2" knockouts that will accept standard armor cable connectors. They can be field assembled on band heaters that have a center distance between terminal

screws of 7/8". Boxes can be pre-wired with galvanized armor, stainless steel armor, wire braid or plain leads. If a Low Profile Box with cable or leads is required, it is strongly recommended to order it pre-wired by the factory.

The standard leads are 10" of cable or wire braid over 12" of flexible leads. *If longer leads are required, specify when ordering.*

Duraband® Type C2 – Standard Terminal Boxes

One-Piece Band

Standard Termination Location:
next to gap; center of width

- * **Minimum Inside Diameter:** 2-1/2" (63.5 mm)
- * **Minimum Width:** 1" (25.4 mm) Heater widths between 1" and 2-1/2" require a minimum ID of 5-1/2" or greater.
- * **Maximum Volts/Amps:** 480VAC/25A

Type C2 □ – Standard Box

- C2A** – Box only
- C2B** – w/galvanized armor
- C2C** – w/stainless steel armor
- C2D** – w/wire braid

Two-Piece Band

Standard Termination Location:

next to same gap on each half; center of width

- * **Minimum Inside Diameter:** 3" (76.2 mm)
- * **Minimum Width:** 1" (25.4 mm) Heater widths between 1" and 2-1/2" require a minimum ID of 5-1/2" or greater.
- * **Max. Volts/Amps:** 480VAC/25A each half

One-Piece Expandable Band

Standard Termination Location:
next to gap; center of width

- * **Minimum Inside Diameter:** 2-1/2" (63.5 mm)
- * **Minimum Width:** 1" (25.4 mm) Heater widths between 1" and 2-1/2" require a minimum ID of 5-1/2" or greater.
- * **Maximum Volts/Amps:** 480VAC/25A

Duraband Type C5 – Low Profile Terminal Boxes

One-Piece Band

Standard Termination Location:
next to gap; center of width

- * **Minimum Inside Diameter:** 2-1/2" (63.5 mm)
- * **Minimum Width:** 1" (25.4 mm) Heater widths between 1" and 2-1/2" require a minimum ID of 5-1/2" or greater.
- * **Maximum Volts/Amps:** 480VAC/25A

Type C5 □ – Low Profile Box

- C5A** – box only
- C5B** – w/galvanized armor
- C5C** – w/SS armor
- C5D** – w/wire braid
- C5J** – w/plain leads

Two-Piece Band

Standard Termination Location:

next to same gap on each half; center of width

- * **Minimum Inside Diameter:** 3" (76.2 mm)
- * **Minimum Width:** 1" (25.4 mm) Heater widths between 1" and 2-1/2" require a minimum ID of 5-1/2" or greater.
- * **Max. Volts/Amps:** 480VAC/25A each half

One-Piece Expandable Band

Standard Termination Location:
next to gap; center of width

- * **Minimum Inside Diameter:** 2-1/2" (63.5 mm)
- * **Minimum Width:** 1" (25.4 mm) Heater widths between 1" and 2-1/2" require a minimum ID of 5-1/2" or greater
- * **Maximum Volts/Amps:** 480VAC/25A

Quick Disconnect Plugs: Type P1, Type P2, Type P3 and Type P4

Available on any construction or clamping variation. These plug assemblies are highly recommended & should be used whenever possible. The combination of plug & cup assembly along with armor cable covered leads eliminates all live exposed terminals or wiring that can be a potential hazard to employees or machinery.

Type P1 and P3 assemblies are available with a straight or right-

angle plug. Type P2 and P4 plug assemblies have a lower profile and are available with a straight plug only.

To simplify installation, band heaters with these assemblies can be supplied pre-wired, using high temperature lead wires.

The standard leads are 10" of armor cable over 12" of flexible leads. *If longer leads are required, specify when ordering.*

Duraband® Type P1 – High Temperature Quick Disconnect Plugs

Type P1 □

- P1K** – Cup assembly only
- P1L** – w/straight plug only
- P1M** – w/90° plug only
- P1N** – w/str. plug & galvanized cable
- P1O** – w/str. plug & SS cable
- P1P** – w/str. plug & wire braid
- P1Q** – w/90° plug & galvanized cable
- P1R** – w/90° plug & SS cable
- P1S** – w/90° plug & wire braid

Plug Electrical Ratings

- * 2-Pole 3-Wire Grounding
- * Maximum Volts: 250 VAC
- * Maximum Amps: 16A
- * Maximum Temperature: 572°F (300°C)

One-Piece Band

Standard Termination Location:
next to gap; center of width

- * **Minimum Inside Diameter:** 2" (50.8 mm)
- * **Minimum Width:** 1-1/2" (38.1 mm)
If width is between 1-1/2" and 2", minimum diameter is 5-1/2".
If width is greater than 2", minimum diameter is 2".

Two-Piece Band

Standard Termination Location:
next to same gap on each half;
center of width

- * **Minimum Inside Diameter:** 2" (50.8 mm)
- * **Minimum Width:** 1-1/2" (38.1 mm)
If width is between 1-1/2" and 2", minimum diameter is 5-1/2".
If width is greater than 2", minimum diameter is 2".

One-Piece Expandable Band

Standard Termination Location:
next to gap; center of width

- * **Minimum Inside Diameter:** 2-1/2" (63.5 mm)
- * **Minimum Width:** 1-1/2" (38.1 mm)
If width is between 1-1/2" and 2", minimum diameter is 5-1/2".
If width is greater than 2", minimum diameter is 2".

Terminations

Duraband® Type P2 – High Temperature Quick Disconnect Plugs

Continued from previous page...

Type P2 □ – Low Profile Assembly

- P2F** – Low profile assembly only
- P2G** – w/straight plug only
- P2H** – w/str. plug and galvanized cable
- P2J** – w/str. plug and SS cable
- P2K** – w/str. plug and wire braid

One-Piece Band

Standard Termination Location:
next to gap; center of width

- * **Minimum Inside Diameter:** 3" (76.2 mm)
- * **Minimum Width:** 2-1/2" (63.5 mm)

Plug Electrical Ratings

- * **2-Pole 3-Wire Grounding**
- * **Maximum Volts:** 250 VAC
- * **Maximum Amps:** 16A
- * **Maximum Temperature:** 572°F (300°C)

Two-Piece Band

Standard Termination Location:
next to same gap on each half;
center of width

- * **Minimum Inside Diameter:** 3" (76.2 mm)
- * **Minimum Width:** 2-1/2" (63.5 mm)

One-Piece Expandable Band

Standard Termination Location:
next to gap; center of width

- * **Minimum Inside Diameter:** 3" (76.2 mm)
- * **Minimum Width:** 2-1/2" (63.5 mm)

Duraband Type P3 – DIN 49458 A/B Quick Disconnect Plugs

One-Piece Band

Standard Termination Location:
next to gap; center of width

- * **Minimum Inside Diameter:** 3" (76.2 mm)
- * **Minimum Width:** 1-1/2" (38.1 mm)

Plug Electrical Ratings

- * **2-Pole 3-Wire Grounding**
- * **Maximum Volts:** 250 VAC
- * **Maximum Amps:** 16A
- * **Maximum Temperature:** 392°F (200°C)

Standard Pin Orientation

Type P3 □ – Vertical Box Assembly

- P3A** – Box assembly only
- P3B** – Box assembly w/straight plug
- P3C** – Box assembly w/right-angle plug only

Two-Piece Band

Standard Termination Location:
next to same gap on each half;
center of width

- * **Minimum Inside Diameter:** 3" (76.2 mm)
- * **Minimum Width:** 1-1/2" (38.1 mm)

One-Piece Expandable Band

Standard Termination Location:
next to gap; center of width

- * Minimum Inside Diameter: 3" (76.2 mm)
- * Minimum Width: 2-1/2" (63.5 mm)

Special Duraband® Construction Options

Thermocouple Bayonet Adapter

A standard Bayonet Adapter facilitates the installation of an external thermocouple with a standard bayonet cap. The standard location for the adapter is 90° from the gap. Specify without through hole for heater sensing or with through hole for load sensing. For heaters less than 1" wide order separate strap clamping and utilize the gap for the thermocouple.

Refer to pages 14-3 and 14-4 for a complete selection of thermocouples available from stock.

Thermocouple Coupling

The Thermocouple Coupling facilitates the installation of an external thermocouple with a threaded fitting to sense the temperature of the band. The standard location for the coupling is 90° from the gap. Specify without through hole for heater sensing or with through hole for load sensing.

Available Bushing Sizes:

Thread	D	H
1/8-27 NPT	9/16"	5/8"
1/4-18 NPT	3/4"	11/16"
3/8-18 NPT	7/8"	5/8"
M12-1.75 mm	3/4"	1/2"

Holes and Cutouts

Holes and cutouts are normally required in band heaters for clearance for thermocouple probes or holding bolts. An oversize gap can in many cases serve the same purpose, saving the expense of the hole.

Using the center of the gap as a starting point, specify the location of the center-point of the hole or cutout in terms of degrees and the distance from the edge of the heater. In addition, state the size of the hole or cutout.

For critical hole and cutout locations, a detailed drawing will be required.

Note: A minimum of 1/2" is required from the hole to the edge of the heater.

Hinged Two-Piece Band

The Hinged Two-Piece Band Heater is connected with a continuous hinge for easy installation and removal. This heater can be opened and closed as often as is necessary. The preferred method of clamping is latch and trunnion. It is available with any screw or lead variation. When ordering, specify watts and volts each half.

Minimum Width: 1-3/8" (34.9 mm)

Special Mica Insulated Heater Construction Variations

Ring Heaters

When ordering Ring Heaters, specify inside and outside diameters. If mounting holes are required, specify location and hole size. For critical hole and cutout locations, a detailed drawing will be required.

Special Mica Insulated Heater Construction Variations (continued)

Square, Rectangular, or Hexagon Bands

Square or Rectangular band heaters are normally used for heating dies on plastic extruders, or the barrels of twin screw extruders. They can be made in either one- or two-piece construction but two-piece construction with **Style 1** Clamping (see below) is recommended.

Hexagon shaped band heaters are used on the hex shaped portion of the nozzle on injection molding machines. These types of heaters are strictly made to customer specifications with bent-up flange clamping only.

Clamping Styles – Three clamping styles are used on square and rectangular band heaters:

Style 1 for 2-piece heaters: bent-up flange clamping at the corners provides the most uniform clamping force and should be used whenever possible.

Maximum Recommended Watt Density: 25 w/in²

Style 2 for 2-piece heaters: bent-up flange clamping or built-in strap brackets at the sides requires a minimum “B” dimension of 3.75” (95.3 mm).

Maximum Recommended Watt Density: 20 w/in²

Style 3 for 1-piece heaters: bent-up flange clamping or built-in strap brackets at the sides requires a minimum “A” dimension of 3.75” (95.3 mm).

Maximum Recommended Watt Density: 25 w/in²

Ordering Information

- Square, Rectangular or Hex
- Select Clamping Style 1, 2 or 3
- Specify inside dimensions – Square or Rectangular: “A” and “B”
Hexagon: Specify internal dimension across flats
- Width: Minimum 3/4” (19.1 mm)
- Wattage: per half on two-piece heaters
- Voltage: per half on two-piece heaters
- Termination (see pages 1-32 through 1-45)
- Lead Cable/Braid Length
- Special Features (see page 1-46)
- Provide drawing or sample part when possible

⚠ WARNING: Cancer and Reproductive Harm - www.P65Warnings.ca.gov.

Cone Shapes

Cone Shaped Heaters are normally used for special heating applications when heat is required for hoppers or funnels. They are made strictly to customer specifications. The preferred method of attachment is with built-in bracket clamping. When ordering or for quoting purposes, supply a detailed drawing or sample part. Include the top ID, bottom ID, and the vertical rise or heater width.

Duraband Features

Additional Duraband® Heater Features

Electrical Variations

Three-Phase On very high wattage band heaters it would be advantageous to set up the wiring three-phase to reduce the current load across a single conductor. Three-Phase wiring is available on select clamping/construction or termination variation (termination location is subject to engineering approval).

Min. ID: 3" (76.2 mm), **Min. Width:** 2" (50.8 mm)

Dual Voltage Band heaters can be designed using 3-wire series/parallel circuits for dual voltage applications. Whether the heater is run on the higher or lower voltage, the wattage will be the same. Dual Voltage wiring is available on any clamping/construction or termination variation.

Ground Terminal or Lead

For those applications requiring a separate ground terminal or lead attached to the heater sheath. A Ground Terminal or Lead is available on any clamping/construction or termination variation.

Single Phase/Three Phase Duraband Heaters can be designed with multiple circuits to operate single or three-phase.

Built-In Thermocouples

Heaters can be manufactured with a Built-In Thermocouple to closely control the temperature of the heater.

Type J or K thermocouples are available with fiberglass, wire braid or any other required insulation.

Consult Tempco with your requirements.

Construction Variations

All Stainless Steel Construction Mica band heaters can be constructed with the external sheath made entirely from stainless steel. This allows the Duraband to reach the maximum temperature of 1200°F (650°C). All Stainless Steel Construction is available on any clamping/construction or termination variation.

Other Sheath Materials Other sheath materials, such as rust-resistant steel, Monel®, aluminum, or copper are also available for unique applications.

CONSULT TEMPCO
WITH YOUR REQUIREMENTS –
WE HAVE THE RIGHT SOLUTIONS

Lead Variations

Electrical Plugs Industry standard NEMA Twist-Lock® electrical plugs are available. The plugs can be attached to fiberglass leads, armor cable or wire braid. Electrical Plugs can be added to any clamping/construction or termination variation.

See page 15-15 for additional Twist-Lock electrical plugs.

Terminal Lugs Various types of crimp terminals can be attached to the heater leads to make wiring into applications quick and easy. High temperature 1200°F (649°C) ring terminals and nylon or PVC insulated terminals are available. Spade, ring, and right-angle or straight quick disconnect type terminals can be attached to the leads.

Reference	NEMA P or R	Amps	Volts	Plug Part Number	Connectors (Female) Part Number
P4 twist lock	L5-15	15A	125V	EHD-102-113	EHD-103-104
P5 twist lock	L6-15	15A	250V	EHD-102-121	EHD-103-107
P9 twist lock	L2-20	20A	250V	EHD-102-104	N/A

Duraband® and Mica Insulated Heater Special Custom Designs

Variety and Versatility in Mica Insulated Heaters. No other heater band has the design and manufacturing flexibility of mica insulated heaters. Tempco's flexible CNC sheet metal fabricating machines, custom developed engineering programs with built-in intelligence, and experienced and talented engineering staff allow us to push the limits on band heater designs.

Throughout our catalog we show Tempco's standard specifications and most popular designs. However, as a custom heating element manufacturer, we recognize that many applications require non-standard and unique designs.

At Tempco, we are constantly challenged by our customers to solve their heating applications. We have the experience, technical knowledge and manufacturing capability to solve all your heating problems with unique heater designs. You should use

Tempco's talent and capabilities to your benefit to solve your specific heating problem in an expeditious and cost effective manner.

The following pictures show some of the heater designs that we have developed for special applications. Next time, when you have a special application and you want someone to work with you and "think outside the box" to solve your specific heating application, call Tempco.

We haven't seen all heating applications, but most likely our experienced staff has seen and solved more heating problems than you have seen.

Use our knowledge and experience to work for you. Challenge us! You will be glad you did.

We Welcome Your Inquiries.

“Sinuated” Element Construction for Commercial OEM Applications

An alternative to wound ribbon core heaters is the sinuated heater element. In this type of construction, the heating element resistance wire is sinuated, or “formed” back and forth without a middle core layer of mica insulation. The heating element is then sandwiched between two layers of specially selected mica insulation to provide excellent thermal conductivity and dielectric strength.

The sinuated formed element lends itself to lower temperature and watt density applications where high watt density construction is not required.

Typical Applications (Cylindrical Surfaces)

- *Food and Candy Extruders*
- *Vending Machines*
- *Commercial Food Equipment*
- *Food Service Warming Items*
- *Laboratory and Scientific Apparatus*
- *Photographic Equipment*
- *Incubators*

The Solution for Low to Medium Temperature Cylindrical and Flat Surface Heating Applications

Typical Applications (Flat Surfaces)

- *Laminating*
- *Food Service Warming Items*
- *Radiant Heating*
- *Incubators*

This design is widely used in food service and the farming industry. By careful selection of economical materials used for these low temperature applications, significant cost savings can be realized compared to standard mica heaters.

Contact Tempco for Complete Product Details.

▼ Installation ▼ RECOMMENDATIONS

1. Disconnect electric power to the machine and/or heaters prior to installing or replacing heaters.
2. Do not install heaters in areas where combustible gases, vapor or dust is present.
3. Use as many narrow band heaters as the application will permit. 1-1/2" through 3" wide heaters are recommended.
4. Using a heater that closely matches the wattage requirements will decrease the frequency of cycling and temperature overshoot, thereby increasing the life of the heater.
5. Make certain that all barrel surfaces are clean and have a smooth finish. Any contaminants or imperfections on the surface can cause premature heater failure.
6. Tempco expandable type Mica Band Heaters may be opened once at the gap to fit on the barrel. Do not open these heaters beyond their specified heater diameter.

Do not open Tempco One-Piece Non-Expandable Type mica band Heaters. Opening of these heaters can damage Mica Insulation and will create electrical short circuits.

7. Position heater bands on the barrel.
8. Securely tighten heater bands around the barrel. Clamping force must be equally distributed on heaters with more than one set of clamping brackets.
Recommended clamping bolt torque is 10 ft./lbs.
9. For heaters with screw terminals, remove the top nut and flat washers from the power screw terminals. Do not remove or loosen the bottom nut on the power screw terminals. The bottom nut is tightened to 60 in./lbs. at the factory. A loose bottom nut may cause premature heater failure.

Installation

Accessories Available

IMMEDIATE DELIVERY!

- * High Temperature Terminal Lugs
- * Igloo™ Ceramic Terminal Covers
- * UL Listed Plugs
- * High Temperature Lead Wire 842°F (450°C)
- * Armor Cable
- * Stainless Steel Braid
- * High Temperature Sleaving
- * High Temperature Mica Insulated Wiring Harnesses 842°F (450°C)
- * Thermocouples
- * Temperature Controllers
- * High Temperature Fiberglass Tape

10. All electrical wiring of heater bands should be done by a qualified electrician.
 - a. Use only Stainless Steel or other high temperature lugs to prevent material degradation when exposed to high temperatures over a prolonged period of time.

DO NOT USE COPPER OR PLATED COPPER LUGS.

- b. Use only lead wire with high temperature insulation and proper gauge size.
 - c. When connecting power leads to screw terminals make certain that barrels of terminal lugs are not facing down toward the heater case, which will create a short circuit.
Tighten the top nut to 30 in/lbs.
 - d. Make certain power lead wires do not make contact with hot heater surface to avoid degradation of lead wire, as this can cause electrical short circuits.
 - e. Make sure the voltage input to the heater bands does not exceed the voltage rating that is stamped on the heater band.
 - f. It is recommended that an amperage reading is taken for each heater to verify proper wiring.
(Amps = Watts/Volts)

11. Insulate all live electrical wires per applicable safety standards.
12. Begin heater band re-tightening procedure. Be sure to wear protective gloves.
 - a. Energize heater bands and allow the heater to reach 300°F (149°C). This usually takes between 3 and 5 minutes.
 - b. Turn off power and immediately re-tighten the heater bands to 10 ft./lbs. Turn power back on.
13. Install shrouds around the machine to meet applicable safety requirements.
14. Once installed, check surroundings to make sure that contaminants won't get on the heater while the unit is in operation. Accumulation of contaminants on heaters can cause premature heater failure.
15. Insulating blanket installations must have band heater retightening sequence (#12) completed before blanket installation. Lead wires must exit the insulation blanket as soon as possible; do not entrap lead wires between heater sheath and insulation blanket.

It is imperative that upon start-up of new machines at customer facilities, all of the aforementioned parameters are double checked by qualified field service personnel.

Exposed electrical wiring on band heater installations is a violation of Electrical Safety Codes including O.S.H.A.

Ordering Information

See page 1-48

Stock and Standard (Non-Stock) Mica Insulated Band Heaters for Plastic Injection Molding Machines

Optional Igloo™ ceramic covers can fully insulate any standard #8 or #10 terminal lugs used for electrical hook-ups. See page 1-33.

Design Features:

- * Features unbreakable 10-32 screw terminals.
- * Larger heaters (dia. 2-1/2" or greater) are designed as one-piece expandable type, enabling you to open up the heater to the diameter of the barrel for easy installation.
- * Heaters less than 1-1/2" wide have separate straps — **Type SE**

Ceramic Insulated Band Heaters

- A** General purpose terminal box offers excellent protection to exposed terminals. To simplify electrical wiring, the box has a 1/2" trade size knockout (actual dia. 7/8") that will accept standard conduit or flexible armor cable connectors.
- B** Stainless steel screw terminals connected to stranded nickel wire designed to provide maximum amperage carrying capacity.
- C** Built-In ceramic fiber insulation 1/4" thick standard on all Ceramic Bands will reduce power consumption by 25 to 30 percent. Further reduction can be obtained with optional 1/2" thick insulation. Specially designed mounting brackets with 1/4"-20 socket cap screws are used to securely draw the heating element assembly against the cylinder evenly and tightly across its entire width. Brackets are located 180° from the screw terminals.
- D** Helically wound nickel-chrome resistance wire strung through specially designed ceramic insulating bricks.
- E** Tempco's ceramic insulating bricks provide excellent dielectric strength at high temperatures and high voltages. Interlocking ceramic brick construction is used where applicable to allow for additional heater widths and to improve the rigidity of the heater.
- F** Stainless steel housing with serrated edges provides maximum flexibility for ease of installation.

REDUCE HEAT LOSS

CONSERVE ENERGY

MAXIMIZE OPERATOR COMFORT

REDUCE OVERALL OPERATION COST

Ceramic Band Heaters Are Designed To Conserve Energy and Improve Operation Efficiency

Design Features

- * Built-In Thermal Insulation
- * Conserves Electrical Energy
- * Minimum Heat Loss
- * Fully Flexible For Easy Installation
- * Good Temperature Uniformity
- * Longer Heater Life
- * Various Constructions & Terminations
- * Heats Through Conduction and Radiation
- * Designed to Your Specifications

Tempco Ceramic Insulated Band Heaters

are specifically designed and engineered to meet the ever increasing demand for energy conservation and to improve operation efficiency. The Ceramic Band Heaters are capable of generating the higher temperatures essential to process today's high temperature resins. Electrical energy savings are achieved by using a 1/4" thick ceramic fiber insulating blanket, reducing power consumption by 25 to 30 percent. Because of the low thermal conductivity of the ceramic fiber insulation, the external surface temperature of the Ceramic Band Heater is approximately 400°F while running the inside surface temperature at 1200°F.

Ceramic Band Heaters transmit heat through both conduction and radiation. The element winding is designed to run at maximum temperature and heat the ceramic blocks to the point at which they radiate energy into the barrel as well as conduct energy by being in contact with the barrel. Therefore, the fit is not as critical as in other types of bands.

Tempco Ceramic Band Heaters have become extremely popular among Original Equipment Manufacturers as the standard heaters for the barrels of Plastic Injection Molding Machines, Extruders, and Blow Molding Equipment.

Variations and Advantages

Ceramic Band Heaters are manufactured in a full range of standard construction variations, physical dimensions, electrical ratings, and a complete arrangement of screw terminals and lead terminations.

However, these standard Ceramic Band Heater variations and terminations do not represent the extent of our capabilities. Tempco's engineering staff, with many years of experience in heat processing and temperature control applications, can assist you in designing the right Ceramic Band Heater for your specific application.

Construction Characteristics

Standard

The basic Tempco Ceramic Band Heater design consists of a helically wound resistance coil made from nickel-chrome wire, evenly stretched and precisely strung through specially designed ceramic insulating bricks, forming a flexible heating mat. The ceramic heating mat along with 1/4" thick ceramic fiber insulation is installed in a stainless steel housing made with serrated edges, providing maximum flexibility for ease of installation. This allows the use of wider band heaters, eliminating the need for numerous narrow width and two-piece band heaters.

Double Insulated

For situations requiring additional insulation for lower external temperatures and increased electrical energy savings, Tempco offers Double Insulated Ceramic Bands with a full 1/2" thick ceramic fiber insulation. This will decrease power consumption by 35 to 37 percent when compared to uninsulated band heaters.

Rib Cage (Type R) Ceramic Band Heater

When Ceramic Band Heaters are used on extruder barrels that require both heating and cooling, Tempco manufactures the **Rib Cage (Type R)** Air-Cooled Ceramic Band Heater in two watt density styles. See page 1-75 for details.

Ceramic Band Standard Specifications and Tolerances

PERFORMANCE RATINGS

Maximum Temperature: 1400°F (760°C)
Nominal Watt Density: 20-45 W/in² (3-7 W/cm²)
Maximum Watt Density: 45 W/in² (7 W/cm²)

ELECTRICAL RATINGS

Maximum Voltage: 480 VAC per termination
Dual Voltage: Available depending on heater configuration
Maximum Amperage per circuit:
 lead wire termination: 10 amp
 screw terminations: 25 amp
Resistance Tolerance: +10%, -5%
Wattage Tolerance: +5%, -10%

Exposed electrical wiring on band heater installations is a violation of Electrical Safety Codes including O.S.H.A.

PHYSICAL SIZE CONSTRUCTION LIMITATIONS

Sheath Material: Stainless Steel
Insulation Material: Ceramic Fiber Blanket
 Standard Thickness: 1/4" (6.4 cm)
 Double Thickness: 1/2" (12.7 cm)

Overall Thickness:

	Dia. less than 4"	Dia. 4" or greater
Standard	.5" (12.7 cm)	.625" (15.9 cm)
Double	.688" (17.5 cm)	.75" (19.1 cm)
Ribcage	.344" (8.7 cm)	.5" (12.7 cm)

Minimum Width: 1" (2.54 cm)

Standard Width Increments: 1/8" (3.2 cm)

Consult Tempco for non-standard widths.

Maximum Width: Dependent upon the ratio of diameter to width

Width Tolerance:

1" (25.4 cm) to 3-1/2" (88.9 cm): ±1/16" (±1.6 cm)
 4" (101.8 cm) to 6-1/2" (165.1 cm): ±1/8" (±3.2 cm)
 Over 6-1/2" (165.1 cm): ±1/4" (6.4 cm)

Minimum Diameter: 2" (50.8 cm)

Maximum Diameter—One-Piece: 21" (533.4 cm)

Two-Piece: 44" (1,117.6 cm)

Nominal Gap: 3/8" (9.5 cm)— If a larger gap is required for probes or thermocouples, specify when ordering.

If tighter tolerances are required consult Tempco.

Construction Clamp	Min. ID		Min. Width		Max. ID	
	in	mm	in	mm	in	mm
One-Piece	2	50.8	1	25.4	21	533.4

Ordering Information

Standard Heaters

Select a Ceramic Insulated Band Heater from pages 1-63 through 1-65. Each heater's Termination Type is indicated.

Type L1 has 10" long leads.

Type W1 has 12" long leads with 10" wire braid.

Type R2A has 12" long leads with 10" galvanized steel armor cable.

Custom Engineered/Manufactured Heaters

Understanding that an electric heater can be very application specific, for sizes and ratings not listed **TEMPCO** will design and manufacture a Ceramic Insulated Band Heater to meet your requirements. **Standard lead time is 3 weeks.**

Please Specify the following:

- Inside Diameter
- Width
- Wattage
- Voltage
- Termination (see pages 1-68 through 1-74)
- Lead Cable/Braid Length
- Construction style (see page 1-66)
- Clamping variation (see page 1-67)

⚠ WARNING: Cancer and Reproductive Harm - www.P65Warnings.ca.gov.

How To Specify A Ceramic Band Heater

Ceramic band heaters offer several variations in construction, clamping and electrical terminations. For ease of ordering, make a selection from options listed in each of the boxes below.

Construction Styles

(See below)
One-piece
Two-piece
Multiple Sections
(Specify number of sections required.)

Clamping

(See page 1-67)
Type B – Built-in bracket (Standard)
Type S – Built-in bracket with spring loaded screw
Type L – Latch and trunnion
Type F – Bent-up flange (Ears)

Termination

Select termination type from pages 1-68 through 1-74

Insulation

(See below)
Standard 1/4" insulation (**S**)
Double 1/2" insulation (**D**)

Shell Overlap

(See page 1-67)
Provides T/C hole. (Specify if required.)

Ceramic Band Construction Styles

One-Piece Band

The One-Piece Ceramic Band Heater is the basic design most often specified by OEMs and processors. It is available with all types of insulation, construction styles, clamping or termination variations.

Min. ID: 2" (50.8 mm)
Min. Width: 1" (25.4 mm)
Max. ID: 21" (533.4 mm)

Two-Piece Band

The Two-Piece Ceramic Band Heater is commonly used on sizes larger than 21" diameter or when it would be inconvenient to use a one-piece heater. It is available with all types of insulation, construction styles, clamping or termination variations.

Min. ID: 4" (101.6 mm)
Min. Width: 1" (25.4 mm)
Max. ID: 44" (1118 mm)

Larger sizes are manufactured in multiple sections. Watts and volts are specified per each section when ordering.

Ceramic Band Insulation Options

Standard Insulation (S): 1/4"

Built-In ceramic fiber insulation 1/4" thick standard on all Ceramic Bands will reduce power consumption by 25 to 30 percent, and lower external temperatures.

Optional Double Insulation (D): 1/2"

For situations requiring additional insulation for lower external temperatures and increased electrical energy savings, Tempco offers Double Insulated Ceramic Bands with a full 1/2" thick ceramic fiber insulation. This will decrease power consumption by 35 to 37 percent when compared to uninsulated band heaters.

Standard Insulation
Cross Section

Double Insulation
Cross Section

Ceramic Band Clamping Variations

Type B – Built-In Bracket (Standard)

The Built-In Bracket is the basic design most often specified by OEMs and processors. The standard screw used is 1/4-20. It is available with all types of insulation, construction styles, and termination variations.

Type S – Built-In Bracket with Spring-Loaded Screw

The Built-In Bracket can also be supplied with a spring-loaded screw. The spring-loaded clamp aids in absorbing thermal expansion.

Limitations – One-Piece Bands

Min. ID: 2" (50.8 mm)
Min. Width: 1" (25.4 mm)

Limitations – Two-Piece Bands

Min. ID: 4" (101.6 mm)
Min. Width: 1" (25.4 mm)

Type L – Latch and Trunnion

The spring-loaded Latch and Trunnion clamping system is ideal for bands over 12" in diameter to absorb thermal expansion and facilitate installation on large bands.

The Latch and Trunnion clamping system is available with all types of insulation, construction styles, and termination variations.

Limitations – One-Piece Bands

Min. ID: 4" (101.6 mm)
Min. Width: 1" (25.4 mm)

Limitations – Two-Piece Bands

Min. ID: 4" (101.6 mm)
Min. Width: 2" (50.8 mm)

Type F – Bent-Up Flange (Ears)

The Bent-Up Flange (Ears) design is available with all types of insulation, construction styles, and termination variations.

Limitations – One-Piece Bands

Min. ID: 2" (50.8 mm)
Min. Width: 1" (25.4 mm)

Limitations – Two-Piece Bands

Min. ID: 4" (101.6 mm)
Min. Width: 2.5" (63.5 mm)

Shell Overlap

The Shell Overlap design is the preferred method of providing a thermocouple mounting hole in a ceramic band heater. It is available with all types of insulation, construction styles, clamping and termination variations.

Limitations – One-Piece Bands

Min. ID: 3" (76.2 mm)
Min. Width: 1-1/2" (38.1 mm)
Standard Hole: 3/4" (19.1 mm)

Limitations – Two-Piece Bands

Min. ID: 4" (101.6 mm)
Min. Width: 2" (50.8 mm)
Standard Hole: 3/4" (19.1 mm)

Terminations

Ceramic Band Type T2 – Screw Terminals

Type T2 Screw Terminals are available with all types of insulation, construction styles, and clamping variations. They are considered to be standard on most band heaters under 2" in width unless otherwise specified. 10-32 post terminals are standard.

One-Piece Band

Standard Termination Location:
opposite the gap; center of width

- * **Minimum Inside Diameter:** 2" (50.8 mm)
- * **Minimum Width:** 1" (25.4 mm)
- * **Maximum Volts/Amps:** 480VAC/25A

Two-Piece Band

Standard Termination Location:
center of each half; center of width

- * **Minimum Inside Diameter:** 4" (101.6 mm)
- * **Minimum Width:** 1" (25.4 mm)
- * **Maximum Volts/Amps:** 480VAC/25A each half

Ceramic Band Type T3 – Screw Terminals

Type T3 Screw Terminals are available with all types of insulation, construction styles, and clamping variations. They are considered to be standard on most band heaters unless otherwise specified. For use with leads, crimp terminals, or bus bars.

One-Piece Band

Standard Termination Location:
opposite the gap; across center of width

- * **Minimum Inside Diameter:** 2" (50.8 mm)
- * **Minimum Width:** 2" (50.8 mm)
- * **Maximum Volts/Amps:** 480VAC/25A

Two-Piece Band

Standard Termination Location:
center of each half; across center of width

- * **Minimum Inside Diameter:** 4" (101.6 mm)
- * **Minimum Width:** 2" (50.8 mm)
- * **Maximum Volts/Amps:** 480VAC/25A each half

Optional Igloo™ Ceramic Covers for Heaters with Screw Terminals

Igloo™ Ceramic Terminal Covers consist of two individual ceramic parts. They are available with all types of insulation, construction styles, and clamping variations. Unlike conventional ceramic caps, Igloo fully insulates any standard #10 terminal lugs used for electrical hook-ups.

Limitations

Min. ID: 2" (50.8 mm); **Min. Width:** 1" (25.4 mm)

Three types of Igloo™ bases are available:

Type C6 – Double Port In-Line P/N CER-101-104

Type C7 – Double Port 90° P/N CER-101-106

Type C8 – Single Port P/N CER-101-107

Igloo™ caps are available in the following screw terminal size:

10-32 – P/N CER-102-101

Exposed electrical wiring on band heater installations is a violation of Electrical Safety Codes including O.S.H.A.

Ceramic Band Type L1 – Straight Lead Wires

Type L1 Straight Lead Wires are available with all types of insulation, construction styles, and clamping variations. They are used primarily on small diameter bands where clearance is limited. If applicable, screw terminals should always be specified due to the high heat generated by ceramic bands. The standard flexible leads are 10" long.

If longer leads are required, specify when ordering.

One-Piece Band

Standard Termination Location:
opposite the gap; center of width

- * **Minimum Inside Diameter:** 2" (50.8 mm)
- * **Minimum Width:** 1" (25.4 mm)
- * **Maximum Volts/Amps:** 480VAC/10A

Two-Piece Band

Standard Termination Location:
center of each half; center of width

- * **Minimum Inside Diameter:** 4" (101.6 mm)
- * **Minimum Width:** 1" (25.4 mm)
- * **Maximum Volts/Amps:** 480VAC/10A each half

Terminations

Ceramic Band Type W1 – Abrasion Resistant Straight Wire Braid Leads

Straight Wire Braid Leads are available with all types of insulation, construction styles, and clamping variations. Wire braid leads offer sharp bending not possible with armor cable. If applicable, screw terminals should always be specified due to the high heat generated by ceramic bands. The standard leads are 10" of wire braid over 12" of flexible leads.

If longer leads are required, specify when ordering.

One-Piece Band

Standard Termination Location:
opposite the gap; center of width

- * **Minimum Inside Diameter:** 2" (50.8 mm)
- * **Minimum Width:** 1" (25.4 mm)
- * **Maximum Volts/Amps:** 480VAC/10A

Two-Piece Band

Standard Termination Location:
center of each half; center of width

- * **Minimum Inside Diameter:** 4" (101.6 mm)
- * **Minimum Width:** 1" (25.4 mm)
- * **Maximum Volts/Amps:** 480VAC/10A each half

Ceramic Band Type R1 – Abrasion Resistant Straight Armor Cable

Straight Armor Cable is available with all types of insulation, construction styles, and clamping variations. Armor cable provides far superior protection to lead wires where abrasion is a constant problem. If applicable, screw terminals should always be specified due to the high heat generated by ceramic bands. The standard leads are 10" of armor cable over 12" of flexible leads.

If longer leads or electrical connectors are required, specify when ordering.

Type R1A – Galvanized Steel Armor Cable

Type R1B – Stainless Steel Armor Cable

One-Piece Band

Standard Termination Location:
opposite the gap; center of width

- * **Minimum Inside Diameter:** 2" (50.8 mm)
- * **Minimum Width:** 1" (25.4 mm)
- * **Maximum Volts/Amps:** 480VAC/10A

Two-Piece Band

Standard Termination Location:
center of each half; center of width

- * **Minimum Inside Diameter:** 4" (101.6 mm)
- * **Minimum Width:** 1" (25.4 mm)
- * **Maximum Volts/Amps:** 480VAC/10A each half

Ceramic Band Type R2 – Abrasion Resistant Right-Angle Armor Cable

Right-Angle Armor Cable is available with all types of insulation, construction styles, and clamping variations. It is used where space is limited and abrasion is a constant problem. If applicable, screw terminals should always be specified due to the high heat generated by ceramic bands. The standard leads are 10" of armor cable over 12" of flexible leads.

If longer leads or electrical connectors are required, specify when ordering.

Type R2A – Galvanized Steel Armor Cable

Type R2B – Stainless Steel Armor Cable

One-Piece Band

Standard Termination Location:
opposite the gap; center of width

- * **Minimum Inside Diameter:** 2" (50.8 mm)
- * **Minimum Width:** 1" (25.4 mm)
- * **Maximum Volts/Amps:** 480VAC/10A

Two-Piece Band

Standard Termination Location:
center of each half; center of width

- * **Minimum Inside Diameter:** 4" (101.6 mm)
- * **Minimum Width:** 1" (25.4 mm)
- * **Maximum Volts/Amps:** 480VAC/10A each half

Ceramic Band Type S1 – Lead Wire Spring Strain Relief

A strain relief spring is attached to the heater at the termination exit to reduce strain on leads subjected to excessive flexing. The spring is 2-5/8" long. The flexible standard leads are 10" long with 2-1/2" of fiberglass sleeving.

If longer leads are required, specify when ordering.

Type S1A – Plain Leads and Strain Relief Spring

Type S1B – Stainless Steel Wire Braided Leads and Strain Relief Spring

One-Piece Band

Standard Termination Location:
opposite the gap; center of width

- * **Minimum Inside Diameter:** 2" (50.8 mm)
- * **Minimum Width:** 1" (25.4 mm)
- * **Maximum Volts/Amps:** 480VAC/10A

Two-Piece Band

Standard Termination Location:
center of each half; center of width

- * **Minimum Inside Diameter:** 4" (101.6 mm)
- * **Minimum Width:** 1" (25.4 mm)
- * **Maximum Volts/Amps:** 480VAC/10A each half

Terminations

General Purpose Terminal Boxes: Type C2 & Type C5

Terminal Boxes are available with all types of insulation, construction styles, or clamping variations. It is a simple and economical way to protect employees from electric shock or prevent electric shorts that can result from exposed wiring on band heater electrical installations.

The Heavy Duty Terminal Boxes have a 1/2" trade size knockout (actual diameter 7/8") that will accept standard armor cable connectors. The boxes can be field assembled on band heaters that have a center distance between screws of 7/8". To simplify installation the boxes can be pre-wired with galvanized armor, stainless steel armor, or wire braid.

Ceramic Band Type C2 – Standard Terminal Box

One-Piece Band

Standard Termination Location:
opposite the gap; center of width

- * **Minimum Inside Diameter:** 2" (50.8 mm)
- * **Minimum Width:** 1-1/2" (38.1 mm)
- * **Maximum Volts/Amps:** 480VAC/25A

Type C2 □ Standard Box

- C2A**—Box only
- C2B**—with galvanized armor
- C2C**—with stainless steel armor
- C2D**—with wire braid

Box Size: 1-1/2"H × 1-1/2"W × 2-1/2"L
for bands 1-1/2" to 2" wide

Box Size: 1-1/2"H × 2-1/8"W × 2-1/8"L
for bands greater than 2" wide

NOTE: Heater dimensions will determine terminal configuration.

Two-Piece Band

Standard Termination Location:
center of each half; center of width

- * **Minimum Inside Diameter:** 4" (101.6 mm)
- * **Minimum Width:** 1-1/2" (38.1 mm)
- * **Maximum Volts/Amps:** 480VAC/25A each half

Ceramic Band Type C5 – Low-Profile Terminal Box

One-Piece Band

Standard Termination Location:
opposite the gap; center of width

- * **Minimum Inside Diameter:** 2" (50.8 mm)
- * **Minimum Width:** 1-1/2" (38.1 mm)
- * **Maximum Volts/Amps:** 480VAC/25A

Note: If a Low Profile Box with cable or leads is required, it is strongly recommended to order it pre-wired by the factory.

Type C5 □ Low Profile Box

- C5A**—Box only
- C5B**—with galvanized armor
- C5C**—with stainless steel armor
- C5D**—with wire braid
- C5J**—Box with lead wire

Box Size: 1"H × 1-1/4"W × 3"L
for bands 1-1/2" to 2" wide

Box Size : 1"H × 2-1/4"W × 2"L
for bands greater than 2" wide

NOTE: Heater dimensions will determine terminal configuration.

Two-Piece Band

Standard Termination Location:
center of each half; center of width

- * **Minimum Inside Diameter:** 4" (101.6 mm)
- * **Minimum Width:** 1-1/2" (38.1 mm)
- * **Maximum Volts/Amps:** 480VAC/25A each half

Exposed electrical wiring on band heater installations is a violation of Electrical Safety Codes including O.S.H.A.

Quick Disconnect Plugs: Type P1, Type P2, Type P3 & Type P4

Quick Disconnect Plugs are available on any construction or clamping variation. These quick disconnect plug assemblies are highly recommended and should be used whenever possible. The combination of plug and cup assembly along with armor cable covered leads eliminates all live exposed terminals or wiring that can be a potential hazard to employees or machinery.

Type P1 and P3 assemblies are available with a straight or right-angle plug. Type P2 and P4 plug assemblies have a lower profile and are available with a straight plug only.

To simplify installation, band heaters with these assemblies can be supplied pre-wired using high temperature lead wire protected with armor cable. *If longer leads are required, specify when ordering.*

Ceramic Band Type P1 – High Temperature Quick Disconnect Plugs

Type P1Q shown

Type P1 ☐ – Standard Cup Assembly

- P1K**—Cup Assembly only
- P1L**—w/straight plug only
- P1M**—w/90° plug only
- P1N**—w/straight plug & galvanized armor cable
- P1O**—w/straight plug & stainless steel armor cable
- P1P**—w/straight plug & wire braid
- P1Q**—w/90° plug & galvanized armor cable
- P1R**—w/90° plug & stainless steel armor cable
- P1S**—w/90° plug & wire braid

One-Piece Band

Standard Termination Location:
opposite the gap; center of width

- * **Minimum Inside Diameter:** 2" (50.8 mm)
- * **Minimum Width:** 2" (50.8 mm)
depending on termination orientation

Plug Electrical Ratings

- * **2-Pole 3-Wire Grounding**
- * **Maximum Volts:** 250 VAC
- * **Maximum Amps:** 16A
- * **Maximum Temperature:**
572°F (300°C)

Two-Piece Band

Standard Termination Location:
center of each half; center of width

- * **Minimum Inside Diameter:** 4" (101.6 mm)
- * **Minimum Width:** 2" (50.8 mm)
depending on termination orientation

Ceramic Band Type P2 – High Temperature Quick Disconnect Plugs

Type P2H shown

Type P2 ☐ – Low Profile Assembly

- P2F**—Low profile assembly only
- P2G**—w/straight plug only
- P2H**—w/straight plug and galvanized armor cable
- P2J**—w/straight plug and stainless steel armor cable
- P2K**—w/straight plug and wire braid

One-Piece Band

Standard Termination Location:
opposite the gap; center of width

- * **Minimum Inside Diameter:** 2" (50.8 mm)
- * **Minimum Width:** 2" (50.8 mm)

Plug Electrical Ratings

- * **2-Pole 3-Wire Grounding**
- * **Maximum Volts:** 250 VAC
- * **Maximum Amps:** 16A
- * **Maximum Temperature:**
572°F (300°C)

Two-Piece Band

Standard Termination Location:
center of each half; center of width

- * **Minimum Inside Diameter:** 4" (101.6 mm)
- * **Minimum Width:** 2" (50.8 mm)

- * **Minimum Width:** 2-1/2" (63.5 mm)

Ceramic Band Heaters — Cool TO-THE Touch Shroud Systems

Type R Uninsulated Ceramic Band Heaters

This system was developed to provide another means of heating and cooling high temperature extrusion processes. Typically cast-in bronze or brass units are used in applications in which heater temperatures can be in excess of 700°F (371°C). Cast-in bronze or brass heaters are expensive and since they weigh approximately three times their aluminum counterparts they are difficult to install.

In response to this challenge, Tempco's engineers have developed a low mass, non-thermally insulated ceramic band heater to work in tandem with a highly efficient stainless steel sheet metal shroud for high temperature heating and cooling extrusion processes.

Forced air blowers are used for cooling. The ambient air-flow enters the shroud, circulates around the ceramic heater and barrel, removes the heat from the heater and the process and exits the shroud opposite the entrance port.

Construction Characteristics

Type R construction is an uninsulated ceramic band heater with a perforated Stainless Steel outer shell for more efficient cooling. It is typically used in multiple quantities with forced air cooling systems.

Consult Tempco with your requirements.

Type R Ceramic Insulated Band Heater

Cool TO-THE Touch™ Shroud System with Type RCC

Type RCC (Ribcage) Heating Mounting Configuration

Tempco's **Type RCC** (Rib Cage) Air Cooled System uses multiple Type R Ceramic Band Heaters under one air cooled shroud. Type R heaters are typically arranged with spaces between the heaters to enhance the cooling of the barrel when external heat is no longer required.

The Cool TO-THE Touch dual layer shroud uses an inner stainless steel solid layer thermally isolated from the heater, providing a path for the forced cooling air. An outer Stainless Steel perforated layer provides optimal venting and heat dissipation while providing personnel safety.

See catalog page 3-29 for shroud assembly details.

**Complete Information on Shrouds Systems
can be found in Section 3, pages 3-26 through 3-47**

PERFORMANCE RATINGS FOR HEATER BAND

Maximum Watt Density: 50 W/in² (8 W/cm²)

Maximum Temperature: 900°F (482°C)

MECHANICAL

Standard Width Increments: 1/8" (3.2 cm)

Maximum Width: depends on ratio of diameter to width

Minimum Width: 1" (25.4 mm)

Standard Gap: 3/8" ±1/8" (9.5 ±3.2 mm)

ELECTRICAL RATINGS

Resistance tolerance: +10%, -5%

Wattage tolerance: +5%, -10%

Maximum Voltage: 480 single or 3-phase (when applicable)

Maximum Amperage: Screw Terminals: 25 Amps per circuit

Lead Wire: 10 Amps per circuit

Additional Features

Electrical VARIATIONS

Three-Phase — On very high wattage band heaters it would be advantageous to set up the wiring three-phase to reduce the current load across a single conductor. Three-phase wiring is available with all types of insulation, construction styles, and clamping variations.

Limitations

Minimum width: 3" (76.2 mm)

Dual Voltage — Band heaters can be designed using 3-wire series/parallel circuits for dual voltage applications. Whether the heater is run on the high or low voltage, the wattage will be the same. Dual Voltage wiring is available with all types of insulation, construction styles, or clamping variations.

Limitations

Minimum width: 2" (50.8 mm)

Single-Phase/Three-Phase — Ceramic Band Heaters can be designed with multiple circuits to operate single or three-phase.

Lead VARIATIONS

Electrical Plugs — Industry standard NEMA twist lock electrical connectors are available. The plugs can be attached to fiberglass leads, armor cable or wire braid. Electrical Plugs can be added to any termination variation. See Section 15 page 15-15.

Terminal Lugs — Various types of crimp terminals can be attached to the heater leads to make wiring into applications quick and easy. High temperature [1200°F (649°C)] ring terminals and nylon or PVC insulated terminals are available. Spade, ring, and right-angle or straight quick disconnect type terminals can be attached to the leads. See Section 15 page 15-18.

High Temperature Lead Wire — When required, high temperature lead wire can be used. The wire is insulated with mica tapes over the stranded nickel conductors and then treated fiberglass overbraided. See Section 15 page 15-2.

Maximum temperature: 450°C (842°F)

Ground Terminal or Lead — For those applications requiring a separate ground terminal or lead attached to the heater sheath. A Ground Terminal or Lead is available on any construction or termination variation.

Other VARIATIONS

Oversize Gap — The nominal gap is 3/8". If a larger gap is required for probes or thermocouples, specify when ordering.

Installation Accessories Available for Immediate Delivery

- * High Temperature Terminal Lugs
- * Igloo™ Ceramic Insulating Covers
- * UL Listed Plugs
- * High Temperature Lead Wire 842°F (450°C)
- * Armor Cable
- * Stainless Steel Braid
- * High Temperature Sleeving
- * High Temperature Mica Insulated Wiring Harnesses 842°F (450°C)
- * Thermocouples
- * Temperature Controllers
- * High Temperature Fiberglass Tape

All Items Available from Stock

▼ Installation ▼ RECOMMENDATIONS

1. Disconnect electric power to the machine and/or heaters prior to installing or replacing heaters.
2. Do not install heaters in areas where combustible gases, vapor or dust is present.
3. Reduce the number of narrow or two-piece bands used on the barrel. Ceramic bands are very flexible and can be made in large widths and one-piece construction for easy installation. This eliminates heat losses between narrow bands and sharply reduces costly installation labor.
4. Use a heater that closely matches the wattage requirements. This will decrease the frequency of cycling and temperature overshoot, thereby increasing the life of the heater.
5. When replacing any other type of non-insulated band heater with Tempco ceramic band heaters using standard or double insulation, you can decrease your total operating wattage by approximately 15 to 20 percent.
6. To prevent overheating and heater failure, adequate temperature controls should be installed. The thermocouples must be kept free of contaminants and checked for good response to temperature changes. A faulty thermocouple can cause the destruction of an entire heating zone due to overheating. Tempco offers a wide variety of temperature controls and thermocouples from stock for immediate delivery. Consult the index of this catalog for appropriate pages.
7. Make certain that all barrel surfaces are clean and free of contaminants. During operation, the band heaters and cylinder surface must be kept free of all contaminants that might liquefy under heat and find their way into the heater windings, carbonizing and becoming conductive. The smallest amount of contamination can cause electrical shorts, resulting in heater failure.
8. Position heater bands on the barrel.
9. Take up all the slack by tightening the outer housing until the serrated edges come firmly in direct contact with the cylinder. Do not overtighten to the point where the serrated edges begin to collapse and thrust outward. At this point you are compressing the ceramic insulation and decreasing its insulating value. Unlike all other types of band heaters, ceramic bands heat by radiation as well as conduction and they do not require the same clamping force that is essential with all other types of band heaters. The proper torque is approximately 8 ft/lbs.
10. For heaters with screw terminals, remove the top nut and flat washers from the power screw terminals. Do not remove or loosen the bottom nut on the power screw terminals.
11. All electrical wiring of heater bands should be done by a qualified electrician using proper, dry personal protective equipment.
12. Use only lead wire with high temperature insulation and proper gauge size. See page 15-2 in the accessories section.
13. When connecting power leads to screw terminals make certain that barrels of terminal lugs are not facing down toward the heater case, which will create a short circuit.
14. Ensure leads are not kinked or sharply bent around other obstructions.
15. Make sure the voltage input to the heater bands does not exceed the voltage rating that is stamped on the heater band
16. It is recommended that an amperage reading is taken for each heater to verify proper wiring. (Amps = Watts ÷ Volts).
17. Insulate all live electrical connections per applicable safety standards.
18. Install shrouds around the machine to meet applicable safety requirements.
19. Once installed, check surroundings to make sure that contaminants won't get on the heater while the unit is in operation. Accumulation of contaminants on heaters can cause premature heater failure.

It is imperative that upon start-up of new machines at customer facilities, all of the aforementioned parameters are double checked by qualified field service personnel.

Exposed electrical wiring on band heater installations is a violation of Electrical Safety Codes including O.S.H.A.

Band Heaters

Tubular Bands

Tubular Construction Barrel & Nozzle Band Heaters

Design Features

- * Contamination-Proof
- * Higher Watt Densities
- * Temperatures Up to 1000°F (540°C)
- * Rugged Durable Construction
- * Greater Reliability
- * Various Lead Terminations
- * Optional Monel® Shroud

Designed to Perform Under Adverse Conditions

Tempco Tubular Band Heater design stands apart from all other similar type band heaters. This band heater is capable of performing under the most adverse conditions. Highly recommended for heating applications where premature nozzle band heater burn-out on plastic injection molding machines is a constant problem due to contamination from plastic overflow or other contaminants. Proven to be very effective for processing Teflon® and high temperature engineering resins, providing long, trouble-free service.

Standard Specifications and Tolerances

of Tubular Band Heaters. If tighter tolerances are required consult Tempco.

PERFORMANCE RATINGS

Maximum Temperature: 1000°F (540°C)

Maximum Watt Density: 40 W/in² (7 W/cm²)

ELECTRICAL RATINGS

Resistance Tolerance: +10%, -5%

Wattage Tolerance: +5%, -10%

Maximum Volts: 277 Volts

Maximum Watts: Depends on diameter

Maximum Amps: 30 Amps

MECHANICAL

Minimum Width: 1-1/2" (38.1 mm)

Minimum Inside Diameter: 1-1/2" (38.1 mm)

Standard Gap: 3/8"

Holes: Can be accommodated. Consult Tempco with your requirements.

Construction Characteristics

Incoloy® 840 sheath .315 diameter tubular heating elements are used as heat source. The tubular element is formed to the specified inside diameter to produce a snug slip-on fit.

A low thermal expansion alloy is used to make the strap that houses the tubular heating element. The strap edges are rolled over the element to prevent the strap from separating from the tubular heater. Specially designed mounting brackets are spot welded to the strap, providing the clamping force required to tightly draw the tubular heater against the cylinder.

Advantages and Variations

The straight section of the tubular heater is fully annealed, remaining ductile for field bending. Normally done to guide the leads away from machine obstructions.

If bending is required—

- Secure the tubular band heater to the cylinder in the position required.
- Draw the strap as tight as possible.
- Using a piece of 1/2" water pipe, insert the leads and tubular element into the pipe up to the point where you need the bend.

Proceed to bend with a generous radius.

DON'T MAKE A SHARP BEND AS YOU WILL CRACK THE HEATING ELEMENT.

Ordering Information

Standard — Select a Tubular Band heater from the table. All Tubular Band Heaters listed are supplied with Type W3 termination, 24" long.

Custom Engineered/Manufactured — An electric heater can be very application specific; for sizes and ratings not listed **TEMPCO** will design and manufacture a Tubular Band Heater to meet your requirements.

Standard lead time is 3 weeks.

Please Specify the following:

Type C3—Single Armor Cable Out Top

Armor Cable provides excellent protection against abrasion and contaminants. The cable exits through an adapter that encapsulates both tubular heater ends.

The adapter tube is tack welded to the heating element and the cable is crimped to the adapter for maximum security and seal protection. For maximum security and seal protection, 20" of cable and 24" flexible leads are standard.

Type C3A—Galvanized Armor Cable

Type C3B—Stainless Steel Armor Cable

Options:

- * Male or female plugs attached to leads. For plug selection, see Accessory Section, page 15-15.

Type W3—Wire Braid Leads

(Standard Termination)

Wire Braid provides strength and protection to the lead wire insulation, offering sharp bending not possible with armor cable. 20" of wire braid and 24" flexible leads are standard.

Options:

- * Longer leads or braid
- * Male or female plugs attached to leads. For plug selection, see Accessory Section, page 15-15.

Type T1—Screw Terminals

Screw Terminals will provide a rigid connection when it is required. Standard thread size is 8-32. If another type is required, specify when ordering. You should make special arrangements to properly insulate the electrical connections.

CAUTION Exposed wiring is a potential hazard to operators and machine.

Type C1—Single Armor Cable

Armor Cable provides excellent protection against abrasion and contaminants. The cable exits through an adapter that encapsulates both tubular heater ends. The adapter tube is tack welded to the heating element and the cable is crimped to the adapter for maximum security and seal protection. 20" of cable and 24" flexible leads are standard.

Type C1A—Galvanized Armor Cable

Type C1B—Stainless Steel Armor Cable

Options:

- * Male or female plugs attached to leads. For plug selection, see Accessory Section, page 15-15.

Type C2—Individual Armor Cable

Armor Cable provides excellent protection against abrasion and contaminants. The cable is securely fastened individually to the tubular heater ends, allowing more flexibility for electrical wiring connections. 20" of cable and 24" flexible leads are standard.

Type C2A—Galvanized Armor Cable

Type C2B—Stainless Steel Armor Cable

Maxiband®

The Most Sought After Band Heater

- A** General purpose terminal box offers excellent protection to the exposed terminals. To simplify electrical wiring, the box has two 1/2" trade size knockouts that will accept standard conduit or flexible armor cable connectors.
- B** Right-angle terminal lugs with 10-32 binding head screws provide ease of electrical wiring.
- C** The channels in the specially designed extruded aluminum track have been precisely sized to accept a .315 diameter tubular heating element, and provide an excellent heat sink for rapid heat transfer and good temperature uniformity.
- D** Ruggedly constructed .315 diameter tubular heating elements are the heat source for Maxiband Heaters, providing excellent life and long, trouble-free service.
- E** Crown nuts are located at 90° from the ends that fasten the clamping strap to the aluminum track, keeping the entire assembly together, providing ease of installation.
- F** The strap is made from a Low Thermal Expansion Alloy. It hinges at the terminal end to allow for easy installation. Specially designed mounting brackets with 1/4"-20 socket cap screws, located 180° from the terminal end, provide the clamping force required to tightly draw the heater assembly to the cylinder being heated.

MOUNTING BRACKETS

Typical Maxiband Clamping

Maxiband® Heaters

Design Features

- * Quick Installation
- * Rugged, Durable Construction
- * Contamination Proof
- * Various Lead Terminations
- * Exceptionally Long Life
- * Excellent Heat Transfer
- * Excellent Temperature Uniformity

Heat and Liquid Cool Maxibands (MXB)

Stainless steel tubing for liquid cooling is placed in the additional channels of the aluminum track next to the tubular heater. The overall low mass construction and high thermal conductivity of the aluminum provides extremely uniform surface temperatures and rapid cooling cycles.

Cool Only Maxibands (MXC)

Stainless steel tubing for liquid cooling is placed in the aluminum track.

Construction Characteristics

Maxiband heaters are manufactured in five standard widths: 3/4", 1-1/2", 2-1/2", 3", and 4". They are available in a full range of standard diameters; construction variations for heating only, heat and cool, and cooling only; electrical ratings and a complete arrangement of various types of terminations to accommodate your specific application. For heating only standard sizes and ratings, see pages 1-82 through 1-86.

Maxiband MXB heaters, with heat and liquid cooling capabilities, incorporate stainless steel tubing placed in the additional channels of the aluminum track next to the tubular heater. The overall low mass construction and high thermal conductivity of the aluminum provides extremely uniform surface temperatures and rapid cooling cycles.

The low thermal expansion strap securely fastened to the aluminum track segments provides a built-in hinge, keeping both halves together at all times, making handling and installation easier. Specially designed integral mounting brackets are welded to the strap, providing the clamping force required to draw the heater assembly evenly and tightly to the cylinder.

PERFORMANCE RATINGS

Maximum Temperature: 650°F (350°C)

Nominal Watt Density: 35 W/in² (5.4 W/cm²)

ELECTRICAL RATINGS

Maximum Voltage: 277VAC per half

Maximum Wattage: Depends on diameter and number of elements used

Maximum Amperage: 30 amps per circuit

Resistance Tolerance: +10%, -5%

Wattage Tolerance: +5%, -10%

STANDARD GAP

Up to 11" ID—1/4" gap. As the diameter increases, the gap will also increase accordingly in order to accommodate the thermal expansion of the aluminum track.

HEATER THICKNESS — 1/2"

Designed for Durability and Trouble-Free Service

Tempco has been manufacturing Maxiband heaters since 1975. The Maxiband is a high quality, durable band heater providing more efficient heating and cooling as well as a longer life compared to other types of band heaters. Due to the rugged construction characteristics of this type of band heater, Maxiband has proven to be extremely valuable and has become the most sought after band heater of its type for plastic injection molding machines, extruders, and blow molding equipment. The initial cost is easily absorbed by the sharp reduction in downtime and labor costs involved in replacing burned-out, less efficient band heaters.

The straps are equipped with clamping brackets with 1/4"-20 socket head cap screws. On Maxibands exceeding 12" in diameter, spring-loaded screws provide the essential clamping force required in large diameter Maxibands to maintain positive contact with the cylinder being heated. On very large diameter Maxibands, the tubular element required becomes excessively long; therefore, two elements per half are used, each tubular element heating a 90° section of a Maxiband heater. In this case, two terminal boxes are required. A typical application for this type of Maxiband construction is heating the die heads of plastic blown film processing machines.

Maxiband heaters are constructed as sets. Each half consists of one tubular heating element and one aluminum track segment. The tubular heaters are always rated at half the total wattage of the set and full rated voltage. For better configuration on larger diameter cylinders, Maxibands exceeding 12" in diameter have the aluminum track segments in quadrants (see page 1-80 for details).

PHYSICAL SIZE CONSTRUCTION LIMITATIONS

Minimum Inside Diameter: 3-1/2" (Due to manufacturing constraints, some wattages/voltages may not be available in smaller heater sizes.)

Ordering Information

Stock Heaters

Select a Stock Maxiband Heater (identified by a **RED** part number) from the Standard Sizes and Ratings Lists on Pages 1-82 through 1-86. Part Numbers shown are for Maxiband Heaters with type “S” termination.

Stock heaters can be modified to the following terminations:

Type **C**—Outlet terminal box

Type **P2**—Low profile high temp. quick disconnect

Type **W3**—Wire braid leads

Type **TS**—Contamination seal

A Part Number will be issued at time of order.

Custom Engineered/Manufactured Heaters

An electric heater can be very application specific; for sizes and ratings not listed **TEMPCO** will design and manufacture a Maxiband Heater to meet your requirements. **Standard lead time is 3 weeks.**

Please Specify the following:

- | | |
|--|---|
| <input type="checkbox"/> Inside Diameter | <input type="checkbox"/> Termination |
| <input type="checkbox"/> Width | <input type="checkbox"/> Construction |
| <input type="checkbox"/> Total Wattage | <input type="checkbox"/> Clamping |
| <input type="checkbox"/> Voltage per half | <input type="checkbox"/> Special Features |
| <input type="checkbox"/> Lead Cable/Braid Length | <input type="checkbox"/> Quantity |

⚠ WARNING: Cancer and Reproductive Harm - www.P65Warnings.ca.gov.

Maxiband Terminal Lug Termination

Type S—Standard Terminal Lugs

Terminal Lugs with 10-32 binding head screws.

Note: Standard on all Maxiband heaters unless otherwise specified.

Abrasion Resistant Lead Terminations

Type W3—Wire Braid Leads

Stainless Steel Wire Braid provides strength and protection to the lead wire's insulation and offers sharp bending not possible with armor cable. The standard leads are 20" of wire braid over 24" of flexible leads.

If longer leads are required, specify when ordering.

Type R1□—Armor Cable Leads

Armor Cable provides excellent protection against abrasion and contaminants. The cable exits through an adapter that encapsulates both elements' ends on each half. The adapter tube is tack welded to the heating element and the cable is crimped to the adapter for maximum security and seal protection. The standard leads are 20" of cable over 24" of flexible leads.

If longer leads are required, specify when ordering.

Type R1A — Galvanized Armor Cable
Type R1B — Stainless Steel Armor Cable

Type TS—Leads with Contamination Seal

Teflon® shrinkdown sleeving provides a good moisture and contamination seal. The sleeving is shrunk down on the element ends and is about 3-1/2" long. The maximum temperature allowed at the Teflon® seal sleeve is 500°F (260°C). The standard flexible leads are 24" in length.

If longer leads are required, specify when ordering.

CONTINUED 

Terminations

Maxiband Terminal Protection Terminations

Continued from previous page...

Type EP—Explosion and Moisture Resistant Box

Maxiband heaters can be made with an explosion/moisture resistant box brazed on to the heater.

Explosion resistant terminal housings are intended to provide containment of an explosion in the enclosure only. No portion of the heater assembly outside the enclosure is covered under this NEMA rating.

Abnormal use of a heater which results in excessive temperature can create hazardous conditions such as a fire. Never perform any type of service nor remove the housing cover prior to disconnecting all electrical power to the heater.

Type C3□—General Purpose Terminal Boxes

Terminal Boxes provide a simple and economical way to eliminate all live exposed terminals and electrical wiring that can be a potential hazard. The boxes have a 1/2" trade size knockout (actual diameter 7/8") for standard connectors. The standard termination is Type S, Terminal Lugs. Heaters can be factory prewired with high temperature lead wire, armor cable or stainless steel wire braid.

- C3A**—Standard box only
- C3B**—w/galvanized armor
- C3C**—w/stainless steel armor
- C3D**—w/wire braid

Band Width "X"

1-1/2"	1-7/8"
2-1/2"	2-7/8"
3"	3-3/8"
4"	4-3/8"

Type P2□—Quick Disconnect High Temperature Plug

Quick Disconnect Plug assemblies are highly recommended to provide the simplest and safest way to apply power to band heater installations.

- P2A**—Box and cup only
- P2B**—w/straight plug
- P2C**—w/str. plug and galvanized cable
- P2D**—w/str. plug and SS cable
- P2E**—w/str. plug and wire braid

Band Width "X"

1-1/2"	1-7/8"
2-1/2"	2-7/8"
3"	3-3/8"
4"	4-3/8"

Plug Electrical Ratings

2-Pole 3-Wire Grounding

Max. Amps: 16

Max. Volts: 250 VAC

Max. Temperature: 572°F (300°C)

Maxiband Special Construction Variations

Type EC—Insulated Shroud

Insulated Shroud provides energy savings. Available on all Maxiband widths except 3/4". The shrouds are a separate component part and fit over the Maxiband heater. Insulated shrouds to cover entire heat zones are available and are made to customer specifications. When ordering or for quoting, supply Tempco with a detailed drawing outlining your requirements.

Type SL—Spring-Loaded Clamping

On Maxiband heaters over 12" in diameter, the aluminum tracks are in segments for better configuration, and the straps are equipped with two or more Spring-Loaded Clamping Brackets. For excessively large diameters, four tubular heaters will be used, each heating a 90° section of the total diameter. When terminal boxes are required, two boxes will be used.

NOTE: See page 1-80 for clamping quantity and location details.

Type RC—Reverse Construction

Reverse Maxibands lend themselves to heating cylindrical surfaces from the inside out.

The specially designed internal brackets exert pressure to both heater halves to assure good contact against the inside diameter of the part being heated. Reverse HLC Maxiband minimum OD is 5-1/2".

Made strictly to customer specifications.

Due to size/construction restrictions, some termination styles are not possible.

Consult Tempco with your requirements.

Maxiband Special Construction Variations

Partial Coverage

Partial coverage band heaters are normally required when holes and cutouts will not allow the heater to sufficiently clear the machine obstructions. The preferred method of construction is the 2-Piece Maxiband Heater with Built-In Brackets. The heater is screwed down to the cylinder at the ends and the Built-In Brackets pull the heater tightly against the cylinder being heated. It is available with all types of construction and termination variations. When ordering provide the angle of coverage from center to center of the mounting screw holes as shown.

Additional Maxiband Heater Optional Features

Electrical Variations

Dual Voltage — Maxiband heaters can be designed using series/parallel circuits for dual voltage applications. Whether the heater is run on the higher or lower voltage, the wattage will be the same. Dual Voltage is available on all Maxiband heater widths except 3/4".

Ground Terminal or Lead — For those applications requiring a separate ground terminal or lead attached to the heater. A Ground Terminal or Lead is available on any construction or termination variation.

Lead Variations

Electrical Plugs — Industry standard NEMA twist lock electrical connectors are available. The plugs can be attached to fiberglass leads, armor cable or wire braid. Electrical Plugs can be added to any clamping, construction or termination variation.

Terminal Lugs — Various types of crimp terminals can be attached to the heater leads to make wiring into applications quick and easy. High temperature 1200°F (649°C) ring terminals and nylon or PVC insulated terminals are available. Spade, ring, and right-angle or straight quick disconnect type terminals can be attached to the leads.

Extra Cooling Tube Length — The standard cooling tube length is 4". Longer lengths can be provided; please specify when ordering.

Type SC—Square or Rectangular

Square or Rectangular heaters, normally used for heating dies on plastic extruders, are made in a two-piece construction for better clamping and to provide good surface contact. Made strictly to customer specifications. When ordering or for quotation purposes, supply a detailed drawing or sample part.

Consult Tempco with your requirements.

Maxiband “MXB” Heat & Cool with Built-In Cooling Tubes

Maxiband heaters have an exceptionally long operating heater life when compared to other types of band heaters. Highly recommended whenever applicable as an economical alternative to more expensive cast-in aluminum heat and cool band heaters. Available in three different widths: 2-1/2", 3", and 4".

Minimum Inside Diameter: 5".

Consult Tempco if smaller ID is required.

For **complete specifications and terminations** see pages 1-87 through 1-90.

For **cooling tube fittings**, see page 3-52 in the Cast-In Band Heater Section.

Design Features

- * **Rugged Durable Construction**
- * **Withstands Vibration**
- * **Excellent Temperature Uniformity**
- * **Excellent Heat Transfer**
- * **Contamination Resistant**

Ordering Information

Standard Heaters

Select a Maxiband MXB from the Standard Sizes and Ratings List on pages 1-91 and 1-92.

If not otherwise specified, MXB heaters are supplied with type "S" termination and 4" long plain cooling tubes.

Custom Engineered/Manufactured Heaters

An electric heater can be very application specific; for sizes and ratings not listed **TEMPCO** will design and manufacture a Maxiband Heater to meet your requirements. **Standard lead time is 3 weeks.**

Please Specify the following:

- | | |
|--|---|

⚠ WARNING: Cancer and Reproductive Harm - www.P65Warnings.ca.gov.

Maxiband “MXC” Cool Only *with* Built-In Cooling Tubes

Maxiband MXC Bands are made for cooling only and are available in five standard widths: 3/4", 1-1/2", 2-1/2", 3", and 4". For 3/4" and 1-1/2" wide MXC bands the ends of the stainless steel cooling tubes exit 180° apart. Complete Maxiband specifications can be found on page 1-81.

Minimum Inside Diameter: 5".

Consult Tempco if smaller ID is required.

For **optional cooling tube fittings**, see page 3-52 in the Cast-In Band Heater Section.

Cooling Tube Specifications

Band Width	3/4"	1-1/2"	2-1/2"	3"	4"
Cooling Tube Diameter	3/8"	3/8"	3/8"	3/8"	3/8"
Cooling Tube Extension	4"	4"	4"	4"	4"
Cooling Tube Material	Stainless Steel				

Optional Reverse Construction

Reverse MXC Maxibands lend themselves to cooling cylindrical surfaces from the inside out.

The specially designed internal brackets exert pressure to both heater halves to assure good contact against the inside diameter of the part being cooled. Reverse MXC Maxiband minimum OD is 8". Consult Tempco if smaller OD is required.

Made strictly to customer specifications.

Consult Tempco with your requirements.

Cartridge Heaters

Hi-Density

CARTRIDGE HEATER FEATURES

A The standard termination for Hi-Density Cartridge Heaters is Type N, 10" (254 mm) long nickel conductor lead wires externally connected to 1-1/4" (32 mm) solid conductor terminal pins. The lead wires have fiberglass insulation and are UL approved for temperatures up to 482°F (250°C). Mica insulated UL approved wires for temperatures up to 842°F (450°C) are optional.

Note: To meet the requirements of your application we offer over 40 standard termination styles to select from that will solve many of the most common application problems. See pages 2-39 through 2-60.

B High temperature fiberglass sleeve provides maximum electrical insulation to the crimp connector used to splice the nickel conductors to the flexible leads.

C Ceramic end cap prevents nickel conductors from shorting out against sheath when sharp bending of the leads is required. The ceramic cap may be eliminated in some cases to optimize the heater watt density.

D Ceramic end cap and swaged-in lava plug protect the internal cartridge from outer contamination. Other types of seals can also be provided.

E Solid conductor terminal pins are used to ensure a good electrical connection between the nickel conductor lead wires and the resistance wire. They are sized for the maximum current rating of the heater.

F A high purity Magnesium Oxide (MgO) powder consisting of custom grain sizes is used to fill all remaining space inside the sheath. Heater is then swaged, which compacts the magnesium oxide grains into a solid mass, thereby increasing thermal conductivity and dielectric strength.

G Standard sheath material is 321 Stainless Steel. It provides high temperature strength up to 1200°F (650°C), good thermal conductivity, and resistance to corrosion and scaling. Alloy 321 is a Nickel-Chromium Stainless Steel modified with the addition of Titanium. For higher operating temperatures up to 1400°F (760°C) or corrosive immersion heating applications, Incoloy® 800 is available. Consult Tempco for other sheath materials.

H Grade "A" Nickel-Chrome resistance wire precisely wound on a high purity magnesium oxide core places the resistance wire as close to the inside of the sheath as possible while maintaining dielectric strength. This provides excellent heat transfer and long heater life with the highest possible watt densities.

I Welded end disc made from the same material as the sheath provides a positive seal against moisture and other contaminants.

Hi-Density Cartridge Heaters are UL recognized and CSA certified in many design variations under UL File Number E65652 and CSA File Number 043099.

If you require UL and/or CSA Agency Approval, please specify when ordering.

TEMPCO Offers the Most Comprehensive and Diverse Selection in Hi-Density Cartridge Heaters

Since Their Introduction in 1972, Hi-Density Cartridge Heaters Have Evolved and Today Offer a Multitude of Diverse Product Options:

1. **(HDC)** A Hi-Density cartridge heater in US sizes (see page 2-4).
2. **(HDM)** A Hi-Density cartridge heater in Metric sizes (see page 2-28).
3. **(HDP)** Pennybottom™, A Hi-Density cartridge heater with a Built-in Thermocouple and Flat Copper end disc. (see page 2-24).
4. **(HDL)** A Hi-Density cartridge heater designed with NPT Fittings for Immersion heating (see page 2-23).
5. **(HDB)** Bolt Heater, A Hi-Density cartridge heater designed for assisting in the assembly of large machinery (see page 2-61).

Hi-Density Cartridge Heaters provide maximum processing temperature capability

- * Higher watt densities permit smaller heaters to be used without sacrificing life expectancy. This results in up-front as well as long-term cost savings.
- * Swaged construction provides maximum support for the resistance wire and excellent heat transfer characteristics, improving the overall life expectancy of the cartridge heater.
- * Termination styles and special features allow customization to any application.
- * Applications up to 1400°F (760°C)

Typical Applications

- ✦ Plastic Extruders
- ✦ Hot Runner Molds
- ✦ Hot Stamping
- ✦ Medical Equipment
- ✦ Packaging Equipment
- ✦ Molds
- ✦ Aerospace
- ✦ Sealing Bags
- ✦ Semi-Conductor
- ✦ Plastic Molding
- ✦ Shoe Machinery
- ✦ Food Processing
- ✦ Heating Gases and Liquids
- ✦ Glue Guns
- ✦ Laminating Presses
- ✦ Platens
- ✦ Scientific Equipment
- ✦ Food Service Equipment

Hi-Density Cartridge Heaters are Classified in Two Distinct Categories

Multi-Purpose Use

The Multi-Purpose Use Cartridge Heaters represent Tempco's commitment to value-added customer service as we maintain in Stock over 65,000 Semi-Finished Hi-Density Cartridge Heater Substrates, offering a combination of over 1000 sizes in industry standard diameters and lengths ranging from 1" (25.4 mm) to 36" (914.4 mm) in a complete spectrum of wattages and operating voltages. Multi-Purpose Use Cartridge Heaters are the solution for a multitude of original equipment manufacturers (OEMs) or maintenance (MRO) applications.

Available through the Terminator Program.

Complete details are found on pages 2-12 through 2-21.

Highly Engineered Specific Purpose Use

Tempco has been at the forefront of addressing the challenges of Original Equipment Manufacturers (OEMs) in a broad segment of diversified industries. As a company we are uniquely qualified and committed to providing value-added expertise in engineering and manufacturing capabilities that span over three decades of acquired knowledge, assisting customers in developing highly engineered specific use cartridge heaters for dependable and reliable performance. Let us provide the optimal solution to your thermal loop system and cartridge heater design challenges. Engineering assistance can be found on pages 2-5 through 2-7.

Consult Us With Your Requirements.

We Welcome Your Inquiries.

Cartridge Heaters

Standard Specifications

Hi-Density Cartridge Heater Specifications

PERFORMANCE RATINGS

Max. Temperature: *1400°F (760°C)
Max. Watt Density: 100-300 W/in² (15.5-46.5 W/cm²)
 depending on heater size & operating temperature.

NOTE: The maximum operating temperature and the life expectancy of a cartridge heater is dependent on two main factors:
 1. The maximum recommended sheath temperature (*1200°F for a standard heater)
 2. The maximum ambient temperature for the termination selected.
 Consult Tempco if you require a recommendation for your application.

LENGTH TOLERANCE FOR: - LEAD WIRES - WIRE BRAID LEADS - ARMOR CABLE LEADS

Up to 36": -1/2", +1" (-12.7 mm, +25.4 mm)
 36" to 72": -1", +2" (25.4 mm, +50.8 mm)
 Above 72": ±4" (101.6 mm)

Note: Specifications detailed on this page are standard. Consult Tempco if your application requires tighter tolerances or has other special requirements.

TEMPERATURE COEFFICIENT OF RESISTANCE

The electrical resistance (ohms) of the heater resistance wire increases with temperature rise.

Tempco standard Hi-Density Cartridge Heaters are manufactured with ohms (cold ohms) 3.3% lower than the actual calculated ohms (hot ohms) to compensate for this increase.

Recommendations for Improving the Life of Hi-Density Cartridge Heaters

Tempco Hi-Density Cartridge Heaters have been widely used in many demanding and diverse applications since 1972. The commonly used basic applications are platen, plastic mold and die heating, liquid immersion and air heating.

Note: Selection of the wrong termination for a particular application is the primary reason for all heater failures. However, failure to consider other important criteria can also have a negative effect on the life of the heater. To get the best performance and assure long life, it is important to carefully evaluate the following factors.

Operating Temperature

Operating temperature of a heater is a major factor in determining the life expectancy of a heating element. The heater life depends on the actual temperature of the resistance wire within the heater and not on the process operating temperature. The graph in Fig. 1 demonstrates the proper relationship between operating temperature and watt density; the higher the operating temperature, the lower the maximum recommended watt density.

Heater Watt Density

Cartridge heater watt density is defined as the wattage dissipated per square inch of the heated sheath surface. For a particular application a heater's watt density governs internal resistance wire temperature, which determines the outer sheath temperature. These factors are critical to the proper heating of the application and to the life expectancy of the heater. Special construction features that promote excellent heat transfer permit Hi-Density Cartridge Heaters to operate at higher watt densities while maintaining the lowest possible resistance wire temperatures of any style cartridge heater.

Heater watt density (w/in^2) is calculated using the following formula:

$$\text{Watt Density} = \frac{\text{Heater wattage}}{\text{Heated length} \times \text{Heater diameter} \times 3.1416}$$

Heated length is the overall length of the heater minus any unheated (cold) sections. Standard Type N, Hi-Density cartridge heaters have 3/8" at the lead end and 1/4" at the disc end unheated. This would mean a 6" long heater would have 5-3/8" effective heated length. Unheated sections vary with type of heater termination. For descriptions of terminations and options, see pages 2-39 through 2-60.

The graph in Fig. 1 shows the maximum recommended watt density for Hi-Density Cartridge Heaters when used in a steel platen. Watt density limitations for various materials are given in the engineering section of this catalog. For liquid immersion heaters the maximum watt density depends on the type of liquid being heated. The more viscous, or thicker the liquid, the lower the maximum watt density. Higher watt density can cause the liquid to carbonize and accumulate on the heater sheath, which will cause premature heater failure. It is advisable to use heaters that have watt densities below the maximum recommended watt density to get the longest heater life. If the actual heater watt density is close to the maximum recommended watt density, you can correct the problem by:

1. Increasing the number, diameter and length of heaters.
2. Lowering the total wattage; however, this may increase the heat-up time.
3. Obtaining tighter fit (see Fig. 2 — Determining Fit).

A Hi-Density cartridge heater designed at the maximum recommended watt density allows the smallest heater to be used to obtain the required wattage with good service life. All things being equal, using a lower watt density heater will typically provide optimized service life.

FIG. 1
Recommended Watt Density for Heating Metal Parts

The graph shows the recommended maximum watt density for Tempco Hi-Density cartridge heaters at different operating temperatures and fit, when the heater is installed in an oxidized mild steel block. The thermocouple is located 1/2" from the heater. When heating other materials, the data needs to be extrapolated based on the thermal conductivity of the material. Consult Tempco with your requirements.

FIG. 2
Determining Fit

CONTINUED

Recommendations for Improving the Life of Hi-Density Cartridge Heaters

Continued from previous page...

Determining Fit

When heating a platen, mold, die or hot runner probe with Hi-Density Cartridge Heaters inserted into drilled holes, fit is an important factor in determining the life expectancy of the heater. Fit is the difference between the minimum diameter of the cartridge heater and the maximum diameter of the hole. Unheated sections on a Hi-Density cartridge may be smaller in diameter due to swaging. To determine fit, use the smallest diameter on the heated length only.

Example: A 3/8" nominal OD Hi-Density cartridge heater has an actual diameter of .371" \pm .002, which translates to a minimum diameter of .369". If used in a .376" \pm .002 hole, the fit would be .009" (.378" - .369" = .009").

When medium watt density heaters (less than 60 watts per square inch) are used in low temperature applications (less than 600°F [315°C]) general purpose drills are commonly used to drill holes. The typical hole size may be .003" to .008" over the drill size. For higher watt density and/or higher temperature applications, we recommend that the holes are drilled and reamed for the tightest possible fit. In applications where precise temperature control and heat transfer properties are required, Hi-Density cartridge heaters can be centerless ground to \pm .0005".

Although a tighter fit is desirable to efficiently transfer heat and to get long heater life, a looser fit will aid in installing and removing heaters, especially long heaters. We recommend that you apply Tempco's BNS anti-seize cartridge heater coating as it will improve heat transfer and will make the removal of heaters easier.

The graph in Fig 1. (page 2-5) shows the effect of fit in determining the maximum recommended watt density on a steel platen. As it is indicated in the graph, the tighter the fit, the higher the maximum recommended watt density.

Temperature Control and Location of Temperature Sensing Device

In order to better control the heater temperature and hence the resistance wire temperature, use of an appropriate temperature control and the proximity of the heater to the sensor is very important. The graph in Fig. 1 (page 2-5) shows the effect of operating temperature in determining the maximum recommended watt density on a steel platen where the sensor is located 1/2" from the heater. Higher watt density heaters can generate heat faster than the surrounding area's ability to dissipate heat. This creates a thermal lag between the heater and the sensor. The closer the sensor to the heater, the better you can control the heater temperature. By keeping the sensor further from the heater, temperature gradients of several hundred degrees can be observed in many applications, especially during initial start-up and heavy thermal cycling. Although the set operating temperature may be low, the heater may be running at a very high temperature. This is a common cause of heater failure. This can be minimized using time proportional and PID functions of the temperature controllers. See Section 13 for temperature controllers and Section 14 for thermocouples and sensors.

Power Control

Power control methods affect the life expectancy of heating elements. In general, although economical, on-off controls increase thermal fatigue and oxidation rate on heating elements by causing wide temperature swings of the internal heating element. Silicon Controlled Rectifiers (SCRs), Mercury Relays and Solid State Power Controls can increase the life expectancy of heating elements by reducing the temperature swings of the internal heating element. See Section 13 for power controls.

Common Causes of Cartridge Heater Failures

Contamination

Contamination is a major cause of heater failure. Moisture, hydraulic oils, and melted plastic are the most common contaminants that are seen on failed heaters. Since the magnesium oxide insulation in a Hi-Density heater is hygroscopic in nature, moisture is easily absorbed into the heater and typically results in premature heater failure. Moisture absorption during machine washdown or cleanup also is a frequent problem. These contaminants, which are electrically conductive, will short out the heater. Most probably, the failures will be at the lead end of the heater and in some cases can split or blow a hole on the heater sheath. The disc end of a Hi-Density cartridge heater is welded shut with a stainless steel disc.

Generally, contaminants enter the heater through the lead end of the heater. The high temperature lead wires used on Hi-Density heaters have fiberglass or mica insulation. Oil and moisture can wick through the insulation on the lead wire into the heater. Tempco offers a wide variety of terminations to avoid this problem, including epoxy seals, Teflon® seals, convoluted cables, welded end discs, Teflon® insulated lead wires and SJO cable. However, there are temperature limitations on many of these terminations.

Note: If you should encounter premature cartridge heater failure, consult Tempco. Our team of professionals will have the solution to your problem.

Excessive Flexing of Leads

Tempco Hi-Density heaters use flexible grade A nickel stranded lead wires with fiberglass or mica insulation. On certain terminations the lead wires are connected externally to solid nickel conductor pins. In applications where there is excessive movement or vibration, the solid pins could break due to fatigue. A simple solution is to give enough slack on the leads to minimize the stress on the solid pins or provide an internal lead wire connection within the heater. Tempco also offers strain relief brackets and springs to prevent this problem.

Where heater leads can wear out by abrasion due to excessive flexing of the leads, Tempco offers several abrasion resistant terminations. See pages 2-41 through 2-47.

Lack of Heat Sink

Hi-Density heaters are designed with minimum unheated (cold) sections. If the heated sections project from the platen or mold, these sections will get extremely hot due to lack of heat transfer. This will lead to premature heater failure. Tempco can manufacture heaters with cold sections anywhere along the length of the heater to prevent overheating of the heater sheath.

When a Hi-Density heater is used as a liquid immersion heater, make sure the heater's sheath length is completely immersed in the liquid. The heater lead end should not be immersed in liquid, since most of the lead end seals are only moisture resistant, not moisture proof.

Recommendations for Improving the Life of Hi-Density Cartridge Heaters

High Operating Temperature

Tempco Hi-Density heaters are designed to operate at sheath temperatures up to 1400°F (760°C). When process temperatures approach the maximum heater sheath temperature, make sure the sheath temperature doesn't exceed its limitations. Location of the thermocouple and the type of temperature and power controls are factors that affect sheath temperature and potential overshoot conditions.

Although the heater is designed to run at temperatures up to 1400°F (760°C), heater lead wires and terminations are rated for much lower temperatures. Care should be taken to make sure that the heater lead end temperatures do not exceed their limitations. Heaters can be made longer with unheated sections at the lead end to bring the lead end out of the high temperature area. Tempco can also provide you with a high temperature wiring harness, which can withstand temperatures up to 1400°F (760°C). See page 15-5 in the accessories section for details.

Note: As explained in the above paragraphs, the single major cause for cartridge heater failure is the selection of the wrong type of heater lead end termination for the specific application. To assist you in selecting the right termination type, pages 2-39 through 2-57 give detailed descriptions of over 40 terminations designed to solve many of the common application problems. If you need further assistance, consult Tempco.

High Wattage Rating

Heaters with very high wattage ratings can create temperature overshoots, uneven temperature distribution and high heater sheath temperatures, causing premature heater failure.

For liquid immersion heaters, maximum watt density depends on the type of liquid being heated. The heavier or thicker the liquid, the lower the maximum watt density. Higher watt density can cause the liquid to carbonize and accumulate on the heater sheath, which will cause premature heater failure.

Scale and Sludge Buildup

In liquid immersion applications, periodic cleaning of the heater sheath is necessary to remove any scale buildup on the sheath. Scale can accumulate on the sheath and cause the heater to overheat and fail. When used to heat liquid in a tank, be sure to clean any sludge from the bottom of the tank. A heater sheath covered with sludge will overheat and fail.

Important Installation Considerations

- For closest fit and best heat transfer, use reamed holes.
- When possible, drill holes through the object being heated. This will make heater removal easier.
- When using an anti-seize coating like Tempco's BNS spray or paste, **do not apply** over lead wires or any other current carrying conductors.
- When using insulated tape or sleeving, check to make sure it is rated for the temperature of the application. Lower temperature rated materials can contain an adhesive or binder that can carbonize and become electrically conductive.
- When using heaters near their maximum recommended watt density, it is recommended that the temperature sensing probes be at maximum 1/2" from the heater sheath.
- Lead wires should not be located in the hole containing the cartridge heater during operation. This may cause the lead wires to be exposed to temperatures above their rated temperature.
- When used in a vacuum application, make sure the lead end of the heater is outside the vacuum. If the lead has to be in the vacuum, consult Tempco for specific recommendations.
- Many applications will subject a heater's electrical terminations to one or more of the following potentially damaging conditions:
 - Moisture
 - Oil and other contaminants
 - Flexing
 - Abrasion
 - High temperature

Note: To protect the heater from damage in these harsh environments, Tempco has a wide selection of terminations and options available. See pages 2-39 through 2-60 for details.

BNS Anti-Seize Cartridge Heater Coating

This high temperature, electrically insulating and thermally conductive coating will minimize oxidation and improve heat transfer from heater to the object being heated.

Brush a thin layer of paste or spray lightly over the cartridge heater prior to inserting the heater into a hole.

Do not apply over lead wires or other bare current carrying conductors, since the water in the paste and spray can cause an electrical short circuit.

13 oz.
Aerosol spray can

Part Number:
CML00010

- * Temperature Range 1562°F (850°C)
- * High Heat Transfer

4 oz.
Paste w/brush applicator top
Part Number: CML00020

- * Temperature Range 1562°F (850°C)
- * High Heat Transfer

Note: Formulated to assist in the removal of cartridge heaters.

All Items Available from Stock

Highly Engineered Custom Manufactured Specific Use Cartridge Heaters

Meeting the Challenges of Original Equipment Manufacturers with Custom Engineering

Tempco has been at the forefront of addressing the challenges of original equipment manufacturers (OEMs) in diversified industries, when dependable and reliable performance of custom engineered cartridge heaters is crucial to the overall operating efficiency and quality of their equipment and machinery.

Tempco is a company uniquely qualified and committed to providing value-added expertise in engineering and manufacturing that spans over four decades of acquired knowledge, assisting customers in developing highly engineered specific use cartridge heaters for equipment and/or machinery systems.

Cartridge heater with NPT fitting and a 5-pin industrial connector molded to the cord.

Cartridge heater for continuous air heating application with Incoloy® sheath, custom machined fitting and silicone rubber moisture barrier.

Cartridge heater with built-in thermal fuse and ground wire for X-Ray processing equipment.

Cartridge heater with built-in thermostat, pipe fitting and ground leads for oil heating in waste handling equipment.

Finned Cartridge Oil Immersion Heater with a liquid-tight electrical termination.

Complete a New Project on Time, Improve Efficiencies and Reduce Cost

Consult Tempco, your strategic partner, in the early stages of a new project requiring cartridge heaters, or to improve a troublesome existing application. By doing so you allow Tempco to place at your disposal our team of professionals, offering you our vast knowledge in product design and manufacturing expertise. We can provide you with the optimal solution to your thermal loop system and cartridge heater design challenges.

Tempco offers you the perfect balance in quality and service with value-added technology. These pictures depict a small sampling of the cartridge heaters we have developed for special applications. Put our knowledge and experience to work for you.

*Our capabilities are limited only by your imagination.
Consult us with your requirements.
We welcome your inquiries.*

Internal thermocouple is wired to a serial connector for easy assembly to a microprocessor used in incubators.

Incoloy® fitting and seamless Incoloy® 800 sheath material used in an aviation application.

Straight armor cable and adjustable bayonet cap for easy assembly.

Heater with custom designed fins for air heating in natural convection environment in a plastic-processing machine.

Highly Engineered Custom Manufactured Specific Use Cartridge Heaters

The heater has a header cap as an integral part of the fitting. Leads exit through small holes that are sealed with epoxy for moisture protection.

Pennybottom™ Tip Die Bolt heater with internal thermocouple

Heater designed to run continuously at 1202°F (650°C); built-in isolated thermocouple and ground wire.

Heater for medical diagnostic instruments has an integrated heat sink and thermal fuse.

SJO cord and molded plug for automotive air conditioning recharging units.

Cartridge heaters can be formed into complex shapes.

Optional Inspection Services and Test Reports

Die Penetrant Test

This non-destructive testing can detect imperfections in weld joints. For critical applications, each individual heater's weld joints by end cap and fittings can be tested. Certified test reports will be sent with each shipment.

Hydrostatic Pressure Test

Cartridge heaters with attached pipe fittings can be pressure tested to your specifications at Tempco. Our in-house testing capabilities can ensure that your products meet your exact specifications.

Electrical Tests

Our state of the art test meter can perform AC/DC dielectric withstand test (Hypot) up to 5000 volts while measuring leakage current in micro amps. It can also measure Insulation resistance (IR) and heater element resistance. Heaters can be serialized and test reports can be sent with each shipment if required.

*Consult Tempco with Your Requirements.
We Welcome Your Inquiries.*

Cartridge Heaters

Hi-Density Miniature

Hi-Density 1/8" Diameter Miniature Cartridge Heaters

PERFORMANCE RATINGS

Max. Temperature: 1200°F (649°C)

Max. Watt Density: 100-200 W/in² (15.5-31 W/cm²)
depending on operating temperature.

NOTE: The maximum operating temperature and the life expectancy of a cartridge heater is dependent on two main factors:

1. The maximum recommended sheath temperature
 2. The maximum ambient temperature for the termination selected
- Consult Tempco if you require a recommendation for your application.

Custom Engineered/Manufactured 1/8" Hi-Density Cartridge Heaters

(Refer to pages 2-2 through 2-9)

Because cartridge heaters can be very application specific, consult Tempco with your special requirements. For sizes, electrical ratings and any other design features required but not listed in the catalog, Tempco will custom engineer and manufacture to your specifications.

Consult Us with Your Requirements. We Welcome Your Inquiries.

**Custom
Manufactured**

1/8" Diameter Cartridge Heaters Termination Types

Type N External Pins with Leads (Standard Termination)

- Minimum 1/4" cold section at lead end is required
- 24 ga ultralead leads temperature rating: 482°F (250°C)
- Leads externally crimped to nickel pins
- **Standard** 10" (254 mm) leads. Specify longer leads.

Type F Internally Connected Flexible Leads

- Minimum 1/2" cold section at lead end is required
- High temperature fiberglass leads temperature rating: 842°F (450°C)
- Maximum Voltage: 120V
- **Standard** 10" (254 mm) leads. Specify longer leads.

Type M3 Teflon® End Plug Seal with Teflon® Leads

- Minimum 1/2" cold section at lead end is required
- 24 ga Teflon® insulated leads temperature rating: 392°F (200°C)
- Moisture resistant swaged Teflon® seal
- **Standard** 10" (254 mm) leads. Specify longer leads.

Type C1B SS Cable, Mechanically Fastened

- Minimum 1/4" cold section is required
- Provides maximum protection for abrasive environment
- Maximum Voltage: 120V
- **Standard** 10" (254 mm) cable over 12" (305 mm) leads. Specify longer leads or cable.

Type W SS Braid, Mechanically Fastened

- Minimum 1/4" cold section is required
- Offers sharp bending and abrasion protection
- Maximum Voltage: 120V
- **Standard** 10" (254 mm) cable over 12" (305 mm) leads. Specify longer leads or cable.

1/8" Diameter Cartridge Heaters Mounting Options

Type R4 Bent Cartridge

- Heater Sheath is bent up to 90°
- Bend is through a required cold section
- Standard sheath extension past the bend is 1"

Type MFR Mounting Flange

- 1" diameter; 2 × 9/64" mounting holes are standard
- Other sizes available

Custom Terminated Multi-Purpose Use Cartridge Heaters from the Terminator Program

Tempco stocks over 1000 different Semi-Finished Hi-Density Cartridge Heaters in diameters 1/4", 5/16", 3/8", 1/2", 5/8" and 3/4".

These cartridge heaters are semi-finished (substrates), offering you the option to finish them by choosing from 19 program-qualified lead end terminations and options. Cartridge heaters will be ready for shipment within 1 to 3 days, depending on the termination/option selected.

Ordering Information – Follow These Simple Steps

1. Select an available 1/4" through 3/4" Hi-Density cartridge heater from the stock lists on pages 2-14 through 2-21. The Part Numbers in the tables are for heaters with termination Type N (10" long externally connected lead wires). **Call Tempco for part numbers for stock heaters with other Terminator Program terminations.**
 2. Refer to the Program-Qualified Lead Terminations Reference Photos below and on page 2-13 to select the cartridge heater termination type best suited for your application.
- NOTE:** Type "N" (10" long externally connected plain lead wires) is the most common termination applied in the Terminator program. **If a termination other than Type N is selected, a new permanent part number will be assigned when your order is placed.**
3. Specify your lead requirements in the event that the standard supplied lengths for Plain Leads (10"), Braid or Armor Cable (10" over 12" leads) are not suited for your application.
 4. Specify the Quantity.

These Program-Qualified Lead Terminations and Options for Stock Cartridge Heater Substrates will ship Same or Next Day when ordered before 2PM (CST).

Terminations

Type N

Custom Engineered/Manufactured Hi-Density Cartridge Heaters

(Refer to pages 2-2 through 2-9)

Because cartridge heaters can be very application specific, consult Tempco with your special requirements. For sizes, electrical ratings and any other design features required but not listed in the catalog, Tempco will custom engineer and manufacture to your specifications.

Consult Us with Your Requirements. We Welcome Your Inquiries.

Cartridge Heaters

Hi-Density

STOCK — Immediate Delivery through the **TERMINATOR** Lead Conversion Program

1/4" Actual .246" (6.25 mm) Diameter Hi-Density Cartridge Heaters

Part Numbers listed are for stock Cartridge Heaters terminated with 10 inch long leads (Type N Termination). Other Terminator Program terminations and options can also be applied to stock heaters (see Ordering Information).

Ordering Information

Order by Part Number for stock Cartridge heaters with Type N termination. Call Tempco for part numbers for stock heaters with other Terminator Program terminations and options (see pages 2-12 & 2-13).

Custom Engineered/Manufactured

Cartridge Heaters can be application specific; therefore for sizes, electrical ratings, terminations and any other design features not listed in this catalog **TEMPCO** will custom manufacture to your specifications. Consult us with your requirements.

STOCK — Immediate Delivery through the  Lead Conversion Program

5/16" Actual .308" (7.82 mm) Diameter Hi-Density Cartridge Heaters

Part Numbers listed are for stock Cartridge Heaters terminated with 10 inch long leads (Type N Termination). Other Terminator Program terminations and options can also be applied to stock heaters (see Ordering Information).

Ordering Information

Order by Part Number for stock Cartridge heaters with Type N termination. Call Tempco for part numbers for stock heaters with other Terminator Program terminations and options (see pages 2-12 & 2-13).

Custom Engineered/Manufactured

Cartridge Heaters can be application specific; therefore for sizes, electrical ratings, terminations and any other design features not listed in this catalog **TEMPCO** will custom manufacture to your specifications. Consult us with your requirements.

STOCK — Immediate Delivery through the **TERMINATOR** Lead Conversion Program

1/2" Actual .496" (12.60 mm) Diameter Hi-Density Cartridge Heaters

Part Numbers listed are for stock Cartridge Heaters terminated with 10 inch long leads (Type N Termination).
Other Terminator Program terminations and options can also be applied to stock heaters (see Ordering Information).

Ordering Information

Order by Part Number for stock Cartridge heaters with Type N termination. Call Tempco for part numbers for stock heaters with other Terminator Program terminations and options (see pages 2-12 & 2-13).

Custom Engineered/Manufactured

Cartridge Heaters can be application specific; therefore for sizes, electrical ratings, terminations and any other design features not listed in this catalog **TEMPCO** will custom manufacture to your specifications. Consult us with your requirements.

STOCK — Immediate Delivery through the **TERMINATOR** Lead Conversion Program

5/8" Actual .621" (15.77 mm) Diameter Hi-Density Cartridge Heaters

Part Numbers listed are for stock Cartridge Heaters terminated with 10 inch long leads (Type N Termination). Other Terminator Program terminations and options can also be applied to stock heaters (see Ordering Information).

Ordering Information

Order by Part Number for stock Cartridge heaters with Type N termination. Call Tempco for part numbers for stock heaters with other Terminator Program terminations and options (see pages 2-12 & 2-13).

Custom Engineered/Manufactured

Cartridge Heaters can be application specific; therefore for sizes, electrical ratings, terminations and any other design features not listed in this catalog **TEMPCO** will custom manufacture to your specifications. Consult us with your requirements.

Cartridge Heaters

Type F Terminated Stock Heaters

STOCK Cartridge Heaters with Type F Flexible Lead Termination

Type F Internally Connected Flexible Leads 10" Long

This lead termination provides flexibility; the lead wires are internally connected to the terminal pins. The lead wires can be sharply bent as they exit the ceramic insulating cap without exposing the bare wire.

Note: Custom Engineered/Manufactured Hi-Density Cartridge Heaters with Type F Flexible Lead Termination
Refer to ordering information on page 2-3.

Standard Size Stock Type CM 1/2" & 3/4" NPT Screw Plug Hi-Density Cartridge Immersion Heaters

Hi-Density Cartridge Immersion Heaters are designed for heating water and other liquids. The high watt density capability of this heater permits greater heat dissipation in a given area than would a tubular immersion heater.

However, it is important to note that allowable watt density depends on the material being heated. For water heating, watt densities of several hundred watts per square inch are possible; oil heating may be limited to 5 to 20 watts per square inch.

Design Features

- * Passivated Incoloy® Sheath
- * 10" long Teflon® Insulated Lead Wires
- * Brass Fitting
- * Epoxy Seal at Lead End
266°F (130°C) Standard
UL Rating 194°F (90°C)

Note: See pages 2-50 & 2-51 for other fitting options

Ordering Information

Stock Heaters

Part Numbers listed above are for 1/2" and 3/4" NPT Brass Screw Plug Cartridge Immersion Heaters with Type CM termination and 10" long leads. **Standard lead time is 72 hours.**

Custom Engineered/Manufactured Heaters

Because an electric heater can be very application specific, for sizes and ratings not listed, **TEMPCO** will design and manufacture a Cartridge Immersion Heater to meet your requirements. **Standard lead time is 3 weeks.**

Please Specify the following:

- Screw Plug NPT Size
- Screw Plug material (Brass or SS)
- Sheath material (Incoloy®, 321 SS)
- Element Watt Density
- Immersion Length
- Heated Length
- Wattage
- Voltage
- Termination types
- Lead Length

Cartridge Heaters

Hi-Density Pennybottom™

Hi-Density Pennybottom™ Cartridge Heaters with Built-In Thermocouple

Designed for Trouble-Free Performance and Improved Efficiency

The unique feature of the Pennybottom™ cartridge heater is the use of a flat copper end disc to maximize heat transfer and improve temperature sensing. It has been proved through extensive field testing that heat at the tip can be increased by up to 30°F. The Pennybottom™ cartridge heater also includes a Type J thermocouple at the end disc. The junction is grounded to the flat copper end disc, providing excellent temperature control at the gating area, eliminating freeze-ups or drool, thus producing quality molded parts.

Additional features of Pennybottom™ heaters include minimum cold sections and computer designed distributed wattage. Pennybottom™ heaters are manufactured under the same design specifications and rigid quality control workmanship as the Hi-Density cartridge heater line. The swaging operation during the manufacturing process produces a rugged and durable cartridge heater for greater reliability and exceptionally long operating life.

Design Features

- * Pennybottom™ Copper Flat End Disc
- * Hi-Density Swaged Construction
- * Grounded Type J Thermocouple at the Copper End Disc
- * 36" High Temperature Leads for both Heater and Thermocouple
- * Minimum Cold Sections
- * OEM Replacements Available From Stock for Runnerless Molding Systems

Note: The cartridge heaters listed in this section include Pennybottom™ and Hi-Density cartridge heaters configured for specific tasks in the plastic injection molding environment with extra long leads, Teflon® or fiberglass insulation, with and without thermocouples, grounded at the end disc or in the middle of the heater.

All Items Available from Stock

STOCK OEM Replacement Hi-Density Cartridge Heaters — Underwater Pelletizer Die Heater

Design Features

- * Hi-Density Swaged Construction
- * 44" mica insulated 842°F (450°C) Lead Wires
- * 1" Diameter Heater Sheath
- * Incoloy Sheath Standard, SS Optional
- * 16 Gauge Stainless Steel Mounting Flange
- * Ground Lead Optional
- * Other Options Available (wattage, voltage, lead length etc.)

Type R2A Cement potting and silicone varnish

Type R2A 600W, 240V — Part Number HDC02661

Type W1A Cement potting and silicone varnish

Type C3B Cement potting & silicone varnish, with stainless steel cable

Type C3D Welded lead end disc, with stainless steel cable

METRIC SIZES

Hi-Density

CARTRIDGE HEATERS

Standard Specifications and Tolerances of Hi-Density Cartridge Heaters in **Metric** sizes. If tighter tolerances are required consult Tempco.

LEAD LENGTH TOLERANCE

Up to 1000 mm: -15/+40 mm
 1000 mm to 2000 mm: -25/+50 mm
 Above 2000 mm: ±100 mm

*480V when applicable. Consult Tempco.

†Current carrying capacities are for ambient temperatures up to 482°F (250°C) with mica insulated lead wires.

Recommendations for Improving the Life of Tempco Hi-Density Metric Cartridge Heaters

Tempco Hi-Density Metric Cartridge Heaters have been widely used in many demanding and diverse applications since 1972. The commonly used basic applications are platen, plastic mold and die heating, liquid immersion and air heating.

Note: Selection of the wrong termination for the particular application is the major reason for all heater failures. However, failure to consider other important criteria can also have a negative effect on the life of the heater. To get the best performance and assure long life, it is important to carefully evaluate the following factors.

Operating Temperature

Operating temperature of a heater is a major factor in determining the life expectancy of a heating element. The heater life depends on the actual temperature of the resistance wire within the heater and not on the process operating temperature. The graph in Fig. 1 demonstrates the proper relationship between operating temperature and watt density; the higher the operating temperature, the lower the maximum recommended watt density.

Heater Watt Density

Cartridge heater watt density is defined as the wattage dissipated per square centimeter of the heated sheath surface. For a particular application a heater's watt density governs internal resistance wire temperature, which determines the outer sheath temperature. These factors are critical to the proper heating of the application and to the life expectancy of the heater. Special construction features that promote excellent heat transfer permit Hi-Density cartridge heaters to operate at higher watt densities while maintaining the lowest possible resistance wire temperatures of any style cartridge heater.

Heater watt density (w/cm^2) is calculated using the following formula:

$$\text{Watt Density} = \frac{\text{Heater wattage}}{\text{Heated length} \times \text{Heater diameter} \times 3.1416}$$

Heated length is the overall length of the heater minus any unheated (cold) sections. Standard Type N, Hi-Density Metric Cartridge Heaters have 9.5 mm at the lead end and 6.4 mm at the disc end unheated. This would mean a 100 mm long heater would have 84.1 mm effective heated length. Unheated sections vary with type of heater termination. For descriptions of terminations and options, see pages 2-39 through 2-60.

The graph in Fig. 1 shows the maximum recommended watt density for Hi-Density Metric Cartridge Heaters when used in a steel platen. Watt density limitations for various materials are given in the engineering section of this catalog. For liquid immersion heaters the maximum watt density depends on the type of liquid being heated. The more viscous, or thicker the liquid, the lower the maximum watt density. Higher watt density can cause the liquid to carbonize and accumulate on the heater sheath, which will cause premature heater failure. It is advisable to use heaters that have watt densities below the maximum recommended watt density to get the longest heater life. If the actual heater watt density is close to the maximum recommended watt density, you can correct the problem by:

1. Increasing the number, diameter and length of heaters.
2. Lowering the total wattage; however, this may increase the heat-up time.
3. Obtaining tighter fit (see Fig. 2 — Determining Fit).

A Hi-Density cartridge heater designed at the maximum recommended watt density allows the smallest heater to be used to obtain the required wattage with good service life. All things being equal, using a lower watt density heater will typically provide optimized service life.

FIG. 1
Recommended Watt Density for Heating Metal Parts

The graph shows the recommended maximum watt density for Tempco Hi-Density Metric Cartridge Heaters at different operating temperatures and fit, when the heater is installed in an oxidized mild steel block. The thermocouple is located 12.5 mm from the heater. When heating other materials, the data needs to be extrapolated based on the thermal conductivity of the material. Consult Tempco with your requirements.

FIG. 2
Determining Fit

CONTINUED 

Recommendations for Improving the Life of Tempco Hi-Density Metric Cartridge Heaters

Continued from previous page...

Determining Fit

When heating a platen, mold, die or hot runner probe with Hi-Density Metric Cartridge Heaters inserted into drilled holes, fit is an important factor in determining the life expectancy of the heater. Fit is the difference between the minimum diameter of the cartridge heater and the maximum diameter of the hole. Unheated sections on a Hi-Density cartridge may be smaller in diameter due to swaging. To determine fit, use the smallest diameter on the heated length only.

Example: A 10 mm nominal OD Hi-Density cartridge heater has an actual diameter of 9.95 ± 0.03 mm, which translates to a minimum diameter of 9.92 mm. If used in a $10.01 \text{ mm} \pm 0.02$ mm hole, the fit would be .11 mm ($10.03 \text{ mm} - 9.92 \text{ mm} = 0.11 \text{ mm}$).

When medium watt density heaters (less than 9.30 watts per square centimeter) are used in low temperature applications (less than 600°F [315°C]) general purpose drills are commonly used to drill holes. The typical hole size may be 0.07 mm to 0.20 mm over the drill size. For higher watt density and/or higher temperature applications, we recommend that the holes are drilled and reamed for the tightest possible fit. In applications where precise temperature control and heat transfer properties are required, Hi-Density cartridge heaters can be centerless ground to ± 0.01 mm.

Although a tighter fit is desirable to efficiently transfer heat and to get long heater life, a looser fit will aid in installing and removing heaters, especially long heaters. We recommend that you apply Tempco's BNS anti-seize cartridge heater coating as it will improve heat transfer and will make the removal of heaters easier.

The graph in Fig 1. (page 2-29) shows the effect of fit in determining the maximum recommended watt density on a steel platen. As it is indicated in the graph, the tighter the fit, the higher the maximum recommended watt density.

Temperature Control and Location of Temperature Sensing Device

In order to better control the heater temperature and hence the resistance wire temperature, use of an appropriate temperature control and the proximity of the heater to the sensor is very important. The graph in Fig 1. (page 2-29) shows the effect of operating temperature in determining the maximum recommended watt density on a steel platen where the sensor is located 12.5 mm from the heater. Higher watt density heaters can generate heat faster than the surrounding area's ability to dissipate heat. This creates a thermal lag between the heater and the sensor. The closer the sensor to the heater, the better you can control the heater temperature. By keeping the sensor further from the heater, temperature gradients of several hundred degrees can be observed in many applications, especially during initial start-up and heavy thermal cycling. Although the set operating temperature may be low, the heater may be running at a very high temperature. This is a common cause of heater failure. This can be minimized using time proportional and PID functions of the temperature controllers. See Section 13 for temperature controllers and Section 14 for thermocouples and sensors.

Power Control

Power control methods affect the life expectancy of heating elements. In general, although economical, on-off controls increase thermal fatigue and oxidation rate on heating elements by causing wide temperature swings of the internal heating element. Silicon Controlled Rectifiers (SCRs), Mercury Relays and Solid State Power Controls can increase the life expectancy of heating elements by reducing the temperature swings of the internal heating element. See Section 13 for power controls.

Important Installation Considerations

1. For closest fit and best heat transfer, use reamed holes.
2. When possible, drill holes through the object being heated. This will make heater removal easier.
3. When using an anti-seize coating like Tempco's BNS spray or paste, **do not apply** over lead wires or any other current carrying conductors.
4. When using insulated tape or sleeving, check to make sure it is rated for the temperature of the application. Lower temperature rated materials can contain an adhesive or binder that can carbonize and become electrically conductive.
5. When using heaters near their maximum recommended watt density, it is recommended that the temperature sensing probes be located approximately 12.5 mm from the heater sheath.
6. Lead wires should not be located in the hole containing the cartridge heater during operation. This may cause the lead wires to be exposed to temperatures above their rated temperature.
7. When used in a vacuum application, make sure the lead end of the heater is outside the vacuum. If the lead has to be in the vacuum, consult Tempco for specific recommendations.
8. Many applications will subject a heater's electrical terminations to one or more of the following potentially damaging conditions:
 - Moisture
 - Flexing
 - Oil and other contaminants
 - Abrasion
 - High temperature

Note: To protect the heater from damage in these harsh environments, Tempco has a wide selection of terminations and options available. See pages 2-39 through 2-60 for details.

CALCULATING WATTAGE REQUIREMENTS

Formulas and related data to calculate wattage requirements are detailed in the Engineering Section located at the back of this catalog. For new applications it is recommended that testing under actual operating conditions be performed to confirm wattage and watt density calculations.

An excellent evaluation method is to power up a heater with the calculated wattage and watt density through a variable voltage transformer. By changing the voltage and therefore the heater output, thermocouples sensing heater and process temperature can verify the design.

Note: Part Numbers above are for Hi-Density Cartridge Heaters terminated with Type N leads, 250 mm (10") long. See pages 2-39 through 2-57 for other terminations.

Ordering Information

Catalog Heaters

Order by Catalog Part Number from the Standard Sizes and Ratings List on the preceding pages. Note that Part Numbers shown are for heaters with Type N Termination (250 mm leads). Available Terminations and Optional Features can be found on pages 2-39 through 2-60.

Custom Engineered/Manufactured Heaters

Because an electric heater can be very application specific, for sizes and ratings not listed, **TEMPCO** will design and manufacture a Hi-Density Metric Cartridge Heater to meet your requirements. **Standard lead time is 3 weeks.**

Please Specify the following:

- Diameter
- Length
- Wattage
- Voltage
- Termination types (see pages 2-39 through 2-51)
- Options/Special Features (see pages 2-52 through 2-60)
- Lead Length
- Cable/Braid length
- Application Type
- Operating Temperature

Low-Density

CARTRIDGE HEATER FEATURES

*An Economical and Reliable Cartridge Heater,
Used in Applications Requiring
Lower Operating Temperatures and Watt Densities*

A The standard termination for Low-Density Cartridge Heaters is Type F, consisting of 10" (254 mm) internally connected flexible lead wires with high temperature insulation, UL approved for 300 Volt or 600 Volt service and temperature rated to 482°F (250°C).

Note: To meet the requirements of your application we offer over 40 standard termination styles to select from that will solve many of the most common application problems. See pages 2-39 through 2-60.

B Ceramic end cap protects the cartridge internally from outside contamination.

C Resistance wire and lead wires are mechanically spliced with heavy wall nickel connectors for a positive electrical connection.

D Helically wound Nickel-Chrome resistance wire is evenly stretched and strung through ceramic insulators.

E Alloy 304 Stainless Steel is used to provide high temperature strength, good thermal conductivity and resistance to oxidation up to 1200°F (650°C). Alloy 304 is a Nickel-Chromium Stainless Steel. For immersion heating of corrosive solutions consult Tempco.

F Specially selected grain size high purity Magnesium Oxide (MgO) is used to fill all remaining space inside the ceramic insulator, thus increasing thermal conductivity, dielectric strength and heater life.

G Sheath is roll crimped over a 304 Stainless Steel end disc. A mica spacer electrically insulates the heater core from the end disc. This style end seal is not moisture proof.

Low Density Cartridge Heaters are UL recognized and CSA certified in many design variations under UL File Number E65652 and CSA File Number 043099.

If you require UL and/or CSA Agency Approval, please specify when ordering.

Tempco Low-Density Cartridge Heaters are an excellent, cost effective choice without compromising quality for Original Equipment Manufacturers (OEMs) consuming large quantities of cartridge heaters for their equipment.

Typical Applications

- Heat Sealing Equipment
- Laminating Equipment
- Packaging Equipment
- Labeling Machines

- Molds and Dies
- Food Processing
- Refrigeration
- Shoe Machinery

- Glue Guns
- Wax Pots
- Heating Liquids
- Heating Gases

Low-Density Cartridge Heater Specifications

Standard Specifications and Tolerances of Low Density Cartridge Heaters. If tighter tolerances are required consult Tempco.

PERFORMANCE RATINGS

Maximum Temperature: 1200°F (650°C)

Maximum Watt Density: 20-45 W/in² (3.1-7.0 W/cm²) depending on heater size and operating temperature.

Low-Density Cartridge Heaters are made-to-order only. Standard lead time is 3 weeks.

See pages 2-39 through 2-57 for other terminations.

Ordering Information

Catalog Heaters

Order by Catalog Part Number from the Standard Sizes and Ratings List on the preceding pages. Note that Part Numbers shown are for heaters with Type F Termination (10" leads).

Available Terminations and Optional Features can be found on pages 2-39 through 2-60.

Custom Engineered/Manufactured Heaters

Because an electric heater can be very application specific, for sizes and ratings not listed, **TEMPCO** will design and manufacture a Low-Density Cartridge Heater to meet your requirements. **Standard lead time is 3 weeks.**

Please Specify the following:

- Diameter
- Length
- Wattage
- Voltage
- Termination types (see pages 2-39 through 2-51)
- Options/Special Features (see pages 2-52 through 2-60)
- Lead Length
- Cable/Braid length
- Application Type
- Operating Temperature

Tempco Offers Innovative Cartridge Heater Terminations Focused on Providing Maximum Performance Under a Diverse Segment of Demanding Applications

Cartridge Heater Terminations Can be Elusive to Define and Are Often Overlooked

To ensure maximum efficiency and reliable cartridge heater service, evaluate your existing operating conditions and proceed to select the best suited termination(s) for your application.

Failure to evaluate the operating conditions and the environment of a cartridge heater application and/or improper termination selection will compromise the operating reliability and functional life of the cartridge heater, resulting in costly machine downtime and loss of revenue due to lack of productivity.

The synergy between the cartridge heater termination and the application will result in reduced operating cost, increased productivity, optimized performance and improved customer satisfaction.

Take Advantage of Tempco's Innovative Cartridge Heater Terminations.

We offer a selection of over 40 standard terminations specifically designed to address the operating requirements of a multitude of diverse applications requiring protection against the following conditions:

- **Abrasion**
- **Moisture Resistance**
- **Double-End Powerleads**
- **Locating Ring or Bushings**
- **NPT or Bulkhead Fittings**
- **Built-In Thermocouples & Thermostats**
- **Electrical Boxes**
- **Contamination**
- **High Temperatures**
- **Mounting Flanges**
- **Pull Straps**
- **Flexing**

In addition, there are many cartridge heater adaptations to facilitate their use:
 Refer to pages 2-39 through 2-60 for complete specifications and details on all available terminations and options.

A Wise Man Once Said . . .

“A Cartridge Heater is Only As Good as the Termination that Powers It.”

Standard Termination — HDC and HDM Hi-Density Cartridge Heaters

Available through the Hi-Density Cartridge Heater Terminator Program for Same or Next Day Shipping

Type N External Pins with Leads

Available on HDC and HDM cartridge heaters

Flexible stranded lead wires have fiberglass insulation and are connected to 1-1/4" (32 mm) long solid conductors. Silicone rubber coated fiberglass sleeving insulates the pin/lead wire connection.

- Nominal 3/8" unheated section at the lead end is required.
- Standard lead wire temperature rating: 482°F (250°C)
- **Standard 10" (254 mm) leads.** Specify longer leads.

Standard Termination — LDC Low-Density Cartridge Heaters

Type F Internally Connected Flexible Leads

Available on HDC, HDM and LDC Cartridge Heaters

The fiberglass lead wires are internally connected to the terminal pins. This lead termination provides flexibility, permitting the lead wires to be sharply bent as they exit the heater.

- Minimum 3/8" up to 1" unheated section at the lead end is required.
- Standard lead wire temperature rating for HDC and HDM cartridge heaters is 842°F (450°C)
- Standard lead wire temperature rating for LDC cartridge heaters is 482°F (250°C)
- **Standard 10" (254 mm) leads.** Specify longer leads. For HDC & HDM heaters, leads longer than 60" require a splice.

Cartridge Heater — Moisture Resistant Terminations

Type M1 Polyolefin Liquid Barrier

Available on HDC, HDM, and LDC cartridge heaters

A liquid barrier used for low temperature applications primarily in refrigeration or food service applications. The seal bonds to both the heater and the leads.

- Minimum 1" unheated section at the lead end is required.
- Three conductor SJO type cord.
- Available only in certain diameters. Heaters smaller than 1/2" diameter require an adapter.
- **Standard 10" (254 mm) leads. Specify longer leads.**

Type M2 Potted End Seal

Available on HDC, HDM and LDC cartridge heaters

Potted end seals help to protect the heater from moisture or contamination from plastic material, cleaning solvents, or oils. The bottom end disc seal is welded in.

M2A Cement potting with silicone varnish. Fiberglass lead wires externally connected.

- Cement potting temperature rating: 1000°F (538°C)
- Standard lead wire temperature rating: 482°F (250°C)

M2B Silicone rubber potting. Silicone rubber lead wires internally connected.

- Silicone rubber potting temperature rating: 450°F (232°C)
- Standard lead wire temperature rating: 392°F (200°C)

M2C High temperature epoxy potting. Teflon® lead wires internally connected.

- High temp. epoxy potting temp. rating: 450°F (232°C)
- Standard lead wire temperature rating: 392°F (200°C)

M2D Low temperature epoxy potting. Teflon® lead wires internally connected.

- Low temp. epoxy potting temp. rating: 266°F (130°C), UL rated to 194°F (90°C)
- Standard lead wire temperature rating: 392°F (200°C)

M2E Cement potting with silicone varnish. Fiberglass lead wires internally connected.

- Cement potting temperature rating: 1000°F (548°C)
- Standard lead wire temperature rating: 482°F (250°C)
- Minimum of 3/8" up to 1" unheated section at the lead end is required.
- **Standard 10" (254 mm) leads. Specify longer leads.**

Type M3 Teflon® End Plug Seal

Available on HDC and HDM cartridge heaters

A moisture resistant Teflon® seal that is swaged in during the manufacturing process with Teflon® insulated lead wire.

- Minimum 3/8" up to 1" unheated section at the lead end is required.
- Teflon® seal temperature rating: 392°F (200°C)
- Standard lead wire temperature rating: 392°F (200°C)
- **Standard 10" (254 mm) leads. Specify longer leads. Leads longer than 60" require a splice.**

TYPE M2A

TYPE M2B, M2C, M2D and M2E

 M2A and M2E are available through the Hi-Density Cartridge Heater Terminator Program for 2nd or 3rd Day Shipping

Cartridge Heater — Moisture Resistant Terminations

Type SA Sealed Corrugated Armor Cable

Available on 1/2" Diameter and Larger HDC, HDM and LDC cartridge heaters

A liquid-proof stainless steel corrugated metal hose is silver brazed to the end of the cartridge heater. The end disc of the heater is also welded or brazed. This termination provides a positive seal against moisture and contamination entering the heater.

- ▶ Minimum 3/8" up to 1" unheated section at the lead end is required.
- ▶ Standard fiberglass lead wire temperature rating
HDC and HDM: 842°F (450°C), LDC: 482°F (250°C)
- ▶ **Standard 10" (254 mm) cable over 12" (305 mm) leads.**
Specify longer leads or cable.

Cartridge Heater — Flexible Spring Abrasion Resistant Terminations

Type S1 Flexible Spring

Available on HDC, HDM, and LDC cartridge heaters.

The leads are reinforced with a steel spring for applications with extreme flexing. The spring is mechanically fastened or silver brazed.

S1A Mechanically fastened spring.

S1B Silver brazed spring.

- ▶ Minimum 3/8" up to 1" unheated section at the lead end is required.
- ▶ Standard fiberglass lead wire temperature rating
HDC and HDM: 842°F (450°C), LDC: 482°F (250°C)
- ▶ **Standard 10" (254 mm) leads. Specify longer leads.**

Type W Wire Braided Leads

Available on HDC, HDM, and LDC cartridge heaters

Stainless steel braid over fiberglass leads offers sharp bending not possible with armor cable, as well as abrasion protection.

- Minimum 3/8" up to 1" unheated section at the lead end is required.
- Standard lead wire temperature rating
HDC and HDM: 842°F (450°C), LDC: 482°F (250°C)
- **Standard 10" (254 mm) braid over 12" (305 mm) leads.**
Specify longer braid/leads.

Diameter		Fig.	"A" Dim./HD		"A" Dim./LD

1-1/4	31.75	2	—	—	9/16	14.29

Type W2 Embedded Wire Braided Leads

Available on HDC, HDM and LDC cartridge heaters

Stainless Steel braid embedded into seal offers moisture resistance and abrasion protection.

W2A Fiberglass Leads with Cement Potting

- Cement potting temperature rating: 1000°F (538°C)
- Standard lead wire temperature rating: 482°F (250°C)

W2B Teflon® Leads with High Temperature Epoxy

- High temperature epoxy temp. rating: 450°F (232°C)
- Standard lead wire temperature rating: 392°F (200°C)

W2C Teflon® Leads with Low Temperature Epoxy

- Low temperature epoxy temp. rating: 266°F (130°C)
UL rated to 194°F (90°C)
- Standard lead wire temperature rating: 392°F (200°C)
- Minimum 3/8" up to 1" unheated section at the lead end is required.
- **Standard 10" (254 mm) braid over 12" (305 mm) leads.**
Specify longer braid/leads.

Type W3 Swaged-In Wire Braided Leads

Available on HDC and HDM cartridge heaters

Stainless steel braid over fiberglass leads offers sharp bending not possible with armor cable, as well as abrasion protection. In addition, Type W3 offers contamination resistance due to the Teflon® seal required for holding the wire braid.

- Minimum 3/8" up to 1" unheated section at the lead end is required.
- Teflon® Seal temperature rating: 392°F (200°C)
- Standard lead wire temperature rating: 842°F (450°C)
- **Standard 10" (254 mm) braid over 12" (305 mm) leads.**
Specify longer braid/leads.

[View Product Inventory @ www.tempco.com](http://www.tempco.com)

Cartridge Heater — Armor Cable Abrasion Resistant Terminations

Type CS Straight Armor Cable Directly Attached to Sheath

Available on HDC, HDM, and LDC cartridge heaters

The armor cable is directly attached to the cartridge heater, eliminating the coupling, to maintain an overall diameter equal to or smaller than the cartridge diameter.

CSA Galvanized armor cable – minimum diameter: 5/16"

CSB Stainless steel armor cable – minimum diameter: 5/16"

- Minimum 3/8" up to 1" unheated section at the lead end is required.
- Heaters with an OD of 3/4" or larger require reducing diameter washer
- Standard fiberglass lead wire temperature rating
HDC and HDM: 842°F (450°C), LDC: 482°F (250°C)
- **Standard 10" (254 mm) cable over 12" (305 mm) leads.**
Specify longer leads or cable.

Type C1 Straight Armor Cable with Coupling

Available on HDC, HDM, or LDC cartridge heaters

Armor cable provides the maximum in protection for abrasive, jagged environments. The coupling between the cartridge and the armor cable is mechanically fastened or silver brazed.

C1A Galvanized armor cable, mechanically fastened

C1B Stainless steel armor cable, mechanically fastened

- Standard fiberglass lead wire temperature rating
482°F (250°C)

C1C Galvanized armor cable, silver brazed

C1D Stainless steel armor cable, silver brazed

- Standard fiberglass lead wire temperature rating
HDC and HDM: 842°F (450°C), LDC: 482°F (250°C)

- Minimum 3/8" up to 1" unheated section at the lead end is required.

- **Standard 10" (254 mm) cable over 12" (305 mm) leads.**
Specify longer leads or cable.

TYPE C1 Fig. 1

C1A and C1B are available through the Hi-Density Cartridge Heater Terminator Program for Same or Next Day Shipping

TYPE C1 Fig. 2

Right-Angle Terminations

Cartridge Heater — Plain Leads Right-Angle Terminations

TYPE R1 Fig. 1

TYPE R1 Fig. 2

Type R1 Right-Angle Leads with Copper Elbow

Available on HDC, HDM, and LDC cartridge heaters

This termination is used when space is limited. The copper elbow is mechanically fastened or silver brazed.

R1A Mechanically fastened

R1B Silver brazed

➤ Minimum 3/8" up to 1" unheated section at the lead end is required.

➤ Standard fiberglass lead wire temperature rating
HDC and HDM: 842°F (450°C), LDC: 482°F (250°C)

➤ **Standard 10" (254 mm) leads. Specify longer leads.**

Note: For Right-Angle Sheath Options, see page 2-53.

Cartridge Heater — Flexible Spring Abrasion Resistant Right-Angle Terminations

Type R2 Right-Angle Leads

Available on HDC, HDM, and LDC cartridge heaters

This termination is used when space is limited. Not suitable for abrasive environments. Same as C3 and W1 except plain leads. Various lead end finishes are available as listed below:

- R2A** Cement potting, no lead end disc
 - Cement potting temperature rating: 1000°F (538°C)
 - Standard fiberglass lead wire temperature rating: 482°F (250°C)
 - R2B** Cement potting, welded lead end disc
 - Cement potting temperature rating: 1000°F (538°C)
 - Standard fiberglass lead wire temperature rating: 482°F (250°C)
 - R2C** Silicone rubber potting, welded lead end disc
 - Silicone Rubber potting temperature rating: 450°F (232°C)
 - Standard silicone rubber lead wire temperature rating: 392°F (200°C)
 - R2D** High temperature epoxy potting, welded lead end disc
 - High Temperature epoxy potting temperature rating: 450°F (232°C)
 - Standard Teflon® lead wire temperature rating: 392°F (200°C)
 - R2E** Low temperature epoxy potting, welded lead end disc
 - Low Temperature epoxy potting temperature rating: 266°F (130°C)
 - Standard Teflon® lead wire temperature rating: 392°F (200°C)
- Minimum 3/8" up to 1" unheated section at the lead end is required.
- **Standard 10" (254 mm) leads. Specify other lead lengths.**

R2A and R2B are available through the Hi-Density Cartridge Heater Terminator Program for 2nd or 3rd Day Shipping

Type S2 Right-Angle Spring

Available on HDC, HDM, and LDC cartridge heaters

The leads are reinforced with a steel spring for applications with extreme flexing. The spring is mechanically fastened or silver brazed.

- S2A** Mechanically fastened spring
- S2B** Silver brazed spring
- Minimum 3/8" up to 1" unheated section at the lead end is required.
- Standard fiberglass lead wire temperature rating
HDC and HDM: 842°F (450°C), LDC: 482°F (250°C)
- **Standard 10" (254 mm) leads. Specify longer leads.**

Type W1 Right-Angle Wire Braided Leads

Available on HDC, HDM, and LDC cartridge heaters

Stainless steel braid over fiberglass leads for abrasion protection, mechanically crimped to the cartridge sheath at 90°. Wire braid offers extreme flexibility not possible with armor cable. Various lead end finishes are available as listed below.

W1A Cement potting and silicone varnish, no lead end disc.

- Cement potting temperature rating: 1000°F (538°C)
- Standard lead wire temperature rating: 482°F (250°C)

W1B Welded lead end disc.

- Cement potting temperature rating: 1000°F (538°C)
- Standard lead wire temperature rating: 482°F (250°C)
- Minimum 3/8" up to 1" unheated section at the lead end is required.
- **Standard** 10" (254 mm) braid over 12" (305 mm) leads. Specify longer braid or leads.

Note: For Right-Angle Sheath Options, see page 2-53.

Cartridge Heater — Armor Cable Abrasion Resistant Right-Angle Terminations

Type C2 Right-Angle Armor Cable with Copper Elbow

Available on HDC, HDM, and LDC cartridge heaters

Armor cable provides the maximum in protection for abrasive, jagged environments. The copper elbow between the cartridge and the armor cable is mechanically fastened or silver brazed.

- C2A** Galvanized armor cable, mechanically fastened
 - C2B** Stainless steel armor cable, mechanically fastened
 - C2C** Galvanized armor cable, silver brazed
 - C2D** Stainless steel armor cable, silver brazed
- Minimum 3/8" up to 1" unheated section at the lead end is required.
 - Standard fiberglass lead wire temperature rating
HDC and HDM: 842°F (450°C), LDC: 482°F (250°C)
 - **Standard 10" (254 mm) cable over 12" (305 mm) leads.**
Specify longer cable or leads.

Dimensions for Type C2 Hi-Density Cartridge Heaters

Type C3 Right-Angle Armor Cable

Available on HDC, HDM, and LDC cartridge heaters

Use this termination when space is limited and maximum protection is required. The armor cable is tack welded or silver brazed to the cartridge sheath at 90°. The sheath extension is potted with cement. Various lead end finishes are available as listed below.

- C3A** Cement potting and silicone varnish with no lead end disc, galvanized cable
 - C3B** Cement potting and silicone varnish with no lead end disc, stainless steel cable
 - C3C** Welded lead end disc, with galvanized cable
 - C3D** Welded lead end disc, with stainless steel cable
- Minimum 3/8" up to 1" unheated section at the lead end is required.
 - Cement potting temperature rating: 1000°F (538°C)
Standard fiberglass lead wire temperature rating: 482°F (250°C)
 - **Standard 10" (254 mm) armor cable over 12" (305 mm) leads.**
Specify longer cable or leads.

Cartridge Heater — Screw Terminations

Type T1 Screw Terminals

Available on LDC type cartridge heaters only

For use with leads, crimp terminals, or bus bars. Includes washers and nuts.

- Minimum 1/2" unheated section at the lead end is required.
- Diameters available: 3/4", 7/8", 1", and 1-1/4".
- **Standard:** screw #6-32 x 3/4" long

Diameter	in	3/4	7/8	1	1-1/4
	mm	19.05	22.23	25.40	31.75
"A" Dimension	in	3/8	7/16	1/2	1/2
	mm	9.53	11.11	12.70	12.70

Type T2 Screw Terminals

Available on HDC and HDM type cartridge heaters only

For use with leads, crimp terminals, or bus bars. Includes washers and nuts.

- Minimum 1/2" unheated section at the lead end is required.
- Diameters available: HD — 5/8", 3/4", 1"
HDM — 16 mm and 20 mm
- **Standard:** screw #8-32

Cartridge Heater — High Temperature Termination

Type B Heat Resistant Ceramic Bead Insulation

Available on HDC, HDM, and LDC cartridge heaters.

The ultimate in high temperature lead protection. Allows for the attachment of flexible leads to the heater away from the high heat area. Used when the ambient temperature exceeds 842°F (450°C).

- **Standard** 10" (254 mm) solid nickel pins insulated with ball and socket construction type ceramic beads

 Available through the Hi-Density Cartridge Heater Terminator Program for Same or Next Day Shipping

Type BL Heat Resistant Ceramic Bead Insulation with Leads

Available on HDC, HDM, and LDC cartridge heaters.

High temperature flexible leads are connected away from the high heat area.

- **Standard** 6" (254 mm) solid nickel pins insulated with ball and socket construction type ceramic beads and 10" (254 mm) fiberglass leads rated at 842°F (450°C). Specify longer leads.

 Available through the Hi-Density Cartridge Heater Terminator Program for Same or Next Day Shipping

Cartridge Heater — Double End Terminations

Type T4 Double End Terminal Pin

Available on HDC, HDM, and LDC cartridge heaters

For those applications in which wiring from both ends is an advantage. Various seals are available:

- T4A** Cement potting seal with silicone varnish
 - Cement potting temperature rating: 1000°F (538°C)
- T4B** High temp. moisture resistant epoxy seal
 - High temp. epoxy temp. rating: 450°F (232°C)
- T4C** Low temp. moisture resistant epoxy seal
 - Low temp. epoxy temp. rating: 266°F (130°C)
- Minimum 1" unheated section at each end is required.
- **Standard** terminal pin length is 2".

Type F1 Double End Flexible Leads

Available on HDC, HDM, and LDC cartridge heaters

For applications in which it is an advantage to wire from both ends. The leads are internally connected and can be bent sharply as they exit the potted ends. Various seals are available:

- F1A** Fiberglass leads with cement potting seal and silicone varnish
 - Cement potting temperature rating: 1000°F (532°C)
 - Standard lead wire temperature rating: 482°F (250°C)
- F1B** Teflon® leads with high temp. moisture resistant epoxy seal
 - High temp. epoxy temperature rating: 450°F (232°C)
 - Standard lead wire temperature rating: 392°F (200°C)
- F1C** Teflon® leads with low temp. moisture resistant epoxy seal
 - Low temp. epoxy temperature rating: 266°F (130°C)
 - Standard lead wire temperature rating: 392°F (200°C)
- Minimum 1" unheated section at each end is required.
- **Standard** 10" leads. Specify longer leads.
Leads longer than 60" require a splice.

Type T3 Double End Screw Terminals

Available on HDC, HDM, and LDC cartridge heaters from 1/2" to 1-1/4" diameter

A double ended heater with quick change wiring screw terminals. Includes zinc plated washers and nuts.

- Minimum 1/2" unheated section at each end is required.

Standard screw sizes:

- 1/2" diameter — #8-32 × 3/4" screws
- 5/8" to 1-1/4" diameter — #10-32 × 3/4" screws

Mounting Fitting Termination & Option

Cartridge Heater Termination — Single Ended National Pipe Thread (NPT) Fitting

TYPE CM Fig. 1 – Fitting Flush with Lead End of Sheath

 **CMB & CMP are available through the Hi-Density Cartridge Heater Terminator Program for 2nd or 3rd Day Shipping**

NOTE: Stainless steel fittings are available through the Terminator program for heaters 1/2" diameter and larger.

Note: Fitting can be offset from end of sheath. See Figure 2, Single Threaded Mounting Options CMV and CMW below.

Standard NPT Bushing Dimensions
(Fig. 1 & Fig. 2)

Heater Diameter (in)	NPT Size	"A"	"B"	"C"
1/4	1/8-27	3/8	3/16	7/16
3/8	1/4-18	1/2	3/16	9/16
1/2	3/8-18	9/16	1/4	11/16
5/8	1/2-14	5/8	1/4	7/8
3/4	3/4-14	3/4	1/4	1-1/8
7/8	1-11 1/2	3/4	1/4	1-3/8
1	1-11 1/2	3/4	1/4	1-3/8
1-1/4	1 1/4-11 1/2	7/8	5/16	1-3/4

Type CM Single Threaded Fitting Mounting Termination Fitting Flush with Lead End of Sheath

Available on HDC, HDM, and LDC cartridge heaters

A single threaded pipe fitting is attached to the end of a cartridge heater to allow for installation into a threaded hole. Brass fittings are silver brazed and stainless steel fittings are heli-arc welded. Available with the potting seals listed in the table.

Potted end seals help to protect the heater from moisture or contamination from plastic material, cleaning solvents, or oils. The bushing cavity can be sealed with various materials such as:

CMA/CMN Low temperature epoxy potting — 266°F (130°C), UL rated to 194°F (90°C)
Teflon® leads internally connected, rated 392°F (200°C).

CMB/CMP Hi-temp cement potting with silicone varnish — 1000°F (538°C)
Fiberglass leads internally connected, rated 482°F (250°C).

CMC/CMQ Silicone rubber potting — 450°F (232°C)
Silicone rubber leads internally connected, rated 392°F (200°C).

CMD/CMR High temperature epoxy potting — 450°F (232°C)
Teflon® leads internally connected, rated 392°F (200°C).

➤ A minimum of 1/4" unheated section below the bushing is required.

➤ **Standard 10" (254 mm) leads. Specify longer leads.**

Type Codes for Single Threaded Fittings

Potting Seal Type	Fitting Material	
	Brass	Stainless Steel
Low Temp Epoxy	CMA	CMN
Hi-Temp Cement	CMB	CMP
Silicone Rubber	CMC	CMQ
Hi-Temp Epoxy	CMD	CMR

Single Ended National Pipe Thread (NPT) Fitting Option

TYPE CM Fig. 2 – Fitting Offset from Lead End of Sheath

Type CM Single Threaded Fitting Mounting Option Fitting Offset from Lead End of Sheath

Available on HDC, HDM, and LDC cartridge heaters

This mounting option available with many terminations attaches a fitting offset from the lead end of the sheath. This option is useful when the lead wires need to be kept away from the heated area. Brass fittings are silver brazed and stainless steel fittings are offset heli-arc welded.

CMV Brass Fitting

CMW Stainless Steel Fitting

➤ Specify offset dimension "E" when ordering.

➤ A termination must be specified separately.

Hi-Density Cartridge Immersion Heater Specifically Designed for Heating Water & Other Liquids

See Page 2-23.

[View Product Inventory @ www.tempco.com](http://www.tempco.com)

Cartridge Heater — Double Ended National Pipe Thread (NPT)

Type CN Double Threaded Fitting Mounting Termination Fitting Flush with Lead End of Sheath

Available on HDC, HDM, and LDC cartridge heaters

A double threaded pipe fitting is attached to the end of a cartridge heater to allow for installation into a threaded hole. Brass fittings are silver brazed and stainless steel fittings are heli-arc welded.

Standard NPT Bushing Dimensions

Heater Diameter (in)	NPT Size	"A"	"B"	"C"
1/4	1/8-27	3/8	1/4	7/16
3/8	1/4-18	1/2	1/4	9/16
1/2	3/8-18	9/16	1/4	11/16
5/8	1/2-14	5/8	5/16	7/8
3/4	3/4-14	3/4	3/8	1-1/8
7/8	1-11 1/2	3/4	3/8	1-3/8
1	1-11 1/2	3/4	3/8	1-3/8
1-1/4	1 1/4-11 1/2	7/8	1/2	1-3/4

Type Codes for Double Threaded Fittings

Potting Seal Type	Fitting Material	
	Brass	Stainless Steel
Low Temp Epoxy	CNA	CNN
Hi-Temp Cement	CNB	CNP
Silicone Rubber	CNC	CNQ
Hi-Temp Epoxy	CND	CNR

Potted end seals help to protect the heater from moisture or contamination from plastic material, cleaning solvents, or oils. The bushing cavity can be sealed with various materials such as:

CNA/CNN Low temperature epoxy potting — 266°F (130°C), UL rated to 194°F (90°C)
Teflon® leads internally connected, rated 392°F (200°C).

CNB/CNP Hi-temp cement potting w/ silicone varnish — 1000°F (538°C)
Fiberglass leads internally connected, rated 482°F (250°C).

CNC/CNQ Silicone rubber potting — 450°F (232°C)
Silicone rubber leads internally connected, rated 392°F (200°C).

CND/CNR High temperature epoxy potting — 450°F (232°C)
Teflon® leads internally connected, rated 392°F (200°C).

- A minimum of 1/4" unheated section below the bushing is required.
- Standard 10" (254 mm) leads. Specify longer leads.

Cartridge Heater Immersion Heater Top Hat Screw Plug Termination

Type TH Top Hat Screw Plug

Available on HDC (except 1/8") and HDM cartridge heaters

This heater has a header cap as an integral part of the fitting. Leads exit through small holes which are sealed with epoxy for moisture protection.

Low temperature epoxy potting — 266°F (130°C), UL rated to 194°F (90°C)

Teflon® leads internally connected, rated 392°F (200°C).

- Standard 10" (254 mm) leads. Specify longer leads.

Cartridge Heater — Bulkhead Fitting Termination

Type BF Bulkhead Fitting

Available on HDC and LDC 1/2" and 5/8" cartridge heaters

A 5/8-18 UNF fitting is attached to the end of the cartridge heater to allow for mounting the heater to the wall of a tank or enclosure. Brass fittings are silver brazed and stainless steel fittings are heli-arc welded. Includes a copper washer and jam nut. The lead wires are internally connected. Available with the potting seals listed in the table.

Type Codes for Bulkhead Fittings

Potting Seal Type	Fitting Material	
	Brass	Stainless Steel
Low Temp Epoxy	BFA	BFJ
Silicone Rubber	BFB	BFK
Hi-Temp Epoxy	BFC	BFL

Potted end seals help to protect the heater from moisture or contamination from plastic material, cleaning solvents, or oils. The fitting cavity can be sealed with various materials such as:

BFA/BFJ Low temperature epoxy potting — 266°F (130°C), UL rated to 194°F (90°C)
Teflon® leads internally connected, rated 392°F (200°C).

BFB/BFK Silicone rubber potting — 450°F (232°C)
Silicone rubber leads internally connected, rated 392°F (200°C).

BFC/BFL High temperature epoxy potting — 450°F (232°C)
Teflon® leads internally connected, rated 392°F (200°C).

- A minimum of 1/4" unheated section below the bushing is required.
- Standard 10" (254 mm) leads. Specify longer leads.

Options

Cartridge Heater Mounting Flange Options

Type MFR Mounting Flange — Round

Available on HDC, HDM, and LDC cartridge heaters

Recommended for applications where excessive vibration exists and may cause the heater to back out of its mounting hole. The 16 ga. 304 SS flange is used as a means of securing the cartridge heater in place.

The default position of the flange is flush with the lead end. Specify the position of the flange when ordering.

Available through the Hi-Density Cartridge Heater Terminator Program for Same or Next Day Shipping with flush flange only

Standard Round Mounting Flanges

Heater Diameter in (mm)	"F"		"C"		"H"	
	in	mm	in	mm	in	mm
1/4 (6.35), 5/16 (7.94), 3/8 (9.53), 1/2 (12.70), 5/8 (15.88), 3/4 (19.05)	1-1/2	38.10	1-1/8	28.57	.156	3.97
7/8 (22.23), 1 (25.40), 1-1/4 (31.80)	2	50.80	1-5/8	41.28	.203	5.16

Note: 5/16" dia. cartridge heater can only be HDC; 7/8" and 1-1/4" can only be LDC.

Type MFH Mounting Flange — Hex

Available on HDC, HDM, and LDC cartridge heaters

A hex shape allows the possibility of using a wrench when removal is tight. The 16 ga. 304 SS flange is used as a means of securing the cartridge heater in place.

The default position of the flange is flush with the lead end. Specify the position of the flange when ordering.

Standard Hex Mounting Flanges

Heater Diameter		"F"		"C"		"H"	
in	mm	in	mm	in	mm	in	mm
1/4	6.35	1	25.40	3/4	19.05	.144	3.66
5/16	7.94	1	25.40	3/4	19.05	.144	3.66
3/8	9.53	1	25.40	3/4	19.05	.144	3.66
1/2	12.70	1-3/8	34.93	1-5/32	29.37	.187	4.76
5/8	15.88	1-3/8	34.93	1-5/32	29.37	.187	4.76
3/4	19.05	1-3/8	34.93	1-5/32	29.37	.187	4.76
7/8	22.26	1-7/8	47.63	1-9/16	39.69	.203	5.16
1	25.40	1-7/8	47.63	1-9/16	39.69	.203	5.16
1-1/4	31.80	1-7/8	47.63	1-11/16	42.86	.203	5.16

Custom Mounting Flanges available upon request. Consult Tempco with your requirements.

Cartridge Heater Lead Wire with Strain Relief Options

Type S3 Lead Wire Strain Relief

Available on HDC, HDM, and LDC cartridge heaters

Strain relief clip for leads subject to tension and stress. A "T" type strain relief is silver brazed to the sheath.

Type S4 Right-Angle Lead Wire Strain Relief

Available on HDC, HDM, and LDC cartridge heaters

Strain relief clip for leads subject to tension and stress. A "T" type strain relief is silver brazed to the sheath and bent at a 90° angle.

Cartridge Heater Option — Angled Sheath

Type R3 Angled Sheath Extension

Available on HDC, HDM, and LDC cartridge heaters

The sheath extension is silver brazed to the cartridge at a 90° angle. The leads are internally connected. The standard sheath extension is 3/8" long. Specify when ordering if a longer sheath extension is required. If abrasion resistance is required, armor cable or stainless steel wire braid can be attached to the sheath extension. Available with various lead wire types and potted end seals.

Type R4 Bent Cartridge

Available on HDC and HDM cartridge heaters

The heater sheath itself is bent to 90°. The bend is through a required cold section. The standard sheath extension past the bend is 1". Specify when ordering if a longer sheath is required.

Cartridge Dia.	in	1/4	3/8	1/2	5/8	3/4	1
	mm	6.35	9.53	12.70	15.88	19.05	25.40
Bend Radius	in	1/2	1/2	3/4	1	1-1/4	1-1/2
	mm	12.70	12.70	19.05	25.40	31.75	38.10

Type R5 Square Block with Tube Extension

Available on HDC, HDM, and LDC cartridge heaters

The tube extension is silver brazed or tack welded to a square S/S block. The standard tube length is 1", but different lengths can be specified. Available with various lead wire types, abrasion resistant options or potted end seals.

Heater Diameter		"A"		"B"	
in	mm	in	mm	in	mm
1/4	6.35	7/16	11.11	5/16	7.94
3/8	9.53	1/2	12.70	3/8	9.52
1/2	12.70	5/8	15.87	1/2	12.70
5/8	15.88	3/4	19.05	5/8	15.87
3/4	19.05	1	25.40	11/16	17.46

Other Sheath Options

Cartridge Heater Locating Ring

Available through the Hi-Density Cartridge Heater Terminator Program for Same or Next Day Shipping

Type LR Locating Ring

Available on HDC, HDM, and LDC cartridge heaters

A locating ring can be attached to the heater to aid in positioning the heater for the application.

The default position of the ring is 1/4" from the lead end. Specify the position of the ring when ordering.

(800) 323-6859 • Email: sales@tempco.com

Cartridge Heater Pull Strap

Available through the Hi-Density Cartridge Heater Terminator Program for Same or Next Day Shipping

Type PS Pull Strap

Available on HDC, HDM, and LDC cartridge heaters

A nickel wire rope is silver brazed to the lead end of the cartridge heater sheath to assist in removing the heater.

Cartridge Heater Terminal Box Options

Type E1 General Purpose Terminal Box

Available on HDC, HDM, and LDC cartridge heaters

General purpose Stainless Steel NEMA 1 electrical enclosure designed to provide protection from electrical shock. The boxes have a 5/8" conduit knockout and are welded or brazed to the cartridge sheath.

➤ A termination must be specified separately.

Type E2 Moisture Proof Terminal Box

Available on HDC, HDM, and LDC cartridge heaters

NEMA 4 aluminum electrical enclosures provide protection from splashing or hose directed water, external condensation and water seepage. The box is mechanically attached to the cartridge sheath.

➤ A single 5/8" access hole is standard.

➤ A termination must be specified separately.

NOTE: Potted End Seal M2C (high temperature epoxy) or M2D (low temperature epoxy) is recommended.

Type E4 General Purpose Terminal Box (mailbox style)

Available on HDC, HDM, and LDC cartridge heaters

General purpose Stainless Steel NEMA 1 electrical enclosure designed to provide protection from electrical shock. The box is welded or brazed to the cartridge sheath.

➤ A termination must be specified separately.

Type E5 Octagon Terminal Box

Available on HDC, HDM, and LDC cartridge heaters

General purpose steel NEMA 1 electrical enclosure designed to provide protection from electrical shock. The box is welded to the cartridge sheath.

➤ A termination must be specified separately.

Type E3 Explosion Resistant Terminal Box Options

Available on HDC and HDM cartridge heaters 1/2" diameter and larger.

NEMA 4/7 electrical enclosures provide protection from contaminants, moisture, and hazardous conditions. These housings are screwed onto a heater with a single or double ended Brass or Stainless Steel fitting.

- A threaded fitting mounting termination must be specified. See pages 2-50 and 2-51.
- Other terminal box configurations available upon request.

Style **E3C**

Housing E3C Dimensions

Heater Diameter(s)	Hub Size NPT	"A" (in)	"B" (in)	"C" (in)	"D" (in)	"E" (in)
1/2 & 5/8	1/2-14	2-1/2	2-1/4	2-3/16	5/8	7/8
3/4	3/4-14	2-1/2	2	2	3/4	7/8
1	1-11½	3-1/2	2-5/16	2-3/16	7/8	1

Style **E3D**

Housing E3D Dimensions

Heater Diameter(s)	Hub Size NPT	"A" (in)	"B" (in)	"C" (in)	"D" (in)	"E" (in)
1/2 & 5/8	1/2-14	2-1/2	2-1/4	2-3/16	5/8	7/8
3/4	3/4-14	2-1/2	2-1/2	2-7/16	3/4	7/8
1	1-11½	3-1/2	2-5/16	2-3/16	7/8	1

Style **E3L**

Housing E3L Dimensions

Heater Diameter(s)	Hub Size NPT	"A" (in)	"B" (in)	"C" (in)	"D" (in)	"E" (in)
1/2 & 5/8	1/2-14	2-1/2	2-1/4	2-3/16	5/8	7/8
3/4	3/4-14	2-1/2	2-1/2	2-7/16	3/4	7/8
1	1-11½	3-1/2	2-5/16	2-3/16	7/8	1

Explosion resistant terminal housings are intended to provide containment of an explosion in the enclosure only. No portion of the heater assembly outside the enclosure is covered under this NEMA rating. Abnormal use of a heater which results in excessive temperature can create hazardous conditions such as a fire. Never perform any type of service nor remove the housing cover prior to disconnecting all electrical power to the heater.

Cartridge Heaters

Lead Wire Options

Cartridge Heater Options — Lead End Connections

Type RT Ring Terminal

Type ST Spade Terminal

Type QTA 1/4" Female Straight Quick Disconnect

Type QTB 1/4" Female Right-Angle Quick Disconnect

Available on HDC, HDM and LDC cartridge heaters

Various types of crimp terminals can be attached to the heater leads to make wiring into applications quick and easy. Non-insulated and insulated with nylon (221°F/105°C) or PVC (194°F/90°C).

Note: Specify insulation type and ring size (#6, #8, or #10) when ordering. Standard is a non-insulated #10 terminal. Consult Tempco with your requirements.

Type RT

Type ST

Type QTA

Type QTB

Type P Quick Disconnect Plugs

Available on HDC, HDM, and LDC cartridge heaters

Allows for the quick and easy replacement of the heater. The plug can be attached to galvanized armor cable, stainless steel armor cable, or wire braid.

Plug Type

Description

- | | |
|----------|---|
| 1 | 2-pole/2-wire twist locking plug, 15 amp 125 volt
NEMA L1-15P (Part Number EHD-102-102) |
| 2 | 2-pole/3-wire twist locking plug, 15 amp 125 volt or
10 amp 250 volt
NEMA N/A. (Part Number EHD-102-107)
NOTE: This plug is not listed by UL, and is recommended
for replacement use only. |
| 3 | 2-pole/3-wire straight blade plug, 15 amp 125 volt
NEMA 5-15P (Part Number EHD-102-103) |
| 4 | 2-pole/3-wire twist locking plug, 15 amp 125 volt
NEMA L5-15P (Part Number EHD-102-113) |
| 5 | 2-pole/3-wire twist locking plug, 15 amp 250 volt
NEMA L6-15P (Part Number EHD-102-121) |
| 6 | 2-pole/3-wire twist locking plug, 20 amp 250 volt
NEMA L6-20P (Part Number EHD-102-122) |
| 8 | 2-pole/3-wire straight blade plug, 15 amp 250 volt
NEMA 6-15P (Part Number EHD-102-114) |
| 9 | 2-pole/3-wire twist locking plug, 20 amp 250 volt
NEMA L2-20P (Part Number EHD-102-104)
NOTE: For other types of plugs, consult Tempco or
specify the manufacturer's part number when ordering.
See page 15-15 for additional information. |

Caution! Voltage and Amperage ratings of heater and plug must match.

Available through the Hi-Density Cartridge Heater Terminator Program for Same or Next Day Shipping

Cartridge Heater Lead Wire Options

Type MIL High Temperature Lead Wire

Available on HDC, HDM and LDC cartridge heaters

When required, high temperature lead wire can be used on most cartridge heaters. The stranded wire is insulated with mica tapes and then a treated fiberglass overbraid.

- Maximum temperature rating: 450°C (842°F)

Type TL Teflon® Leads

Available on HDC and HDM cartridge heaters

- Maximum temperature rating: 200°C (392°F)

Type HA Heat Shrink Covered Armor Cables

Available on HDC, HDM and LDC cartridge heaters

- Either the galvanized or stainless steel armor cable can be covered with moisture proof heat shrink PVC tubing.

Type HTL Very High Temperature Lead Wire

Available on HDC, HDM and LDC cartridge heaters

When required, high temperature lead wire can be used on most cartridge heaters. The stranded wire is insulated with mica composite and then a treated fiberglass overbraid.

- Available wire gauge sizes: 10-18
- Maximum temperature rating: 550°C (1022°F)

Type SR Silicone Rubber Coated Fiberglass Slewing

Available on HDC, HDM and LDC cartridge heaters

For added protection, strength, and resistance to various chemicals, the lead wires can be covered with silicone rubber slewing.

SRA Silicone rubber coated fiberglass slewing on each lead separately

SRB Silicone rubber coated fiberglass slewing on both leads together

- Specify length when ordering.
- Maximum temperature rating: 200°C (392°F)

Consult Tempco with your requirements.

We welcome your inquiries.

Cartridge Heater Options — Sheath Surface and Sheath Material

Type IS Incoloy® Sheath

Available on HDC and HDM cartridge heaters.

The standard sheath material for all Hi-Density Cartridge Heaters except 1" diameter is 321 stainless steel; standard for 1" diameter is 304 stainless steel. The incoloy sheath option is available on all diameters except 1/8", 5/16", 8 mm and 20 mm.

To assist you in selecting the proper sheath material, corrosion resistant ratings and chemical properties of various heater sheath materials are given in Section 16, Engineering Data, in the back of this catalog.

Type DSM Other Special Sheath Materials

If your application requires a specific alloy sheath material other than described in Type IS above, consult Tempco with your requirements.

Type PAS Passivation

Available on HDC, HDM, and LDC cartridge heaters.

Passivating is a chemical process accomplished by dipping the heater in a solution of nitric acid. The process removes surface contamination, usually iron, so that the optimum corrosion resistance of the stainless steel is maintained.

Type OAL Special Length Tolerance

Available on HDC, HDM, and LDC cartridge heaters.

If a special length tolerance different than the standard length tolerance specified on page 2-4 is required, consult Tempco with your requirements.

Type ELP Electro-Polish

Available on HDC, HDM, and LDC cartridge heaters.

Electro-Polishing is an electro-chemical process that removes surface imperfections and contaminants, enhancing the corrosion resisting ability of the heater sheath.

Type CG Centerless Grinding

Available on HDC and HDM cartridge heaters.

For applications requiring high precision fit and tolerance, the sheath can be centerless ground.

Tolerance: ± 0.0005 inches (0.013 mm)

Specify diameter when ordering.

Type SDA End Disc Seals Silver Brazed

Type SDB End Disc Seals Heli-Arc Welded

Available on LDC cartridge heaters.

End discs on HDC and HDM cartridge heaters are heli-arc welded as standard.

The normally mechanically attached end discs on LD cartridge heaters can be silver brazed or heli-arc welded if desired.

Cartridge Heater With Built-In Internal Thermocouples

Built-in Internal Thermocouples are available on all HDC, HDM, and LDC cartridge heater diameters except for 3/16", 5/16" and 8 mm.

Notes: Type TJ4 and TK4 are not available on 1/4" and 6.5 mm diameter cartridges.

Minimum sheath length: 3" for 1/4", 3/8" and 1/2" diameter. 4" for 5/8" and 3/4" diameter.

10" leads are standard for both heater and thermocouple. Leads are internally connected. Specify longer leads.

ANSI Code	Conductor Characteristics		Temperature Range	
	Positive	Negative	°F	°C
J	Iron (Magnetic)	Constantan (Non-Magnetic)	0 to 1400	-17 to 760
K	Chromel (Non-Magnetic)	Alumel (Magnetic)	0 to 2300	-17 to 1260

For other thermocouple types consult Tempco.

Type TJ1 and TK1

Type TJ1 and TK1 Grounded at Disc End

The thermocouple junction is grounded to the sheath at the disc end and packed with MgO. The concave end disc is filled with silver solder and ground flat. When inserted into a flat end blind hole, it will provide fast responsive temperature readings. Widely used in Hot Runner mold probes.

TJ1 Type J thermocouple; **TK1** Type K thermocouple

Type TJ2 and TK2

Type TJ2 and TK2 Ungrounded at Disc End

The thermocouple junction is ungrounded, located at the end of the heater section, 1/8" behind the end disc and packed with MgO. Only provides reference temperature reading of the part being heated – slower response.

TJ2 Type J thermocouple; **TK2** Type K thermocouple

Type TJ3 and TK3

Type TJ3 and TK3 Ungrounded at Center

The thermocouple junction is ungrounded and is located in the center of the length and diameter of the cartridge heater. It provides internal temperature readings of the heater core. Generally used for research applications and is not recommended for controlling process temperatures.

TJ3 Type J thermocouple; **TK3** Type K thermocouple

Type TJ4 and TK4

Type TJ4 and TK4 Grounded at Center

The thermocouple junction is grounded to the sheath in a 1/2" unheated section located in the center of the cartridge length unless otherwise specified. It provides good temperature readings with quick response.

TJ4 Type J thermocouple; **TK4** Type K thermocouple

Type TJ5 and TK5

Type TJ5 and TK5 Grounded at Lead End

The thermocouple junction is grounded to the sheath at the lead end. A minimum of 3/8" of cold section is required. It provides good temperature readings with quick response.

TJ5 Type J thermocouple; **TK5** Type K thermocouple

Note: For a complete selection of standard Hi-Density Pennybottom™ Cartridge Heaters, with built-in Type J thermocouple for Hot Runner plastic molds, see pages 2-24 through 2-26.

Available from stock.

Cartridge Heater Options — Internal Power Variations

Type DW Distributed Wattage

Available on HDC and HDM cartridge heaters

Cartridge heaters can be designed to vary the wattage along the length of the heater. Specify number of zones and the required watts and length per zone starting from the disk end. Leads can be connected externally or internally. Picture shows a heater with Type N externally connected leads. Heaters with other terminations may require a longer cold section at the lead end.

Type 3PH Three Phase

Available on HDC, HDM, and LDC cartridge heaters 1/2" diameter and larger (See page 2-4)

In order to minimize the gauge of the wiring on high wattage cartridge heaters, 3-phase elements can be designed.

Type DV Dual Voltage

Available on HDC, HDM, and LDC cartridge heaters 3/8" diameter and larger (See page 2-4) 3/8" and 1/2" diameter heaters may require a larger diameter transition area at lead end.

Cartridge heaters can be designed using 3-wire series/parallel circuits for dual voltage applications. Whether the heater is run on the high or low voltage, the wattage will be the same.

DV1 120/240 volts **DV2** 240/480 volts

Type DWV Dual Circuits

Available on HDC, HDM, and LDC cartridge heaters 1/2" diameter and larger (See page 2-4)

Independent resistance elements can be designed in a single cartridge heater for added versatility.

Type MHZ Multiple Heat Zones (3-Zones Maximum)

Available on HDC and HDM cartridge heaters 3/8" diameter and larger (See page 2-4) 3/8" and 1/2" diameter heaters may require a larger diameter transition area at lead end.

Multiple independently operated sections of the heater with a common wiring connection can be designed for increased flexibility.

Type GJ Grounded Element Winding

Available on HDC, HDM, and LDC cartridge heaters

For DC applications where the electrical circuit is negative grounded, the cartridge heater can be designed with one side of the element winding grounded to the sheath and a single lead wire exiting the cartridge heater.

Type GL Ground Lead/Sheath

Available on HDC, HDM, and LDC cartridge heaters

For those applications requiring a separate ground lead attached to the cartridge heater sheath.

Standard ground lead wire is a 10" long insulated stranded conductor. Optional insulated and color coded leads are available.

Available through the Hi-Density Cartridge Heater Terminator Program for 2nd Day Delivery

Type LLC Low Leakage Current

Available on HDC, HDM, and LDC cartridge heaters

Low leakage current construction is available for those applications such as medical products that require strict conformity to the requirements of regulatory agencies.

Options

Cartridge Heater Internal Sensor and Control Options

Type TF Thermal Fuses

Available on HDC, HDM, and LDC cartridge heaters 1/2" diameter and larger

Thermal fuses can be built into cartridge heaters to act as a high limit for the heater in applications where the temperature must be limited to avoid dangerous situations. When the trigger point is reached, the thermal fuse will open, cutting the electrical current to the cartridge heater. Once the thermal fuse opens, it cannot be reset. Many different trigger temperatures are available.

Type TS Thermostat

Available on HDC, HDM, and LDC cartridge heaters 5/8" diameter or larger

Cartridge heaters with built-in thermostats are very efficient and economical for heating and controlling temperatures. Available with NPT or special type mounting fittings, they provide a self-contained heater mainly recommended for immersion applications. They can also be used as over-temperature safety devices. The thermostats are factory preset for the trip temperature; therefore, prototyping and testing is required to determine the exact fixed setpoint. Maximum temperature—302°F (150°C). Maximum Amps—8@120 Volts.

A minimum 2-1/2" cold section is required to house the thermostat. Consult Tempco with your requirements.

Type TM Thermistor

Type RD RTD Temperature Sensors

Available on HDC, HDM, and LDC cartridge heaters

Tempco has the ability to custom design cartridge heaters with built-in temperature sensors such as thermistors and RTDs. For specific applications that have a limited or single set point range, thermistors or RTDs in conjunction with simple electronic controllers can be an economical choice.

NOTE: For thermocouples see page 2-58.

Type TS

Cartridge Heater Option — Inspection Services and Test Reports

Standard Electrical Tests and Optional Test Reports

1. Resistance test — measures ohms at room temperature.
2. IR (insulation resistance) test — measures the insulation resistance to the flow of current. Standard test is done at 500VDC.
3. Hipot (high potential) test — a high voltage is applied between a product's current carrying conductors and its metallic enclosure to verify that the insulation is sufficient to protect the operator from electrical shock.
4. Leakage current test — measures the current that flows from any conductive part to ground.
5. Heaters can be serialized and test reports can be sent with each shipment if required. Contact Tempco with your requirements.

Optional Die Penetrant Test

This non-destructive testing can detect imperfections in weld joints. For critical applications, each individual heater's weld joints by end cap and fittings can be tested. Certified test reports will be sent with each shipment. Consult Tempco for details.

Optional Hydrostatic Pressure Test

Cartridge heaters with attached pipe fittings can be pressure tested to your specifications at Tempco. Our in-house testing capabilities can ensure that your products meet your exact specifications. Contact Tempco with your requirements.

LDA and HAC Forced Air In-Line Process Cartridge Heaters

TEMPCO manufactures a variety of Air Process Cartridge Heaters. They can be standard units or designed to the customer's specifications. The following diameter sizes are available: 3/8", 1/2", 5/8" and 3/4".

These diameters can be adapted with various types of fittings and made into any practical length.

See Section 11, Pages 11-74 through 11-77
for complete details

BOLT HEATERS

Design Features

- * *Hi-Density Construction*
- * *Conduit Box with Knockouts*
- * *Wooden Handle*
- * *High Temperature Lead Wires—250°C (482°F)*
- * *Optional SJO Cord or Post Terminals*
- * *Optional Quick Disconnect Plugs*

Typical Industries

- ✦ *Shipyards*
- ✦ *Large Machine and Die Manufacturers*
- ✦ *Construction*
- ✦ *Boiler Manufacturers*

Typical Applications

- ✦ *Large Compressors*
- ✦ *Turbines*
- ✦ *Die Blocks*
- ✦ *Large Cylinders*
- ✦ *Engine Heads*
- ✦ *Pressure Vessels*

TEMPCO Bolt Heaters are used as an aid to tighten large bolts in heavy machinery and equipment. Heaters are sized for easy insertion into a hollow bolt. The rapid heating of the bolt expands it, allowing further tightening of the nut. The heater is then de-energized and removed. As the bolt cools, its contraction back to original size provides a tight fit.

Tempco Bolt Heaters are constructed with one of the industry's most efficient and highest quality heating elements—Tempco Hi-Density (swaged) Cartridge Heaters; with close tolerance fits, watt densities of 100 watts per square inch are obtainable—65% higher than standard cartridge or tubular heating elements can deliver. The higher wattage on Hi-Density Bolt Heaters means quicker heat-up time and minimum heat loss to the area surrounding the bolt.

Bolt Heaters Standard Specifications and Tolerances

DIMENSIONAL SPECIFICATIONS

Actual Diameter (in)	.438	.496	.553	.580	.621	.660	.710	.745	.813	.993

Note: Part Numbers shown are for heaters with standard 10" long leads and a conduit box with wooden handle.

Hi-Density Bolt Heaters are made-to-order only.

Ordering Information

Catalog Heaters

Order by Catalog Part Number from the Standard Sizes and Ratings List.

Note that Part Numbers shown are for heaters with 10" long, 428°F (250°C) stranded flexible lead wires inside the conduit box.

Standard lead time is 3 weeks.

Custom Engineered/Manufactured Heaters

Because an electric heater can be very application specific, for sizes and ratings not listed, **TEMPCO** will design and manufacture a Bolt Heater to meet your requirements. **Standard lead time is 3 weeks.**

Cast-In Heaters

Delivering Cutting Edge Solutions with Highly Customized/Engineered Cast-In Thermal Components

Developing Solutions Through Product Innovation

Tempco is a name synonymous with state-of-the-art technology and a strong commitment to providing practical, cost effective, quality thermal component solutions. We are a widely recognized industry-leading authority in the design, engineering and manufacturing of cast-in heaters and cast-in thermo cooling components.

Tempco's expertise and flexible manufacturing capabilities allow cast-in thermal components to be designed in virtually any imaginable size and shape, including complex and challenging geometries. Casting alloys used are aluminum, brass, and bronze.

Supporting A Diversified Segment of Industries

Tempco has a proven track record of successfully assisting our customers in solving or improving complex and challenging applications with cast-in thermal component technology, whether for heating or cooling functions. We consistently deliver on our commitment to exceed our customers' expectations in a diverse segment of industries from Original Equipment Manufacturers (OEMs), to Research and Development, Life Science, and Maintenance (MRO) Applications.

***Consult Us with Your Requirements
We Welcome Your Inquiries***

Supporting Diversified & Demanding Industrial, Life Science, Commercial & Scientific Applications

Vertically Integrated Manufacturing Capabilities

Tempco is a company uniquely qualified and committed to taking full ownership and responsibility of your Cast-In thermal component challenges. Consult Tempco at the early stages of your application requirements; we can provide you with the ultimate solution that will achieve cost savings and reliability with both functional and aesthetic quality.

Tempco's in-house manufacturing capabilities to produce Cast-In Thermal Components include:

- ✦ Custom designing and engineering utilizing 3-D and CAD/CAM solid modeling technology
- ✦ Tubular and Cable Heating Element manufacturing
- ✦ Full service foundry facility processing Aluminum, Brass, and Bronze Alloys
- ✦ Foundry tooling fabrication — Steel or Cast Iron Permanent Molds, Wood or Plastic Patterns
- ✦ Machining — Full service State-of-the-Art CNC machine shop capabilities including Coordinate Measuring Machine
- ✦ Lab services — computerized infrared heating profiles, life cycle testing, X-ray examination, 3-D solidification modeling

Experience our Passion for Excellence in the Design & Manufacturing of Cast-In Thermal Components

One Source Providing Extensive Engineering/Manufacturing Capabilities

Casting Process: Low Pressure

Used for large volume quantities. Specifically suited for intricate and challenging geometric shapes, producing quality castings with consistent dimensional accuracy and superior surface finish.

Alloy: Aluminum (only)

Tooling: Requires a Steel or Cast Iron Permanent Mold

Machining: Minimum to no machining

Weight Capacity: Up to 150 pounds depending on shape

Casting Process: Tilt-Pour Gravity Feed

Used extensively for medium to high volume quantities. Will accommodate simple to some irregular shape castings, producing good dimensional accuracy and surface finish.

Alloy: Aluminum (only)

Tooling: Requires a Steel or Cast Iron Permanent Mold

Machining: Moderate to Extensive

Weight Capacity: Up to 150 pounds depending on shape

Casting Process: No-Bake Sand Molds

Used for lower volume quantities, prototypes, very large irregular shapes and thermal platens.

Alloys: Aluminum, Brass, Bronze and Iron

Tooling: Requires a Wood or Plastic Pattern

Machining: Extensive

Weight Capacity: Up to 600 pounds

Melting Capabilities

- Electric Reverb and Induction furnaces are used to minimize gas inclusion into the molten metal, thereby producing a denser, higher quality casting.

CNC Machining

There are certain dimensional and/or finish tolerances or geometry that cannot be produced as cast and must be machined. Tempco offers a full service state-of-the-art machine shop featuring various types of CNC machine tools to perform all of the precision machining required—from simple to complex contour geometrics, including turning and/or boring, with repeatable accuracy from one machined casting to the next. Machinists also build and maintain permanent mold tooling for the low pressure and tilt-pour gravity feed casting processes.

CMM Inspection

Coordinate Measuring Machine provides precise measurement of complex parts in process or at final inspection.

No one can do it better than Tempco – LET US PROVE IT!

Pattern Shop

Tempco has an in-house Pattern Shop to build and maintain the wood or plastic patterns required to produce castings with no-bake sand molds.

Experience Our Value-Added Services that are Second to None

Casting Alloys

Casting Alloy	Aluminum	Copper	Silicone	Zinc	Lead	Maximum Iron	Tin	Other
Aluminum 319	85.8 - 91.58%	3.0 - 4.0%	5.50 - 6.50%	≤ 1.0%	—	≤ 1.0%	—	≤ 1.7%
Aluminum 356	90.1 - 93.3 %	≤ 0.25%	6.50 - 7.50%	≤ 0.35%	—	≤ 0.60%	—	≤ 1.125%
Bronze	9.0 - 11.0%	≥ 86.0%	—	—	—	0.80 - 1.50%	—	≤ 1%
Yellow Brass	≤ 0.55%	58.0 - 64.0%	≤ 0.05%	32.0 - 40.0%	0.80 - 1.50%	≤ 0.70%	0.50 - 1.50%	≤ 1%

Material Properties

Material	Classification	Max. Surface Temperature °F (°C)	Density (lb/in ³)	Coefficient of Linear Thermal Expansion (in/in/°F × 10 ⁻⁶)	Specific Heat Capacity (BTU/lb-°F)	Thermal Conductivity (BTU-in/hr-ft ² -°F)	Melting Point (°F)
Aluminum 319	Aluminum 319.0	700 (371)	0.101	12.7 @ 68° - 572°F	0.23	754	960 - 1120
Aluminum 356	Aluminum 356.0	750 (399)	0.0968	12.9 @ 68° - 572°F	0.23	1160	1030 - 1140
Bronze	UNS C95300	1350 (732)	0.272	9 @ 68° - 572°F	0.0896	437	1900 - 1913
Yellow Brass	UNS C85700	1200 (649)	0.304	12.2 @ 68° - 500°F	0.0899	582	1660 - 1690

Linear Thermal Expansion Formula: $\Delta L = L_i \times \alpha \times (T_f - T_i) \times 10^{-6}$

ΔL = Change in Length

L_i = Initial Length

T_f = Final Temperature

α = Coefficient of Linear Thermal Expansion

T_i = Initial Temperature

Minimum Casting Thickness vs. Heating Element and/or Cooling Tube Diameters

Casting Thickness	Maximum Available Element Diameter Heat Only	Maximum Available Cooling Tube Diameter Cool Only	Maximum Element and Cooling Tube Combination Heat and Cool
5/8" (15.9 mm)	.260	1/4	—
3/4" (19.1 mm)	.375	3/8	—
1" (25.4 mm)	.430	1/2	—
1-1/4" (31.8 mm)	.430	1/2	.260 and 3/8
1-3/8" (34.9 mm)	.430	1/2	.315 and 1/2
1-1/2" (38.1 mm)	.430	1/2	.430 and 1/2
1-5/8" (41.3 mm)	.430	1/2	.430 and 1/2
1-3/4" (44.5 mm)	.430	1/2	.430 and 1/2
Finned Casting			
3/4" (19.1 mm)	.375	—	—
7/8" (22.2 mm)	.430	—	—
1" (25.4 mm)	.430	—	—
1-3/4" (44.5 mm)	.430	—	—

Casting Size & Weight Limitations

	Cylindrical	Platen
Minimum Inside Diameter:	1" (25.4 mm)	—
Maximum Inside Diameter:	48" (1219 mm)	—
Minimum Width:	—	1-1/2" (38.1 mm)
Maximum Width:	—	60" (1524 mm)
Minimum Length:	1-3/4" (44.5 mm)	4" (102 mm)
Maximum Length:	40" (1016 mm)	72" (1829 mm)
Finish:	125 RMS Standard or to customer spec.	
Gap (two-piece cylindrical cast-in band heaters):	1/4" (6.4 mm) top and bottom or to customer specification	
Maximum Weight:	Aluminum— 600 pounds Bronze & Brass— 300 pounds	

NOTES: Cylindrical heaters are made with two half-round heaters. Cast-In thermal components can be made in any practical size, weight and geometric shape.

Heating Element Electrical Specifications

Tubular Heater Diameter	.260"	.315"	.375"	.430"
Maximum Volts	240	277	480	600
Maximum Amps Per Element	15	30	40	40
Maximum Watt Density:	Aluminum Alloy—35 W/in ² on the element Bronze or Brass—45 W/in ² on the element			
Resistance Tolerance:	+10%, -5%			
Wattage Tolerance:	+5%, -10%			
Three Phase available depending on casting size. Ground Studs can be added to most cast-ins.				

Note: Tempco-Pak mineral insulated cable heaters can be used in place of tubular heating elements to fit physical constraints not possible with conventional heating elements. See catalog Section 5 for more details.

Cooling Tube Materials for Castings with Liquid Cooling

Tube Material	Tube OD and Wall Thickness
Stainless Steel (Standard)	1/4" O.D. × .028 wall
Stainless Steel (Standard)	3/8" O.D. × .035 wall
Stainless Steel (Standard)	1/2" O.D. × .049 wall
Stainless Steel (Optional)	5/8" O.D. × .049 wall
Incoloy® 840 (Optional)	1/2" O.D. × .049 wall
Tubing with heavier wall thickness is available upon request.	

Options for Cast-In Thermal Components

Casting Surface Treatments

Special surface finishes are required in some applications:

- Electroless Nickel Plating
- Anodizing
- Teflon®
- Hard-Coat Anodizing
- Magnaplate

Lab Services

- Computerized Infrared Heating Profiles
- Life Cycle Testing
- X-Rays to confirm heating element location and casting density
- Heating Ramp Rate Testing

Agency  US Approvals

Cast-In Heater Elements are UL recognized under UL File Number E90771.

If you require UL Agency Approval, please specify when ordering.

Cast-In Heaters – Complex Geometrics for Diversified Industries

Delivering Cutting-Edge Engineered Cast-In Thermal Component Solutions

Today's fast-paced and high-tech industries demand products that are high quality, unique, reliable, and diverse. Tempco is passionate about meeting those expectations and putting our customers' needs first by providing quality service and products with superior capabilities. Tempco specializes in engineering and manufacturing customized cast-in thermal component solutions to service and support virtually all major industries. The following pages illustrate a sampling of cast-in thermal components we have produced for original equipment manufacturers (OEMs) and maintenance (MRO) applications that enjoy the advantages and benefits our products offer.

High Performance Cast-In Thermal Components are not Just a Challenge – They Are Our Bread & Butter. Please Consult Us with Your Requirements. We Welcome Your Inquiries.

Cast Iron Manifold Heater for Aluminum Low Pressure Casting Machine

Aluminum Cast-In Heater for Plastic Extrusion

Rectangular Manifold Cast-In Heater

Aluminum Cast-In Heater Used in the Carpet Mill Industry

Oil Pre-Heater for Industrial Process Equipment

Barrel Adapter for Polymer Extruder Equipment

Heating Elements & Aluminum Cast Over Steel Transfer Feed Pipe

Autoclave Aluminum Cast-In Heater Electroless Nickel-Plated for Sterilizing Dental Instruments

Heater used on a Custom Rectangular Barrel for a Monofilament Line Extruder

System for Pre-Heating and Mixing Chemicals for Sand Cores

Valve and Flange Heater Used to Improve Viscous Material Flow

Cast-In Heaters – Complex Geometrics for Diversified Industries

Heating & Cooling Cylinder used in Lab Testing Equipment

Cast-In Heater Used to Decrease Viscosity in Glue Processing

Waste Treatment Sanitation Equipment Heater

Manifold Valve Assembly

Bronze Cast-In Heater for Package Sealing Machine

Used as a Resistor for Thermal Dynamic Braking of Large Electric Motors

Cast-In Platen used for Heating a Custom Rectangular Extruder Barrel

Bronze Cast-In Heater for Pre-Heating Salt Baths

Cast Aluminum Motor Housing and Base with Integral Liquid Cool Capabilities used for Medium to Large Horsepower Electric Motors
Can be made for any size motor.

Developed and Patented by Tempco
U.S. Patents: # 622289 & #5939808

In-Line System for Pre-Heating Water to Induce Humidity in Baking Ovens

Bronze Cast-In Heater for a Laminating Press

You will be glad you did.

We Welcome Your Inquiries

Cast-In Heaters for Transfer/Feed Pipes

Tempco offers the perfect solution to heat Complex Transfer/Feed Pipes

Transfer pipes used in large-scale extrusion lines are difficult to heat because of their irregular geometry. They are not machined cylinders so proper contact and heat transfer are difficult to achieve.

Consequently, a special Cast-In Heater must be engineered for each pipe to accommodate its individual characteristics. Typically, this entails the customer sending the pipe to Tempco and our Engineering staff designing a Cast-In Heater System that will optimally fit the pipe. The quality of the process will be improved because hot spots and/or unevenly heated surfaces can be eliminated. In some cases, we cast the heater directly onto the pipe.

*Let Tempco's Creative Team of
Professionals Tackle Your Next Cast-In
Thermal Component Project.
We Have the Technology,
Infrastructure & Commitment to
Exceed Our Customers' Expectations.*

Special Cast-In Process for Unusual and Complex Applications

In the event that a cast-in heater cannot be made the conventional way for assembly into a machine part, Tempco has the expertise to directly attach a tubular heating element or a tube for cooling purposes to a customer supplied part.

By making a wood pattern with the required shape we can create a sand mold to encapsulate the entire assembly and pour the molten aluminum or bronze over the part.

The sample depicted in this picture represents the typical process. In this case, a tubular heating element is attached to a steel roller and is then placed in a sand mold prior to casting. After casting, the roller OD is machined per customer specifications — in addition, the aluminum roller will be vulcanized with rubber. The finished heated roller will be used in a laminating web press.

Cast-In Heaters for Semiconductor Manufacturing

Cast-In Heaters for the Semiconductor Processing Industry

Tempco has been at the forefront of the industry, addressing the challenges of stringent operating parameters and high quality requirements faced by original equipment manufacturers specializing in the semiconductor, wave solder and reflow surface mount processes.

By employing state-of-the-art technologies and by utilizing our acquired knowledge as a company, we have met the challenges by offering and delivering excellence in the design, engineering and manufacturing of a complete selection of innovative, reliable and high quality cast-in aluminum thermal component products.

Cast-In Thermal Platens for Wave Solder & Reflow Surface Mount Equipment

Tempco's highly engineered platens are capable of maintaining a temperature gradient of 5°F (2.77°C) across the entire working surface of the heater platen at the process operating temperature. The innovative design of this cast-in thermal platen incorporates the dual functions of being both a radiant and a convection heat source.

Cast-In Heaters for Wafer Processing

Tempco offers a complete selection of highly customized semi-conductor process heaters which include *Pedestal Heaters, Pedestal Heaters with Integrated Cooling Capabilities, Bake Platen Heaters, High-Temperature Platen Heaters with Interference Press Fit Tubular or Cable Heating Elements*. For this type of platen heater construction the available base alloys are *Aluminum, Brass or Bronze*.

Our metallurgical knowledge and foundry expertise are the catalyst for producing cast-in heaters with the precise heat profiles and temperature gradient required for the process. Tempco's state-of-the-art CNC machining capabilities will ensure that the working surface requirements of the part are precisely machined to customer requirements, including extremely flat surfaces, to within 0.0005 in (0.0127 mm) for optimizing the performance of the application.

In order to satisfy the stringent requirements of the industry, these products are manufactured under rigid quality control standards. Specific attention is directed to the heating element design and the casting processes.

Design Features & Options

- * *Casting Maximum Surface Temperature*
Aluminum Alloy 319: 700°F (371°C)
Aluminum Alloy 356: 750°F (399°C)
- * *Interference Press Fit Construction – maximum surface temperature depends on base alloy used*
- * *Surface Finish – Hard-Coat Anodized*
- * *Built-in Temperature Sensors*
- * *Selection of heating element and cooling tube terminations*

Note: Cast-In heaters for semiconductor processing are made to customer specifications. For technical assistance, engineering data and available options

please refer to pages 3-4 and 3-5. When ordering, please provide detailed design drawings including dimensions, critical tolerances, watts, volts, and any other features or special requirements.

CHX-100 Series Circulation Heater

Standard Design Features

- * Seamless 316 SS Tubing for fluid flow
- * Replaceable 5/8" diameter Hi-Density Cartridge Heater
- * Cast Aluminum heat exchanger body
- * Operating pressure up to 3000 PSI
- * Operating temperature up to 350°F (177°C)
- * NEMA 4/7 enclosure with standoff standard

Optional Design Features

- * Process Thermocouple
- * Overtemperature Thermocouple
- * High Limit Thermostat

Typical Applications

- ✦ Solvent heating (MEK, NMP, ACT, EKC, others)
- ✦ Heating of Air, CO₂, Nitrogen and similar gases
- ✦ Heating of non-flammable gases
- ✦ De-ionized water heating
- ✦ Steam generation
- ✦ Glycol heating
- ✦ Heating ink in printing
- ✦ Diesel and Fuel heating
- ✦ Packaging sterilization
- ✦ Analytical instrumentation
- ✦ Food and beverage heating
- ✦ Coating and Paint heating

Construction

The CHX-100 circulation heater is a compact lightweight unit used for heating gases or liquids. The material being heated is pumped through the coiled seamless 316 SS tubing which has been cast into an aluminum body that acts as the heat exchanger. A replaceable Hi-Density cartridge set into a hole bored into the aluminum is the heat source. The material being heated never comes into contact with the HD cartridge heater.

CHX-200 Series Circulation Heater

Standard Design Features

- * Seamless 316 SS Tubing for fluid flow
- * Cast-In Tubular Heater
- * Cast Aluminum heat exchanger body
- * Operating pressure up to 3000 PSI
- * Operating temperature up to 392°F (200°C)
- * Type C2 (General Purpose) housing with standoff

Optional Design Features

- * Process Thermocouple
- * Overtemperature Thermocouple
- * Type MPR (Moisture Resistant) or Type EP (Explosion Resistant) Housings

Typical Applications

- Solvent heating (MEK, NMP, ACT, EKC, others)
- Heating of Air, CO₂, Nitrogen and similar gases
- Heating of non-flammable gases
- De-ionized water heating
- Steam generation
- Glycol heating
- Heating ink in printing
- Diesel and Fuel heating
- Packaging sterilization
- Analytical instrumentation
- Food and beverage heating
- Coating and Paint heating

Construction

The CHX-200 circulation heater is a compact lightweight unit used for heating gases or liquids. The material being heated is pumped through the coiled seamless 316 SS tubing which has been cast into an aluminum body that acts as the heat exchanger. A tubular heating element is the heat source. The material being heated never comes into contact with the heating element.

Cast-In Heaters – Large Thermo-Platens

Engineered Solutions With Advanced Technology in Cast-In Thermo-Platens

Tempco specializes in innovative engineering and manufacturing of thermal components. Coupled with our diverse foundry and machine shop capabilities, this expertise provides the know-how behind our product line offering of large electrically heated platens that are manufactured by using our cast-in heater technology.

This casting process incorporates the heat source (tubular heating element) as an integral component of the platen. This process provides a more cost-effective and reliable approach than drilling holes for cartridge heaters or clamping inefficient and cumbersome-to-use strip heaters to the back surface of a platen.

Tempco's thermo-platens are made from aluminum, bronze and brass alloys. These materials provide excellent thermal conductivity for rapid heat transfer with uniform temperature gradients. To further enhance heat profiles, the formation and the location of the tubular heaters within the casting are precisely engineered using the latest computer design techniques.

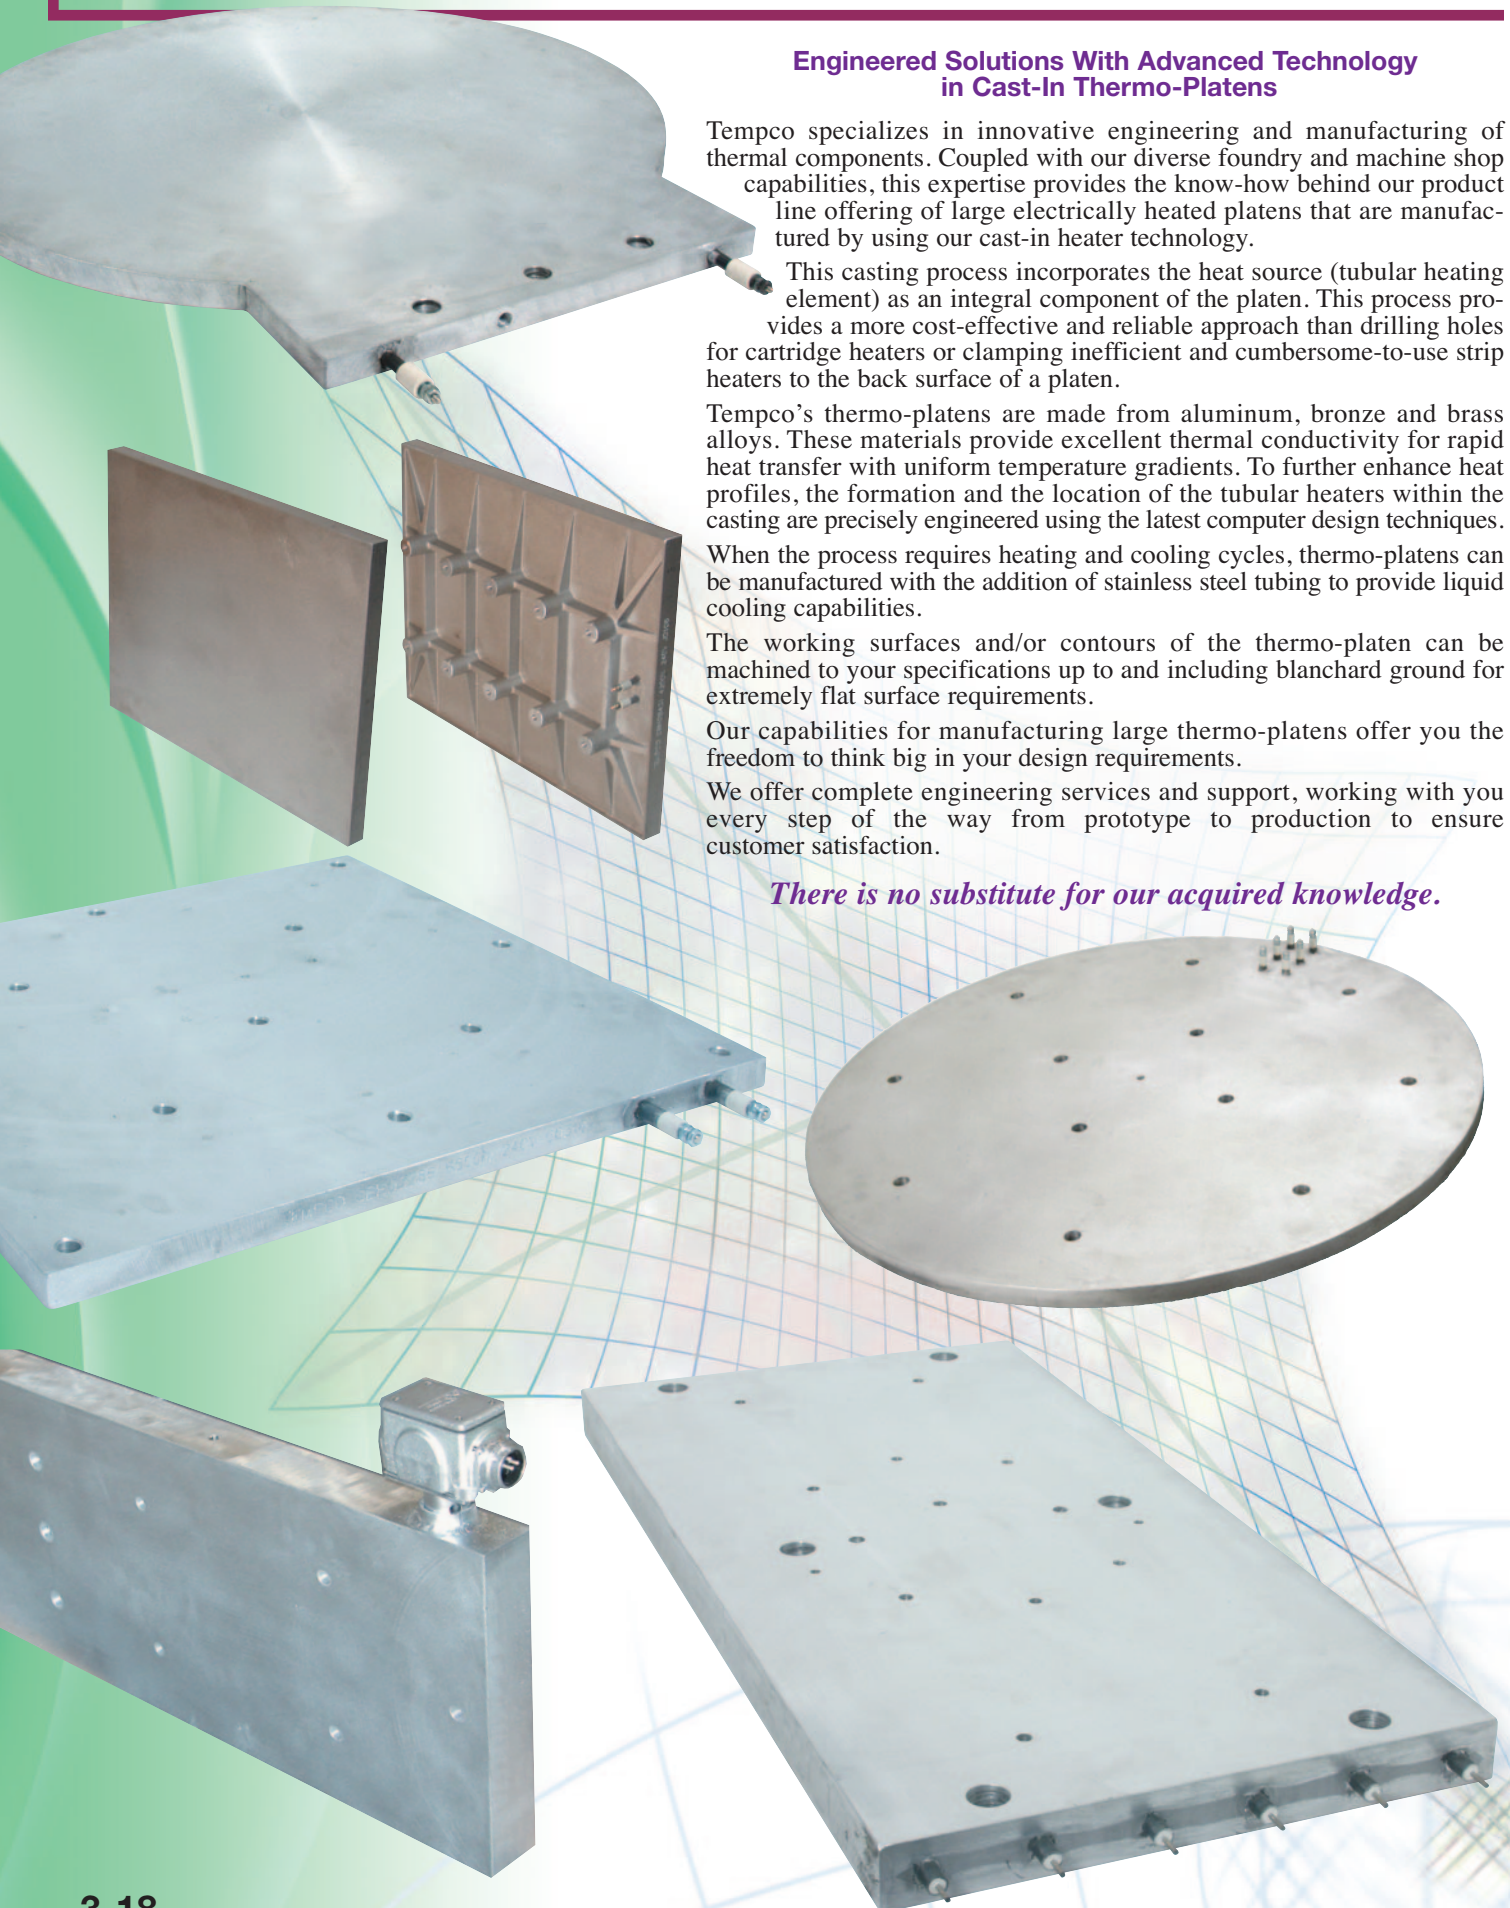

When the process requires heating and cooling cycles, thermo-platens can be manufactured with the addition of stainless steel tubing to provide liquid cooling capabilities.

The working surfaces and/or contours of the thermo-platen can be machined to your specifications up to and including blanchard ground for extremely flat surface requirements.

Our capabilities for manufacturing large thermo-platens offer you the freedom to think big in your design requirements.

We offer complete engineering services and support, working with you every step of the way from prototype to production to ensure customer satisfaction.

There is no substitute for our acquired knowledge.

Cast-In Heaters – Large Thermo-Platens

Design Features & Options

- * **Castings:**
 - Aluminum up to 600 lbs.
 - Bronze & Brass up to 300 lbs.
(Recommended for high operating pressures and temperatures)
- * **Exceptionally Long Operating Life**
- * **Single- or Three-Phase Circuit**
- * **Surface Finishes: Electroless Nickel-Plated, Teflon®, Hard-Coat Anodizing, Magnaplate**
- * **Thermowells for Temperature Sensors**
- * **Excellent Heat Transfer**
- * **Maximum width 60" Maximum length 72"**
- * **Uniform Surface Temperatures**
- * **Machined to Customer Specifications**
- * **Heating & Liquid Cooling Functions**
- * **Various Heater & Cooling Tube Terminations**

Note: Cast-In Thermo-Platens are made to customer specifications. For technical assistance, engineering data and available options please refer

to pages 3-4 & 3-5. When ordering please provide detailed design drawings, including dimensions, critical tolerances, electrical ratings, watts, volts, single- or three-phase, and any other feature or special requirements.

When Your Needs Call for **LARGER** Than **BIG**
Cast-In Thermal Platens & You Need Them **NOW** –
Look No Further Than **Tempco!**

We Can Do It – We Have the Technology!

Cast-In Thermal Components – Liquid Cool

Engineered Solutions With State-Of-The-Art Technology in Liquid Cool Aluminum Cast-In Thermal Components

You can count on Tempco to continue our tradition of leadership by providing cutting edge solutions as we address the needs and challenges of specialized segments of industries that depend on cooling for the operating efficiency and performance of their equipment.

As a result of market demand for such products, Tempco introduces our capabilities of producing a complete selection of made-to-order liquid cool aluminum cast-in thermal components, available in both complex geometrics or simple platens.

The thermodynamic relationship between the liquid heat transfer media circulating through the precisely formed and configured stainless steel cooling tube and the aluminum alloy casting maximizes heat removal efficiency. Tempco's liquid cool cast-in thermal component technology is a novel approach to clean, efficient and reliable process cooling of difficult and complex applications.

Consult Tempco with your challenging applications. Our capabilities for manufacturing these complex liquid cool thermal components offer you the advantage to think outside the box. Let the endless possibilities spark your imagination, allowing you the freedom to customize your design.

Cast Aluminum Motor Housing & Base with Integral Liquid Cool Capabilities
U.S. Patents: # 6222289 & #5939808

Let Tempco's Creative Team of Professionals Tackle Your Next Cast-In Liquid Cool Thermal Component Project. We Have the Technology, Infrastructure & Commitment to Exceed Our Customers' Expectations.

Thermo-Platens for Liquid Cooling of High Density Electronic Systems & Other Applications Requiring Flat Surface Cooling

In a world of compact designs with increased power densities, more heat is being generated than can be properly dissipated by conventional air blowers. For applications that have high-watt densities such as lasers, high-powered electronics, telecommunications, and semiconductor processing, liquid-cooled cold plates are the ideal high-performance heat transfer solution.

Mounting the components on an aluminum platen with internal liquid cooling tubes replaces forced air cooling to achieve and maintain lower electronic cabinet temperatures, thus increasing the operating service life of the individual components and the system.

When drilling and/or tapping is required for the cold plate application, Tempco will perform the machining to ensure that the product's integrity is not compromised.

Now You Can Give Your Electronics a Chill!

Thermo-Platen Specifications

Typical Cooling Tube Exit Locations For Cast-In Thermo-Platens

Cooling tubes exiting through the thickness toward the ends of the width or length.

Cooling tubes exiting through the thickness opposite of each other toward the ends of the width or length.

Cooling tubes exiting at the ends of the width or length through the top surface.

Cooling tubes exiting through the thickness at opposite ends of each other toward the ends of the width or length.

Cooling tubes exiting through the thickness at opposite ends of each other with one in the width and one in the length.

Complex Geometrics

Note: Cooling Tube Exit Locations for Complex Geometric Liquid Cool Thermal Components can be at any practical location for the shape and size of the individual thermal component.

For Cooling Tube Termination Optional Fittings and Accessories See pages 3-52 and 3-53.

Standard Cooling Tube Fittings For Cast-In Thermo-Platens

Type FF Flared Seal Fittings

Brass flared seal fittings are well adapted for low to medium pressure and resistant to mechanical pullout. Available for 3/8" and 1/2" diameter tubing with SAE 45° flare.

Diameter Tubing	Thread	Part Number
3/8"	5/8"-18	FTG-124-101
1/2"	3/4"-16	FTG-124-104

Type HS Hi-Seal Fittings

Hi-seal brass fittings are highly dependable under the most adverse conditions. For reliable and trouble-free service with ease of installation, we strongly recommend hi-seal fittings. Available for 3/8" and 1/2" diameter tubing. Male thread is 1/2" NPT for 1/2" tube and 3/8" tube.

Diameter Tubing	Part Number
3/8"	FTG-118-124
1/2"	FTG-118-116

TEMPCO Offers the Largest Selection of Quality Cast-In Heaters for Plastics Processing

Over 15,000 Existing Designs on File and Growing

Single Source Advantage – From Beginning to End

Tempco has set industry standards as the leading manufacturer of Aluminum, Brass and Bronze Cast-In Heaters in a variety of standard designs and styles for the plastics processing industry.

However, we realize not every Cast-In Heater application can be solved by one of our standard products. Our solutions help our customers and create new opportunities for Tempco. It is our engineering talents and vast application knowledge that provide a winning combination for solving specific application problems with custom designed and manufactured Cast-In Heaters.

The design, engineering and manufacturing of Tempco Cast-In Heaters is done under one roof—administered by a team of experienced professionals with a vast knowledge in product design and proven foundry expertise, producing the best quality Cast-In Heaters money can buy.

Computer Designed Tubular Heaters manufactured under our rigid quality control standards are the heat source for the Cast-In Heater. They can be formed into endless configurations to accommodate any practical Cast-In Heater shape.

Wood Pattern Shop A full-service in-house wood pattern shop builds, modifies and maintains patterns.

Foundry Capabilities Tempco's modern foundry produces Low Pressure Permanent Mold, Tilt Pour Permanent Mold, and No-Bake Mold Sand Castings. Our team of professionals with years of practical experience provides the knowledge essential for producing quality cast-in heaters for the plastics processing industry.

Cast-In Heaters are produced in-house by a team of experts for unparalleled quality!

Tempco's Exclusive **Cool TO-THE Touch™** Heating & Air Cooling Shroud Systems for Extrusion Processing Can be found on pages 3-26 through 3-32

Consult us with your requirements. No one can do it better than Tempco – Let us prove it!

SATISFACTION GUARANTEED!

Plastics Extrusion Processing

Our Cast-In Band Heaters have proven to be the most effective method for heating and cooling the barrels of extruders used in the plastics processing industry.

Tempco offers Cast-In Band Heaters with liquid or air cooling. Liquid cooling incorporates tubing cast in as part of the heater assembly, allowing water or heat transfer solutions to remove excess heat. Air cooling uses fins cast to the Outer Diameter surface of the band heater;

blowers and specially designed shrouds aid in heat removal.

Aluminum is the predominant alloy used for the Cast-In Heater. Copper-based alloys (Bronze and Brass) are used when the required operating temperatures exceed the maximum for Aluminum. Bronze or Brass are recommended for heated platens in molding presses as they can withstand a greater force of pressure per square inch than Aluminum.

Typical Plastics Processing Applications For Tempco's Cast-In Heaters

- ➔ Extruders
- ➔ Blow Molding
- ➔ Injection Molding
- ➔ Extrusion Die Heads
- ➔ Silk-Screening
- ➔ Laminating Equipment
- ➔ Heat Sealers
- ➔ Vacuum Forming
- ➔ Compression Molding
- ➔ Polymer Compounding

When your needs call for Cast-In Heaters for Plastics Processing & you need them NOW!
Look no further than Tempco – we have an extensive inventory.
Custom manufactured with the best lead times in the Industry!

1-3/4" (44.5 mm)	.430	—	—

Casting Size & Weight Limitations

	Cylindrical	Platen
Minimum Inside Diameter:	1" (25.4 mm)	—
Maximum Inside Diameter:	48" (1219 mm)	—
Minimum Width:	—	1-1/2" (38.1 mm)
Maximum Width:	—	60" (1524 mm)
Minimum Length:	1-3/4" (44.5 mm)	4" (102 mm)
Maximum Length:	40" (1016 mm)	72" (1829 mm)
Finish:	125 RMS Standard or to customer spec.	
Gap (two-piece cylindrical cast-in band heaters):	1/4" (6.4 mm) top and bottom or to customer specification	
Maximum Weight:	Aluminum— 600 pounds Bronze & Brass— 300 pounds	

NOTES: Cylindrical heaters are made with two half-round heaters. Cast-In thermal components can be made in any practical size, weight and geometric shape.

CNC Machining

There are certain dimensional and/or finish tolerances or geometry that cannot be produced as cast and must be machined. Tempco offers a full service state-of-the-art machine shop featuring various types of CNC machine tools to perform all of the precision machining required—from simple to complex contour geometrics, including turning and/or boring, with repeatable accuracy from one machined casting to the next. Machinists also build and maintain permanent mold tooling for the low pressure and tilt-pour gravity feed casting processes.

Heating Element Electrical Specifications

Tubular Heater Diameter	.260"	.315"	.375"	.430"
Maximum Volts	240	277	480	600
Maximum Amps Per Element	15	30	40	40
Maximum Watt Density:	Aluminum Alloy—35 W/in ² on the element Bronze or Brass—45 W/in ² on the element			
Resistance Tolerance:	+10%, -5%			
Wattage Tolerance:	+5%, -10%			
<i>Three Phase available depending on casting size. Ground Studs can be added to most cast-ins.</i>				

Note: Tempco-Pak mineral insulated cable heaters can be used in place of tubular heating elements to fit physical constraints not possible with conventional heating elements. See catalog Section 5 for more details.

Maximum Alloy Surface Temperatures

Material	Max. Surface Temperature °F (°C)
Aluminum 319	700 (371)
Aluminum 356	750 (399)
Bronze	1350 (732)
Yellow Brass	1200 (649)

Cooling Tube Materials for Castings with Liquid Cooling

Tube Material	Tube OD and Wall Thickness
Stainless Steel (Standard)	1/4" O.D. × .028 wall
Stainless Steel (Standard)	3/8" O.D. × .035 wall
Stainless Steel (Standard)	1/2" O.D. × .049 wall
Stainless Steel (Optional)	5/8" O.D. × .049 wall
Incoloy® 840 (Optional)	1/2" O.D. × .049 wall
Tubing with heavier wall thickness is available upon request.	

Agency  US  Approvals

TEMPCO

EXTREME

MAKEOVER

With Our Exclusive

Cool TO-THE Touch™

Shroud Systems

**A 4-Zone
Cool TO-THE Touch
Shroud System**

Let Tempco's state-of-the-art technology convert your extruder's existing heating and cooling system from antiquated, inefficient and costly to modern, highly efficient, and cost-effective.

We invite you to energize your extrusion business with Cool TO-THE Touch. It can take your profits to the next level.

The Challenge

We understand that choosing to make a change can be challenging and full of "What-If's?" Not to worry – Tempco warrants the performance of our systems. Our expert team will be with you every step of the conversion to help you select the ideal system for your extrusion lines.

Cool TO-THE Touch is a fully integrated system that offers powerful functionality, user-friendly installation and operation, customizable features and other benefits you simply will not find in any existing extruder heating and cooling system.

These highly engineered products are designed for durability and trouble-free operating performance.

It can very well be the most important step you take when you purchase a new extruder or rebuild existing equipment.

Experience the benefits and advantages offered by upgrading to Cool TO-THE Touch Shroud Systems.

Take your extrusion operation to the next level of technology with Tempco at your side.

There is nothing to lose, except. . .

The entire closed loop recirculating system which includes: chiller, heat exchanger, heat transfer fluid, and all associated piping and electrical components.

Let's Not Forget About This!!

Think about all the great changes ahead for your business – when you no longer have to babysit your unreliable, maintenance nightmare on your extruder heating and cooling system.

It's a Reality – Extreme Makeover for Extruders Is Finally Here! Take Advantage of It If You Are . . .

Purchasing a New Extruder

Specify to your machine builder to install one of Tempco's exclusive high-efficiency Cool TO-THE Touch heating and air cooling systems.

**SMALL
INVESTMENT**

**BIG
RETURN**

Retrofitting

Outdated air cooled systems can be retrofitted with Tempco's efficient air cooled shroud designs without replacing your existing heaters.

**Add Value
to Your
Extrusion
Process**

Rebuilding

An outdated, high maintenance, low efficiency liquid cooled system can be rebuilt with one of Tempco's turnkey Cool TO-THE Touch heating and air cooling systems.

Improve Your Bottom Line

Designed for Durability and Trouble-Free Operating Performance

Tempco's **Finned Cast-In Heaters** with bolt clamping are exclusively designed to work with **Tempco's Cool TO-THE Touch Shroud Systems**. They are manufactured with special high-efficiency fins and low overall mass cross-section for maximizing thermodynamics.

**Unmatched Quality Shroud System
& Finned Cast-In Heater**

Design Features

- * *Reduced operating costs*
- * *Quick, easy installation*
- * *Greater Reliability*
- * *Thermally efficient heating & cooling characteristics*
- * *Reduces costly downtime*
- * *Exceptional Cast-In Heater life*
- * *Eliminates expensive closed loop liquid cooling systems*
- * *Rugged, Durable & Appealing Design*

Liquid Cooling Cast-In Band Heaters vs. Cool TO-THE Touch Air Cooling Shroud Systems

Liquid Cooling

Up to now Liquid Cooling Cast-In Band Heaters have been the predominant method of controlling the melt temperature of extrusion barrels. Although effective in removing heat from the extrusion process, there are a number of drawbacks that are primarily maintenance related.

Extruders using liquid cooled Cast-In Heaters can be subject to unpredictable and untimely failures of the cooling tube assemblies, resulting in extremely costly downtime to the processor. Inherent maintenance problems include stress corrosion cracks, linear thermal expansion of the heater body, and clogging of the tubes due to accumulation of mineral deposits. Additionally, Liquid Cooled Cast-In Heaters require an expensive cooling tower or heat exchange system, extensive plumbing systems and labor for installation.

A Change Is In The Air

Tempco-designed air cooled systems have evolved considerably and become more thermally efficient as a result of geometric changes and implementation of sophisticated shrouding and air flow techniques. Optimized direction and ducting of airflow, coupled with selection of the proper blower CFM, are important to ensuring that the air cooling technique removes the proper amount of heat from the extrusion barrel. Air Cooled Cast-In Heaters are virtually maintenance free and therefore, when properly installed and applied, have the capability to far outlast and perform their liquid cooled counterparts.

Consult Tempco With Your Requirements. We Welcome Your Inquiries.

3 Turnkey State-Of-The-Art Systems to Improve Operating Efficiencies in Plastic Extrusion Equipment

Designed for Durability, Ease of Installation and Trouble-Free Service . . .

These highly engineered heating and cooling systems are an innovative concept in product design, offering a very efficient means to heat and cool the barrels of plastic extruders. They provide cooling efficiencies equal to or better than conventional liquid cooled cast-in aluminum band heaters.

These shroud designs are made with stainless steel sheet metal, cast aluminum construction.

These systems are self-contained and can be supplied as turnkey ready-to-go, requiring minimum labor and installation cost, and drastically reducing downtime and maintenance upkeep compared to conventional liquid cooling and heating cast-in band heaters.

Experience all the advantages offered by Tempco's exclusive **Cool TO-THE Touch High-Efficiency shroud and aluminum finned cast-in band heater designed system.**

The engineering of these two components is perfectly matched to work in tandem, offering thermally efficient heating and air cooling characteristics and eliminating the shortcomings of liquid cool cast-in aluminum band heaters

Improve Efficiencies in Extrusion Processing

Need Assistance Selecting a System? We Welcome Your Inquiries.

If you have a special application requiring a custom manufactured system or need assistance selecting one of our standard systems for a new or existing installation, consult Tempco with your requirements. We offer complete engineering services and support, working with you every step of the way to ensure customer satisfaction.

Selection Guide – Plastic Extruder Heating and Cooling Shroud Design Systems

	Shroud Style Construction	Recommended Heater Types	Barrel Diameter Range		Zone Length Range	
			Min.	Max.	Min.	Max.
 1	Cool TO-THE Touch™, Page 3-26 Inner Stainless Steel Solid Layer; Outer Stainless Steel Perforated Layer	Tempco Finned Cast Aluminum Heaters, Vented Ceramic Band or Maxiband Heaters	3" 76 mm	16" 406 mm	5" 127mm	36" 915 mm
 2	Multi-Versal, Page 3-33 Single Stainless Steel Solid Layer	Tempco Finned Cast Aluminum Heaters, Vented Ceramic Band or Maxiband Heaters	3" 76 mm	16" 406 mm	3-3/4" 95 mm	36" 915 mm
 3	Arctic Cast®, Page 3-37 Single Cast Aluminum Solid Layer	Tempco Finned Cast Aluminum Heaters	4" 102 mm	16" 406 mm	6-1/2" 165 mm	30-1/2" 775 mm

Cool TO-THE Touch Extruder Heat/Cool System

Tempco's Cool TO-THE Touch extruder heat/cool systems are custom engineered to provide optimal heating and cooling while providing personnel safety with a Cool Touch perforated outer layer. These systems are designed with finned cast-in heaters that optimize overall system efficiency.

The reflective inner layer of the shroud decreases the heat-up cycle, reducing energy consumption. The "maxi-flow" unrestricted blower port directs inlet air to the hottest part of the casting and distributes it evenly over the entire cross section of the zone.

1 – Cool TO-THE Touch Construction

Cool TO-THE Touch

Dual Layer Shroud with Inner Stainless Steel Solid Layer (thermally isolated from heater) and Outer, Cool to the Touch, Perforated Stainless Steel Layer for Maximum Venting and Heat Dissipation

Usage Requirements

The Cool TO-THE Touch Construction Style achieves best results when built for Tempco's High-Efficiency Finned Cast-In Heaters.

Cool TO-THE Touch Construction Details

Dual Layer Shroud

- * *Inner Stainless Steel solid layer – radiation shield that directs the cooling air flow over the heater*
- * *Outer Stainless Steel perforated layer – isolates hot surfaces from contact (cool touch)*

Shroud Assembly Features

- * *Two Mounting Styles are available:*
 - ➔ *Hinge with Barrel Clamps – designed for ease of installation*
 - ➔ *Two Individual Halves with Barrel Clamps (Two-Piece) – used where installation space is tight or mounting is difficult*
- * *Internal Support Straps or Support U-Bolt on blower mount half of shroud permits shroud to be opened for servicing without removing unit from barrel*
- * *Anti-Rotate Tabs – used only with Finned Cast-In Heaters to prevent shroud from radial and axial movement around the barrel*
 - ➔ *Tabs are cast as part of the heater (may require a Terminal Box)*
- * *Blower Options – See page 3-41 through 3-43 for Complete Details*
 - ➔ *Single or Dual Tempco Recommended Blowers available from 148 CFM up to 1210 CFM at 115V or 230V, or 480V 3-Phase*
 - ➔ *Customer Specified blower*
 - ➔ *Blower not required for Heat-Only Shrouds*
- * *Blower Location*
 - ➔ *Horizontal or Vertical Orientation*
 - ➔ *Extension Housings Available*
- * *Standard separate top Air Outlet*
- * *Optional Air Outlet Features Include:*
 - ➔ *Air Outlet Shield deflects air flow out of shroud and shields shroud from external solid contamination*
 - ➔ *Air Outlet combined with Terminal Box*
 - ➔ *Alternate Radial Air Outlet locations available*
- * *Air-Inlet Baffle Optional*
- * *Vent Hole(s) Optional*

Cool TO-THE Touch shown with optional dual blowers mounted vertically with knockouts for heater termination(s) and top vertical air outlet

Heater Type and Components

- * *Recommended Heater Types – Finned Cast-In Heaters with standard 1/4" gap between heater halves, Ceramic Band and Maxiband Heaters*
- * *Power Input Terminal Box with 7/8" dia. K.O. for 1/2" conduit:*
 - ➔ *Standard 10-32 stud termination with ceramic or mica insulator*
 - ➔ *With Louvered Cover – used when terminal box is separate from air-outlet*
 - ➔ *Stainless Steel Screen – used when terminal box is combined with air outlet*
- * *Power Input through Blower Mount – input wiring through knockouts in blower mount eliminates terminal box and facilitates ease of heater service*

Sensing and Controlling

- * *Existing Zone Control Probe – Shroud System can be designed per customer specifications*
- * *Tempco supplied Zone Control Probe*
- * *Tempco customized Power Control Panel designed to complete Your Thermal Loop System*

Ordering Information

Multi-Versal Extruder Heat/Cool System

Tempco's Multi-Versal extruder heat/cool systems are designed for efficient heating and cooling. The shroud systems can be used with many styles of band heaters. Due to the single layer design, the Multi-Versal shroud system has a low profile OD.

The reflective interior of the shroud decreases the heat-up cycle, reducing energy consumption. The unrestricted blower port directs inlet air to the hottest part of the heater and distributes it evenly over the entire cross section of the zone.

2 – Multi-Versal Construction

Multi-Versal Extruder

**Solid, Stainless Steel
Single Layer Shroud**

Usage Requirements

A highly adaptable single layer shroud, suited for retrofit and/or new applications regardless of the type of barrel band heater being used.

Multi-Versal Construction Details

Single Layer Shroud

- * *Solid Stainless Steel Layer – radiation shield that directs the cooling air flow over the heater*

Shroud Assembly Features

- * *Two Mounting Styles are available:*
 - ➔ *Hinge with Barrel Clamps – designed for ease of installation*
 - ➔ *Two Individual Halves with Barrel Clamps (Two-Piece) – used where installation space is tight or mounting is difficult*
- * *Internal Support Straps or Support U-Bolt on blower mount half of shroud permits shroud to be opened for servicing without removing unit from barrel*
- * *Anti-Rotate Tabs – used only with Finned Cast-In Heaters to prevent shroud from radial and axial movement around the barrel*
 - ➔ *Tabs are cast as part of the heater and may require a Terminal Box*
- * *Blower Options – See page 3-41 through 3-43 for Complete Details*
 - ➔ *Single or Dual Tempco Recommended Blowers available from 148 CFM up to 1210 CFM at 115V or 230V, or 480V 3-Phase*
 - ➔ *Customer Specified blower*
 - ➔ *Blower not required for Heat-Only Shrouds*
- * *Blower Location*
 - ➔ *Horizontal or Vertical Orientation*
 - ➔ *Extension Housings Available*
- * *Standard separate top Screened Air Outlet*
- * *Optional Screened Air Outlet Features Include:*
 - ➔ *Air Outlet combined with Terminal Box*
 - ➔ *Alternate Radial Air Outlet locations available*
- * *Shroud Air-Inlet Baffle Optional*
- * *Vent Hole(s) Optional*

Multi-Versal shown with horizontally mounted blower & vertical combination terminal box & air outlet

Heater Type and Components

- * *Recommended Heater Types – Finned Cast-In Heaters with standard 1/4" gap between heater halves, Ceramic Band and Maxiband Heaters*
- * *Power Input Terminal Box with 7/8" dia. K.O. for 1/2" conduit:*
 - ➔ *Standard 10-32 stud termination with ceramic or mica insulator*
 - ➔ *With Louvered Cover – used when terminal box is separate from air-outlet*
 - ➔ *Stainless Steel Screen – used when terminal box is combined with air outlet*
- * *Power Input through Blower Mount – input wiring through knockouts in blower mount eliminates terminal box and facilitates ease of heater service*

Sensing and Controlling

- * *Existing Zone Control Probe – Shroud System can be designed per customer specifications*
- * *Tempco supplied Zone Control Probe*
- * *Tempco customized Power Control Panel designed to complete Your Thermal Loop System*

Customer Information

Name: _____ Company: _____ City: _____ State: _____
Phone: _____ Fax: _____ Email: _____
Extruder Barrel Manufacturer: _____ Model Number: _____
Resin Type: _____ Process Temperature: _____

When submitting this form, please be sure to include an extruder barrel sketch or drawing that includes the following:

- * Extruder Barrel Support(s)
- * Number of Heating Zones
- * Vent Location(s)
- * Zone Probe Location(s)
- * Input Feed Location
- * Pressure Tap Location(s)
- * Zone Length(s)
- * Additional Restriction(s)

Note: To assist Tempco in designing a shroud system, please provide digital images (in .jpg format) of the extruder barrel.

Shroud Specifications

(For replacement of existing Tempco Shroud(s), please contact your Tempco Factory or Sales Representative.)

Shroud Style: Cool TO-THE Touch™ Multi-Versal Quantity Required: _____

Shroud Dimensions

Shroud Width / Zone Length: _____ Extruder Barrel OD / Shroud ID: _____
Maximum Shroud OD: _____ (determined by Engineering unless specified by customer)
Existing Heater OD (including terminations): _____ (determined by Engineering when new Tempco Heater is purchased)
Internal Shroud Support Required: Yes No

Shroud Components and Component Locations

Component Options (see pages 3-29 or 3-33 for shroud component details)

1. Blower Mount:
 Horizontal Vertical
2. Air Outlet:
 Separate from Terminal Box Combined w/ Terminal Box
3. Terminal Box:
 None Louvered (Separated from Air Outlet)
 Screened (Combined with Air Outlet)
4. Clamping Method at Shroud Opening:
 Barrel Clamps with Hinge Barrel Clamps (no Hinge)
 Adjustable Clamps with Hinge Adjustable Clamps (no Hinge)
5. Zone T/C Probe(s) - Customer Specified:
Quantity: _____ Clearance Hole Diameter(s): _____

Please indicate Component Radial Locations:

- 1 _____
Blower Mount
- 2 _____
Air outlet
- 3 _____
Terminal Box
- 4 _____
Clamps
- 5 _____
Hinge (if applicable)
- 5 _____
Zone T/C Probe(s)

Blower Specifications

 (see page 3-43 for standard Tempco blowers & configuration details)

Configuration: Single Dual Customer Supplied (*see below)
 Stock Tempco Blower (Engineering will determine specifications if none specified)
P/N: _____ or CFM: _____ Volts: _____ Operating Frequency: _____ Hz
Optional Blower Extension: Horizontal Vertical Custom (Consult Tempco.)
 *Customer Supplied Blower (Please attach mounting information when submitting this form.)
Manufacturer: _____ P/N: _____ CFM: _____ Volts: _____ Operating Frequency: _____ Hz

Heater Specifications

Existing Tempco Heater: P/N: _____ Replace Existing Heater Cover Existing Heater

If purchasing new Tempco Heater(s), please provide the following information if known:

Type and Quantity Required:
Qty. Cast-In(s) _____ Qty. Ceramic Bands _____ Qty. Maxibands _____
Inner Diameter: _____ Width(s): _____ Wattage per Shroud: _____ Voltage: _____

⚠ WARNING: Cancer and Reproductive Harm - www.P65Warnings.ca.gov.

Arctic Cast® Extruder Heat/Cool System

Tempco's Arctic Cast Shroud System was our pioneer shroud design for the air-cooling of extruders. The cooling efficiency of the Arctic Cast shroud system meets or exceeds that of water-cooled systems when used with our field proven high-capacity blowers.

The Arctic Cast shroud features a vented 1/4" thick cast aluminum layer for durability. The cast-in heaters are designed with a large fin surface area to maximize cooling efficiency. The blower port directs inlet air to the hottest part of the heater, distributing it evenly over the entire cross section of the zone.

3 – Arctic Cast Construction

Arctic Cast Extruder

Single Layer Shroud – Vented Cast Aluminum layer bolted directly onto Tempco's Specially Designed Finned Cast-In Aluminum Band Heater

Usage Requirements

This rugged shroud design is recommended for installations where the shroud system could be exposed to physical damage, such as instances where the extruder barrel is low to the ground. It is suited to work with Tempco's Specially Designed Finned Cast-In Aluminum Heater and cannot be used on any existing finned cast-in heaters.

Arctic Cast Construction Details

Single Layer Shroud

- * Vented 1/4" thick Cast Aluminum layer – directs the cooling air flow over the heater

Shroud Assembly Features

- * Two Individual Halves bolted together (Two-Piece) and clamped around finned cast heater
- * Blower Options – See Pages 3-41 through 3-43 for complete details
 - Single or Dual Tempco Recommended Blowers available from 148 CFM up to 1210 CFM at 115V or 230V, or 480V 3-Phase
 - Customer Specified blower
- * Blower Location
 - Vertical Orientation – at the bottom of the shroud
 - Custom location achieved only by rotating entire shroud system
- * Standard top Air Outlet
 - Custom location achieved only by rotating entire shroud system
- * Shroud Air-Inlet Baffle with built-in air deflector that breaks up incoming airflow, distributing it across the cast-in heater(s)

Arctic Cast shown with Vertical Mount Option

Heater Type and Components

- * Recommended Heater Types – Tempco Finned Cast-In Heaters with standard 1/4" gap between heater halves and bolt and nut clamping
- * Heater Strap Clamping is available
- * Power Input with Standard 10-32 stud termination with ceramic or mica insulator
 - Bus Wiring between halves is optional

Sensing and Controlling

- * Existing Zone Control Probe – Shroud System can be designed per customer specifications
- * Tempco supplied Zone Control Probe
- * Tempco customized Power Control Panel designed to complete Your Thermal Loop System

The typical Arctic Cast System consists of:

- A Cast-In Aluminum Finned Band Heater
- A Cast Aluminum Shroud
- An appropriately rated Forced Air Blower

Note: For additional information on sizing and selecting Cast-In Band Heaters for your application, see page 3-39. To order an Arctic-

Page 3-37 illustrates the complete system as well as the components that make up each assembly. Envelope dimensions for the shrouds shown on page 3-39 are also provided. Pages 3-41 through 3-43 display different forced air blower styles and specifications.

Cast system not shown in our Standard Sizes and Ratings, consult Tempco or send us your specifications and/or drawing.

Selection of Arctic Cast® Shroud Design Styles

Shroud Style A

Please provide mounting hole specifications if using other than Tempco standard.

Shroud Style B

Please provide mounting hole specifications if using other than Tempco standard.

Shroud Style C

Please provide mounting hole specifications if using other than Tempco standard.

Forced-Air Blowers for Air-Cooled Heating Systems

A variety of sizes and styles of forced-air centrifugal blowers are used on Tempco's air-cooled extrusion systems. Tempco Forced-Air Blowers are available in a large range of CFM ratings to fit any new or existing application. All blowers include air inlet guards for your safety.

Standard Single Phase Centrifugal Blowers

Tempco standard blowers feature corrosion protected sheet metal housings and impeller wheels. The quiet operation and quick response coupled with high volume unrestricted output results in a field-proven efficient cooling means for extrusion processes. Standard blowers are readily available for single phase 115V or 230V and represent the shortest delivery times.

Low-Profile Single Phase Centrifugal Blowers

Tempco low-profile 115/230V single phase blowers offer a narrower footprint than the standard blowers. The motor is integrated with the impeller so that the motor housing protrudes only slightly from the blower housing. Low-profile blowers are made of die-cast aluminum and galvanized sheet steel and are perfect for applications where space is a concern.

Forced-Air Blowers for Air-Cooled Heating Systems

Universal Three-Phase Centrifugal Blowers

Tempco high-end blowers use heavy duty construction for a long service life. They are available with universal three-phase motors for 50/60 HZ operation on voltages from 202 up to 530V. They meet Cenelec standards and are IP41 or IP54 rated with class B or F insulation systems. These low noise, continuous duty rated blowers operate efficiently under higher static pressure loads than our standard blowers. Optional attachments are available for transferring high temperature air up to 200-300° C and inlet filters for dusty environments.

Single Port Blowers — 3-Phase 60 Hz (202-306V 3-Ph. Delta, 350-530V 3-Ph. Y)

Part Number	"D"	"F"	"G"	"H"	"N"	"P"	"R"	"S"	Outlet "L" x "W"	CFM	Volts	Full Load Amps

NOTE: See Blower Drawing 1 on page 3-43

Double Port Blowers — 3-Phase 60 Hz (202-306V 3-Ph. Delta, 350-530V 3-Ph. Y)

Part Number	"D"	"F"	"G"	"H"	"M"	"N"	"P"	"R"	"S"	Outlet "L" x "W"	CFM	Volts	Full Load Amps
MTR-104-105	5.19	5.51	4.72	4.33	9.74	15.25	13.68	8.82	8.98	3.54 x 3.66	550-665	240/480	1.10/0.65

NOTE: See Blower Drawing 3 on page 3-43

Extensions for Forced-Air Blowers

Blower extensions are available for applications where space restrictions do not allow the blower to be mounted directly to the shroud assembly.

Horizontal Blower Extension allows blower to be mounted perpendicular to the shroud. A baffle inside the blower extension smoothly guides air flow into the shroud.

Vertical Blower Extension allows blower to be vertically offset at a distance below the shroud as specified by the customer. Especially useful in retrofit applications.

Vertical Blower Extension with 90° adapter plate allows blower to be vertically offset from the shroud. Blower can be rotated at 90° intervals relative to the extension.

Inlet Guards for Single Inlet Centrifugal Blowers

Single Port Blower: Drawing 1

Special cast housing narrow blowers for small extruders or short barrel zone widths are available from 23 up to 350 CFM.

Single port blowers can be obtained up to 1210 CFM for use in large extruder installations. Consult Tempco with your requirements.

Single Port Large Volume Blower: Drawing 2

Note: Blower's wheel and motor assembly is mounted within the sheet metal housing, allowing air in from both ends.

Additional sizes of two-speed blowers rated 435/296 are also available. A full range of special dual inlet sizes from 120 CFM up to 1200 CFM can be supplied for extruder zone widths of 6" and longer. Consult Tempco with your requirements.

All CFM Values are with free inlet and discharge and 0" Static Pressure. All Dimensions are in inches.

Double Port Blower: Drawing 3

Note: A smaller 157 CFM version is also available. Special cast housing blowers rated 500 to 600 CFM for use on larger extruders can be obtained. Consult Tempco with your requirements.

Finned Air-Cooled

Standard Cast-In Finned Heater Designs for Air-Cooled Extruder Systems

Aluminum Finned Cast-In Band Heaters are used as an alternative to Liquid Cooled Cast-In Band Heaters for heating and cooling the barrels of plastic extruders.

As a standard, Finned Cast-In Band Heaters are manufactured in aluminum alloys because this material provides very good thermal conductive properties. For applications requiring higher operating temperatures and/or higher watt densities, bronze or brass alloys can be used.

Precision machining of the inside diameter yields superior heat transfer between the heater and the machine barrel, thereby

ensuring uniform heating and cooling of the extrusion process. The heaters are secured to the barrel either by Stainless Steel Clamp Bands or by means of Bolt Clamping the heater halves together.

Finned Cast-In Band Heaters can be designed to meet the mechanical and physical constraints of existing extruder shroud systems. They are manufactured for Original Equipment Manufacturers (OEM) and maintenance (MRO) applications to customer specifications.

Finned Cast-In Heater End Types

Type FS1 – Finned Cast-In Heater without Side Flanges

These cast-in band heaters are normally made to be used in conjunction with the Cool to-the Touch and Multi-Versal Shroud Systems. They can also be used as stand alone replacements for other heating and cooling extrusion systems.

The standard mounting method for these designs is bolt clamping. An alternative mounting method is to use stainless steel straps. Type "T" screw terminals are the standard termination. For other termination styles see pages 3-54 and 3-55.

Type FS2 – Finned Cast-In Heater with Side Flanges

These cast-in band heaters are normally made to be used in conjunction with the Arctic Cast Shroud System. They can also be used as stand alone replacements for other heating and air cooling extrusion systems.

The standard mounting method for these designs is bolt clamping. An alternative mounting method is to use stainless steel straps. Type "E" screw terminals are the standard termination. For other termination styles see pages 3-54 and 3-55.

Reasons Why OEMs

Specify Tempco's Quality

Liquid-Cool Cast-In Aluminum Heaters

The Importance of Liquid Cooling

The liquid cooling function of the Cast-In Heater is of primary importance in maintaining the proper temperature of the barrel in the extrusion process.

Tempco offers many different liquid cooling variations, styles and terminations. The following pages will assist you in selecting the liquid cooling system best suited to your application. See page 3-63 for complete details on how to order.

THE PERFORMANCE FACTS

A General purpose stainless steel terminal boxes provide a simple and economical way to eliminate exposure to live electrical terminals. To simplify electrical wiring, the box has two knockouts for standard 1/2" BX cable connectors. Boxes can be supplied factory prewired with high temperature lead wire protected with armor cable or wire braid. Other boxes are available to accommodate your requirements. See pages 3-56 and 3-57.

B Threaded post terminals with 10-32 threads are securely fastened to the tubular heating element cold pin, assuring positive electrical contact for maximum amperage carrying capacity. Other terminations are available to accommodate your requirements. See pages 3-54 and 3-55.

C The standard Type "S" terminal has specially designed ceramic insulators that provide support to the screw terminals. The tubular heater is recessed into the insulator to help prevent the screw terminals from bending or breaking from mechanical abuse. Other specially designed ceramic insulators are available for the screw terminals and the connecting wire. See page 3-54.

D Specially designed, low expansion 430 stainless steel clamping straps with 1/4"-20 socket head cap screws and barrel nuts, in either 3/4" or 1-1/4" widths, are supplied as our standard method for securing the casting to the barrel. The number and width of the straps is determined by the length and weight of the heater. For optional bolt and nut clamping design see page 3-50.

E Having an in-house foundry gives us the flexibility to apply sound foundry techniques to control the quality of each casting. Specially designed steel and cast iron molds are used in our Permanent Mold Casting Process, producing a dense casting, free of internal voids with smoother as-cast surfaces. When casting small quantities, the No-Bake Sand Mold process is used. This process produces a better quality casting than other sand processes. The inside diameter of all Cast-In Band Heaters is machine finished to customer specifications.

F A critical consideration in the design of a heat and liquid cooled Cast-In Heater is the cooling tube itself, since cooling tube failures usually occur before heating element failures. Tempco has devoted many years of research and testing to select alloy tubes that are resistant to corrosion, and that will also withstand the continuous stress that is placed on the cooling tube. Our testing also included developing the proper tube forming techniques to limit the effects of thermal shock from repetitive heat/cool cycling that can produce stress cracking, especially at the point the cooling tube exits the casting.

G To maintain lower watt densities important for good heater life, the largest possible diameter steel sheath tubular heater is used. Tempco most commonly uses a .430 diameter element with 1/8" diameter cold pins. This pin size allows installation of larger and stronger screw terminal connections, providing additional strength to prevent broken terminals due to mechanical abuse.

H Cooling tube extensions can be cut to your specified length, with various types of tube fittings factory installed. The casting can also be supplied with non-exposed cooling tube fittings, which reduce cooling tube failure due to stress corrosion cracking. For a complete selection of cooling tube terminations see page 3-52.

Liquid-Cooled Cast-In Band Heaters for Extrusion Processing

Single Set of Cooling Tubes—The Industry Standard

The single set cooling tube design features 1/4", 3/8" or 1/2" diameter tubing precisely formed into a serpentine or any other suitable shape and cast into the body of the Cast-In Heater. This is the most widely used method for providing a means of cooling in liquid-cooled Cast-In Heaters.

From this basic design, the user can choose to factory equip the cooling tubes with any of the cooling tube termination options shown on page 3-52. Electrical termination options are shown on pages 3-54 and 3-55. The two most common clamping variations are shown below.

Type CW—Single Cooling Tube with Strap Clamping

Type CW Cast-In Band Heaters consist of liquid cooled and/or heating functions, and are secured to the extruder barrel with 3/4" or 1-1/4" wide low expansion stainless steel clamping straps with 1/4"-20 socket head cap screws and barrel nuts.

If not otherwise specified, supplied with Type S electrical screw termination, 3" long cooling tube extensions and straps for clamping. For a wide selection of electrical and cooling tube termination options, see pages 3-52 through 3-55. See page 3-63 for complete details on how to order.

Type CWB—Single Cooling Tube with Bolt Clamping

Type CWB Cast-In Band Heaters consist of liquid cooled and/or heating functions, and are secured to the barrel by bolts clamping the two halves together around the barrel. A variety of bolt clamping designs and hardware is available. Consult Tempco with your specific requirements.

If not otherwise specified, cast-in band heaters are supplied with Type S electrical screw termination and 3" long cooling tube extensions. For a wide selection of electrical and cooling tube termination options, see pages 3-52 through 3-55. See page 3-63 for complete details on how to order.

Style 1 – Continuous Flange for Bolt Clamping

Style 2 – Segmented Pads for Bolt Clamping

Liquid-Cooled Cast-In Band Heaters for Extrusion Processing

Type CWW — Dual Set of Cooling Tubes within the Same Cast-In Heater

The Dual cooling tube design incorporates two sets of 3/8" or 1/2" diameter tubing formed into a serpentine or any other suitable shape within the same Cast-In Heater. Dual cooling tubes will actually double the operating life of a Cast-In Heater with liquid-cool function, since cooling tube failures usually occur before heating element failures.

There are two main causes for failure on liquid-cooled Cast-In Heaters: Stress corrosion cracking at the exiting point of the tube extensions and clogged lines due to scale build-up that reduces flow, decreasing cooling capacity and finally completely blocking the tube. Once the first set of cooling tubes has failed, reconnect to the spare set and you are back in operation, thus eliminating costly downtime and additional labor for heater replacement. Dual cooling tubes are also used when additional cooling capacity is required.

Cooling tube extensions can be factory equipped with your choice of fittings. Clamping styles are low thermal expansion alloy straps or bolt clamping. If not otherwise specified, supplied with Type S electrical screw termination, 3" long cooling tube extensions and straps for clamping. For a wide selection of electrical and cooling tube termination options, see pages 3-52 through 3-55. See page 3-63 for complete details on how to order.

Design Features

- * Double operating life
- * Greater reliability
- * Reduces costly downtime
- * Better cooling capacity
- * Reduces heater replacement inventory
- * Various heater terminations
- * Available in Bolt Clamping and Strap Clamping
- * Made to customer specifications

Type RC — Non-Exposed Cooling Tubes Recessed NPT Fittings

The recessed cooling tube design incorporates 3/8" or 1/2" diameter tubing formed into a serpentine or any other suitable shape with specially designed stainless steel NPT fittings that are welded to the tube ends and cast below the surface of the Cast-In Heater, thus eliminating the troublesome, commonly used tube extensions as they exit the casting for connection to the coolant lines.

Non-exposed fittings will drastically increase the operating life of a Cast-In Heater with liquid cool function, as this feature eliminates broken and/or damaged cooling tube extensions which are a major factor in premature heater failure. Type RC fittings are available in two female NPT thread sizes, 3/8"-18 and 1/2"-14. Standard clamping styles for Cast-In Band Heater sets are low thermal expansion alloy straps or bolt clamping. Specify fitting thread size and clamping style when ordering. If not otherwise specified, supplied with Type S electrical screw termination and straps for clamping. For fittings with special thread size, consult Tempco with your requirements. See page 3-63 for complete details on how to order.

Design Features

- * Quick and easy installation
- * Exceptionally longer Cast-In Heater life
- * Reduces costly downtime
- * Greater reliability
- * Rugged, durable construction
- * Available on all cooling tube sizes
- * Available in Bolt Clamping and Strap Clamping
- * Made to customer specifications

Cooling Tube Termination Options for Liquid-Cooled Cast-In Band Heaters

Type FF Flared Seal Fittings

Brass flared seal fittings are well adapted for low to medium pressure and resistant to mechanical pullout. Available for 3/8" and 1/2" diameter tubing with SAE 45° flare.

Diameter Tubing	Thread	Part Number
3/8"	5/8"-18	FTG-124-101
1/2"	3/4"-16	FTG-124-104

Type HS Hi-Seal Fittings

Hi-seal brass fittings are highly dependable under the most adverse conditions. For reliable and trouble-free service with ease of installation, we strongly recommend hi-seal fittings. Available for 3/8" and 1/2" diameter tubing. Male thread is 1/2" NPT for 1/2" tube and 3/8" tube.

Diameter Tubing	Part Number
3/8"	FTG-118-124
1/2"	FTG-118-116

Type RA 90° Copper Elbow

90° copper elbow is brazed to the Cast-In Heater cooling tube extension with additional tube extension for connecting cooling lines with compression and/or flared fittings. Available for 3/8" and 1/2" diameter tubing. If required, specify.

Diameter Tubing	Part Number
3/8"	FTG-127-102
1/2"	FTG-127-103

Type RT Cast Brass 90° Threaded Elbow

90° threaded elbow is brazed to the cooling tube extension, providing an easy and quick method for connecting cooling lines. Recommended to be factory installed to assure good braze seals. Available for 3/8" and 1/2" NPT internal threads. If required, specify.

Diameter Tubing	NPT	Part Number
1/2"	3/8"	FTG-125-101
1/2"	1/2"	FTG-125-102

Type R3 Straight Threaded Copper Fitting

Straight threaded fitting is brazed to the cooling tube extensions, providing an easy and quick method for connecting cooling lines. Recommended to be factory installed to assure good braze seals. Available for 3/8" and 1/2" diameter tubing with internal threads. If required, specify.

Diameter Tubing	NPT	Part Number
3/8"	3/8"	FTG-131-103
1/2"	3/8"	FTG-131-102
1/2"	1/2"	FTG-131-101

Installation Accessories for Liquid-Cooled Cast-In Band Heaters

Stock Tubing for Cooling Lines

Cooling Line Tubing can be used to connect the Tempco Cast-In heat/cool bands to the plumbing system of your extruder. Tubing is available in 6'8" lengths for U.P.S. shipments and up to 20' lengths for truck shipments. Barlow's formula below was used to calculate Working Pressure in the table.

$$\text{Maximum Working Pressure (PSIG)} = \frac{2 \times \text{Material Strength (PSI at Room Temperature)} \times \text{Wall Thickness of Tube (in)}}{\text{OD of Tube (in)} \times \text{SF (Safety Factor of 1.5 to 10 depending on application)}}$$

Tubing Diameter (in)	Material	Wall Thickness (in)	Burst Pressure (PSI)	Working Pressure (Safety Factor 4) (PSI)	Material Strength (PSI)	Volume (in ³ /ft)	Part Number
1/4	304 SS	0.028	11200	2800	75000	0.3547	TUB-101-130
3/8	304 SS	0.035	14000	3500	75000	0.8767	TUB-101-108
1/2	304 SS	0.049	14700	3675	75000	1.5231	TUB-101-110
1/2	304 SS	0.065	19500	4875	75000	1.2903	TUB-101-122
1/2	Incoloy	0.049	17052	4263	87000	1.5231	TUB-111-108

Flexible Teflon® Wire Braided Hose

Flexible Teflon® Wire Braided Hose provides an excellent means of connecting Cast-In Heaters to the extruder plumbing system. This style of hose meets the demands of medium to tight bending radius requirements. The stainless steel braid protects the Teflon® hose from any harsh mechanical conditions that may be present.

A variety of brass male and female threaded fittings can be incorporated onto the hose, making it a practical choice for use in conjunction with Tempco's Style RC Non-Exposed Fittings and other available fittings.

Rigid brass adapter fittings as listed below are used to mate the base hose assembly to your existing installation. This allows for the installation of the rigid NPT coupling into the plumbing system and then attaching the swivel fitting on the hose, making assembly relatively easy. Remember to use Teflon® tape or equivalent.

Standard Hose: Size 8 (1/2") .405" I.D., .549" O.D.
Operating Pressure: 2000 PSI
Burst Pressure: 8000 PSI

Ordering Information

The standard hose assemblies are supplied with 1/2" female 37° SAE flare swivel style crimped-on fittings. The hose assemblies can be ordered in 6" increments starting at 18" minimum. Fitting material is Brass.

Part Number*
 WHT05

*Complete the Part Number with length of hose in 6" increments starting at 18" (018).

Standard lead time is 2 weeks or less.

Adapter Fittings for Flexible Teflon® Wire Braid Hose

Rigid brass adapter fittings are used to mate the base hose assembly to your existing installation.

T1	T2	Part Number
1/2" male 37° SAE flare	1/2"-14 NPT male	FTG-161-103
1/2" male 37° SAE flare	1/2"-14 NPT female	FTG-161-102
1/2" male 37° SAE flare	3/8"-18 NPT male	FTG-161-104
1/2" male 37° SAE flare	3/8"-18 NPT female	FTG-161-105

⚠ WARNING: Cancer and Reproductive Harm - www.P65Warnings.ca.gov.

Standard Tubular Heater Terminations for Cast-In Heaters

Select the termination style that meets your requirements for space, accessibility and reliability.

Type S Standard Unless Otherwise Specified

Heavy Duty Ceramic Insulators.

- .315" diameter heater has 8-32 screw terminals.
- .430" diameter heater has 10-32 screw terminals.

Type T7

Ceramic insulator is the same diameter as the heating element.

- .260" diameter heater has 6-32 screw terminals.
- .315" diameter heater has 8-32 screw terminals.
- .430" diameter heater has 10-32 screw terminals.

Type T

Mica insulator is the same diameter as the heating element.

- .260" diameter heater has 6-32 screw terminals.
- .315" diameter heater has 8-32 screw terminals.
- .430" diameter heater has 10-32 screw terminals.

Type C4

Heavy duty ceramic insulator with terminal cover.

- .315" diameter heater has 10-32 screw terminals.
- .430" diameter heater has 10-32 screw terminals.

TYPE P—Plain Pin

Plain terminal pin. Specify Length "L." Standard 1/2" (12.7 mm) pin length.

Element Diameter		Nominal Pin Diameter	
in	mm	in	mm
.260	6.6	.091	2.3
.315	8.0	.100	2.5
.430	10.9	.120	3.0

Type R

Mica washers with 90° blockhead screw terminal with 10-32 screw threads. Available for .315" and .430" diameter heaters.

Type R2

Mica washers with blockhead and through hole for lead wire connection. Eliminates the use of ring terminals. Available for .315" and .430" diameter heaters. Accepts 6-14 gauge wire.

Type E

Right-angle lug welded to pin with mica washer insulators and 10-32 binding head screw. Available for .260", .315" and .430" diameter heaters.

Standard Tubular Heater Terminations for Cast-In Heaters

Select the termination style that meets your requirements for space, accessibility and reliability.

Type L & L9

Terminal lug spot welded to pin with 10-32 binding head screw. Available for .260", .315" and .430" diameter heaters. Type L represents straight; Type L9 represents 90° to pin. Specify lug orientation.

Type SF & SF9

Quick-disconnect spade tabs spot welded to pin. Available for .260", .315" and .430" diameter heaters. Type SF represents straight. Type SF9 represents 90° to pin. Specify tab orientation.

Type F

Flexible lead: insulated stranded wire crimped to cold pin. Crimp connection is insulated with fiberglass sleeving. Available for .260", .315" and .430" diameter heaters. Wire insulation rated to 250°C, 450°C optional. Specify lead length.

Type R1

Flexible Armor Cable provides excellent protection to lead wires against abrasion and contaminants. Available for .260", .315" and .430" diameter heaters. Specify cable length and lead length. Style may vary from depiction depending on heater diameter and cable diameter used.

Type R1A

Stainless Steel Wire Overbraid provides flexibility and excellent protection to lead wires against abrasion. Available for .260", .315" and .430" diameter heaters. Specify stainless steel wire overbraid length and lead length. Style may vary from depiction depending on heater diameter and braid diameter used.

Type MR

Moisture resistant shrink strain relief and lead wire with or without stainless steel overbraid. Available for .260", .315" and .430" diameter heaters. Specify lead wire and overbraid length. Maximum operating temperature is 350°F (177°C).

Type TS

Contamination seal shrink-down Teflon® sleeving over the heater and lead wire splice. Provides a good moisture resistant seal. Maximum operating temperature 500°F (260°C). Available for .260", .315" and .430" diameter heaters. Specify lead length.

Type P1

Quick -disconnect plug, either mounted directly on casting or on elements ends offset a specified distance from casting. Rating: 16A-250VAC.

General Purpose Terminal Protection Boxes For Cast-In Heaters

Standard Box Type C2

Terminal Boxes provide a simple and economical means to eliminate exposed heater terminals and live electrical wiring, protecting employees from potential electrical shock. They also eliminate electrical shorts that can result from exposed wiring on Cast-In Heater installations.

Type C2 is an individual terminal box for protecting the terminals on each Cast-In Band Heater half. It is also used on many other Cast-In Heater designs with one set of heater terminals. The C2 box design requires a flat pad on half-round castings or a flat surface on other casting designs for mounting. It is made from heavy gauge, rust-resistant sheet metal. The cover is removable for easy access to terminals. The box has two 7/8" diameter knockouts opposite each other for standard 1/2" BX connectors.

To simplify installation, Cast-In Heaters fitted with boxes can be factory pre-wired with high temperature lead wire that can be protected with armor cable. If one of these options is required, **specify terminal box type, lead wire and cable length**. Satisfies NEMA 1 requirements.

Standard C2 box size: L = 4" W = 2-1/2" H = 2-1/8"

Terminal Protection for Both Heater Halves Type C7

Type C7 terminal boxes are made from rust-resistant sheet metal. The C7 base is fixed to the clamping straps. The box has two 7/8" diameter knockouts opposite each other for standard 1/2" BX connectors. The cover is removable, providing easy access to the screw terminals for electrical wiring.

To simplify installation, Cast-In Heaters fitted with boxes can be factory pre-wired with high temperature lead wire, protected with armor cable. If either one of these options is required, **specify terminal box type, lead wire and cable length**. Satisfies NEMA 1 requirements.

C7 Terminal Box Size varies with dimensions of casting.

Quick-Disconnect High Temperature Cup and Box Assembly Type P2

Quick-Disconnect Cup assemblies provide the simplest and safest means for applying power to any type of Cast-In Heater installation. The box extends over the screw terminals on both Cast-In Band Heater halves. The combination of prewired cup and box assembly, along with factory prewired high temperature lead wire protected with armor cable, eliminates live exposed heater terminals and electrical wiring, protecting employees from electrical shock and the possibility of electrical shorts due to exposed wiring.

If prewired plugs are required, **specify length of lead wire and cable**.

Rated 250V maximum, 15 Amp maximum

Terminal Box Size varies with dimensions of casting.

Terminal Protection Boxes for Cast-In Heaters

Type EP Explosion and Moisture Resistant Box

Cast iron explosion and moisture resistant boxes should be used in areas where the surrounding air may become contaminated with combustible gases or a high humidity level may exist. Installation requires one box per Cast-In Heater half and they are brazed to the tubular heater. The standard box has one 1/2" NPT hub.

Optional: Two hubs per box available. Cast-In Heater fitted with boxes can be factory prewired with high temperature lead wire, protected with special armor cable. If either of these options is required, please specify the following:

- Number of hubs
- Cable type
- Lead wire length
- Cable length

Type MPR Moisture Resistant Box

This design has a moisture resistant die cast aluminum box with a non-removable polyurethane gasket in the lid. Lid is secured with captive stainless steel screws. Body and lid are painted in basic industrial gray; interior contains copper ground screw. Box is mounted to a plate that is brazed to the element. Available in a wide variety of sizes.

Type MR1 Moisture Resistant Box with Perforated Shield

This design incorporates the MPR housing style along with a perforated tube shielding unheated extensions of the tubular heating elements. This feature provides mechanical strength to the element extension and prevents overheating of the terminals, reducing possible premature failure from corrosion and oxidation.

Type CB

A cast box mounted directly on the casting is used to protect the termination.

Exposed electrical wiring on cast-in heater installations is a violation of Electrical Safety Codes including O.S.H.A.

Cast-In Band Heater Selection for Plastics Extrusion & Downstream Equipment

The Cast-In Band Heater listings on the following pages constitute a small segment of the thousands of Cast-In Band Heaters we have produced for plastics processing equipment. So that we may assist you in selecting the exact heater replacement for your machine, adhere to the following instructions:

1. Measure the O.D. of your barrel, which in turn will be the I.D. of the heater.
2. Measure the width of your heater.
3. Check the wattage and voltage rating per half or per segment. This information is normally stamped on the heater.
4. Establish heater cooling function, if any. If water cooled, measure length and diameter of cooling tube extensions. Cooling tube extensions are 3" long, and 1/2" x .049 O.D. wall thickness unless otherwise specified. If air cooled, Cast-In Band will have fins.
5. Check for special features such as: thermocouple clearance holes, drill and tapped holes, vent cutouts and terminal boxes.
6. There are two methods for securing a Cast-In Band Heater to a barrel: separate clamping straps or nut and bolt clamping.
7. Once you have established this information, proceed to match your heater description with one of our standard Cast-In Band Heaters. Starting with the I.D., read across the chart until you have a perfect match. Wattage can vary up to 15% either way with little or no effect to your process.

Note: Made-to-Order Manufacturing:

For sizes, ratings, terminations and/or features not listed, Tempco will manufacture a Cast-In Heater to your specifications. State quantity, watts, volts and full heater description with all the appropriate specifications and features required. See Ordering Information on page 3-63.

Customer Assistance:

If you have a special application requiring a custom manufactured Cast-In Band Heater or need assistance selecting one of our standard heaters for a new or existing installation, consult Tempco with your requirements. We offer complete engineering services and support, working with you every step of the way to ensure customer satisfaction.

Cast-In Heaters

Liquid-Cooled

Stock and Standard (Non-Stock) Cast-In Band Heaters for Plastics Extrusion

Made-to-Order Manufacturing

For sizes, ratings, terminations and/or features not listed, Tempco will manufacture a Cast-In Heater to your specifications. State quantity, watts, volts and full heater description with all the appropriate specifications and features required. See Ordering Information on page 3-63.

Customer Assistance

If you have a special application requiring a custom manufactured Cast-In Band Heater or need assistance selecting one of our standard heaters for a new or existing installation, consult Tempco with your requirements. We offer complete engineering services and support, working with you every step of the way to ensure customer satisfaction.

Key for Abbreviations found under the Termination Type Column

C4 = Screw Terminal with Ceramic Cover	R1A = Stainless Steel Wire Overbraid
E = Right-Angle Lug	R2 = Blockhead Screw Terminal
F = Flexible Lead Wire	S = Screw Terminal with Heavy Duty Ceramic Insulator
R = 90° Blockhead Screw Terminal	T = Screw Terminal with Mica Insulator
R1 = Flexible Armor Cable	T7 = Screw Terminal with Ceramic Insulator

“L” Shaped

“L” Shaped Bronze, Brass or Aluminum Cast-In Heaters for Square and Rectangular Extruder Barrels

Cast-In Heaters That Provide High Temperature and Maximum Processing Capabilities

The “L” Shaped Cast-In Heaters are typically used on square and rectangular twin screw extruder barrels in compounding and plastic resin manufacturing applications. Due to high shear rates, which are common in this process, extreme operating temperatures and high watt densities are frequently encountered. For these reasons Tempco manufactures “L” shaped heaters in bronze or brass alloys, which are capable of withstanding high temperatures at higher watt densities.

In the case of applications requiring lower temperatures and lower watt densities, aluminum alloys can be used. Aluminum castings are desirable as they have greater thermal conductivity and weigh substantially less than their bronze or brass counterparts, allowing for greater ease of installation.

For mounting purposes, the heaters can be designed with 45° flanged ear extensions that are bolted and drawn together, or can be made with through holes machined into the casting body to bolt directly onto the barrel itself. Thermocouple and transducer holes or other special features can be accommodated as well.

To enhance cooling capabilities, or to be used in place of integral feed screw cooling, “L” shaped heaters can be manufactured with cast-in cooling tubes to satisfy liquid cooling requirements. This feature allows processors the ease of changing a single unit at a time, thus representing a far less time-consuming and less expensive alternative should a cooling line become clogged or severely restricted.

Enhanced Features

To aid processors in reducing maintenance downtime, Tempco has introduced several optional construction features to the basic “L” shaped design.

- * *Cast-In Aluminum Alloys for applications requiring lower temperatures and less watt density*
- * *3/8" or 1/2" O.D. cooling tubes for liquid cooling*
- * *Non-Exposed cooling tubes (Type RC—See page 3-51). Eliminates cracked and broken cooling tubes.*

Note: All of the options listed above are design enhancements that will provide value-added benefits to the basic “L” shape configuration, thereby extending the life and performance of your Cast-In Heaters.

Standard “L” Shaped Cast-In Heaters

Design Features

- * *Cast-In Bronze or Brass Alloys for high temperature, high shear applications*
- * *Flange bolt clamping arrangement or through holes in the heater body, allowing bolt mounting directly to the barrel*
- * *High precision machining of the inner contact surface of the heater, yielding exceptional heat transfer to the process*
- * *Choice of terminal protection housings*
- * *Moisture resistant terminal housing which is available in a variety of different styles and mounting arrangements*
- * *Elevated temperature terminations and enclosures. Prevents premature heater failure due to accelerated corrosion or oxidation of terminals caused by high heater surface temperature. See page 3-66 and 3-67 for details on how to order.*

Standard (Non-Stock) "L" Shaped Cast-In Heaters

"L" Shaped Bronze, Brass or Aluminum Cast-In Heaters are sold as individual units. They are normally supplied with a moisture resistant junction box. Also available with explosion resistant or cast-on junction box, fitted with convoluted wire braided hose and high temperature lead wire. If required, specify. For additional terminations, see pages 3-54 and 3-55.

The sizes and ratings listed are among the most commonly used. They will provide the shortest lead times.

Cast-In Heaters

Ring-Shaped

Cast-In Aluminum or Bronze Ring Heaters for Plastics Processing Equipment

Designed to Heat Limited Access Locations

Tempco Cast-In Ring Heaters provide an excellent means of applying extremely uniform heat to limited access application areas. Cast-In Ring Heaters are frequently used in Blown Film Die, Extrusion Die, Screen Changer and Extruder Barrel Adapter applications where long life and minimal maintenance concerns are prevalent.

The design scope of this product line makes it possible to cast large or small diameter disc shaped rings with nominal thicknesses of 5/8" to 1". These units are an excellent choice for heating the top or bottom of a cylindrical die.

As a standard, Cast-In Ring Heaters are generally manufactured in aluminum because of its superior thermal conductivity. For higher temperature or high watt density requirements, bronze or brass alloys can be used. A variety of standard terminations shown on pages 3-54 and 3-55 are available. The units can be fully machined to include through holes for mounting, thermocouple holes and surface machining.

Standard Cast-In Ring Heaters

Design Features and Options:

- * Computer designed, precisely formed tubular heating element optimizing the heat transfer pattern
- * Variety of termination options including terminal enclosure housings
- * Variety of shapes and sizes
- * Through holes, tapped holes or cutouts to facilitate mounting or obstructions
- * Precision machining of one or all surfaces of casting – specify your individual requirements.

CUSTOM Manufactured

For sizes and ratings not listed, **TEMPCO** will design and manufacture a Cast-In Ring Heater to meet your requirements. **Specify the following:**

- Inside Diameter
- Outside Diameter
- Thickness
- Wattage and Voltage
- Number of Segments
- Termination Type (see pages 3-54 and 3-55)
- Alloy (Aluminum or Bronze)
- Special Features
- Machining Specifications
- Detailed Drawing

Cast-In Cross Head Die Heaters for Plastics Extrusion Processing Equipment

Maximize Service Life on Difficult Extrusion Die Applications

Extrusion Cross Head and related extrusion dies present extremely challenging operating parameters to most conventional heating elements. This is primarily due to the presence of excessive contamination, high watt densities and high temperature as well as unusual physical and dimensional requirements.

Many processors continue to use ceramic and mica band heaters on this application, with frequently marginal results. In these instances, Cast-In Aluminum or Bronze heaters are recommended to substantially improve heater life expectancy and performance.

Cast-In Heaters are less susceptible to contamination problems, and can operate at higher temperatures with higher watt densities. In addition, the design is structurally better suited to accommodate holes and cutouts without compromising the heater's electrical and mechanical integrity.

As a standard, Cross Head Die Heaters are typically designed in aluminum as a one-piece band with a single slot that can be slid over the die and clamped with stainless steel clamping straps. For higher temperature or high watt density requirements, bronze or brass alloys can be used.

CUSTOM Manufactured

For sizes and ratings not listed, **TEMPCO** will design and manufacture a Cross Head Die Heater to meet your requirements.

Specify the following:

- Inside Diameter
- Outside Diameter
- Thickness
- Wattage and Voltage
- Termination Type (see pages 3-54 and 3-55)
- Alloy (Aluminum or Bronze)
- Special Features
- Machining Specifications
- Detailed Drawing

Standard Cross Head Die Heaters Design Features and Options:

- * Computer designed, precisely formed tubular heating element, optimizing the heat transfer pattern.
- * Variety of termination options, including terminal enclosure housings.
- * Optional 1/4", 3/8" or 1/2" cooling tubes cast into the cross head die body for liquid cool function.
- * Variety of shapes and sizes.
- * Aluminum and bronze alloys.
- * Through holes, tap holes or cutouts to facilitate mounting or obstructions.
- * Precision machining of one or all surfaces of casting – specify your individual requirements.

Note: Part numbers are for aluminum heaters unless otherwise specified.

Cast-In Aluminum and Bronze Platen Die Heaters for Plastics Processing Equipment

Tempco Cast-In Platen Heaters are widely accepted as the industry standard for heating critical, temperature-sensitive plastics processing downstream equipment.

Typically, plastic die applications are highly temperature sensitive and require extreme heater uniformity and reliability.

Tempco Cast-In Aluminum Platen Heaters are a logical choice to satisfy these critical application parameters, as the aluminum alloy has excellent thermal conductivity and a highly reliable, computer designed heating element which provides good contamination resistance. Optional cooling tubes can be cast-in to more precisely regulate the temperature of your process. The result is a highly efficient, uniform heater which, if used properly, can be expected to provide years of trouble-free service.

Cast-In Platen Heaters are generally manufactured in aluminum but can also be made in bronze or brass alloys to meet higher temperature processing requirements. For high volume requirements, the permanent mold process can be used to achieve the most effective economies of scale as well as yielding the best cosmetic appeal. To service customers with lower volume orders, Tempco's high quality no-bake sand mold process will be used, which assures excellent part quality and employs economical tooling.

Typical Applications for Tempco's Cast-In Platen Die Heaters:

- ↔ Sheet dies
- ↔ Plastic molds
- ↔ Plastic welding equipment
- ↔ Cast film dies
- ↔ Calendaring dies
- ↔ Screen changer equipment

Standard Cast-In Platen Heaters Design Features and Options

- * *Computer designed, precisely formed tubular heating element, optimizing the heat transfer pattern*
- * *A variety of termination options including terminal enclosure housings*
- * *Optional 1/4", 3/8", or 1/2" cooling tubes cast into the platen for liquid cool function*
- * *A variety of shapes and sizes made to your specifications*
- * *Through-holes, tapped holes or cutouts to facilitate mounting or obstructions*
- * *Precision machining of one or all surfaces of casting—specify your individual requirements.*

Note: Cast-In Platen Heaters are made to customer specifications. Please review our "Standard Sizes and Ratings" data along with our "How To Order" information to determine the heater best suited to your needs. Tempco also offers numerous sizes and styles off the shelf for immediate delivery.

For further information on large platen heaters see pages 3-18 through 3-23.

Stock and Standard (Non-Stock) Platen Die Heaters For Plastics Processing Equipment

The sizes and ratings listed are among the most commonly used. They will provide the shortest lead times.

Note: Part numbers are for aluminum heaters unless otherwise specified.

Note: Customer Assistance

If you have a special application requiring a custom manufactured Cast-In Aluminum or Bronze Platen Die Heater or need assistance selecting one of our standard die heaters, consult Tempco with your requirements. We offer complete engineering services and support, working with you every step of the way to ensure customer satisfaction.

CUSTOM Manufactured

For sizes and ratings not listed, **TEMPCO** will design and manufacture a Platen Heater to meet your requirements.

Specify the following:

- Length
- Width
- Thickness
- Wattage and Voltage
- Termination type (see pages 3-54 & 3-55)
- Alloy (Aluminum or Bronze)
- Special Features
- Machining Specifications
- Detailed Drawing

WARNING: Cancer and Reproductive Harm - www.P65Warnings.ca.gov.

Specialty Cast-In Aluminum and Bronze Heaters Used in Plastics Processing Equipment

Plastics Processing Equipment utilizes numerous types of specially designed Cast-In Aluminum and/or Bronze Heaters. In addition to the typical and commonly used cylindrical cast-in heaters, complex geometric shapes are used extensively as well.

The following two pages provide you with a small overview of our manufacturing capabilities by illustrating some popular cast-in heater shapes and how they are used. Special designs can be made to your specifications. Consult Tempco with your requirements.

Internal Ring Heater

Platen for Plastic Welding Equipment

Flat Platen Heater

"U" Shaped Heater

Semicircular Shaped Heater

Segmented Ring Heater

Internal Ring Heater

Laminating Radial Edge Heater

"L" Shape with Vent Clearance Hole

Specialty Cast-In Aluminum and Bronze Heaters Used in Plastics Processing Equipment

Cast Bronze Nozzle Heater Bushings For Runnerless Molding

Vented Barrel Heater

Ring Heaters

"L" Shaped Heater

Hopper Feed Cooler

Large Holes for Vented Barrels

Feed Throat Cooler

Feed Throat Cooler

Rugged Electrical Terminal Housings With Meltric® Receptacles

Installation Recommendations

Installation Recommendations for Cast-In Thermal Components

Tempco Cast-In Heaters will provide long life and dependable, trouble-free service if properly installed, operated, and maintained as per the following recommendations:

Installation

1. Allow sufficient space for thermal expansion. The amount of space required depends upon the Cast-In Heater size, operating temperature and alloy.
2. Surface being heated must be free of any foreign materials and have a smooth finish.
3. Make sure that the casting is properly seated. The clamping devices used should be tightened down to the correct recommended torque. After initial heat-up, retighten fasteners to the correct recommended torque.

Recommended Torque:

10 ft-lb for 1/4–5/16 bolts, 20 ft-lb for 7/16–5/8 bolts

5. Thermal insulation can be used to reduce heat losses.
6. Avoid mounting heaters in an atmosphere containing combustible gases and vapors unless specifically manufactured for use in such conditions.
7. Liquid Cooled Cast-In Heater fittings must be securely tightened to prevent leaks.
8. To prevent overheating and heater failure, adequate temperature controls should be installed. For assistance in selecting temperature controls and thermocouples, see Tempco's (in-stock) complete line of Plug-In type Proportional Temperature Controls for heating and cooling applications in Section 13. Also see the listing on standard and hot melt thermocouples in Section 14.

Wiring

1. For connections at the heater terminals, use high temperature nickel conductor or nickel clad copper lead wire or alloy bus bar. Keep all electrical connections properly protected to eliminate electric shock to machine operators.
2. Heaters of equal wattage and voltage can be connected in series for higher voltage.
3. Heater installations must be properly grounded to eliminate electric shock hazard, and wiring must comply with electrical codes.
4. Always have a qualified electrician perform all wiring and connection of heaters and control components. Terminals must be tightened to the correct torque (2.5 ft/lb for terminal connections).

CAUTION: Castings are not designed to be lifted or carried by the terminations or leads.

Exposed electrical wiring on cast-in heater installations is a violation of Electrical Safety Codes including O.S.H.A.

Note: See page 16-11 for Wiring Diagrams and page 15-2 for lead wire selection

Operation

1. It is recommended to slow start the process during first use.
2. Do not operate above rated voltage. Excess voltage will result in heater failure.
3. Do not operate Cast-In Heaters above recommended temperatures. Heater temperature must be monitored and controlled. Use of over-temperature T/C is strongly recommended for higher temperature applications. Excess temperatures will result in heater failure and/or melting.
4. Electrical terminals must be kept free of contaminants, as spillage of plastic, water, oils, and their vapors can cause electric shorts, resulting in heater failure.
5. Liquid Cooled Cast-In Heaters must not be cycled to operate simultaneously. Thermal stresses may result in shorter heater life.
6. The water used on Liquid Cooled Cast-In Heaters must be properly treated. Hard water contains corrosive media that will contaminate the tubing, producing stress corrosion cracks and resulting in shorter heater life. Presence of minerals in water can cause clogged tubes that can result in poor heat transfer and eventually heater failure.

Maintenance

1. Never perform any type of service on heaters prior to disconnecting all electrical power.
2. To ensure good surface contact, periodically check clamping. Retighten clamping to the correct torque when required.
3. Repeat cycling of temperature controls can indicate poor surface contact or a burned-out heater.
4. Heater terminals must be kept free of plastics, oil, water, and any other foreign matter. As these materials carbonize, they create electrical shorts.
5. Heater terminal electrical connections must be kept tight. Loose connections can overheat and eventual destroy the connection or the heater terminal.
6. Water lines must be periodically checked for leaks. Water on heater terminals can be detrimental to the entire heating system.
7. Thermocouples must be kept free of contaminants and be checked for good response to temperature changes. Our recommendation is to change them periodically, as a bad thermocouple can be the cause of destroying an entire heating zone.

Ceramic Fiber Heaters

Ceramic Fiber Heaters

Introduction

High Temperature Ceramic Fiber Heaters

Design Features

- * Standard Heaters to 1100°C (2012°F)
- * High Temperature Version to 1200°C (2192°F)
- * Low Thermally Conductive Built-In Insulation
- * Standard Flat Panel, Full Cylindrical and Semicylindrical Shapes
- * Fe-Cr-Al Alloy Resistance Wire Elements
- * Standard 9" long double-twisted bare wire leads
- * 100% Inorganic; free of Organics & Asbestos
- * Thermal Shock Immunity
- * Excellent Resistance to Chemical Attack

Industrial Uses

- | Industry | Application |
|-----------------|--|
| ↔ Aerospace | ***** Crystal Growth, R & D |
| ↔ Dental | ***** Manufacture of Crowns and Bridges |
| ↔ Metals | ***** Heat Treat and Temper |
| ↔ Plastics | ***** Sealers and Formers |
| ↔ Automotive | **** Metal Heat Treating and Paint Curing |
| ↔ Chemical | ***** Remove By-Products & Catalyst Materials |
| ↔ Crystals | ***** Preheat & Manufacturing of Optical and Gemstone Crystals |
| ↔ Glass | ***** Annealing Process & Preheat of Glass Manufacturing |
| ↔ Ceramic | ***** Extrusion Dies |
| ↔ Semiconductor | ** Diffusion Furnaces & Annealing Wafers |

Designed For High Temperatures and Efficiency

Tempco Ceramic Fiber Insulated Heaters combine a heat source with superior high temperature insulation—an ideal solution for an unlimited number of industrial heating applications. Tempco Ceramic Fiber Insulated Heaters produce fast, efficient, and reliable uniform heat to temperatures of 1100°C (2012°F). Higher temperature ratings, up to 1200°C (2192°F), are available with a limited number of designs.

Flat Panel, Full Cylindrical and Semi-Cylindrical Shaped Ceramic Fiber Insulated Heaters — Tempco Standard

These heaters are comprised of high-quality helically wound Fe-Cr-Al alloy resistance wire elements embedded in a rigid body of vacuum-formed high temperature refractory fiber. This ceramic fiber insulation has very low weight, thermal mass and thermal conductivity and thus can handle extremely rapid cycling.

The elements are typically mounted flush with the heated surface. The diameter of the helically wound element coil is kept to a minimum, reducing the difference between the element and chamber temperature, thus ensuring long heater life. This feature enables the design and manufacture of responsive heating systems and significantly reduces the risk of overheating the element.

- * Standard 9" long double-twisted bare wire leads.
- * Custom shapes are available on request.

All Tempco Ceramic Fiber Insulated Heaters are organic free and will not smoke or outgas.

MAXIMUM TEMPERATURE

The maximum temperature attainable is totally dependent on the application. To reach the maximum temperature stated, the application must be well insulated and sealed to trap the heat (like an oven) and allow the temperature to build. For example, to use a ceramic fiber cylindrical heater at its maximum temperature, the ends must be closed off with unheated insulated discs to minimize heat loss and allow the temperature to build.

Ceramic Fiber Heater Features and Options

Construction Characteristics

Tempco's standard Ceramic Fiber Heaters are designed for a maximum temperature of 1100°C (2012°F). The resistance wire is wound in a helical coil and embedded flush to the heater surface.

Tempco's High Temperature Ceramic Fiber Heaters are designed for a maximum temperature of 1200°C (2192°F). The resistance ribbon wire is helically wound and mounted at the heater surface using a method that exposes three sides of the coil.

The availability of High Temperature (1200°C) Ceramic Fiber Heaters is very limited. Consult Tempco with your requirements.

Unheated Molded Ceramic Fiber Panels and Cylinders

Tempco can manufacture unheated ceramic fiber panels, full and semi-cylinders for applications that require additional insulation. For example, flat circles can be made to cover the top or bottom of a cylindrical shaped heater to produce a small furnace. The unheated insulation components are made from a similar material as the heaters, so the specifications are the same.

To order, consult Tempco with your requirements.

Thermowells

Quartz glass thermowell tubes can be inserted perpendicular to the heater, usually all the way through, for use with temperature probes to sense the interior temperature. The sensor probes are ordered separately. For a typical thermocouple sensor probe, see page 14-14, MTA1.

For .125" diameter sensor probes, specify a 4mm ID thermowell tube.
For .187" diameter sensor probes, specify a 6mm ID thermowell tube.
For .250" diameter sensor probes, specify an 8mm ID thermowell tube.

Optional Vestibules on Full and Semi-Cylindrical Heaters

Vestibules are used to support full or semi-cylindrical heaters around a pipe to heat the material flowing through the pipe. The vestibule is made from 1" ceramic fiber board cut to the correct OD and ID and then cemented to one or both ends of standard size full or semi-cylindrical heaters. The overall length for standard vestibules would be the original heater plus 2" for a vestibule on both ends or 1" for a vestibule on one end. It is recommended that for maximum temperatures, a vestibule width of 1.5" to 2" be specified.

Full cylindrical heaters with (two) vestibules are available with Type 1, 4, or 5 leads.

Semi cylindrical heaters with (two) vestibules are available with Type 1 or 3 leads.

To order, consult Tempco with your requirements.

Mounting / Repair Accessories

Rigidizer

The external surface of ceramic fiber heaters is treated with a chemical rigidizer to give the heater the hardened shell typical of this type of heater. When the ceramic heater is cut in the field prior to installation for any purpose, or repairs are required, rigidizer should be used to recoat the surface.

Part Number: CFR00010 **Quantity:** 1 Gal.

Ceramic Fiber Cement

The cement has many general purposes, such as bonding ceramic fiber heaters together or adding additional external insulation.

Part Number: CFR00020 **Quantity:** 1 Gal.

Ceramic Putty

Made from high purity Asbestos-Free Aluminum Oxide-based ceramics with a melting point in excess of 3200°F (1760°C) and formulated with special ceramic binders that, on drying, produce a strong ceramic body.

- ✓ **Resistant** to molten metals, most chemicals, oxidizing and reducing atmospheres.
- ✓ **Use for installation** repairs to brick, mortar, burner blocks, insulation, furnace holders, thermocouples, etc.
- ✓ **Applications include** bonding and bonding ceramic fiber components, high temp. insulation, insulation of pipes, supports, burners, turbines, etc.

Size: 4 oz. Squeeze Tube **Part Number:** CFR00030

Size: 11 oz. Caulking Tube **Part Number:** CFR00032

SPECIFICATIONS

Melting Point	3200°F (1760°C)
Continuous Service	2300°F (1260°C)

Performance Characteristics

Performance of a Typical Round Ceramic Fiber Heater

The performance data represented in the chart was obtained by combining a Fiber Insulated Heater with 3" discs of insulation top and bottom. This assembly, which can be representative of many industrial and laboratory heating applications, was cycled with no load. Cool down rates were determined by turning the power off. Assembly was left intact. The “outside wall” temperature was measured on the external surface of the sidewall.

**Time vs. Temperature of a Typical Full Round High Temperature Ceramic Fiber Heater
5.5" I.D. x 12" H x 11" O.D.**

Performance of a Typical Rectangular Furnace

Test chamber left and right walls fabricated from Standard Fiber Insulated Heaters (24" x 36" x 5") and insulation boards. This size chamber, approximately 10 cubic feet, was chosen to best reflect performance characteristics of flat panel heaters as

used in a broad section of industrial applications. Chamber walls, roof and floor are 5" thick insulation. Cool down rate was plotted with data generated after element power was turned off. Chamber door remained closed. Chamber contained no load.

Time vs. Temperature of an (approx.) 10 cubic foot furnace chamber incorporating Tempco's Ceramic Fiber Heaters.

Application Guidelines

- High Temperature Ceramic Fiber heaters are *designed for radiant heat transfer* only. They are not intended for contact heating. They do not have the physical strength found in band, cartridge, strip or cast-in heaters.
- Mounting methods** such as washers, pins, screws, overlapping edge clamps, and interlocking edges work well with Ceramic Fiber heaters. Cementing is not recommended because it will not allow expansion or contraction.
- The **maximum temperature attainable is totally dependent on the application**. To reach the maximum temperature stated, the application must be well sealed (like an oven) to trap the heat generated by the heater core and allow the temperature to build. If the heaters are used in an open environment the maximum temperatures will not be reached. For example, to use a ceramic fiber cylindrical heater at its maximum temperature, the ends must be closed off with un-heated insulated discs to minimize heat loss and allow the temperature to build.
- Ceramic Fiber Heaters have a **very high porosity factor** and cannot be sealed against contamination and possible damage to the heating element. Keep the furnace free of contaminants that can vaporize at high temperatures.
- The **temperature for most applications** needs to be controlled at a specific temperature. This can be most readily accomplished thru the use of fast responding electronic PID temperature controls. See Section 13 for single loop controls and Complete Control Systems.
- Thermocouple temperature probes** are used to sense the temperature of the application and provide feedback to the Temperature Control System. Typically, Type K thermocouples with an operating range up to 1260°C/2300°F are commonly used. Alloy 600 sheath material, good up to 1177°C/2150°F should be specified. Mineral insulated probes such as Tempco's MTA1 on catalog page 14-14 are highly recommended.
- Be careful with any electrical connections** made in the heated portion of the application. The connections must be rated for the expected operating temperature and current flow.
- Use only inorganic fibers and binders** to avoid corrosive fumes that could damage the heater.
- Ceramic Fiber Heaters are easily damaged from **careless mechanical handling**, so handle the units and leads carefully.

Ordering Information

Standard Units

Select a **Flat Panel Heater** by size, electrical rating and style from the table below. To complete the part number, add the required lead location number.

For example

CFR1001□ has Type 2 Leads.

Standard leads are double twist 9" long high-temperature bare wire.

Custom Designed/Manufactured Flat Panel Heaters

Custom manufactured Flat Panel Ceramic Fiber Heaters are available; consult **Tempco** with your requirements. **Standard lead time is 4 weeks.**

Please Specify the following:

- 1100°C or 1200°C Construction Style
- Length
- Width
- Voltage and Wattage
- Lead Location and Type
- Special Features

Note: See page 4-2 for maximum temperature guidelines

Coil & Cable Heaters

Mightyband™ Coil Heaters

Design Features

- * Temperatures up to 1800°F (982°C)
- * Precise temperature control
- * Choice of lead orientation
- * Built-in type J or K Thermocouple
- * Round, square and rectangular cable
- * Rugged, durable construction
- * Unheated straight section
- * Fast response time
- * Choice of lead protection
- * Longer heater life
- * Higher watt densities
- * Made to customer specifications

Applications

Tempco offers from stock a large selection of standard Mightyband coil heaters for plastic injection runnerless molding bushings and for internally heated injection machine nozzles. The inside diameter of a coiled heater is wound undersized for a screw-on fit. Therefore, hold-down straps are not usually required.

Construction Characteristics

Tempco's dedication to quality and product improvement has led us to the development of a second generation of Mightyband heaters.

Manufactured for trouble-free performance in operations involving heating of cylindrical-shaped surfaces where precise temperature control is essential. Especially adapted as an alternate heat source for demanding and high temperature applications where other types of heaters have failed.

The design and manufacturing concept incorporates a built-in thermocouple, with a grounded junction terminating at the end of the cable opposite to the lead end. In some heaters, the thermocouple junction can be terminated anywhere within the coil section. Consult Tempco for the availability of this option on your specific heater.

The built-in thermocouple and the overall low mass construction provide quick response for positive temperature control. Incorporating the thermocouple into the heater construction eliminates the need for separate thermocouples, which have proven to be expensive, fragile and impractical.

Tempco Mightyband heaters have opened new frontiers and revolutionized the plastic injection runnerless molding industry since their introduction by Tempco in 1977. They provided the manufacturers of this type of equipment with a new and more effective heating element concept, thus allowing them to design and manufacture new, improved, and more efficient runnerless molding systems, with the capabilities required

to meet the ever-increasing demand for processing engineering resins and high production output requirements of today's industrial and consumer markets.

One specific way to improve the Mightyband heater design is to use a square or rectangular mineral insulated cable, which has a flat surface contact, allowing better heat conduction and a faster start-up time.

Standard Type J thermocouple with 304 stainless steel heater sheath is recommended for temperatures up to 1500°F (815°C). An optional Type K thermocouple with Inconel® 600 heater sheath for temperatures up to 1800°F (982°C) is available upon request. In some applications, the built-in thermocouple may not be required. In this case, it can be omitted from the heater cable.

The heating source for the Mightyband heater is a resistance wire in straight form or wound into a miniature helical coil. Selecting the best-suited resistance wire configuration is predetermined by an engineering formula applied to the specific heater design.

On Mightyband heaters where wire wound resistance coils are used, the tail end of the heater cable is usually unheated. Optional unheated or cooler tail sections are available on straight resistance wire heater designs. Consult Tempco with your specific requirements.

The swaging and drawing process involved in manufacturing the heater cable for Mightyband heaters compacts the ceramic insulators that house the heating element and thermocouple wire into a solid mass, producing a rugged and durable heater cable, providing excellent thermal conductivity, dielectric strength and quick thermocouple response.

Mightyband™ Coil Heater Specifications

Specifications

Electrical

- Resistance Tolerance: ±10%
 - Wattage Tolerance: ±10%
 - Maximum Amperage: 20 Amps
 - Standard Voltage: 120 or 240 Volts
- Higher or lower voltages applicable for specific heater designs; consult Tempco with your requirements.*

Dimensional

- Standard square cable: 0.125", 0.134" square
- Standard rectangular cable: 0.110" × 0.160"
- Standard round cable diameters: 0.115", 0.120", 0.125"
0.132", 0.153", 0.163"
Others available upon request.
- Cable diameter tolerance: ±0.005
- Standard potting adapter: 5/16" Diameter
Used with heater only and heater with T/C leads, 20 gauge and under.
- 1/2" Diameter
Used with heater only and heater with T/C leads, 18 gauge to 10 gauge.
- Standard potting adapter length: 1-1/2"
Other lengths available.
- Standard coil I.D.: From 3/8" up to 2-1/2" in any increments.

..... 6 to 12": +1/8", -1/4"
..... 12 to 18": ±1/4"
- Standard Sheath Material: 304 stainless steel
For temperatures up to 1500°F (815°C)
- Optional Sheath Material: Inconel® 600
For temperatures up to 1800°F (982°C)
- Standard Thermocouple: ANSI Type J
- Optional Thermocouple: ANSI Type K
- Minimum Bending Radius: Two times the sheath diameter

Typical Configurations

Close Wound Coil

Distributed Wattage

By specifically arranging a coiling pattern on the heater cable, heat distribution can be concentrated where it is needed. Useful to compensate for heat losses along the edges of the part being heated. Specify concentration.

Clamping Straps

Mightybands normally do not require clamping straps as the inside diameter of the coil is wound undersize for a screw fit. At times because of differences in the expansion and contraction in materials a clamping strap may be required to ensure circumferential clamping forces. Clamping straps also provide additional protection of the heater coils from accidental damage. If optional clamping strap is required, specify.

Special Coil Heater Configurations

Star Wound Coil

Star wound formations are usually inserted into pipes or ducts and are used to heat moving air or liquids. The offset coils create a turbulent flow. This allows the flowing material to have better contact with the heater surface, resulting in more efficient heat transfer.

Explosion or Moisture Resistant Box

Mightyband coil heaters can be used for immersion heating and/or in-line heating of liquids, gases or air. The built-in thermocouple provides a self-contained heating unit, eliminating the need for separate thermowells, and is available with standard NPT or special fittings. The outside diameter (O.D.) of the coil must be smaller than the fitting being used for proper fit to the mating part. The wiring can be protected from hazardous environments by attaching explosion or moisture-proof boxes. Consult Tempco with your requirements.

NPT Pipe Fittings

Mightyband coil heaters can be used for immersion heating and/or in-line heating of liquids, gases or air. The built-in thermocouple provides a self-contained heating unit, eliminating the need for separate thermowells. Available with standard NPT fittings or special fittings. The outside diameter (O.D.) of the coil must be smaller than the fitting being used for proper fit to the mating part. Consult Tempco with your requirements.

Lead Orientations

LO1 Standard

LO2

LO3

LO4

LO5

LO6

Note: Lead orientations can be custom formed. Consult Tempco with your requirements. We welcome your inquiries.

Potting Adapter Lead Terminations

- The heating element wire to lead wire transition is done within the potting adapter. Potting adapter sizes are 5/16" O.D. × 1-1/2" long for heater cable diameters 0.188" and smaller and 1/2" × 1-1/2" long for diameters above 0.188". Other diameters and lengths are available, depending on design parameters.
- When the 1/2" × 1-1/2" long potting adapter is used for high temperature applications, a special heat sink collar is also used to help keep the transition from overheating.
- All transitions use 1150°F (621°C) braze joint between the heating element wire and the flexible lead wire.
- Normally the lead wire construction is a fiberglass braided insulation rated to 482°F (250°C). For high temperature applications an MGT (mica, fiberglass, Teflon® impregnation) insulation rated to 842°F (450°C) is used. All thermocouple leads use a fiberglass insulation rated to 900°F (482°C). Lead wires are selected to meet the amperage and temperature requirements of each specific heater.

Type M__ – Plain Leads

Standard

M1 – High temperature cement potting with TGGT (Teflon® tape, fiberglass, Teflon® treated fiberglass overbraid) insulated lead wire for 482°F (250°C) and silicone sealed is standard.

Optional

M2 – High temperature epoxy potting rated 450°F (232°C) with PTFE Teflon® lead wire for a better moisture seal.

Optional

M3 – High temperature cement potting with MGT (mica tape, Teflon® treated fiberglass overbraid) insulated lead wire for 842°F (450°C) and silicone sealed.

Note: Temperature at potting adapter should not exceed the specified limits.

Lead Wire Abrasion Protection Terminations

Type A__ – Stainless Steel Armor Cable

Type A1 – Rated to 482°F (250°C) – TGGT Fiberglass Wire

Type A2 – Rated to 450°F (232°C) – Teflon® Wire

Type A3 – Rated to 842°F (450°C) – MGT Fiberglass Wire

Flexible SS armor cable protects the leads against abrasion and contamination. Special plugs can be attached to heater leads and thermocouple leads.

Type C__ – Galvanized Armor Cable

Type C1 – Rated to 482°F (250°C) – TGGT Fiberglass Wire

Type C2 – Rated to 450°F (232°C) – Teflon® Wire

Type C3 – Rated to 842°F (450°C) – MGT Fiberglass Wire

Flexible galvanized armor cable protects the leads against abrasion and contamination. Special plugs can be attached to heater leads and thermocouple leads.

Type B__ – Stainless Steel Overbraid

Type B1 – Rated to 482°F (250°C) – TGGT Fiberglass Wire

Type B2 – Rated to 450°F (232°C) – Teflon® Wire

Type B3 – Rated to 842°F (450°C) – MGT Fiberglass Wire

SS overbraid protects the leads against abrasion and allows more aggressive bending, which is not possible with armor cable. Special plugs can be attached to heater and thermocouple leads.

Type S__ – Fiberglass Sleeve

Type S1 – Rated to 482°F (250°C) – TGGT Fiberglass Wire

Type S2 – Rated to 450°F (232°C) – Teflon® Wire

Type S3 – Rated to 842°F (450°C) – MGT Fiberglass Wire

Fiberglass sleeve protects the leads against abrasion and allows more flexibility of lead wires. Special plugs can be attached to heater and thermocouple leads.

Optional Heater Cable Cold End

The availability of Tempco-Pak heaters with optional cold heater cable end depends on the electrical ratings and materials used for each heater design. Consult Tempco for the availability of these options.

Type ND – Neck Down

Type NW – Built-in Cold Wire

Note: All OEM Replacement Heaters have round cable, Type "C" galvanized armor cable lead wire protection and LO2 lead orientation (see page 5-4).

Ordering Information

Standard Heaters

Order by Part Number for standard heaters listed in Tables on pages 5-6 through 5-9.

Custom Engineered/Manufactured Heaters

An electric heater can be very application specific; for sizes, ratings and terminations not listed, **TEMPCO** will design and manufacture a Mightyband heater to meet your requirements. **Standard lead time is 3 weeks.**

Please Specify the following:

- Watts
- Volts
- Coil I.D.
- Coil width (length)
- Distributed wattage if required
- Sheath material— 304 stainless steel or Incoloy® 600
- Sheath Diameter if necessary
- Length of internal nickel cold, or if a neck down design, length of cold section. See page 5-5.
- Thermocouple if required— Type J or K
- Thermocouple Junction—Grounded or Ungrounded. If ungrounded, specify location.
- Transition type: M1, M2, M3, A1, A2, A3, B1, B2, B3, C1, C2, C3, S1, S2 or S3. See page 5-5.
- Lead orientation: LO1, LO2, LO3, LO4, LO5, or LO6. See page 5-4.
- Lead length if other than 24"
- Supply a sketch or drawing.

WARNING: Cancer and Reproductive Harm - www.P65Warnings.ca.gov.

Coil & Cable Heaters

Mightyband™ (Square Cable)

Mightyband™ Coil Heaters with Square/Rectangular MI Cable

TEMPCO offers a square sheathed, mineral insulated, coiled nozzle heater with a built-in-thermocouple. The unique feature of the 1/8" square sheath is a larger sheath contact area as compared to its round sheathed counterpart, allowing for faster start-up cycles. The ANSI Type J standard or optional Type K thermocouple normally has a grounded junction. However, an optional ungrounded junction is available. Heaters can be formed into a compact coiled nozzle heater supplying a full 360° of heat to the distributed wattage coil. The low mass of the heater allows quick response to both heating and cooling.

Specifications

- Resistance tolerance: ±10%
- Wattage tolerance: ±10%
- Maximum Wattage: 720 watts (for 240 volt heaters)
300 watts (for 120 volt heaters)
- Maximum operating temperature: 1500°F (816°C)
- Maximum Watt density: 134 watts/in² applied to nozzle
- Physical Dimensions: 1/8" square
(except non-heated tail section, which is 1/8" round)
- Length of non-heated section: 1" to 6" (specify when ordering)
- Potting Adapter: 5/16" O.D. × 1-1/2" long
Standard Lead Length as specified in table below (if other than standard, specify)

Standard Features

- * Standard lead wire construction is a fiberglass braided insulation with stainless steel overbraid suitable for 482°F (250°C). Optional constructions using Teflon® insulation or armor cable are available on request.
- * The standard wire to M.I. cable transition area (potting adapter) is temperature rated to 450°F (232°C). High temperature 842°F (450°C) is optional.
- * The ANSI Type J standard or optional Type K thermocouple junction can be grounded at the tip (the end farthest from transition area) or ungrounded anywhere along the length of the heater.
- * Heaters can be supplied with optional stainless steel clamping straps, which provide additional circumferential clamping forces and protection of the heater coils from accidental damage.
- * All Mightyband coil heaters are available with one (1) of six (6) different lead orientations (LO) as shown on Page 5-4. Other custom lead orientations can be manufactured to suit. Specify lead orientation when ordering.
- * Can be supplied with optional grounding wire upon special request.

Standard (Non-Stock) 1/8" Square Tempco-Pak Cable Heaters (Non-heated tail section is 1/8" round)

Standard Cable Heaters have 304 Stainless Steel Sheath

Ordering Information

Standard Heaters

Order by Part number for standard heaters listed above for runnerless plastic injection molding, hot sprue bushings and nozzles.

If not otherwise specified, all Mightyband heaters are supplied with close wound coiling pattern, Type L01 lead orientation (see page 5-4), 24" of leads and 20" of stainless steel overbraid with Type J thermocouple. If longer leads are required, please specify.

Custom Engineered/Manufactured Heaters

An electric heater can be very application specific; for sizes, ratings and terminations not listed, TEMPCO will design and manufacture a Mightyband heater to meet your requirements. **Standard lead time is 3 weeks.**

Please Specify the following:

- Inside Diameter
- Width (Length)
- Specify width as closed or stretched
- Wattage
- Voltage
- Length of non-heated tail section
- Lead length
- Lead Orientation (see page 5-4)
- Lead Transition (see page 5-5)
- Lead protection (see page 5-5)
- Thermocouple Type—if required

Tempco Replacement Heaters for OEM Hot Runner Systems

Square Cable Heaters

OEM Part Number	TEMPCO Part Number
81-98-219-66	MHC00457

Design Features

- * 300 Watts, 240 Volts
- * .100" square 304 Stainless Steel M.I. cable
- * 3/8" ID x 2" stretched width
- * Termination Type S1
- * Lead Orientation LO1 with 3/4" reference cold length
- * 48" of leads and 6" fiberglass sleeve
- * Built-in Type J ungrounded thermocouple junction at tip of the heater
- * Adapter Size: 1/4" O.D. x 7/8" long

OEM Part Number	TEMPCO Part Number
81-98-08-188	HHC00336

Design Features

- * 300 Watts, 240 Volts
- * .132" square 304 Stainless Steel M.I. cable
- * .997" ID x 1.12" nominal closed width
- * Termination Type S1
- * Lead Orientation LO1 with zero reference length and 1" cold tail length
- * 10 feet of leads and 2" fiberglass sleeve
- * Adapter Size: 1/4" O.D. x 1" long

OEM Part Number	TEMPCO Part Number
81-98-06-182	HHC00337

Design Features

- * 200 Watts, 240 Volts
- * .132" square 304 Stainless Steel M.I. cable
- * .747" ID x 1" nominal closed width
- * Termination Type S1
- * Lead Orientation LO1 with zero reference length and 1" cold tail length
- * 10 feet of leads and 2" fiberglass sleeve
- * Adapter Size: 1/4" O.D. x 1" long

Tubular Hot Runner Mold Heaters

SEE PAGE 10-13 IN THE TUBULAR HEATER SECTION.

OEM Replacement Oxygen Analyzer Heaters

Oxygen Analyzer Heaters (Westinghouse Probes)

Design Features

- * Inconel® 600 Seamless Nickel Alloy Sheath Material for Process temperatures up to 1400°F (760°C)
- * Minimum 99.4% purity compacted MgO Insulation Material
- * 300 Series Stainless Steel Potting Adapter filled with Stycast epoxy for 500°F continuous use
- * Standard heater lengths are 13", 18", 36" and 72" long. Longer length heaters such as 108" and 144" are also available.

"OA" Length		"A" Length		Watts	Volts	OEM Part Number	TEMPCO Part Number
in	mm	in	mm

Lead Wires: Teflon® insulated 20 ga. Stranded Silver Plated Copper Wire (color coded one black and one blue)

Termination: #10 Uninsulated Spade Lug

Oxygen Analyzer Heaters with .153" Diameter Cable

Tempco can also supply oxygen analyzer heaters for 240V, 520W with 0.153" diameter Inconel® 600 sheath, 0.394" ID x 2.75" coil width, with overall lengths of 6.29", 13.18", 17.12", 23.41", 32.86", 43.10", 62.39" and 80.11".
Consult Tempco with your requirements – we welcome your inquiries.

Cable HEATERS

CUSTOM ENGINEERED

FORMED

&

STRAIGHT

Spiral-wound Tempco-Pak heater cables are low profile and capable of generating high operating temperatures in restricted areas. The built-in thermocouple eliminates the need for a separate thermocouple. Works especially well as an alternative heat source for flat surface heating applications where other types of heaters cannot be used due to space restrictions. Consult Tempco with your requirements.

Compression fittings are available on straight cable heaters of various diameters (1/8", 3/16", 1/4", 5/16" and 3/8"). This fitting enables adjustment of the insertion length during installation. Compression fittings are available in Brass or Stainless Steel with standard male NPT threads. When ordering, specify heater sheath material, NPT size and material for compression fittings, insertion length, thermocouple type and type of junction (grounded or ungrounded), thermocouple and heater lead lengths, watts and volts. Optional—thermocouple location and cooler or unheated cable lengths. Consult Tempco with your requirements.

Sinuated (formed) Tempco-Pak heater cables are low profile and capable of generating high operating temperatures in restricted areas. The built-in thermocouple eliminates the need for a separate thermocouple. Works especially well as an alternative heat source for flat surface heating applications where other types of heaters cannot be used due to space restrictions. The sinuated cable can also be formed to conform to a cylindrical inside or outside surface. Consult Tempco with your requirements.

Lab Equipment: Gas Analyzer Heaters

This heater heats gas analyzer samples quickly and uniformly. Low mass construction allows for a fast cool down, increasing cycle times. Adding a T/C or RTD to an assembly is not a problem. Straight lengths are also available for manual custom bending requirements.

Miniature-Coil heaters are made for special applications. Cable diameter is less than .100". They work especially well as an alternative heat source for demanding and high temperature applications where other types of heaters have failed. Available with cooler or unheated cable section toward lead end. Consult Tempco with your requirements.

Stainless steel mounting flange is 1" diameter x .060" thick with two 1/4" holes on a 3/4" bolt circle. When ordering, specify location of mounting flange, cable diameter, length, sheath material, thermocouple type and type of junction (grounded or ungrounded), thermocouple and heater lead lengths, watts and volts—optional: thermocouple location and cooler or unheated cable lengths. Consult Tempco with your requirements.

NOTE: Mounting flange to be located over a cold or cooler section.

Gas or Air Heaters rated 1050 watts at 240 volts. One end has 1/4" MNPT and the other end has 1/4" FNPT so that you can have a series of the heaters for higher wattage requirements. It has 1-1/8" OD x 8" long stainless steel tubing body with 9-3/8" overall length.

Star-Wound Coil

Star wound formations are usually inserted into pipes or ducts and are used to heat moving air or liquids. The offset coils create a turbulent flow. This allows the flowing material to have better contact with the heater surface resulting in more efficient heat transfer.

Tempco-Pak Heaters — Design Constructions

Tempco-Pak Heaters with Straight Wire

Tempco-Pak heaters are made from M.I. cable having 2 straight heating element wires insulated from the sheath by high purity MgO.

Available in nominal sheath diameters from 0.040" to 0.375" (1mm to 9.5mm) in 304 stainless steel and Inconel® 600 for Tempco-Pak heaters with straight wire. Optional cold nickel lead spliced to heating element wire is available in 0.125" diameter or larger depending on conductor material.

Nominal Sheath O.D.		Maximum Heater Length		Nominal Sheath O.D.		Maximum Heater Length	
in	mm	ft	meters	in	mm	ft	meters
.040	1.00	25	7.6	.188	4.77	100	30.5
.063	1.60	70	21.0	.250	6.35	59	18.0
.125	3.18	120	36.5	.312	7.93	38	11.5
.163	4.14	130	39.6	.375	9.53	26	8.0

Note: Consult Tempco for diameters other than those listed above.

Tempco-Pak Heaters with Straight Wire and Built-In Thermocouple

Tempco-Pak heaters with 0.125" or larger diameter are also made from M.I. cable having 2 straight heating element wires and 2 straight thermocouple wires insulated from the sheath by high purity MgO. Optional cold nickel lead spliced to heating element wire is available in 0.125" diameter or larger depending on conductor material.

Tempco-Pak Heaters with Helically Coiled Wire

Hi-Density Tempco-Pak heaters are manufactured from sheathed M.I. cable having 2 coiled heating element wires or 2 coiled heating element wires and 2 straight thermocouple wires. The non-heated portion has the largest possible diameter solid nickel cold pins attached to the heating element wires, providing maximum current carrying capacity within the same continuous sheath.

Available in nominal sheath diameters from 0.120" to 0.153" (3.05 mm to 3.9 mm) including 0.125" O.D., 0.132" O.D. and 0.143" O.D. Tempco also manufactures 0.110" x 0.160" rectangular cable as well as 0.125" square cable.

Maximum sheath length including non-heated section is 70 inches (1778 mm).

Optional Built-in Thermocouple is ANSI Type J or Type K grounded at tip (end farthest from cold end) or ungrounded anywhere along heater length for .125" diameter and larger.

Tempco-Pak Cable Heaters

The densely compacted MgO insulation used in Tempco-Pak heaters produces excellent high temperature insulation resistance and dielectric strength. Heaters can be manufactured with the optional cold nickel leads internally spliced to the heating element wires within the same continuous sheath.

Generally speaking, there is very little temperature difference between the sheath and heater wires. Tempco recommends not exceeding 150 watts per square inch of sheath surface area with the sheath operating temperature at 1000°F (537°C) or less. As temperature increases above 1000°F, the maximum watt density should be decreased.

The maximum recommended operating temperature is 1800°F (982°C) with Inconel® 600 sheath and ANSI Type K thermocouple if required. Heater life in any specific situation or application is impossible to predict. However, heater life generally decreases as temperature and/or the number of thermal cycles increases.

Tempco-Pak heaters are flexible and can be readily formed or bent by hand or production machinery, with the minimum bend radius equal to twice the sheath diameter. The heater sheath can be welded, brazed or soldered without changing its electrical characteristics.

Performance Ratings

Watt Density: 75 watts per square inch of sheath surface area maximum with factory approval

Maximum temperature: 1500°F (815°C) for 304 stainless steel sheath
1800°F (982°C) for Inconel® 600 sheath

Specifications

Electrical

Resistance: ±10% unless otherwise specified

Voltage: 120V and 240V standard

Thermocouples: ANSI Type J to 1500°F (815°C)
Type K to 1800°F (982°C)

All thermocouples and their junctions are internal to the heater sheath. A grounded junction at the heater tip is standard. An ungrounded junction anywhere along the heater's length is optional. Available in sheath diameters .125" and larger.

Dimensional

Heater cable diameters: 0.040", 0.062", 0.115", 0.120",
0.125", 0.132", 0.153", 0.163",
0.174", 0.188", 0.220", 0.250".
Others available upon request.

Cable diameter tolerance: ±.005

Heater length tolerance: 0 to 6" (+1/8", -0), 6 to 18" (+1/4", -0)
18 to 24" (+3/8", -0), 24 to 120" (+3/4", -0)
120 to 300" (±1")

Transition and Termination Construction Specifications

Transition (potting) adapters: 5/16" O.D. × 1-1/2" long for heater cable 0.163" diameter and smaller. 1/2" O.D. × 1-1/2" long for heater cable diameters above 0.163"

Transition Temperature Rating: Standard transition is rated to 482°F (250°C).

Optional High Temperature Transition is rated to 842°F (450°C).

Standard heater lead wire insulation is TGGT (Teflon®, double fiberglass, Teflon® impregnation), which is rated to 482°F (250°C).

Optional high temperature insulation is MGT (mica, fiberglass, Teflon® impregnation) which is rated to 842°F (450°C).

Thermocouple: Standard leads use a fiberglass insulation rated to 900°F (482°C). Teflon® insulation is available upon request.

Optional lead protection: Stainless steel overbraid or galvanized armor cable.

Ordering Information

Standard Heaters

Order by Part Number for standard heaters listed in Tables on pages 5-21 through 5-23.

Part Numbers are for heaters with standard lead length of 24" unless otherwise specified. Longer lead length as well as stainless steel wire braid protection or armored cable protection are available upon request.

Heaters under 72" (1829 mm) will be shipped straight; longer heaters will be shipped in coils a minimum of 24" (610 mm) in diameter.

Custom Engineered/Manufactured Heaters

For sizes, ratings and terminations not listed, **TEMPCO** will design and manufacture a Tempco-Pak heater to meet your requirements. **Standard lead time is 3-4 weeks.**

Please Specify the following:

- Wattage and Voltage
- Sheath Diameter
- Heater length
- Sheath material— 304 stainless steel or Inconel® 600
- Length of internal nickel cold, or if a neck down design, length of cold section. See page 5-5.
- Thermocouple if required— Type J or K
- Thermocouple Junction— Grounded or Ungrounded. If ungrounded, specify location (.115" and larger).
- Transition type: M1, M2, M3, A1, A2, A3, B1, B2, B3, C1, C2, C3, S1, S2 or S3. See page 5-5.
- Lead length if other than 24"
- Supply a sketch or drawing.

Coil & Cable Heaters

Tempco-Pak Heaters

.125 & .153 Diameter Cable Heaters With and Without Thermocouples

Design Features

- * For temperatures up to 1500°F (815°C) with 304 SS sheath or 1800°F (982°C) with Inconel 600 sheath.
- * Heater can be formed into almost any shape.
- * Available with optional type J or K thermocouples.
- * Watt densities up to 40 watts /square inch and as high as 75 watts/square inch in certain applications.

Ordering Information

Cable Heaters are offered with the options listed in the worksheet. Create an ordering code by filling in the boxes with the appropriate number and/or letter designation for your requirements, and a part number will be assigned.

⚠ WARNING: Cancer and Reproductive Harm - www.P65Warnings.ca.gov.

Standard (Non-Stock) Round Straight Tempco-Pak Cable Heaters

Part numbers are for 304 SS sheath heaters (except HHS00003 with Inconel® 600) with 24" plain leads, and a type J thermocouple junction grounded at the tip of the cable, except those marked with a ⚡ (0.062" cable).

Longer lead length as well as optional stainless steel wire braid (B), fiberglass sleeve (S), stainless steel armored cable (A), or galvanized armored cable (C) protection is available upon request. See ordering code worksheet below for lead wire protection and lead length desired.

NOTE: Complete termination descriptions are on page 5-5.

UG-M: — Ungrounded T/C junction is 8" to 11" from the tip

Lead Wire Abrasion Protection Terminations

Type A__ — Stainless Steel Armor Cable

Type C__ — Galvanized Armor Cable

Type M__ — Plain Leads

Type B__ — Stainless Steel Overbraid

Type S__ — Fiberglass Sleeve

Potting Adapter Size without Crimping

5/16" O.D. x 1-1/2" long

Ordering Code:

NOTE: Complete termination descriptions are on page 5-5.

Ordering Information

Part Numbers above are for Standard Rectangular Tempco-Pak heaters with 48" plain lead wires. If you need other than standard 48" leads and/or wire protection use the ordering codes at the right and a part number will be assigned.

Lead Length BOX 1

Whole inches 000 to 999

Termination Type BOX 2

A = Stn. Stl. Cable
B = Stn. Stl. Wire Braid
C = Galvanized Cable
S = Fiberglass Sleeve
M = Plain Leads (Do not fill Box 3)

Length of Protection BOX 3

Whole inches 000 to 999

⚠ WARNING: Cancer and Reproductive Harm - www.P65Warnings.ca.gov.

Bulk Round Heater Cable

Typical Applications

- *Blown Film Die Heaters*
- *Heat Tracing*
- *De-icing Car Wash Door Rails*
- *De-icing Outside Stairways*

Design and Construction Specifications

Terminations

See page 5-5 for potted lead transitions. There are two choices of potting compounds. Either cement potting for a high temperature application or high temperature epoxy for 450°F (232°C) maximum temperature. Also, there are three major choices of lead wires:

- M1** — TGGT (Teflon® tape, fiberglass, Teflon® treated fiberglass overbraid) insulated lead wire for 482°F (250°C).
- M2** — Teflon® insulated lead wire, which is normally potted with a high temperature epoxy rated 450°F (232°C)
- M3** — MGT (mica tape, Teflon® treated fiberglass overbraid) insulated lead wire for 842°F (450°C).

Minimum Bending Radius

Minimum bending radius for all mineral insulated cable heaters is two times the sheath diameter.

Power Calculation

The required wattage can be calculated using the following formula:

$$\text{Wattage} = \frac{(\text{Voltage})^2}{\text{Cable length (in feet)} \times \text{Ohms/foot (from table)}}$$

Standard Single Conductor Heater Cable

Sheath OD		Resistance (+/-10%)		Maximum Length		Sheath Material	Maximum Current Allowed (Amps)	Part Number
in	mm	ohms/ft.	ohms/mtr.	feet	meters			
.125	3.17	0.67	2.2	250	75	Inconel® 600	13.3	CAS01125

Tempco Replacement Mini-Coil Heaters (Round Cable) for OEM Hot Runner Systems

Tempco's Mini-Coil Band Heaters are designed and manufactured under the tightest tolerances so that they may be used in hot runner/runnerless injection mold tooling with complete confidence on maintaining the manufacturer's original balanced heating when using a minimum of thermocouples and temperature control zones.

- $\pm 2\%$ Resistance Tolerance
- 5" and 7" Staggered Cold Lead Length
- 72" Insulated Lead Wire Length
White/Black for 250W and White/Red for 125W

Cam Operated Clamping

Clamp Screw Clamping

Clamp Screw

Clamping

Screw operated clamping for the traditional style.

Cam Operated Clamping

Cam operated axial clamping allows tool room personnel to replace the heating element or the thermocouple of the gate bushing without having to remove the bushing from the mold. This can even be done in emergencies while the mold is still in the press, saving hours of downtime. The hex head cam is accessed from the front, parallel to the bushing's shaft.

Specifications

Mechanical

- Coil Heater Diameter:** 0.055", ± 0.002 "
- Thermocouple:** Type J, 0.055" dia., ± 0.002 "
- Inner Diameter:** ± 0.002 "
- Width/Length:** ± 0.020 "
- Axial Clamp Hex:** Tempered 416 series SS
Hex size: 1/8"
Rotation: 150 degrees
- Clamp Screw:** (2) 6-32 \times 1/2", SS,
Hex size 7/64"
- Heater Leads:** 18 ga. silver coated copper, Teflon[®]
insulation, 200°C/392°F
Staggered 5" and 7"
- Thermocouple Leads:** Fiberglass insulation, 1000°F

Electrical

- Resistance Tolerance:** $\pm 2\%$
- Wattage Tolerance:** $\pm 2\%$
- Voltage:** Standard voltages are 120 and 240VAC;
other voltages can be designed.
Consult Tempco with your requirements.

Coil & Cable Heaters

Cast Nozzle Heater Bushings

Cast Bronze Nozzle Heater Bushings

Typical Applications

- ➔ Hot Runner Systems
- ➔ Sprue Bushings
- ➔ Hot Melt Adhesive Systems

Typical Applications

- ➔ Plastic Injection Nozzles
- ➔ Medical, Laboratory and Pharmaceutical Equipment

Design Features

- * Bronze Cast construction for excellent heat transfer and long life
- * Operating Temperature to 1200°F (650°C)
- * Built-in Type J or K Thermocouple for accurate temperature control
- * Distributed wattage for even heat transfer
- * Precision machining of the inside diameter
- * Choice of leads and lead protection

Custom Engineered/Manufactured to meet customer specifications – we welcome your inquiries.

Construction Characteristics

Tempco's cast bronze nozzle heater bushings offer the latest in state-of-the-art technology to these innovative designs. They eliminate uneven temperature profiles and short heater life; their precision machining also eliminates poor fit and the need for clamping bands, while providing maximum heat transfer.

The casting is protected by a stainless steel tube. The maximum operating temperature for the bronze casting is 1200°F (650°C); the optional aluminum casting has a maximum operating temperature of 600°F (315°C). The built-in thermocouple in either Type J or

K gives exceptional temperature control when connected to a Tempco **TCC** controller. The thermocouple has as standard an ungrounded junction located in the center of the width, which helps eliminate stray EMFs caused by the heater. A grounded junction at the end is optional.

The heater and thermocouple have a standard termination of 36-inch fiberglass leads with a stainless steel overbraid. Options include Teflon® insulated leads and armor cable. All terminations are available with the optional 2-inch-long extended strain relief.

Standard (Non-Stock) Bronze Heater Bushings

Custom Engineered/Manufactured Heaters

An electric heater can be very application specific; for sizes, ratings and terminations not listed, **TEMPCO** will design and manufacture a Heater Bushing to meet your requirements. **Standard lead time is 4 weeks.**

To order a custom Heater Bushing **create an order code number** by filling in the boxes with the appropriate number and/or letter designation for your requirements. A product part number will be assigned at time of order.

⚠ WARNING: Cancer and Reproductive Harm - www.P65Warnings.ca.gov.

Gamma Series Dual Sleeve Mini-Coil Heater

Design Features

- * ID Tolerance: $\pm .0005$ "
- * Wall Thickness: 0.130"
- * Lead Wires: 72" long Teflon[®] insulated
- * Cold leads: 5" and 7" standard
- * Resistance Tolerance: $\pm 2\%$
- * Watt Density: Over 100 w/sq.in. possible

Gamma Series mini-coil heaters for hot runner tooling are constructed with the heating element tightly sandwiched between a nickel plated copper inner sleeve and a stainless steel outer sleeve. The differences in heat transfer characteristics of the sleeves direct the heat generated by the coil inward, toward the nozzle, increasing overall efficiency. The inner diameter of the assembly is very tightly controlled, allowing for a slip fit with no clamping required.

NOTE: Caps Sold Separately

Ordering Information

Stock Heaters

Select a Mini-Coil Heater from the standard sizes and ratings list.

Custom Engineered/Manufactured Heaters

An electric heater can be very application specific; for sizes, ratings and terminations not listed, **TEMPCO** will design and manufacture a Mini-Coil heater to meet your requirements. **Standard lead time is 3 weeks.**

Please Specify the following:

- Inner Diameter
- Width/Length
- Wattage
- Voltage
- Termination Type
- Cable/Braid Length
- Clamp Style
- Special Features

⚠ WARNING: Cancer and Reproductive Harm - www.P65Warnings.ca.gov.

Heat Trace Cable

Introduction

Introduction to Heat Trace Cable Systems

Tempco's Heat Trace Cables are used to counteract the effects of heat dissipation from process pipe and equipment through its insulation (if any). This heat loss allows a drop in temperature, bringing about unacceptable consequences such as frozen pipes, reduced fluid viscosity, etc.

The use of heat trace cable replaces the heat lost, maintaining the desired temperature through the application of the required wattage.

There are two general categories of Electrical Heat Trace Cable:

Constant Wattage and
Self-Limiting, or Self-Regulating cable

Each style of heat trace cable serves different applications.

The Most Commonly Asked Questions About Heat Trace Cables

Which cable do I need?

Selecting the proper cable depends on many different variables. The pipe size, exposure temperatures, ambient conditions, insulation type and thickness, maintenance temperatures, heat-up rate, flow rate, and type of material involved all play a part in determining which cable is best for your application.

Consult pages 6-2 through 6-14 and/or contact **Tempco** to assist you in making the correct choice.

What are the requirements for metal overbraid and outer jackets?

Metal overbraid is required on all heat trace cabling to meet NEC code for grounding. The braid provides mechanical protection, as well as a low-resistance grounding path.

On SL self-limiting cable, in addition to the standard metal overbraid, an optional thermoplastic elastomer or fluoropolymer outer jacket is recommended when exposure to organic chemicals or corrosives is expected.

Can the cable be cut in the field without changing the resistance?

Tempco's Constant Wattage and Self-Limiting style cable is designed to be a certain wattage per foot within a certain circuit length. All Constant Wattage cables have modules cut out of the bus wire jacket, exposing the bare wire at alternating points at pre-determined lengths. The cable is designed to be a certain wattage within this circuit length. These circuits run the length of the spool, similar to short runs of cable run in series to make one long cable. If a circuit is interrupted (cut), the cable will be unheated up until the next complete circuit.

Types of Heat Trace Cable

Constant Wattage Cable This style of heat trace cable is designed to put out a certain amount of wattage per linear foot at a particular voltage. It is always putting out the designed watts per foot, no matter what the surface or ambient temperature is. This means that in most situations the heating cable is continually pumping heat into the vessel or pipe being maintained or heated. If the heat trace cable is

not attached to some kind of control device, it has the potential to overheat itself and burn out. This would not only ruin the cable, but could cause damage to whatever it is being used on. Therefore, constant wattage cable must be controlled by some means.

Self-Limiting, or Self-Regulating Cable This cable will self-adjust its power output in relation to the surface temperature as well as ambient conditions. In other words, the hotter the conditions get, the lower the wattage output becomes. This characteristic allows this type of cable to be used without a control device. However, if a particular temperature is required, then a control device must be used.

Note: Both cables are used by all types of industry. It is the user's requirements that dictate which design to use. Higher temperature maintenance applications will use the constant wattage cables due to the higher maximum exposure temperatures that they allow. Lower temperature maintenance applications, such as freeze protection, can use the self-limiting cable, although constant wattage cable can be used just as effectively as long as it is controlled properly.

How to Determine Heat Trace Cable Requirements

Heat Loss

Heat loss is the amount of heat given up to the surrounding atmosphere through a combination of conduction, convection, and radiation. The parameters required to determine total heat losses on an application may include several of the following:

- * Temperature to be maintained
- * Lowest expected ambient temperature
- * Type, size, and run-length of pipe or tubing
- * Type and thickness of thermal insulation to be used
- * Losses through the vessel wall and the insulation
- * Flow rate

Calculating Heat Loss from Insulated Pipe

1. Calculate the ΔT , or temperature difference. Subtract the lowest ambient temperature from the operating temperature.
2. Using the ΔT calculated in step 1, and the insulation thickness, refer to **Tables 1-A through 1-E—Heat Loss for Pipes (pages 6-5 and 6-6)**, to determine the heat loss in watts per linear foot of pipe.
3. Depending on the type of insulation used in the application, multiply result from step 2 by the appropriate factor from **Table 2—Insulation Factor (page 6-6)**. The resulting number is the heat loss expressed in watts per linear foot of pipe to be made up by the heat tracer.

Determine the Correct Heat Trace Cable

Determine the cable most appropriate for your system based on the temperature to be maintained, environment, length of the run, and the voltages available. There are Tempco heating cables available for most heat tracing applications.

If the watts per foot rating of the cable selected is more than the heat loss per foot, then a straight run may be used.

If the watts per foot rating of the cable selected is less than the heat loss per foot, your options are:

- a. Use a higher wattage cable.
- b. Use multiple straight runs.
- c. Spiral wrap the cable on the pipe.
- d. Use insulation with a higher insulation factor or thickness.

Calculating Heat Loss for Valves and Supports

To determine the heat loss multiplication factor for valves, refer to **Table 4—Heat Loss Multiplication Factors for Valves (page 6-7)**. The heat loss factor is based on a typical gate valve with insulation coverage to include the body, flange, and bonnet of the valve.

To determine adjusted multiplication factors for other types of valves and supports, use the following conversion factors:

To determine adjusted multiplication factors for other types of valves and supports, use the following conversion factors:

Gate valve	1.0	Ball valve	0.7
Globe valve	0.95	Butterfly valve	0.60
Pipe supports	0.50		

Determine the Total Amount of Heat Trace Required

Add the length of cable required for each valve and support to the length of cable required for the total pipe within your system.

Sample Calculation

Engineering Example Specifications

Operating Temperature: 55°F

Minimum Ambient Temperature: -20°F

Pipe Size: 4" steel pipe

Pipe Length: 200 ft.

Valve: 1 Gate Valve

Insulation Thickness and Type: 1" of Calcium Silicate

Voltage: 120 or 240 volts

PROCEDURE

1. Determine the heat loss.

a. Difference between low ambient and operating temperature: $55^{\circ}\text{F} - (-20^{\circ}\text{F}) = \Delta T$
 $\Delta T = 75^{\circ}\text{F}$

b. Determine the heat loss by referring to **Table 1-A - Heat Loss for Pipes**. For $\Delta T = 75^{\circ}\text{F}$, a 4" diameter pipe with 1" thick insulation will have a Heat Loss Factor of 7.6 W/ft.

2. Determine the adjusted heat loss for calcium silicate insulation (heat loss chart is based on fiberglass) by referring to **Table 2 - Insulation Factor** (page 6-6). Adjustment = $7.6\text{ W} \times 1.47 = 11.17\text{ W/ft}$. Adjusted Heat Loss

3. Select correct heating cable (by voltage and wattage) required to replace a heat loss of 11.17 W/ft. Use one straight run of 12 W/ft. or three straight runs of 4 W/ft.

4. Determine the heat loss of the valve gate and supports.

Refer to **Table 4 - Heat Loss Multiplication Factors for Valves** (page 6-7). For a 4" diameter pipe, the heat loss multiplication factor is 2.92.

Valve heat loss factor = $11.17\text{ W/ft.} \times 2.92 = 32.62\text{ W}$

5. Determine the cable requirements for the valve.

Divide valve heat loss by W/ft. of selected cable. Length of cable required for valve:

$32.62\text{ W/ft.} \div 12\text{ W} = 2.72\text{ ft.}$

6. Determine total cable requirements.

a. Cable required for pipe:

1 run \times 200 ft. = 200 ft.

b. Cable required for valve = 2.72 ft.

c. Total: 200 ft. + 2.72 ft. = 203 ft.

Round this number (203) up to the nearest number evenly divisible by the module (module length = 4 ft.), i.e. 204 ft.

d. Add module length (4 ft.) for cold leads for termination:
204 ft. + 4 ft. = 208 ft.

Total feet of cable required = 208 ft. of 12 W/ft. heating cable.

Heat Trace Cable

Constant Wattage Heating Cable

Constant Wattage Heat Trace Cable

Tempco's Constant Wattage Heating Cables are all parallel resistance, low watt density electrical heaters designed to be cut to the desired lengths in the field, eliminating the need for prefabrications and reducing or eliminating many design and installation costs. No special training is required.

All Tempco Heating Cables are parallel circuit designed. The multi-stranded bus wires are covered in a high dielectric insulation. Spirally wrapped resistance wire maintains circuit continuity by connecting short, alternately spaced sections of exposed conductor bus wire. Cables feature moisture and chemical resistance

and are classed for hazardous locations when properly cut and spliced using the correct lead termination kit.

Metal Overbraid is provided on all heat tracing as standard to meet NEC code for grounding. The braid provides mechanical protection as well as a low resistance grounding path.

Tempco constant wattage heating cables are designed for a full range of applications. Whether your need is freeze protection or process temperature control of pipelines, water lines, oil lines or asphalt lines, Tempco has the cable for your special needs.

KE Style Heating Cables Maximum Temperature: 500°F (260°C)

The KE Style cable heating element is tension wrapped and covered with two layers of Kapton® film applied in reverse directions, then heat fused for moisture protection. A tinned copper overbraid is then added for additional abrasion protection and for a ground return path. The overbraid is further enclosed in a covering of 20 mm extruded Teflon® PFA for additional chemical and abrasion resistance.

Design Features

- * Temperature exposure rating 500°F (260°C)
- * Continuous electrical ground
- * Excellent moisture and chemical resistance
- * Hazardous location rating
- * FM approved

Typical Applications

- ↔ Oil Refineries
- ↔ Asphalt Plants
- ↔ Severe Arctic Cold
- ↔ Mines
- ↔ Pulp and Paper Mills
- ↔ Corrosive Environments
- ↔ Explosive Environments

Specifications

- Voltages Available:** 120, 208, 240, 480
- Wattages:** 4, 8, 12 (W/ft.)
- Outside Dimensions:** Nom. .330" x .225"
- Exposure Rating:** 500°F (260°C)
- De-Energized:** 550°F (302°C)
- Standard Metal Overbraid:** Tinned Copper
- Extruded Jacket:** Teflon®
- Moisture and Chemical Resistance:** Excellent
- Flame Resistance:** Outstanding
- Radiation Resistance:** Fair to Good

Agency Approvals

- * IEEE Std 515
- * Factory Mutual
 - Ordinary Locations
 - Hazardous Locations:
 - Class I, Division 2, Groups B, C & D
 - Class II, Division 2
 - Class III, Division 2

Ordering Information

Tempco's KE Constant Wattage Heat Trace Cable is sold by part number and length. The cable part number is put together as follows:

H T P 0 1

Wattage — watts/ft.

- 4 W/ft. = 4
- 8 W/ft. = 8
- 12 W/ft. = 2

Voltage

- 120 VAC = 1
- 240 VAC = 2
- 208 VAC = 3
- 480 VAC = 4

Outer Layer

- 0 = Standard Tinned Copper Braid

Note: Due to code requirements, KE cable has a metal overbraid.

WARNING: Cancer and Reproductive Harm - www.P65Warnings.ca.gov.

Constant Wattage Heat Trace Cable

FE Style Heating Cable Maximum Temperature: 400°F (204°C)

The FE Style cable heating element is tension wrapped and covered with a fluorocarbon film and enclosed in a minimum 20 mm Teflon® FEP abrasion resistant extruded jacket. This tough outer cover provides moisture and dielectric protection as well as resistance to abrasion. A layer of tinned copper braid is then applied to meet NEC code and to provide mechanical protection as well as a low resistance to ground.

Design Features

- * **Temperature Exposure Rating 400°F (204°C)**
- * **Ease of installation—cut to length at the job site**
- * **Moisture and chemical resistant**
- * **Stands up to repeated handling and flexing**
- * **Field proven industrial grade construction**
- * **Single end power connection**

Typical Applications

- ✦ **Mid-Temperature Control**
- ✦ **Food Processing Plants**
- ✦ **Freeze Protection**
- ✦ **Chemical Processing Plants**
- ✦ **Hazardous Locations**
- ✦ **Water Lines/Condensate Return Lines**

Specifications

- Voltages Available:** 120, 208, 240, 480V
- Wattages:** 3, 5, 8, 12 (W/ft.)
- Outside Dimensions:** Nom. .300" x .200"
- Exposure Rating:** 400°F (204°C)
- De-Energized:** 450°F (232°C)
- Standard Metal Overbraid:** Tinned Copper (Optional Stainless Steel)
- Moisture and Chemical Resistance:** Excellent
- Flame Resistance:** Outstanding
- Radiation Resistance:** Fair to Good

Agency Approvals

- * **Factory Mutual**
Ordinary Locations
Hazardous Locations:
Class I, Division 2, Groups B, C & D
Class II, Division 2, Groups E, F & G
Class III, Division 2
- * **CSA (120 and 240 VAC only)**
Ordinary Locations
Hazardous Locations:
Class I, Division 2, Groups B, C & D
Class II, Division 2, Groups F & G
Class III, Division 2

Ordering Information

Tempco's FE Constant Wattage Heat Trace Cable is sold by part number and length. The cable part number is put together as follows:

H T P 0 2

Wattage—watts/ft.

- 3 W/ft. = 3
- 5 W/ft. = 5
- 8 W/ft. = 8
- 12 W/ft. = 2

Voltage

- 120 VAC = 1
- 240 VAC = 2
- 208 VAC = 3
- 480 VAC = 4

Outer Layer

- 0 = Standard Tinned Copper Braid
- 3 = Stainless Steel Braid

Note: Due to code requirements, FE cable has a metal overbraid.

Lead Termination and Cable Kits for Constant Wattage Cables

In order to maintain the integrity of the insulation, termination kits must be used to add leads or splice the heating cables. **Both ends must be terminated to use the heat trace cable properly.** The termination kits are designed to fully seal using a general purpose silicone RTV sealant, such as GE RTV108, on the final connections.

Termination Kit Type	"KE" Cable	"FE" Cable
Universal Connection/ Termination Kit	HTP90001	HTP90006
Lead and End Kit	HTP90002	HTP90007
Single Lead Term.	HTP90003	HTP90008
Single End Term.	HTP90004	HTP90009
Cable Splice Kit	HTP90005	HTP90010

The **Universal Kit** is mainly used to terminate the heat trace cable for pipe trace heating when the heating cable needs to terminate in an NPT pipe standoff for attaching a wiring junction box. The kit includes the 1" NPT pipe standoff and materials to make one power input connection, and two end terminations or one power input splice. The junction box is ordered separately; see page 6-13. These assemblies are watertight and suitable for use in Division II hazardous locations.

The **Lead and End Kit**, **Single Lead Termination Kit** and **Single End Termination Kits** are used when only simple cold power leads are required. The lead wire is customer supplied. The non-lead end must also be terminated and sealed.

The **Lead and End Kit** contains enough material for 5 lead and 5 end terminations.

The **Single Termination Lead Kit** and the **Single End Termination Kit** contain enough material for 1 lead or 1 end termination.

The **Splice Kit** is used to create one in-line splice or one "T" splice between two heat cables. May require pipe standoff, straps, junction box, and RTV (ordered separately, see page 6-13).

Self-Limiting Heat Trace Cable

Tempco's Self-Limiting Heating Cables are all parallel resistance, low watt density electrical heaters designed to be cut to the desired lengths in the field, eliminating the need for prefabrications and reducing or eliminating many design and installation costs. No special training is required.

Self-limiting heating cables are designed and built to regulate their output. As the process temperature drops, the cable's output increases; conversely, as the temperature rises, the cable's output decreases.

The self-limiting core is in essence an infinite number of parallel resistors that permit the cable to be cut to any length without creating cold sections. Because it is self-regulating and infinitely paral-

lel, the output varies along the length of the cable, depending upon local process temperature.

Metal overbraid is provided on all heat trace cabling to meet NEC code for grounding. The braid provides mechanical protection, as well as a low resistance grounding path.

On SL self-limiting cable, in addition to the standard metal overbraid, an optional thermoplastic elastomer or fluoropolymer outer jacket is recommended when exposure to organic chemicals or corrosives is expected.

Self-limiting heating cable provides safe, reliable heat tracing for process temperature maintenance and freeze protection of pipes, valves and similar applications.

Design Features

- * *Efficient, Safe, Easy to Install*
- * *Maintenance Temperatures up to 150°F (65°C)*
- * *Can Be Overlapped*
- * *Cut to Length at the Job Site*

Typical Applications

- ↪ *Pipelines*
- ↪ *Drains*
- ↪ *Water Lines*
- ↪ *Safety Showers*
- ↪ *Sprinkler Systems*

Specifications

- Voltages Available:** 120, 240
- Wattages:** 3, 5, 8, 10 (W/ft.) @ 50°F ambient
- Outside Dimensions:** Nom. .450" x .130"
- Exposure Rating:** 150°F (65°C)
- De-Energized:** 185°F (85°C)
- Standard Metal Overbraid:** Tinned Copper or optional Stainless Steel
- Moisture Resistance:** Excellent
- Chemical Resistance:** Good
- Flame Resistance:** Good
- Radiation Resistance:** Fair

Agency Approvals

- * CSA
- * IEEE Std 515 RU
- * **Factory Mutual**
 - Ordinary Locations
 - Hazardous Locations:
 - Class I, Division 2, Groups B, C & D
 - Class II, Division 2, Groups F & D
 - Class III, Division 1 and Division 2

Actual Wattage Output vs. Temperature

SL Style Heating Cable

The SL Style cable heating element is a low watt density parallel circuit electrical heater. The multi-stranded bus wires are extruded in an irradiated self-regulating conductive polyolefin that increases and decreases its heat output with changes in the ambient temperature. A flame retardant thermoplastic elastomer jacket is added for abrasion and impact resistance.

A metal braided shield is then applied to meet NEC code for grounding. Metal overbraid heaters are FM approved for use in hazardous areas.

An optional fluoropolymer outer jacket is also available. This outer jacket should be specified when the metal braided cable is installed in corrosive environments.

Self-Limiting Heat Trace Cable

Continued from previous page...

⚠ WARNING: Cancer and Reproductive Harm - www.P65Warnings.ca.gov.

Lead Termination and Cable Kits for Self-Limiting Cable

In order to maintain the integrity of the insulation, termination kits must be used to add leads or splice the heating cables. **Both ends must be terminated to use the heat trace cable properly.** The termination kits are designed to fully seal using a general purpose silicone RTV sealant, such as GE RTV108, on the final connections.

Termination Kit Type	"SL" Cable
Universal Connection/ Termination Kit	HTP90021
Splice or Lead End Kit	HTP90022
End Seal Kit	HTP90023

The **Universal Kit** is mainly used to terminate the heat trace cable for pipe trace heating when the heating cable needs to terminate in an NPT pipe standoff for attaching a wiring junction box. The SL kit includes the 1" NPT pipe standoff and materials to make one power input connection, and two end terminations or one power input splice. The junction box is ordered separately; see page 6-13. These assemblies are watertight and suitable for use in Division II hazardous locations.

The **Splice or Lead End Kit** is used for tee splices or cold lead end terminations. Enough material is supplied for 10 tee splices or 10 cold lead end terminations.

The **End Seal Kit** is used to cap off and seal the end of the cable where the bus wires are exposed. Enough material is supplied for 10 end seal terminations.

Temperature Controls and Accessories for Heat Trace Cables

Choosing the proper control depends first on the system requirements and second on the desired features and cost. Since Tempco's heat trace products are used primarily for freeze protection and to offset system heat loss, PID controls are generally not required.

The most economical is the pipe-mounted direct acting preset thermostat. Tempco offers a normally open/normally closed three wire model.

Where greater accuracy, faster response and larger ranges with adjustment capability are required, a bulb and capillary style thermostat fills the need. Tempco offers two types with NEMA 3R for general purpose and NEMA 4X where a fully sealed housing is required.

If the heat trace is used for process control and very accurate control is needed along with additional features, a thermocouple-based electronic PID controller is required.

See Section 13 – "Temperature Controllers" for more information.

Heating Cable Accessories		
Part Number	Accessory	Usage
HTP90028	Junction Box	For use with NPT pipe standoff Single hub - 1" NPT
HTP90029	Reducer	Adapts .75" NPT male to 1" NPT female
HTP90030	Aluminum Adhesive Tape 2" x 180 ft. 350°F/176°C	Helps to isolate the cable from insulation and aids in securing the cable to pipes and tanks.
HTP90031	Aluminum Adhesive Tape 2" x 180 ft. 550°F/288°C	Same as above

Action		Part No.
Closes	Opens	
35°F (2°C)	50°F (10°C)	HTP90104
45°F (7°C)	60°F (16°C)	HTP90105
60°F (16°C)	75°F (24°C)	HTP90106
90°F (32°C)	105°F (41°C)	HTP90107
185°F (85°C)	200°F (93°C)	HTP90108

This control is a preset, epoxy-sealed thermostat containing a hermetically sealed single pole, double throw switch with normally open and normally closed connections

Specifications

Voltage: Up to 277 VAC

Current: FM approved to 240 VAC at 25 amps

Leads: 36" long, 600 VAC 14 ga., 105°C PVC insulation

This control is an adjustable Stainless Steel bulb and capillary thermostat. It is enclosed in a NEMA 4X enclosure with a clear cover.

Specifications

Voltage: 120 or 240 VAC

Contacts: 120V SPST, 240V DPST

Current: 50 amps at either voltage

Leads: Hard wired directly to terminals

Dimensions: 6"H x 6"L x 5.87"W

Range		Part No.	
°F	°C	120V	240V
0 - 150	-18 - 66	HTP90113	HTP90116

150 - 650	66 - 343	HTP90115	HTP90118

Range		Part No.
°F	°C	
0 - 150	-18 - 66	HTP90109
100 - 250	38 - 121	HTP90110
200 - 350	93 - 177	HTP90111

This control is an adjustable bulb and capillary thermostat with single pole double throw contacts with NO and NC connections. It is enclosed in a NEMA 3R general purpose enclosure.

Specifications

Voltage: Up to 277 VAC

Current: 277 VAC at 22 amps

Leads: Hard wired directly to terminals

Dimensions: 3.30"H x 4.08"L x 4.08"W

Closed Cell Elastomeric Thermal Insulation

Design Features

- * *Cost Effective*
- * *Easy to install*
- * *Suitable for wide variety of environments, such as outdoor use and food service*
- * *Temperatures to 257°F (125°C)*
- * *UV resistant*
- * *Fiber Free*

Specifications

Material: 3/4" (19mm) thick closed-cell and lightweight EPDM based elastomeric material

Exposure Temperature Range: -297°F through 257°F

R-value: 3

Density: 3 to 6 Lbs/ft³

Water vapor permeability: 0.10 perm-in (0.15 x 10⁻¹²)

Water absorption (weight %): Less than 5%

Flammability: UL-94 5 V-A. V-O

Sheet Width in (mm)	Sheet Length ft (m)	Description	Part Number
11 (279)	50 (15.2)	Installs around 2.5" O.D. Pipes and smaller	HTP90050
15 (381)	50 (15.2)	Installs around 4" O.D. Pipes and smaller	HTP90051
48 (1219)	25 (7.6)	Installs around vessels and large diameter pipes	HTP90052

FOIL TAPE

Adhesive aluminum tape for extra environmental protection.
Up to 300°F (149°C).

Description	Part Number
3" (76mm) x 180 ft. (55m) roll. To protect insulation from environmental damage.	HTP90055

SEAM-SEALING TAPE

Adhesive tape required for sealing seams.
Up to 180°F (82°C).

Description in (mm)	Part Number
2" (51mm) x 82 ft. (25m) roll. Ideal for pipes and small vessels.	HTP90053
3" (76mm) x 82 ft. (25m) roll. Ideal for large vessels.	HTP90054

INSUL-LOCK® DS Flexible Closed Cell Pipe Insulation

Design Features

- * Easy to install with precise fit
- * Double Seal Technology
 - Built-in pressure sensitive adhesive
 - Built-in PVC overlap tape with acrylic adhesive
- * Scrim reinforcement on the seam surface
- * Non-porous, fiber-free, and resistant to mold growth
- * Resistant to moisture vapor flow
- * Compatible with heating cable and tapes

Specifications

Material: Environmentally-friendly, CFC-free, flexible elastomeric thermal insulation

Operating Temperature Range:
-70°F (-57°C) through 220°F (104°C)

R-value: 3

Color: Black

Length: 6.0 feet (1.8 meter)

Thickness: 0.5" (1.3 cm)

Density: 3 to 6 Lbs/ft³

Water vapor permeability:

Dry cup (Elastomeric insulation) 0.03 perm-in
Wet cup (Glued seam with overlap) 0.12 perm-in

Water absorption % (Volume change): 0

Flammability: UL-94 5 V-A, V-O

Typical Applications

- Freeze Protection
- Prevent condensation on refrigerant lines, cold water plumbing, roof drains, and chilled water systems
- Many other outdoor and indoor applications

Standard Closed Cell Pipe Insulation

Preformed pipe insulations are 1/2 inch thick, 6 foot long with overlap flap with Pressure Sensitive Adhesive (PSA).

section

Series CRL, CRB, CRM, CRC and CRS Curved Face Ceramic E-Mitters

Design Features

- * Universal mount designed to be dropped into existing systems regardless of manufacturer.
- * Standard colors are metamorphing rose (cold) to grey (hot), and traditional white. Optional colors are metamorphing yellow (cold) to orange (hot), and black.
- * Standard stocked voltage: 120 or 220/240V as noted; other voltages are available.
- * Available with built-in type K thermocouple. Type J thermocouple is also available. Low noise options are also available.
- * Long operating life—over 10,000-plus hours of continuous operation under normal conditions
- * Performance is unaffected by vibration or adverse atmospheric conditions.
- * 2.5 to 6 μ m infrared radiation wavelength

5 Standard Solid Curved Face sizes to accommodate a wide range of new or existing applications

Ordering Information

Standard Heaters

Order by Part Number for Standard (Non-Stock) heaters.

Semi-Finished Stock CRB and CRC heaters ship in five business days. A Part Number will be assigned at time of order.

Custom Engineered/Manufactured Heaters

Understanding that an electric heater can be very application specific, for sizes and ratings not listed, **TEMPCO** can manufacture a Ceramic E-Mitter to meet your requirements. **Standard lead time is 3 weeks.**

Please Specify the following:

- Colors:** Standard are metamorphing rose and straight white, optional are metamorphing yellow and straight black
- Wattage:** Up to 43w/in² (6.7w/cm²)
- Voltage:** 120, 208, 240, 277, 480 and others (dependent on design)
- Thermocouple:** Standard Type K (Type J optional) or Low Noise Type K (Type J optional)
- Additional Options:** Start on page 7-20

⚠ WARNING: Cancer and Reproductive Harm - www.P65Warnings.ca.gov.

Series CRL Curved Face Ceramic E-Mitters – Size: 95 mm × 295 mm (3.74" × 11.61")

Color shown is rose (cold) to grey (hot)

Optional Features

- * *Additional Power or Thermocouple Lead Lengths (page 7-23)*
- * *Two-Piece Wave Mounting Clip (page 7-14)*
- * *Reflectors and Other Accessories (pages 7-20 through 7-23)*
- * *Arrays and Power/Temperature Control Panels (start on page 7-15)*

Standard (Non-Stock) CRL E-Mitters

E-Mitters listed have 6" ceramic bead insulated leads, #8-10 spade terminals, and one-piece spring clips for mounting in 20 or 22 gauge sheet metal.

NOTES: All dual voltage heaters have two windings (parallel connected for the lower voltage & series connected for the higher voltage). Single voltage heaters are single winding designs.

Units with an internal “low noise” style thermocouple have 12" leads (see page 7-14). Standard type “K” T/C units also available.

Heaters with yellow to orange color are exact replacements for heaters in CRP Modular 12 × 12 CRP Radiant Panels on page 7-24.

* **Watt density**
calculated using heater face surface area.

** **E-Mitter heater body temperature**
as measured with internal thermocouple when mounted facedown in stock CRK reflector and operating in 72°F (22°C) room ambient.

*** **Peak infrared radiation wavelength** as calculated from Wien's Law, for operating temperature shown. Expressed in microns (μm).

Semi-Finished Stock CRB E-Mitters (Five Business Day Manufacturing)

Semi-Finished Series CRB E-Mitters listed below are stocked ready for color glazing. Colors available are metamorphing rose (cold) to grey (hot), traditional white, metamorphing yellow (cold) to orange (hot), and black.

They can be terminated with beaded leads up to 6" long with spliced-on lead wire for lengths beyond 6" and straight, ring, or spade terminals. Some are available with a thermocouple (any length).

A part number will be assigned at time of order.

Series CRM E-Mitters

Series CRM Curved Face Ceramic E-Mitters – Size: 60 mm × 163 mm (2.36" × 6.42")

Color shown is
rose (cold) to grey (hot)

Optional Features

- * *Additional Power or Thermocouple Lead Lengths (page 7-23)*
- * *Two-Piece Wave Mounting Clip (page 7-14)*
- * *Reflectors and Other Accessories (pages 7-20 through 7-23)*
- * *Arrays and Power/Temperature Control Panels (start on page 7-15)*

Standard (Non-Stock) CRM E-Mitters

E-Mitters listed have 3.50" ceramic bead insulated leads,
#8-10 spade terminals, and a one-piece spring clip for mounting.

* **Watt density** calculated using heater face surface area.

** **E-Mitter heater body temperature** as measured with internal thermocouple when mounted facedown in stock CRK reflector and operating in 72°F (22°C) room ambient.

*** **Peak infrared radiation wavelength** as calculated from Wien's Law, for operating temperature shown. Expressed in microns (μm).

Semi-Finished Stock CRC E-Mitters (Five Business Day Manufacturing)

Semi-Finished Series CRC E-Mitters listed below are stocked ready for color glazing. Colors available are metamorphing rose (cold) to grey (hot), traditional white, metamorphing yellow (cold) to orange (hot), and black.

They can be terminated with beaded leads up to 6" long with spliced-on lead wire for lengths beyond 6" and straight, ring, or spade terminals. Some are available with a thermocouple (any length).

A part number will be assigned at time of order.

Radiant Process Heaters

Series CRH, CRD E-Mitters

Insulated Flat Face Short Neck Series CRH and Long Neck Series CRD Ceramic E-Mitters

CRH shown in white and CRD in metamorphing rose (cold) to grey (hot)

CRH and CRD E-Mitter Construction

1. **LESS MASS.** A special manufacturing process allows construction with thin walls that withstand larger temperature gradients. The embedded resistance coils heat up the low mass body at a faster rate, providing considerable energy savings.
2. **SUPERIOR INSULATING MATERIAL.** The hollow inner area is filled with low-mass ceramic fiber to further insulate the contact region from the e-mitter surface, resulting in an improved operating life.

Design Features

- * *Universal mount designed to be dropped into existing systems regardless of manufacturer*
- * *Standard colors are metamorphing rose (cold) to grey (hot), and traditional white. Optional colors are metamorphing yellow (cold) to orange (hot), and black*
- * *Standard stocked voltage: 120 or 220/240V as noted; other voltages are available*
- * *Available with built-in type K thermocouple. Optional type J thermocouple is also available.*
- * *Long operating life – over 10,000-plus hours of continuous operation under normal conditions*
- * *Performance is unaffected by vibration or adverse atmospheric conditions*
- * *2.5 to 6µm infrared radiation wavelength*

Slot size for ceramic mounting heads
0.593" X 1.688" oblong hole

Series CRH Dimensions

Series CRD Dimensions

Optional Features

- * *Additional Power or Thermocouple Lead Lengths (page 7-23)*
- * *Two-Piece Wave Mounting Clip (page 7-14)*
- * *Reflectors and Other Accessories (pages 7-20 through 7-23)*
- * *Arrays and Power/Temperature Control Panels (start on page 7-15)*

Ordering Information

Standard Heaters

Order by Part Number for Standard (Non-Stock) heaters.

Custom Engineered/Manufactured Heaters

Understanding that an electric heater can be very application specific, for sizes and ratings not listed, **TEMPCO** can manufacture a CRH or CRD E-Mitter to meet your requirements. **Standard lead time is 3 weeks.**

Please Specify the following:

- Size:** CRH or CRD
- Colors:** Standard are metamorphing rose and straight white, optional are metamorphing yellow and straight black
- Wattage:** Up to 35w/in² (5.4w/cm²)
- Voltage:** 120, 208, 240, 277, 480 and others (dependent on design)
- Thermocouple:** Standard Type K or optional Type J
- Additional Options:** Start on page 7-20
- Description of Process & Temperature**

* **Watt density** calculated using heater face surface area.

** **E-Mitter heater body temperature** as measured with internal thermocouple when mounted facedown in stock CRK reflector and operating in 72°F (22°C) room ambient.

Mounting Accessories and Low Noise Thermocouple Option

One-Piece Mounting Clip (Standard)

Designed for heater mounting with 22 ga (.028") to 20 ga (.037") sheet metal.

Part Number SPR-103-102

Thinner or thicker materials require the Two-Piece Mounting Clip.

Standard mounting spring clip shipped with heaters

Two-Piece Wave Mounting Clip (Optional)

The two-piece wave spring clip and holding clip assembly is used for mounting heaters in materials thicker than 20 ga (.037") or thinner than 22 ga (.028")

Part Number: CRK00008

All Items Available from Stock

Single Element Mounting Bracket

A convenient method for mounting individual E-Mitters to a flat surface or panel for spot heating applications

Part Number: CRK00018

The picture shows how the single element mounting bracket can be used to develop a panel array using Series CRB or CRC Ceramic E-Mitters or others with the same mounting head design.

High Temperature Ceramic Terminal Blocks (Part Number EHD-108-101) are used to connect power to the heater leads and can also be used for making thermocouple connections.

Part Number: CRK00018

Low Noise Thermocouple Option

Generally the standard thermocouple is acceptable for the majority of applications. Most instrumentation inputs have noise rejection sufficient to filter out unwanted 60 hz AC noise that the thermocouple picks up from being mounted close to the coil element for ideal temperature sensing.

For those applications where emf generated noise is a problem for the instrument, Tempco offers a low noise thermocouple solution. The low noise thermocouple option is designed to minimize the induced AC noise by using stainless steel overbraid on the high temperature fiberglass color-coded 24 GA solid leads as a ground shield and a ceramic insulator at the thermocouple junction.

Designed for use in the CRB, CRC, CRL, CRG and CRM solid curved and flat face style heaters. Low noise thermocouples can only be factory installed and must be specified at time of ordering.

DANGER: Hazard of Fire. These heaters are not for use in atmospheres where flammable vapors, gases or liquids are present as defined in the National Electrical Code. Where solvents, water, etc. are being evaporated from the process it is necessary to provide substantial quantities of ventilating air to carry away all resulting vapors.

WARNING: Hazard of Electric Shock. Installation must be grounded to earth to avoid shock hazard. Disconnect power to installation before servicing or installing heater.

WARNING: Do not use Copper Wire to make connections inside this heater. High temperatures will oxidize copper. Use of nickel plated or nickel clad insulated copper wire is recommended. Wire insulation rating must be suitable for the ambient temperature of the wiring installation.

CRA Linear Heater Assemblies — Construction

Easiest Replacement of Heaters in the Industry

E-Mitters are easily replaced by removing the top cover. Wiring entrance side covers are not affected. The heater lead wires are insulated with ceramic beads and connected to ceramic terminal blocks. Heaters can be wired to function individually or grouped into heating zones.

Design Features

- * Designed for use with E-Mitters CRB, CRC, CRN and CRZ
- * Lightweight extruded aluminum housing with 5/16-18 mounting bolts for use up to 250°C (482°F) extrusion temperature
- * E-Mitters are easily replaced by removing the top cover
- * Internal mounting hole pattern simplifies mixing and matching E-Mitter sizes and ratings
- * Space between reflector and housing wall offers a good thermal barrier to protect the wiring area
- * This CRA structural housing can be used with any manufacturer's standard 60 × 245 mm -or- 60 × 122 mm heaters
- * Wiring entrance 7/8" Diameter at both ends, for 1/2" trade size electrical fittings

Wiring Options

Prewired with Plain Leads, Armor Cable or Wire Braid (includes ground wire)

Stainless steel armor cable — 18" armor cable over 24" leads

Galvanized armor cable — 18" armor cable over 24" leads

Stainless steel wire braid — 18" wire braid over 24" leads

Fiberglass leads (450°C rating) — 12" long plain leads

If longer leads and/or longer armor cable are required, specify when ordering.

Prewired with 24" SJO Cable (includes ground wire)

- 16 ga. cable (Up to 15 Amps)
- 14 ga. cable (Up to 22 Amps Max.)
- 12 ga. cable (Up to 28 Amps Max.)
- Max. terminal box temperature 194°F (90°C)
- If longer cable is required, specify when ordering.

Optional Electrical Plugs listed can be attached to armor cable, HPN cord or plain leads described under wiring Options. Connectors listed are cable mount matching units for the plugs listed and are ordered separately. See page 15-15 for additional plugs and connectors.

Custom CRA Linear Heater Assemblies Using Standard Components

Do It Yourself or let Tempco build an array to your exact specifications using standard components.

Consult Tempco for arrays using custom designed components.

Components Required To Build A Custom CRA Linear Heater using Standard Items

Example

Steps to Design a Custom CRA E-Mitter Linear Assembly from Standard Components

Designing a 40-inch-long CRA assembly using a stock housing length.

Step 1) Select the Housing. This application can use the standard CRK00004 housing from the Standard CRK Housing Lengths Table on page 7-19. Note the Maximum Power Rating of the housing when making your selection.

Step 2) Select the E-Mitters Series. The CRK Housing Lengths Table gives the various possible E-Mitter configurations that will fit the housing selected. A combination of CRBs and CRCs will be used for this application. CRB E-Mitters were selected for the inside three heaters to limit the number of unheated gaps that would be present if all CRC E-Mitters were used. The middle CRB E-Mitter has a thermocouple for temperature control. The outer two heaters *in this example* are CRC E-Mitters at a different w/in² than the CRBs because the heat required at the edges is not the same as the center. The heater color selected is Metamorphing Rose.

CRB E-Mitters can be found on page 7-4.

CRC E-Mitters can be found on page 7-7.

Step 3) Select the Reflectors. Select E-Mitter Reflectors to match the Style and Quantity of E-Mitters you selected. Three Part Number CRK00007 Reflectors are required for the CRB E-Mitters and Two Part Number CRK00006 Reflectors are required for the CRC E-Mitters. Note: Reflectors are complete with mounting hardware to attach to housing (page 7-20).

Step 4) Select the Terminal Blocks. Select the number of terminal blocks required for wiring. This would typically be one for each heater for the power leads and one for each thermocouple (page 7-21 and 7-22). A total of six terminal Blocks, Part Number EHD-108-101, are required. One for the power leads of each E-Mitter and one for the thermocouple on CRB10033.

CRC10021 CRB10031 CRB10033 (has T/C) CRB10031 CRC10021

40"

Standard CRK Linear Housings

CRK housings include the following components: housing body, end plates, 5/16-18 mounting bolts, cover and ground lug.

NOTE: These housings do not include the reflectors needed for mounting the heaters (see page 7-20) or the terminal block (Part Number EHD-108-101) required for wiring each heater (see page 7-21).

Standard (Non-Stock) Housing Lengths Table

Nominal Housing Length in	"A" Dim. in	"A" Dim. mm	Housing Part Number	Examples of Possible E-Mitter Configurations	Maximum Power
5	5.19	131.8	CRK00024	1 CRC or 1 CRZ	.5KW
10	10.13	257.2	CRK00001	1 CRB or 1 CRN, 2 CRCs or 2 CRZs	1KW
15	15.06	382.6	CRK00023	3 CRCs or 3 CRZs (1 CRB and 1 CRC) or (1 CRN and 1 CRZ)	1.5KW
20	20.00	508.0	CRK00002	2 CRBs or 2 CRNs, 4 CRCs or 4 CRZs (1 CRB and 2 CRCs) or (1 CRN and 2 CRZs)	2KW
25	24.94	633.4	CRK00022	5 CRCs or 5 CRZs a combination of (CRBs and CRCs) or (CRNs and CRZs)	2.5KW
30	29.88	758.8	CRK00003	3 CRBs or 3 CRNs, 6 CRCs or 6 CRZs a combination of (CRBs and CRCs) or (CRNs and CRZs)	3KW
35	34.81	884.2	CRK00019	7 CRCs or 7 CRZs a combination of (CRBs and CRCs) or (CRNs and CRZs)	3.5KW
40	39.75	1009.7	CRK00004	4 CRBs or 4 CRNs, 8 CRCs or 8 CRZs a combination of (CRBs and CRCs) or (CRNs and CRZs)	4KW
50	49.63	1260.5	CRK00021	5 CRBs or 5 CRNs, 10 CRCs or 10 CRZs a combination of (CRBs and CRCs) or (CRNs and CRZs)	5KW
60	59.50	1511.3	CRK00027	6 CRBs or 6 CRNs, 12 CRCs or 12 CRZs a combination of (CRBs and CRCs) or (CRNs and CRZs)	6KW
70	69.38	1762.1	CRK00029	7 CRBs or 7 CRNs, 14 CRCs or 14 CRZs a combination of (CRBs and CRCs) or (CRNs and CRZs)	7KW

Standard housings are available from as-assembled stock in 10", 20", 30", 40" and 50" lengths. Other housing lengths can be made to your requirements.

Ordering Information

Custom Engineered/Manufactured CRA Heater Assembly

Standard Assemblies

Order by Part Number on page 7-16. Delivery is Stock to 3 days.

Understanding that a CRA linear structural housing can be very application specific, **TEMPCO** will design and manufacture a CRA heater assembly to meet your requirements. **Standard lead time is 3 weeks.**

Please Specify the following:

- Housing Length
- E-Mitter Color
- E-Mitter Size, Electrical Ratings or Part Number
- E-Mitter with Built-In Type K T/C, Size, Electrical Ratings or Part Number

If you should encounter any problems or need technical support in the design of the CRA system consult Tempco. Our team of professionals will provide you with the right solution for your application.

Stock Reflectors for CRB, CRN, CRC, CRZ and CRL E-Mitters

Reflectors for Ceramic E-Mitters

- * Designed to withstand bending and heat distortion.
- * Made from highly polished chrome steel or optional aluminized steel for extreme temperatures and harsh environments.
- * Will withstand high operating temperatures.
- * Available in three standard sizes; includes standoffs and hardware.
- * Easy installation into CRA linear structural housing assemblies (except CRK00032).

For One CRB E-Mitter or One CRN E-Mitter

Part Number: CRK00007 (Chrome Steel)
Part Number: CRK00049 (Aluminized Steel)

For One CRC E-Mitter or One CRZ E-Mitter

Part Number: CRK00006 (Chrome Steel)
Part Number: CRK00035 (Aluminized Steel)

For One CRM E-Mitter

Part Number: CRK00030 (Chrome Steel)
Part Number: CRK00074 (Aluminized Steel)

For Two CRC E-Mitters or Two CRZ E-Mitters

Part Number: CRK00020 (Chrome Steel)
Part Number: CRK00043 (Aluminized Steel)

Note: Reflectors in drawings are shown with curved heater(s) for reference only.

For One CRL E-Mitter

Part Number: CRK00032 (Aluminized Steel)

All Items Available from Stock

Ceramic Twist-Loc Wire Connectors

Porcelain Material, Maximum Temperature Rating 1200°F (645°C), 300V Maximum

Agency Approvals: UL and CSA for EHD-114-102, EHD-114-103 and EHD-114-104 (UL File E9809)

Standard Ceramic Terminal Blocks for Internal Wiring

Used for internal connections within CRA linear structural housings and ARA arrays.

Design Features

- * **Maximum Voltage:** 600 VAC
- * **Maximum Current:** 20 Amps
- * **Maximum Temperature:** 450°C/842°F
- * **AWG:** 20-12 ga. wire
- * **Hardware:** Stainless Steel
- * **Terminals:** #8 Screw
- * **Body Material:** Steatite

Part Number:
EHD-108-101

Part Number:
EHD-108-121

Ceramic Terminal Blocks (Enclosed Terminals)

Used for wiring of heater power and thermocouple wiring in high temperature locations.

Design Features

- * **Maximum Voltage:** 380 VAC
- * **Maximum Current:** 30 Amps
- * **Maximum Temperature:** 240°C/464°F
- * **AWG:** 26-12 stranded, 26-14 solid
- * **Screw:** M3, zinc plated steel
- * **Terminal Body:** Nickel plated brass
- * **Body Material:** Porcelain
- * **Rating:** CE, VDE

Part Number:
EHD-108-116

Part Number:
EHD-108-117

Part Number:
EHD-108-118

Design Features

- * **Maximum Voltage:** 600 VAC
- * **Maximum Current:** 50 Amps
- * **Maximum Temperature:** 200°C/392°F
- * **AWG:** 14-8 ga wire
- * **Screw:** M4, zinc plated steel
- * **Terminal Body:** Nickel plated brass
- * **Body Material:** Porcelain
- * **Agency Approval:** UL, File # E69841

Stock Number: EHD-108-114
MFR Part Number: 4010-B

Stock Number: EHD-108-115
MFR Part Number: 4011-B

Stock Ceramic Terminal Blocks

Heavy Duty High Temperature Ceramic Line Wiring Blocks (Exposed Terminals)

Used for interfacing heater assemblies, CRA housings and ARA arrays to external line wiring.

Design Features

- * **Maximum Voltage:** 500 VAC
- * **Maximum Current:** 44 Amps @ 104°F ambient
- * **Maximum Temperature:** 240°C/464°F
- * **Wire Gauge:** 18 to 8 ga.
- * **Terminal Screw:** M4, zinc-plated steel
- * **Body Material:** Steatite
- * **Agency Approvals:** None

Optional Terminal Hardware

Stainless Steel Flat Washer — Part Number: WAS-109-101

Spring Lock Washers — Part Number: WAS-118-108

Part Number: EHD-108-106

Part Number: EHD-108-107

Part Number: EHD-108-108

Part Number: EHD-108-109

Part Number: EHD-108-105

All Items Available from Stock

Stock Hi-Temp (900°F) Nickel Plated Steel Uninsulated Terminals

The following optional terminals are available for use with Ceramic E-Mitter heaters and for assembly wiring. (Ceramic E-Mitters come standard with Part Number TER-115-112 #8-10 Ni Plated Steel spade terminals.)

Terminal Type	Description	Usage	Part Number
Ring	#10 stud, 22-18 ga. wire	Heater leads	TER-110-117
	#10 stud, 16-14 ga. wire	Misc.	TER-110-106
	#10 stud, 16-14 ga. wire	Misc. (Monel material)	TER-110-104
	#10 stud, 12-10 ga. wire	Line Wiring of Assy.	TER-110-111
Ring	#8 stud, 22-18 ga. wire	Heater leads	TER-109-110*
	#8 stud, 16-14 ga. wire	Heater leads	TER-109-104
	#8 stud, 12-10 ga. wire	Line wiring of Assy.	TER-109-106
Spade	#10 stud, 22-18 ga. wire	Misc.	TER-115-111
	#8-10 stud, 22-18 ga. wire	Heater leads (Standard)	TER-115-112*
	#8 stud, 16-14 ga. wire	Internal CRA & ARA wiring	TER-115-113*
Straight	1/4" long Ni 200 Barrel Crimp	T/C or Heater leads	CON-101-101

All Items Available from Stock

* Standard sizes for heater leads to internal ceramic terminal blocks used in CRA housings and radiant arrays. Must be used with EHD-108-101 (2-pole) or EHD-108-121 (3-pole) standard terminal blocks.

Stock High Temperature Stranded Lead Wire

The following insulated lead wires are available for internal bussing and the line input wiring of CRA Linear Housing Assemblies and AR_ Radiant Panels.

Temperature Rating	Size & Conductor	Maximum Amperage	100 Foot Spool	250 Foot Spool	500 Foot Spool	Usage
450°C, 600V	18 ga. NCC	12.3 @ 300°C (572°F)	LDWR-1088	LDWR-1098	LDWR-1142	Heater lead modifications Miscellaneous Standard for internal wiring of factory wired units

NCC = Nickel Clad Copper, 27% Nickel by weight. NPC = Nickel Plated Copper, 2% Nickel by weight.

The 450°C (842°F) rated wires amperage is derated over 300°C (572°F). Maximum ambient is 400°C (752°F).

The 250°C (482°F) rated wires amperage is derated over 200°C (392°F). Maximum ambient is 225°C (437°F).

See page 15-2 for additional specifications.

See amperage tables in Engineering Section 16 for more details on current carrying capacity of Tempco's high temperature lead wire. For bare wire consult Tempco, for ceramic beads see page 15-13.

Stock High Temperature Thermocouple Wire

The following insulated thermocouple wires are available for internal bussing and wiring of CRA Linear Housing Assemblies and AR_ Radiant Panels to external control systems.

These duplex thermocouple wires have color coded fiberglass insulation over each lead within an overall fiberglass insulation jacket.

Type	Wire Style	100 Foot Spool	250 Foot Spool
K	20 ga. solid	TCWR-1025	TCWR-1029
K	20 ga. stranded	TCWR-1034	TCWR-1036
J	20 ga. solid	TCWR-1028	TCWR-1032
J	20 ga. stranded	TCWR-1033	TCWR-1035
With Stainless Steel Overbraid			
K	20 ga. stranded	TCWR-1049	TCWR-1053
J	20 ga. stranded	TCWR-1047	TCWR-1051

See page 14-107 and 15-4 for additional thermocouple wire and specifications.

For bare wire and sleeving consult Tempco.

CRP 12" x 12" Modular Panels – METAMORPHING Yellow to Orange

New Cost Effective and Self-Contained Ceramic Infrared Panel Heater Offers Ease of Installation and Trouble-Free Performance

Design Features

- * Standard colors are metamorphing yellow (cold) to orange (hot), and traditional white. Optional colors are metamorphing rose (cold) to grey (hot) and black.
- * Low profile 20 ga. aluminized steel or stainless steel housing.
- * Standard stocked voltage: 120, 220-240V or 480V as noted; other voltages are available.
- * Low noise type K thermocouple mounted internally in center heater. Optional type J thermocouple is also available.
- * Watt density range: from 11w/in² to 35w/in²
- * Standard operating temp range: 750°F to 1300°F
- * Best when used at radiation distances of 4-10" from application.
- * Performance is unaffected by vibration or adverse atmospheric conditions.
- * 3 to 6µm infrared radiation wavelength.
- * Made to order.

*Three CRL E-Mitter heaters in one panel.
See page 7-26 for CRP Modular Panel with
an additional emitting glass face.*

Replacement Heaters for Standard Modular 12" x 12" CRP Radiant Panels

Panel KW	Heater Watts	Part Number					
		120V		120V-240V		240V-480V	
		No T/C	K T/C	No T/C	K T/C	No T/C	K T/C
1.50	500	CRL20021	CRL20022			CRL20023	CRL20024
2.25	750	—	—	CRL20025	CRL20026	CRL20027	CRL20028
3.00	1000	—	—			CRL20029	CRL20030
3.75	1250	—	—			CRL20031	CRL20032
4.50	1500	—	—			CRL20033	CRL20034

NOTES: All dual voltage heaters have two windings (parallel connected for the lower voltage & series connected for the higher voltage).

120V heaters are single winding designs.

K T/C units have an internal "low noise" style thermocouple with 12" leads.

Standard Panel Specifications

KW	Panel Watt Density***	Typical Operating Temperature**		Primary Emitted Wavelength*
		°F	°C	
1.50	12.0	796	424	4.2
2.25	18.0	956	513	3.7
3.00	24.0	1076	580	3.4
3.75	30.0	1191	644	3.2
4.50	36.0	1308	709	3.0

*Peak infrared radiation wavelength as calculated from Wien's Law, for operating temperature shown. Expressed in microns (μm). Operating temperature based on room ambient testing @ 72°F.

**E-Mitter heater body temperature as measured with internal thermocouple when mounted facedown in stock CRK reflector and operating in 72°F/22°C room ambient.

***Watt density calculated using total heater face surface area within panel.

DANGER: Hazard of Fire. These heaters are not for use in atmospheres where flammable vapors, gases or liquids are present as defined in the National Electrical Code. Where solvents, water, etc. are being evaporated from the process it is necessary to provide substantial quantities of ventilating air to carry away all resulting vapors.

WARNING: Hazard of Electric Shock. Installation must be grounded to earth to avoid shock hazard. Disconnect power to installation before servicing or installing heater.

WARNING: Do not use Copper Wire to make connections inside this heater. High temperatures will oxidize copper. Use of nickel plated or nickel clad insulated copper wire is recommended. Wire insulation rating must be suitable for the ambient temperature of the wiring installation.

Installation: Do not mount CRP Panel Heaters closer than 6 inches to any structural material that does not have at least a 200°C (392°F) continuous temperature rating.

CRP 12" x 12" Modular Glass Face Panels Standard Ratings

Three CRL E-Mitter heaters behind an emitting dark red glass face

Design Features

- * Dark red face glass is standard. Glass provides for ease of cleaning.
- * Low profile 20 gauge aluminized steel or stainless steel housing
- * Standard stocked voltage: 120, 220-240V or 480V as noted; other voltages are available.
- * Low noise type K thermocouple mounted internally in center heater. Optional type J thermocouple is also available.
- * Watt density range: from 11w/in² to 35w/in²
- * Standard operating temp range: 750°F to 1300°F
- * Best when used at radiation distances of 4-10" from application.
- * Performance is unaffected by vibration or adverse atmospheric conditions.
- * 3 to 6µm infrared radiation wavelength.
- * Optional clear face glass is available. If required, please specify when ordering.
- * Made to order.

 120V heaters are single winding designs.
 K T/C units have an internal "low noise" style thermocouple with 12" leads.

CRP Replacement Glass

Color	Part Number
Dark Red	GLS-101-101
Clear	GLS-101-102

DANGER: Hazard of Fire. These heaters are not for use in atmospheres where flammable vapors, gases or liquids are present as defined in the National Electrical Code. Where solvents, water, etc. are being evaporated from the process it is necessary to provide substantial quantities of ventilating air to carry away all resulting vapors.

WARNING: Hazard of Electric Shock. Installation must be grounded to earth to avoid shock hazard. Disconnect power to installation before servicing or installing heater.

WARNING: Do not use Copper Wire to make connections inside this heater. High temperatures will oxidize copper. Use of nickel plated or nickel clad insulated copper wire is recommended. Wire insulation rating must be suitable for the ambient temperature of the wiring installation.

Installation: Do not mount CRP Panel Heaters closer than 6 inches to any structural material that does not have at least a 200°C (392°F) continuous temperature rating.

ARA Single Panel Arrays

ARA Array Assemblies for CRB, CRN, CRM, CRC, CRZ, CRL, CRH and CRG E-Mitters®

Design Features

- * Custom Engineered/Manufactured
- * Lightweight extruded aluminum outer housing
- * Each heater's power leads are connected to an individual ceramic terminal block
- * NCC or Nickel wire with heat resistant insulation is used for wiring between terminal blocks (see pages 7-21 through 7-23)
- * Zones with different radiant heat levels can be achieved by using different wattage heaters (each zone would have a heater with built-in thermocouple for temperature control)
- * Shipped fully assembled
- * Optional factory wiring and power control panels
- * Optional ceramic fiber insulation in wiring space
- * Optional entrances in rear cover or sides to customer specs

Steps to Design a Custom ARA E-Mitter Array for your application

- 1.) Select a panel array size for the Style E-Mitter:
CRB and CRN E-Mitter panel sizes can be found on page 7-29.
CRM E-Mitter panel size can be found on page 7-30.
CRC and CRZ E-Mitter panel sizes can be found on page 7-31.
CRL E-Mitter panel sizes can be found on page 7-32.
CRH and CRG E-Mitter panel sizes can be found on page 7-33.
CRD E-Mitter panel sizes can be found on page 7-35.
- 2.) Determine any special heat zoning.
- 3.) Specify any E-Mitters that will have thermocouples.

*There is
No Substitute
for Our Experience*

**SATISFACTION
GUARANTEED!**

Ordering Information

Refer to the worksheet on page 7-36

DANGER: Hazard of Fire. These heaters are not for use in atmospheres where flammable vapors, gases or liquids are present as defined in the National Electrical Code. Where solvents, water, etc. are being evaporated from the process it is necessary to provide substantial quantities of ventilating air to carry away all resulting vapors.

Do not mount heater closer than 6 inches to any structural material that does not have at least a 200°C continuous temperature rating.

WARNING: Hazard of Electric Shock. Installation must be grounded to earth to avoid shock hazard. Disconnect power to installation before servicing or installing heater.

Series CRB and CRN E-Mitter Panel Arrays Standard Style ARA Structural Housing Dimensions

- A) The Number of Rows will determine the Housing Width. For overall width add 1.50" (for the mounting lips).
 B) The Number of Columns will determine the Housing Length. For overall length add 1.50" (for the mounting lips).

Number of Rows	Number of Columns					
	1 W x L	2 W x L	3 W x L	4 W x L	5 W x L	6 W x L
1	4 x 11	4 x 21	4 x 31	4 x 41	4 x 51	4 x 61
2	7 x 11	7 x 21	7 x 31	7 x 41	7 x 51	7 x 61

18	55 x 11	55 x 21	—	—	—	—

Note: Structural Housing Dimensions (width x length) are in inches. For overall dimensions add 0.75" per side for the mounting lip.

Dimensions are in inches

CRB & CRN E-Mitters (60 x 245 mm)

Custom Engineered/Manufactured Panels

- Multiple panels are used for larger arrays.
- Consult factory for larger panels not shown in table or custom panels with other spacings. Minimum spacing for CRB and CRN heaters is 2.50" x 10.00".
- Special narrow panels having a maximum 40 rows x 1 or 2 columns, & up to 8 rows x 12 columns can be made on special order (max. housing size 121" x 25").

We welcome your inquiries.
 Take advantage of Tempco's economical approach to manufacturing panels.

Note: Structural Housing Dimensions (width x length) are in inches. For overall dimensions add 0.75" per side for the mounting lip.

Custom Engineered/Manufactured Panels

- Multiple panels are used for larger arrays.
- Consult factory for larger panels not shown in table or custom panels with other spacings. Minimum spacing for CRC and CRZ heaters is 2.50" x 5.00".
- Special narrow panels having a maximum 40 rows x 1, 2, 3 or 4 columns, & up to 8 rows x 12 columns can be made on special order (max. housing size 121" x 25").

We welcome your inquiries.

Take advantage of Tempco's economical approach to manufacturing panels.

ARA Array Assemblies for CRD E-Mitters

Design Features

- * *Lightweight extruded aluminum outer housing.*
- * *All metal interior components are stainless steel.*
- * *Designed for use with Style CRD E-Mitters, pages 7-10 and 7-11.*
- * *Each heater's power leads are connected to an individual ceramic Terminal Block.*
- * *NCC or Nickel wire with heat resistant insulation is used for wiring between terminal blocks.*
- * *Zones with different radiant heat levels can be achieved by using different wattage heaters (each zone would have a heater with built-in thermocouple for temperature control).*
- * *Shipped fully assembled.*
- * *Optional factory wiring and power control panels.*
- * *Optional ceramic fiber insulation in wiring space.*
- * *Optional entrances in rear cover or sides to customer specs.*

The housing for the CRD heaters is the same construction as all ARA arrays except for the extra height needed for the long shaft of the CRD heaters. This space is then filled with ceramic fiber insulation with foil backing to keep the wiring and terminal area much cooler.

Ordering Information

Ordering Information

ARA Array Panel Design Worksheet for Ceramic E-Mitters

Ordering Information

To process your order or quotation, please specify the following information.

1.) Supply panel layout or sketch showing:

- Outside panel dimensions (allow for 0.75" wide mounting lip on all sides of ARA structural array housing)
- Heater type and orientation of long (or short) heater dimension
- Layout of rows and columns with number of heaters
- Spacing of rows and columns (Tempco will use standard spacing unless specified by customer)
- Zones and/or number of heaters per zone
- Locations of input wiring
- Locations of heaters with thermocouples (if used)

2.) Electrical requirements:

- Total panel KW _____
- Zone KWs (or # of heaters in zones) _____
- Line voltage to panel, # of circuits & 1 or 3 phase operation _____
- If 480V, can series-parallel wiring and 240V heaters be used? _____
- Type of heater control to be used _____

3.) Heater specifications:

- E-Mitter Style CRB CRC CRG CRN CRZ CRD CRH CRL CRM
- Catalog Part Number _____ or Watts _____ Volts _____ Color for all heaters (T/C & non-T/C types) _____
- Standard K thermocouple or optional J _____ Quantity _____
- Heater lead configuration (Standard is 3.5" ceramic beads with spade terminals if factory wired)
Special terminals if required _____

4.) Panel wiring & control options:

- Standard unit wiring is heaters to terminal blocks only
- Factory wired per customer specs and wiring diagram
- Tempco Engineering to design internal wiring and determine line input requirements
- Tempco to supply turnkey power control panel(s)

5.) Any special features required? _____

6.) Application data:

- Type of application and physical properties of processed materials _____

 **WARNING:** Cancer and Reproductive Harm - www.P65Warnings.ca.gov.

ARA Array Housing Assemblies for Any Style Ceramic E-Mitter

17.5 KW 380V 4-Zone
CRH E-Mitters

9 KW 480V 3-Zone
3 x 3 CRB E-Mitters

4 Rows CRH E-Mitters
4 Rows CRZ E-Mitters (at ends)

There Is No Substitute For Our Experience

Complete, made-to-order infrared heating systems – including the power and process temperature control panel – are available. Our team of professionals will assist you from concept to design/manufacturing. We Welcome Your Inquiries.

Assembly and Wiring of a Custom E-Mitter Panel

Power/Temperature Control Panels

Design Features

- * Solid state or mechanical load switching
- * Temperature control
- * Over-temperature control — A second thermocouple senses for over-temperature, shutting down the system while activating a signal light or optional alarm horn. Solid State controls and mechanical contactors can fail in the on position so it is very important to have this safety backup feature.
- * Control circuit transformer with primary and secondary fusing
- * NEMA 12 enclosure — NEMA 1 construction
- * Manual disconnect switch with interlocking operating mechanism so power must be off in order to open cabinet
- * Cooling fan and filter for solid state units
- * Wiring diagram, parts list and operating instructions

Note: See pages 13-56 through 13-63 for more information on Power and Temperature Control Panels.

Radiant Process Heaters

Series CRE and CRR E-Mitters

Type CRE & CRR Edison Screw-In Bulb E-Mitters

Type CRE
Bulb Shape

Type CRR
Flat Face

Design Features

- * Provides safe, clean, radiant heat anywhere
- * Easy installation
- * Not affected by vibration— high mechanical strength
- * Good resistance to atmospheric contamination
- * Does not generate visible light— only heat
- * Reversible color change feature
- * 3.5 to 7 μ m infrared radiation peak wavelength

Edison Screw-In Bulb E-Mitters

The CRE and CRR Style E-Mitters are hollow ceramic heaters with a unique thin wall construction and geometrical shape to facilitate fast heating and cooling rates.

The resistance coil is embedded into the specially designed circular ceramic E-mitter surface, providing extremely uniform heat transmission with low element surface temperatures.

Because of the convenient Edison Screw-In style termination, CRE & CRR E-Mitters are recognized as a tremendously versatile source for localized spot heating. They can be used virtually anywhere quickly and easily by simply installing the CRE E-Mitter into common porcelain/ceramic insulated bulb sockets—like any ordinary light bulb.

Typical Applications

- Plastic Thermoforming and vacuum forming
- Curing adhesives
- Curing dental composite material
- Heating laboratory samples and specimens
- Comfort heat for agricultural, zoological and reptilian pet applications
- Preventing moisture accumulation and freezing in electrical control boxes
- Preventing moisture accumulation, mildew and freezing in clothes lockers
- Resistor Banks
- Agricultural
- Agency Approval: 

Screw-In Base

Ceramic receptacle for use with screw-in bulb E-Mitters

Part Number: CRK00016

Type CRE & CRR E-Mitters

Ordering Information

Catalog Heaters

For shipment directly from Stock, choose the Ceramic Infrared Radiant Heater from the stock list that fills your requirements.

Optional metamorphing yellow or straight black can be manufactured to order to meet your requirements. A part number will be assigned when an order is placed.

Custom Engineered/Manufactured Heaters

Understanding that an electric heater can be very application specific, for sizes and ratings not listed, **TEMPCO** will design and manufacture a CRE & CRR Bulb Style Ceramic Infrared Heater to meet your requirements. **Standard lead time is 3 weeks.**

Please Specify the following:

- Size:** Overall dimensions or Series Code
- Colors:** Standard colors are metamorphing rose and white; optional colors are metamorphing yellow and straight black
- Wattage:** Description of process and temperature required

EHC Ceramic E-Mitter Enclosure Heaters

Typical Applications

- ➔ Traffic Signal Control Boxes
- ➔ Automatic Teller Machines (ATMs)
- ➔ Outdoor Electrical Power Enclosures
- ➔ Control Panels
- ➔ Control Valve Housings
- ➔ Switch Gear
- ➔ Clothing Lockers

Tempco enclosure heaters are the answer to all your enclosure heater needs. Our heaters are designed to help electric, electronic, pneumatic, hydraulic and mechanical equipment perform at top capacity by protecting them against low temperatures, condensation and corrosion. Tempco offers many different styles of heaters that can be used in enclosure heating applications. Our most popular styles are displayed below.

EHC Enclosure Heaters with NEMA 1 Housing

Watts	Volts	Color	Part Number	Replacement Heater Bulb
50	120	Rose to Grey	EHC10100	CRT10100
75	120	Rose to Grey	EHC10101	CRT10101
75	240	Rose to Grey	EHC10106	CRT10106
100	120	Rose to Grey	EHC10102	CRT10102
100	240	Rose to Grey	EHC10107	CRT10107
150	120	Rose to Grey	EHC10103	CRT10103
150	240	Rose to Grey	EHC10108	CRT10108
200	120	Rose to Grey	EHC10104	CRT10104
200	240	Rose to Grey	EHC10109	CRT10109
250	120	Rose to Grey	EHC10105	CRT10105
250	240	Rose to Grey	EHC10110	CRT10110

See page 11-114 for help in sizing and determining the best enclosure heater for your application.

EHA — Remote Thermostats for Enclosure Heaters

See Page 9-18 for details

High Intensity Medium Wave Quartz Mini-Tube Infrared Heaters KTE (Translucent Tubes) & KTG (Clear Tubes with Gold Coated Ceramic Backing)

Series KTE – Translucent Tubes

Series KTG – Clear Tubes with Gold Coated Ceramic Backing

Up to 95% reflective efficiency using gold coated ceramic backing

Design Features

- * Standard industry sizes and ratings up to 60 w/in² (interchangeable with CRC, CRB, CRN and CRZ ceramic heaters).
- * Highly reflective rugged aluminized steel housing construction.
- * Rapid response – 2.5 to 7.5 deg F / sec. heat-up / cool-down rates, depending on unit watt density.
- * Medium wavelength output (2.5 – 6 microns).
- * Standard winding pattern gives uniform heating over entire face of heater. (Consult factory for custom or high intensity winding patterns and/or sizes.)
- * Optional built-in type K or J T/C available in center of unit face.
- * Ideal for systems requiring small area zoning and close control of process.
- * Best when used at radiation distances of 4 – 10" from work.
- * Suitable for horizontal or vertical operation with tubes in horizontal plane.
- * Designed for use in CRA linear structural housings and ARV array assemblies. See pages 7-48 through 7-51.
- * 120, 208, 240, 277 or 480V design (consult factory for 575V units)

Typical Applications

- ➔ Ideal for drying, adhesive and epoxy bonding/curing
- ➔ Laminating
- ➔ Shrink packaging
- ➔ Thermoforming plastics
- ➔ Other processes requiring fast penetration of heat into metals, wood, synthetic fabrics, and plastics

Ordering Information

Custom Engineered/Manufactured KTE Heaters

An electric heater can be very application specific; for sizes not listed, TEMPCO will design and manufacture a KTE or KTG E-Mitter or complete system to meet your requirements.

Standard lead time is 3 weeks.

Please Specify the following:

Standard Heaters

Order by Part Number for Standard heaters.

- Housing Length
- Housing Width
- Mounting Style (S, C)
- Wattage
- Voltage
- KTE Translucent Quartz or KTG Clear Tubes with Gold Coated Ceramic Backing
- Beaded Lead Length: Standard 6"
- Thermocouple: Optional Type K (Standard 6")
- Options and Accessories: See pages 7-20 through 7-23

⚠ WARNING: Cancer and Reproductive Harm - www.P65Warnings.ca.gov.

6 Standard KTE & KTG Housing Sizes Available

Series KTE1 & KTG1

- 9.75" × 2.46" (247.7 × 62.5 mm)
Available in Two Constructions
- Translucent Tubes (KTE1)
 - Clear Tubes with Hi-Efficiency Gold Coated Ceramic Backing (KTG1)

Series KTE2 & KTG2

- 4.88" × 2.46" (123.8 × 62.5 mm)
Available in Two Constructions
- Translucent Tubes (KTE2)
 - Clear Tubes with Hi-Efficiency Gold Coated Ceramic Backing (KTG2)

Series KTE3 & KTG3

- 7.31" × 2.46" (185.7 × 62.5 mm)
Available in Two Constructions
- Translucent Tubes (KTE3)
 - Clear Tubes with Hi-Efficiency Gold Coated Ceramic Backing (KTG3)

Series KTE4 & KTG4

- 14.63" × 2.46" (371.5 × 62.5 mm)
Available in Two Constructions
- Translucent Tubes (KTE4)
 - Clear Tubes with Hi-Efficiency Gold Coated Ceramic Backing (KTG4)

Series KTE5

- 19.50" × 2.46" (495.3 × 62.5 mm)
Available with Translucent Tubes only

Series KTE6 & KTG6

- 4.88" Square (123.8 mm)
– Translucent Tubes (KTE6)
– Clear Tubes with Hi-Efficiency Gold Coated Ceramic Backing (KTG6)

2 Universal Mounting Styles (C & S) Available

Style C – Single Ceramic Header with Leads
(Shown with Clear Tubes with Hi-Efficiency Gold Coated Ceramic Backing)

Style C – Two Ceramic Headers with Leads
(Shown with Translucent Tubes and T/C)

INTERCHANGEABLE MOUNTING DESIGN

Style C KTE and KTG E-Mitters have a Standard Ceramic Mounting Head and are interchangeable with CRC, CRB, CRN and CRZ Ceramic E-Mitters.

Style S – Two 10-32 Studs × 1" on centerline
(Shown with Translucent Tubes and T/C)

Radiant Process Heaters

KTE & KTG Series Style C

Series Style C (Ceramic Header with Leads) High Intensity Quartz Mini-Tube Infrared Heaters KTE (Translucent Tubes) & KTG (Clear Tubes with Gold Coated Ceramic Backing)

Standard (Non-Stock) Sizes and Ratings

Heaters listed have ceramic bead insulated leads (single head 3.5", dual head 6"), #8-10 spade terminals, and one-piece spring clips for mounting in 20 or 22 gauge sheet metal.

*Heater Face Watt Density

Watt density calculation is based on heater face surface area, which is a relative constant value used to relate different sizes of heaters. The 6 tube KTE (Style S) has a surface area 85.7% of a 7 tube unit (Style C) and will operate at a temperature 16.6% higher than the 7 tube (Style C) unit. This relationship has been confirmed through laboratory testing on various sizes of KTE heaters.

**Heater Body Temp @ 72°F

Heater face temperature as measured with a type K thermocouple mounted directly on the heater face. Temperatures are for a single heater facing down with target re-radiation from an oxidized SS surface 3" from heater face. Operating temperatures (and emitted wavelength) will vary with application conditions such as higher ambient, target absorption properties, moving/stationary systems, and distance to target. The tabulated temperatures are averages compiled from standardized lab tests on different ratings and sizes of KTE heaters. Translucent tube testing showed that various reflector materials and surface conditions (bright, oxidized, etc.) had little or no effect on test results. Lower heater temperatures will occur if radiation is allowed to dissipate freely from the surface without target re-radiation (about 20-25% lower when facing up in open air).

***Peak Emitted Wavelength

Peak infrared radiation wavelength as calculated from Wien's Displacement Law, for the operating temperature shown, expressed in microns (μm). The emissivity of KTE quartz heaters is close to the ideal blackbody value of 1.0 (range is from .88 to .92). This has been confirmed by testing using a thermal infrared camera.

Custom CRA Linear Heater Assemblies for KTE and KTG E-Mitters Using Standard Components

Do It Yourself or let Tempco build an array to your exact specifications.

The CRK Linear Housings assembly (page 7-19) and other components on pages 7-16 through 7-23 for Ceramic E-Mitters are also used with KTE and KTG E-Mitters.

Custom ARV Array Housing Assemblies for KTE and KTG E-Mitters (see pages 7-48 through 7-51)

Series KTE1 E-Mitter Panel Arrays Standard Style ARV Structural Housing Dimensions

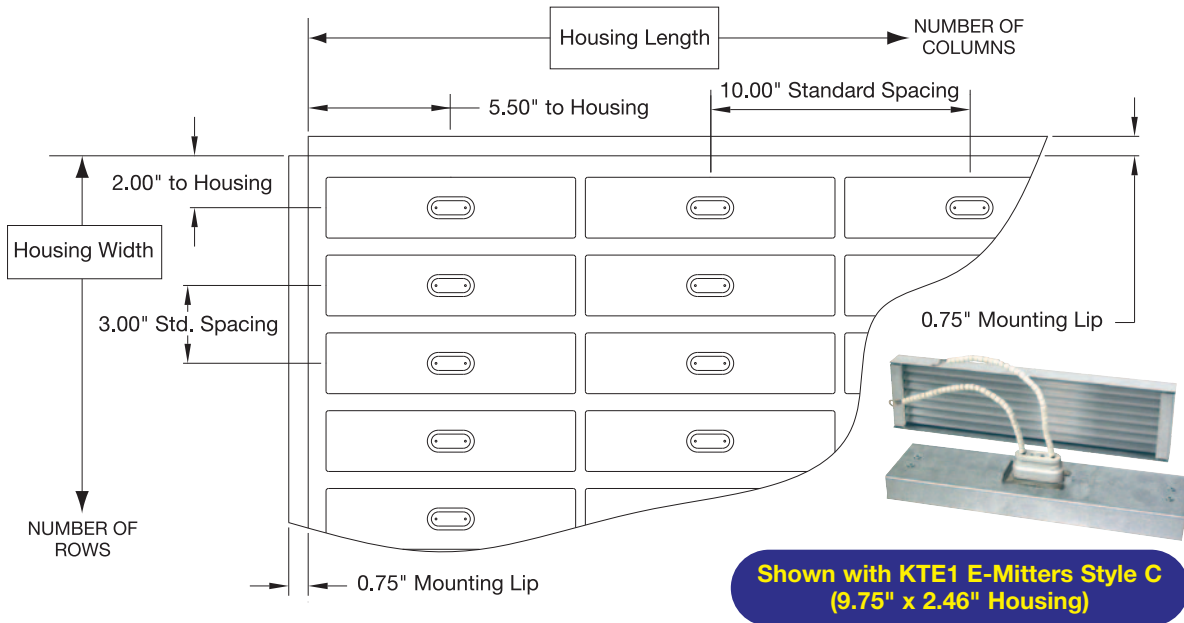

- A) The Number of Rows will determine the Housing Width. For overall width add 1.50" (for the mounting lips).
B) The Number of Columns will determine the Housing Length. For overall length add 1.50" (for the mounting lips).

Note: Structural Housing Dimensions (width x length) are in inches. For overall dimensions add 0.75" per side for the mounting lip.

Number of Rows	Number of Columns

Dimensions are in inches

Custom Engineered/Manufactured Panels

- Multiple panels are used for larger arrays. Custom panels with other spacings are available.
- Minimum spacing for KTE1 heaters is 3.00" x 10.00". Special narrow panels having a maximum 40 rows x 1 or 2 columns, and up to 8 rows x 12 columns can be made on special order (max. housing size 121" x 25").
- Consult factory for larger panels not shown in table. Array panels can be adapted for either the 10-32 stud mount or ceramic heater style heaters. Specify heater mounting type when ordering (C or S style).

**Consult us with your requirements.
There is no substitute for experience.**

ARV Array Panel Design Worksheet for Quartz Mini-Tube E-Mitters

Ordering Information

To process your order please specify the following information.

1.) Supply panel layout or sketch showing:

- Outside panel dimensions (allow for 0.75" wide mounting lip on all sides of ARA structural array housing)
- Heater type and orientation of long (or short) heater dimension
- Layout of rows and columns with number of heaters
- Spacing of rows and columns (Tempco will use standard spacing unless specified by customer)
- Zones and/or number of heaters per zone
- Locations of input wiring
- Locations of heaters with thermocouples (if used)

2.) Electrical requirements:

- Total panel KW _____
- Zone KWs (or # of heaters in zones) _____
- Line voltage to panel, # of circuits, & 1 or 3 phase operation _____
- If 480V, can series-parallel wiring and 240V heaters be used? _____
- Type of heater control to be used _____

3.) Heater Specifications:

- Heater Type KTE KTG
- Heater Size KTE1 (9-3/4"L) KTE2 (4-7/8"L) KTE3 (7-5/16"L) KTE4 (14-5/8"L) KTE5 (19-1/2"L)
 KTE6 (4-7/8" Sq.)
- Heater Mounting Style C S
- Catalog Part Number _____ or Watts _____ Volts _____
- Standard K thermocouple or optional J _____ Quantity _____
- Heater lead configuration — Standard is 3.5" or 6" with spade terminal
Spade terminals used if factory wired (ring terminals optional) _____
- Special marking if required _____

4.) Panel wiring & control options:

- Standard unit wiring is heaters to terminal blocks only
- Factory wired per customer specs & wiring diagram
- Tempco Engineering to design internal wiring & determine line input requirements
- Tempco to supply turnkey power control panel(s)

5.) Any special features required? _____

6.) Application Data:

- Type of application and physical properties of processed materials _____

Sealed IR Quartz Lamps

Design Features

- * *Fast Filament Response*
- * *High Power Densities possible — up to 200 watts per inch per filament*
- * *Different filament temperatures available to suit different materials*
- * *Optional white or gold reflective layer on lamps redirects heat towards target material*
- * *Single or twin-tube construction*
- * *Contour bending available*

Filament Temperature Ratings

Filament Type	Near Infrared (NIR)	Short Wave (SW)	Fast Response Medium Wave (FRMW) High Temperature	Fast Response Medium Wave (FRMW) Low Temperature
Filament Response	1 second	1 second	1-2 seconds	1-2 seconds
Filament Temperature	2900K/4800°F	2500K/4000°F	1900K/2900°F	1500K/2200°F
Approximate Peak Wavelength	1.0μm	1.2μm	1.6μm	2.0μm
Maximum watts/inch per Filament	200	200	100	100
Average Lifetime (Hours)	2000	5000	5000	5000

SPECIFICATIONS

- Max. Temperature:** 350°C — End Seal
 900°C — Quartz Tube and optional White Ceramic Reflective Layer
 800°C — Optional Gold Reflective Layer
- Max. Voltage:** 600 Volts depending on design

LAMP GLASS TYPES

- Clear:** Standard
- Ruby:** Reduces Glare
- Translucent:** Reduces Glare
- Frosted:** Reduces Glare
- Gold Reflector:** Redirects heat toward target for increased efficiency.
- White Reflector:** Redirects heat toward target for increased efficiency similar to gold, but will not degrade over time at high temperatures.

Terminations Key

F — Flat ceramic (no cement)
Fx — Flat ceramic (fixed with cement)
U — Metal sleeve + wire
X — Metal tab w/holes & slot
R7s — Recessed single contact

R7W — R7s w/lead wire

RC — Round ceramic + lead wire
W — Lead wire only - no base

Burning Positions Key

H — Horizontal use only
V — Horizontal or vertical use

Worksheet for Sealed IR Quartz Lamps

Ordering Information

To process your order please specify the following information.

1.) Heater Specifications:

- Filament Temperature: Standard FRMW = 1500K High Temperature FRMW = 1900K
 Standard Halogen = 2500K NIR Halogen = 2900K Other _____
- Tube Cross Section: Single Round Tube Twin Bore Tube
- Tube Shape Straight Special Bend Configuration
- Tube Color: Clear (Standard) Ruby Translucent Frosted Ruby Frosted (Sandblasted) Clear
- Maximum Overall Length (Inches) _____
- Heated Length (Inches) _____
- Built-In Reflector: No Reflector White Reflector Gold Reflector

2.) Electrical requirements:

- Voltage: 120 240 277 480 Other _____
- Wattage _____

3.) Termination Types:

- Single Tube Bases R7s R7W RC X F FX U Other _____
- Twin Tube Bases Ceramic with straight exit leads (Standard) Other _____
- Lead Wire Type Bare Wire (Standard) Teflon®@200°C Fiberglass@250°C Mica@450°C
- Lead Length 5.7" (Standard)_____ (Note: Type R7s and X do not have leads)
- Terminal Options None (Standard) #10 Ring Terminal #10 Spade Terminal Other _____

4.) Panel wiring & control options:

- Tempco to supply array panel
- Factory wired per customer specs & wiring diagram
- Tempco Engineering to design internal wiring & determine line input requirements
- Tempco to supply turnkey power control panel(s)

5.) Any special features required? _____

6.) Application Data:

Type of application and physical properties of processed materials

 **WARNING:** Cancer and Reproductive Harm - www.P65Warnings.ca.gov.

(800) 323-6859 • Email: sales@tempco.com

Standard Double-End Wiring

NOTE:
Allow for element movement when wiring inside this end.

Attach properly rated line input wires to both element ends using the nickel-plated steel ring crimp connectors provided. Solid or stranded conductors can be used.

Optional Single End-Wiring

Single return wire rated for 842°F (450°C), 600V is supplied in internal wireway for line input at ground lug end.

External wiring connection in remote junction box in area not exceeding 300°F (for copper wire)

CAUTION: Do not cut or connect to this wire inside QRH housing. For connection to field wiring within external junction box only.

Wireway conductor extends 12" from unit

Single-End Wiring

NOTE: To convert optional single-end wiring to standard double-end wiring, remove high temperature wire from wireway; cut into two pieces. Strip 1/4" insulation off one end of cut-off piece and reconnect end with ring terminal to one element end; crimp 2nd wire into ring at opposite element end.

Lamp Accessories

Mounting Clamp

Used for mounting & wiring lamps with R7s termination. 600 volts maximum. 350°C maximum operating temperature.

Part Number: LMP-103-101

Wiring Options

Series QRH Heaters can be prewired with plain leads, stainless steel armor cable, galvanized armor cable, stainless steel wire braid or SJO cable. For additional information See Wiring Options on page 7-17.

VIRTUAL SOLAR **GLOW**® *Infrared Heaters*

Series VSA

- *Short Wave IR*
- *2500K Filament Temperature*
- *Tungsten in Halogen-Filled Lamp*
- *150 – 2500 Watts*
- *See Page 7-59*

Series VSC

- *Medium Wave IR*
- *1500K Filament Temperature*
- *Star-Wound Tungsten in Evacuated Lamp*
- *75 – 1300 Watts*
- *See Page 7-60*

Series VSR

- *Medium Wave IR*
- *950K Wire Temperature*
- *Fe-Cr-Al Resistance Wire in Air*
- *125 – 1500 Watts*
- *See Page 7-61*

***VS Glow Is the Newest and Most Technically Advanced
Infrared Heater that Generates Instantaneous Heat***

VSA Series High Density Short Wave

Design Features

- * Gold Coated Ceramic Reflector
- * Short Wave Infrared Radiation up to 220 watts per linear inch
- * Fast Response, Immediate ON/OFF, Time: 20-40 seconds for full heat-up
- * All Ceramic Housing Construction
- * Standard Lamp Voltages: 120 & 230/240
- * All units are double-ended construction

Typical Semiconductor Industry Applications

- ↔ Etching ↔ Rapid Thermal Process ↔ Strip Removal
- ↔ Epitaxy ↔ Chemical Vapor Deposit

One-Piece Mounting Clips Standard
Two-Piece Wave Mounting Clips Optional

See page 7-14 for details.

Standard (Non-Stock) VSA Series

VS Glow heaters listed have 10" mica insulated leads and a one-piece spring clip for mounting.

Gemini® Infrared Heater Technology Emulates the Efficiency of Solar Energy in a Convenient Package for Hundreds of Industrial and Commercial Applications

Gemini™ Medium Wave Heaters Twin Bore Quartz Tube Technology

Design Features

- * *Industry standard twin bore quartz tube formats with 95% heat transmittance*
- * *24-karat Gold Back Coating for targeted infrared applications*
- * *White Ceramic Reflective Back Coating for extreme temperature requirements*
- * *High power densities: 42/51/63.5 w/in (16/20/25 w/cm)*
- * *Fast heat-up rates — Less than one minute to reach steady state conditions*
- * *Very long operating life — Over 10,000 hours of highly efficient and economical continuous operation*
- * *Three industry standard sizes in lengths up to 118 in. (3000mm)*

Complete Infrared Heat Technology for Every Industrial and Commercial Application Under the Sun

Gemini Series – Managing the Power of the Sun in a More Convenient Package

Medium Wave Infrared E-Mitters

Tempco has developed specialized coatings to control the directional nature of the infrared energy emitted from the Gemini twin bore heaters. High levels of energy reflection are achieved by selectively bonding an integral high temperature coating to the half-hemisphere of the quartz tube surfaces facing away from the targeted sur-

face. The choice of a gold or white ceramic coating depends on the maximum operating temperature required in the heating system. Also available is a clear 360° E-Mitter for use in applications that will employ external reflective or focusing surfaces around the heater.

Gemini® Twin Tube Quartz Heaters with Gold Back Coating

- * 24-Karat Gold Back Coating
- * Maximum Coil Temp 1472°F (800°C)
- * Typical Applications:
 - Glass Processing Industry
 - Paper and Textile Industries
 - Plastics Industry

95% Heat Reflection toward working surface

Gemini® Twin Tube Quartz Heaters with White Ceramic Back Coating

- * White Proprietary Formula Reflective Back Coating
- * Maximum Coil Temp. 2012°F (1100°C)
- * Typical Applications:
 - Stress Relieving of Metal Components
 - Drying Foils
 - Paper and Textile Industries

75% Heat Reflection toward working surface

Gemini® Twin Tube Quartz Heaters Without Coating (for external reflector)

- * No back coating
- * Maximum Coil Temp. 2012°F (1100°C)
- * Typical Applications:
 - PVC Panel Coating Cure
 - Curing Coating on Rubber Seals
 - Powder Coating Industry
 - Wood Processing Industry
 - Culinary Arts Industry

360° Heat Radiation

Medium Wave Infrared E-Mitters

SPECTRAL EMISSIVITY OF PET FILM

WAVELENGTH CONTROL – The very low heat transmission losses through the clear quartz material of the twin bore heaters allow Tempco’s engineers to carefully design the peak emitted wavelength of these heaters to match the peak absorption wavelength for a given material or application. By modifying the temperature of the E-mitter, its peak emitted wavelength will change according to Wien’s displacement law (see page 7-101). All E-mitters will emit a range of wavelengths above and below their peak value. (See spectrum graph on page 7-97.) The design of an efficient infrared heating system must consider both the spectral nature and directional properties of thermal radiation.

SPECTRAL NATURE: To address this issue, heaters should be designed to emit wavelengths that closely match the absorption band of the processed material in a given application. By carefully considering the broad side-bands of the emitted radiation and absorption, it is possible to design systems that will enhance the heat transfer rates at different stages of the heating process.

Infrared Energy Spectrum Emission

Vaporization of water is best achieved in the infrared spectrum at wavelengths in the range of 3.1 and 6.1 μm (microns). After the water is removed, the infrared heating rate should match the absorption spectrum of the base material to avoid damaging it thermally. Similar approaches are used in many industries, such as automotive, glass and plastic processing, textiles, electronics and many others.

DIRECTIONAL NATURE: The directional nature of the heat distribution is dealt with by consideration of how to direct heat toward an application. The efficiency of the heating system depends strongly on the percentage of the total infrared energy generated at the resistance coil that reaches the target material. Consideration must be given to the fact that this infrared energy propagates from the E-mitter in all possible directions with a non-uniform wavelength distribution.

Design Specifications

Performance Ratings			
Reflective Backing	Gold	White Ceramic	Clear* (no backing)
Maximum Coil Temperature	1472°F (800°C)	2012°F (1100°C)	2012°F (1100°C)
Peak Emitted Wavelength Range (microns)	2.7-6.5	2.1-6.5	2.1-6.5
Radiation Pattern	180°	180°	360°
Nominal Reflected Heat Efficiency	95%	75%	0%

*Clear tubes are designed for use with external reflector.

Electrical Ratings			
Twin Bore Tube Size	18 × 8 mm	23 × 11 mm	33 × 15 mm
Maximum Power Density (per unit length)	42 w/in (16.5 w/cm)	51 w/in (20 w/cm)	63.5 w/in (25 w/cm)
Maximum Voltage	480V	480V	600V
Maximum Amperage per circuit	9.5A	13.5A	20A

Standard wattage tolerance is +5%, -10%; closer tolerances available upon request

Medium Wave Infrared E-Mitters

Wire Leads for Standard Configuration are Stranded Lead Wire, Rated 842°F (450°C), 600V.

Exceptional Clear Quartz Twin Bore Material with Proven Application Results

- **Automotive:** Airbag assembly, headliner formation, roof rack bonding, mirror manufacturing, flux powder drying, adhesive activation on protective strips, powder coating, spot repair, friction material bonding, plastic bumper drying, forming & painting
- **Plastics:** PET bottle blow molding, pellet/granulate drying, polypropylene fiber fusing, plastic component extruding/bending, ink drying, and laminating
- **Glass:** Preheating, coating/paint curing, light bulb production
- **Food Industry:** Chocolate processing, cake heating/baking, food warming
- **Paper, Electronics** ➤ **Metals** ➤ **Semi-conductor Processing**
➤ **Textiles,** ➤ **Furniture** ➤ **And much more**

Optional Winding Patterns

Using alternate stretching configurations to achieve distributed wattage, Tempco can easily customize Gemini series heaters to fit your application. Below are various configurations with “A” Standard for Single Ended and “B” Standard for Double Ended.

Single Ended Terminations

Double Ended Terminations

Gemini Medium Wave Infrared E-Mitters

Lead configurations and lengths – 842°F (450°C), 600V insulated lead wire, 3/8" stripped ends standard, oriented straight out ends or at 90° to heater axis. Optional styles of high temperature insulated lead wire and un-insulated ring or spade terminals are available to suit your application. Select size and style from charts

on page 7-23. Bare stranded heater leads up to 9" long may be ordered with optional ceramic bead insulators. Longer lengths are available as lead wire options only. When ordering, specify lead orientation, style, length, and terminals.

Gemini Stainless Steel Clamp Specifications and Dimensions

Clamp Assembly Part Number	CRK00085	CRK00086	CRK00087	CRK00088	CRK00089	CRK00090
Fits Twin Tube Size	18 × 8 mm		23 × 11 mm		33 × 15 mm	
Clamp Location on Tube	Center	End	Center	End	Center	End
Clamps Required	OAL > 39.4" (1000 mm)	2 per heater	OAL > 59.1" (1500 mm)	2 per heater	OAL > 78.7" (2000 mm)	2 per heater

Panel Mounting Hole Diameter	0.375" (9.5 mm)		0.375" (9.5 mm)		0.375" (9.5 mm)	

Recommended mounting panel thickness range is 18-14 ga.

Ordering Information

Stock Heaters

Order by Tempco Part Number for heaters listed on page 7-66.

Custom Engineered/Manufactured Heaters

Because TEMPCO understands that an electric heater can be very application specific, for sizes not listed TEMPCO will design and manufacture a Gemini Infrared Heater or modular housing to meet your requirements. **Standard lead time is 3 weeks.**

Please Specify the following:

- Reflective Coating — Gold, White Ceramic or None
- Twin Bore Tube Size (18 × 8 mm, 23 × 11 mm, or 33 × 15 mm)
- Wattage or Watts/In
- Single or Double End
- Overall Length (OAL)
- Heated Length (HL)
- Lead Orientation (0° or 90°)
- Voltage
- Quantity
- Lead Wire Terminals (page 7-23)
- Lead Wire Style/Length (Page 7-23)
- Winding Pattern (page 7-66, A-J or as required)
- Ceramic Bead Option (9" max. length)
- CRA Linear Housing Option (See page 7-68)
- Cold End Lengths (CE1 & CE2) See Winding Pattern page 7-66

⚠ WARNING: Cancer and Reproductive Harm - www.P65Warnings.ca.gov.

Gemini Series

Gemini Medium Wave Infrared E-Mitter Assemblies using a CRA Linear Housing

CRA Linear Modular Housing Assemblies

These compact assemblies have one 33 × 15 mm twin bore Gemini quartz heater mounted in front of an aluminized steel reflector at a power density of 63.5 w/linear inch.

Design Features

- * Rapid heat-up/cool-down and low residual heat retention
- * Compact lightweight extruded anodized housing
- * High efficiency aluminized steel reflector for harsh environments and high temperature applications
- * Adaptable to all Gemini twin bore sizes

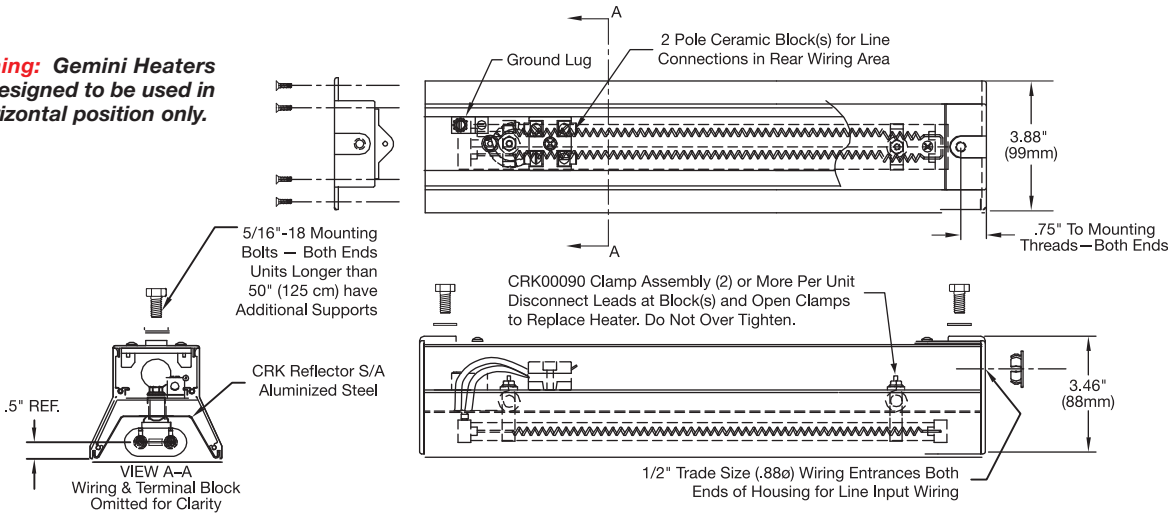

Standard (Non-Stock) and Stock Sizes and Electrical Ratings – 230V

Ordering Information

Select a Part Number from the Standard Sizes and Electrical Ratings table that meets your requirement.

Custom housings are available for any twin tube size (18 × 8 mm, 23 × 11 mm, and 33 × 15 mm; see page 7-67) Gemini Series Heater. Specify watts, volts and heated length (or w/in) required and TEMPCO will design a unit to suit your application. Clear, gold, or white ceramic coated heaters and doubled end wiring, and chrome steel reflector options are available.

WARNING: Cancer and Reproductive Harm - www.P65Warnings.ca.gov.

3/8"	3/8"	5/8"
1/2"	1/2"	7/8"
5/8"	1/2"	7/8"

Tempco Radiant Quartz heaters are one of the most efficient sources of radiant energy. They are ideally suited for processes that require wavelengths in the medium 4.0-2.4 micron band for efficient operation. These heaters are capable of generating full heat output in 80-100 seconds with a cool-down range of 180-225 seconds depending on the mass of the resistance coil and power density level.

They offer excellent life when used in either rapid cycling or continuous radiant heating applications. To achieve the best operating life, these quartz heaters should be operated with surface watt densities in the 35-40 watts per square inch range, not exceeding the maximum power densities specified below.

Construction Features

The heater consists of a helically wound resistance wire coil enclosed in a pure vitreous silica fused quartz tube with a translucent (semi-opaque) surface. The tubing is terminated at the ends with specially designed ceramic caps securely fastened with high temperature ceramic cement providing support for the field wiring screw terminals used for power connections.

The diffusion effect of the opaque quartz tube surface broadens the emitted wavelength range without creating objectionable glare due to emissions in the visible spectrum. Optimum design provides a clear red color on the translucent tube surface when operating at full line voltage. The emitted wavelength band is almost completely absorbed by the process and considered best for most industrial radiant applications.

Typical Applications

- ➔ Shrink Packaging Tunnels
- ➔ Fusing Plastics
- ➔ Food Warming
- ➔ Drying Photo Film Equipment
- ➔ Drying Sand Cores
- ➔ Laminating
- ➔ Vulcanizing Rubber
- ➔ Thawing
- ➔ Curing Rubber
- ➔ Space Heaters
- ➔ Thermoforming
- ➔ Sterilization
- ➔ Electrostatic Copying Equipment
- ➔ Drying Textiles
- ➔ Thermal Copying Equipment
- ➔ Plastic Forming
- ➔ Sealing
- ➔ Food Processing
- ➔ Drying Lacquers and Paints

QUARTZ HEATER SPECIFICATIONS – DIMENSIONAL

Diameters: 3/8", 1/2" and 5/8"
Max. Length: 3/8" dia. – 50"
 1/2" dia. – 100"
 5/8" dia. – 100"
Length Tolerance: Up to 12" long $\pm 1/8$ " Minimum
 Over 12" long $\pm 2\%$

QUARTZ HEATER SPECIFICATIONS – ELECTRICAL

Max. Volts: 480 Volts
Max. Amperage: 20 Amps
Resistance Tolerance: +10%, -5%
Wattage Tolerance: +5%, -10%
Max Watt Density: 40 Watts/sq. in.

Mounting Clamp for 3/8 Quartz Tube OD

Mounting Clamp Part Number: CRK00059

Type ARK Vitreous Silica Quartz Tube Panel Arrays

Custom 4" high Type ARK panels with 1/2" diameter quartz elements are available. Tempco will design and build to your specifications. Consult us with your requirements.

Terminations

Type T1 Standard Termination
10-32 thread screw terminal standard termination.

Type T2 Panel Mount Bushings
10-32 thread screw terminals with extension bushings for CRA/TRH housing assemblies.

Type ST Tabs with Slotted Holes
1/2" wide x 3/4" long, with a 9/32" x 3/8" slot. Alternate mounting method.

Type FT Quick Disconnect Fuse Type
Fuse-type connector provides ease of installation. Connectors are 3/8" OD x 1/2" long brass.

Type L1 Straight-Out Leads
10" flexible lead wire externally spliced standard. If longer leads are required, specify.

Type C4 Ceramic Caps with Leads
This termination provides 10-32 screw terminals insulated with ceramic terminal covers. Screws are prewired with 10" flexible lead wire. If longer leads are required, specify (also for T1 or T2).

Ordering Information

Catalog Heaters

Order by Part number for standard heaters listed above.

Part Numbers listed are for heaters supplied with Type 1 Termination. For other terminations a Part Number will be issued at time of order.

Custom Engineered/Manufactured Heaters

Understanding that an electric heater can be very application specific, for sizes and ratings not listed, **TEMPCO** will design and manufacture a Radiant Quartz Heater to meet your requirements.

Standard lead time is 3 weeks.

Please Specify the following:

- Diameter
- Overall Length
- Heated Length
- Wattage
- Voltage
- Termination Type
- Lead Length; if applicable
- Mounting Clamps (See page 7-70)

KRH Quartz Radiant Heaters

Quartz Sheath Medium Wave Radiant Heater Assemblies in a Universal 2000 Housing

Designed for use in applications that require rapid on/off response and fast heat-up and cooldown rates. These heater assemblies are designed to operate in the medium wavelength range of 4.0-2.4 microns (700 to 1715°F peak emitter temperatures). These Modular Housing assemblies utilize a .50 diameter translucent “milky white” vitreous quartz tube enclosing a high temperature resistance wire coil. The diffusion effect of the translucent quartz tube surface broadens the emitted infrared wavelength range obtained without objectionable glare due to low emissions in the visible spectrum. The units have either single or dual heaters mounted at the focal point of a polished aluminum reflector within the housing. These heater assemblies are available in a wide range of power densities. For housing dimensions and mounting details see page 7-76.

Design Features

- * *Direct Retrofit into existing NEMA 1 applications*
- * *Rugged Universal 2000 anodized aluminum housing*
- * *Wattage range of 600W to 7200W in standard designs*
- * *Voltages of 120-480V available depending on heated length*
- * *Power densities up to 65w/in per heater (20 amps max/heater)*
- * *Maximum Housing assembly length 84"; minimum 15"*
- * *Fast response, 40-80 sec for full element heat-up*
- * *Full cooldown in less than 4-8 minutes*
- * *Single end wiring option available*
- * *Multiple heat/dual voltage wiring options for dual heater units*
- * *Utilizes standard TRH removable guard designs*
- * *External power wiring options available*

NOTES: See page 7-77 for housing dimensions and mounting details.

The Quartz elements are supplied at the same rated voltage as the overall assembly to be wired in parallel.

120V or 240V rated assemblies can be used at twice the rated voltage by wiring the elements in series. (120/240V or 240/480V)

Shipped with Instruction Sheet IDP-129-104 for installation, wiring and maintenance information.

Installation Notes:

Series KRH units are for Horizontal mounting only. KRD elements have T2, 10-32 terminals at both ends for field wiring connections. See page 7-71 for details. Wiring used in the junction boxes must be rated 250°C or higher, sized per NEC/NFPA for unit voltage and current carrying capacity. Use only 450°C rated wiring in internal wireways for single end or multiple heat options. When using copper wire for field wiring, use only nickel plated or nickel clad conductors.

Unplated or silver plated copper must not be used. See page 7-82 & 7-83 for wiring options. Do not mount heater housing closer than 6" to any combustible or structural material that does not have at least a 200°C continuous temperature rating.

Danger: Hazard of fire. These heaters are not for use in atmospheres where flammable or combustible vapors, dust, gases, or liquids are present as defined in the National Electrical Code. Where solvents, water vapor or other VOCs are being evaporated from the process, it is necessary to provide substantial quantities of ventilating air to remove all resulting vapors.

Wiring Options

Series KRH Heaters can be prewired with plain leads, stainless steel armor cable, galvanized armor cable, stainless steel wire braid or SJO cable. For additional information See Wiring Options on page 7-17.

TUBULAR RADIANT HEATER ASSEMBLIES

UNIVERSAL 2000®

Universal 2000 heaters are ideal for reliable service, providing great flexibility for many diverse industrial and commercial applications.

Designed for Maximum Efficiency, Ease of Installation and Trouble-Free Service...

As the product name implies, Universal 2000 radiant heaters are a direct retrofit replacement for existing and new applications, utilizing similar products regardless of make.

Their unique design offer several quality enhancements without compromising fit and function on existing applications.

Delivering Value-Added Performance

Universal 2000 heaters are ideal for reliable service, providing great flexibility for many diverse industrial and commercial applications. Manufactured with the proper options, Universal 2000 Radiant Heater Assemblies can be used outdoors or in wet locations.

Typical Applications

- ➔ *Adhesive Drying*
- ➔ *Comfort Heating*
- ➔ *Conveyorized Drying*
- ➔ *Drying Bulk Materials*
- ➔ *Drying Ceramics*
- ➔ *Food Warming*
- ➔ *Freeze Protection*
- ➔ *Heating Rubber or Steel Rolls*
- ➔ *Ink Drying*
- ➔ *Manufacturing Glass & Mirrors*
- ➔ *Moisture Evaporation*
- ➔ *Outdoor Comfort Heating*
- ➔ *Paint Drying*
- ➔ *Resin Curing*
- ➔ *Shrink Fitting*
- ➔ *Thermoforming*
- ➔ *Washdown Facilities*
- ➔ *Welding Preheating*

Universal 2000

Construction Characteristics

The Universal 2000 Radiant Heater stands apart from all other similar products. Its rugged construction, enhanced design features and flexibility in installation allow it to be used in applications requiring a single unit or to be used as modules creating various configurations for process radiant heating systems.

Universal 2000 Radiant Heaters are available in a full range of standard construction variations, physical dimensions and electrical ratings. They are also available in custom engineered/manufactured units up to 132" (3353 mm) for series TRH1, 4 and 6. TRH3 and 5 series units are available up to 120" (3048 mm) lengths. Special electrical ratings, single end wiring, dual voltage, multiple heat designs, and optional fast response Quartz heater options (TRH1 & 2 NEMA1 units only), along with pre-wired units using flexible/rigid conduit or SJO cord/plug can be custom designed to fit your application.

Design Features

- * Direct retrofit to existing applications
- * Rugged anodized extruded aluminum housing
- * Polished aluminum reflector (replaceable)
- * Incoloy® sheath tubular heaters (replaceable)
- * Element Support brackets (replaceable)
- * Sliding mounting bolts (replaceable)
- * Dual internal wireways for single end wiring
- * Ground terminal lug
- * Slots for heat shield on side of housing for between units
- * Convenient field wiring
- * Made to order

Typical Installations

Ordering Information

Catalog Heaters

Part Numbers in red are in stock for immediate delivery. Non-Stock Part Numbers are standard designs.

Custom Engineered/Manufactured Heaters

Understanding that an electric heater can be very application specific, for sizes and ratings not listed, Tempco can manufacture a Tubular Radiant Heater to meet your requirements. **Standard lead time is 4 weeks.**

Please Specify the following:

- Overall Housing Length
- Wattage and Voltage
- Termination Features
- Wiring Options (Single or Double Ended)
- Series Construction Style

Note: Tubular elements are supplied at the same rated voltage as the overall assembly and are wired in parallel. 120 or 240V rated assemblies can be used at twice the rated voltage by wiring the elements in series (120/240V or 240/480V).

See Page 7-84 for Wiring Options

See Page 7-84 for Stock Heavy Duty Quick Disconnect Plugs and Receptacles

Installation Recommendations

Installation Recommendations

- Sliding mounting bolts (1-3/4" long, 3/8-16 thread) slide along the length of the aluminum housing for mounting the heater to common structural framing materials, creating multiple heater installations accommodating flat, rectangular, polygonal, cylindrical or any other shape arrays.
Minimum distance of 3-3/4" on center for heaters mounted side-by-side. Do not exceed 42" between sliding mounting bolts.
- To reduce heat losses, heat deflector shields up to 14 gauge thick are recommended between heaters. Fiber insulation can also be placed behind the heater housing.
- In applications where water or solvents are being evaporated, proper ventilation is required to expel vapors or fumes.
- Standard NEMA 1 electrical enclosures located at opposite ends of the heater housing with standard 7/8" diameter knock-outs and a 1/2" NPT conduit threaded opening out the top of the housing facilitate single or double end wiring. Heaters with NEMA 3-4 boxes have dual 1/2" trade size hubs oriented 90° to each other. Openings accept standard electrical fittings.
- Hold the tubular heater terminal tabs with pliers when tightening the screws to ensure secure electrical connections. Use only high temperature hook-up lead wire and nickel-plated steel or monel lugs — Available from Tempco; see page 7-23 and Section 15.

Notes: Electrical wiring should be done by a qualified electrician with full knowledge of the installation and in accordance with local codes and the National Electrical Code.

High temperature hook-up wire and terminal lugs are available from stock. See page 7-23 and Section 15.

Maintenance

- Never perform any type of service prior to disconnecting all electrical power to the heater installation.**
- To maintain reflector efficiency, clean periodically with mild soap and water. Do not use alkali or other strong cleaners. They will dull the aluminum reflector finish.
- Replacement of elements, support brackets and reflectors.**
(A) Remove terminal enclosure covers. (B) Disconnect power wires from element terminals. (C) Snap out support brackets. (D) Remove elements and old reflectors from front of unit. When replacing elements, reflectors should be replaced. Install new reflectors by snapping edges into housing grooves and reassemble other parts in reverse order.

Replacement parts are available from stock; see pages 7-86 and 7-87.

Wiring Hints – Wire selection depends on the requirements of the installation.

Wire Temperature Rating for inside the heater housing should be 482°F (250°C) or higher depending on the installation.

Voltage Rating should be equal to the operating voltage of the installation.

Wire Conductors should be nickel, nickel plated copper or nickel clad copper.

Do not use silver plated or unplated copper wire conductors.

Amperage Rating (wire gauge) should be 12 gauge for units drawing over 20 Amps of current. Use 14 gauge for units drawing under 20 Amps of current.

TRH1 (page 7-76) Standard Double-End Wiring

TRH1 (page 7-76) Optional Single End-Wiring

NOTE: To convert optional single-end wiring to standard double-end wiring, remove high temperature wire from wireway; cut into two pieces. Strip 1/4" insulation off one end of cut-off piece and reconnect end with ring terminal to one element end; crimp 2nd wire into ring at opposite element end.

TRH2 (page 7-77) Standard Double-End Wiring

TRH2 (page 7-77) Optional Single-End Wiring

TRH2 (page 7-77) Multiple Heat/Dual Voltage Wiring

TABLE 1

Multiple Heat Connections (Single Input Voltage)

Heat Range	Line Input Wiring
Max Heat	L1 to L2A & L2B in parallel
Medium Heat	L1 to L2A or L2B only
Low Heat	L2A to L2B (L1 not used)

TABLE 2

Dual Voltage Connections (for 240/480V or 120/240V rated units)

Input Voltage	Line Input Wiring
High (480 or 240V)	L2A to L2B (L1 not used)
Low (240 or 120V)	L1 to L2A & L2B in Parallel

DANGER: Fire Hazard. Radiant Process Heaters with NEMA 1 electrical housings are not to be used in applications where flammable vapors, gases or liquids are present as defined in the National Electrical Code. Do not mount the heater closer than 6 inches to any structural or surrounding material that does not have a minimum temperature rating of continuous operation at 395°F (200°C).

Proper ventilation is required to expel vapors or fumes away from the process and personnel.

TRH3 (page 7-78) and TRH5 (page 7-80) Standard Single-End Wiring

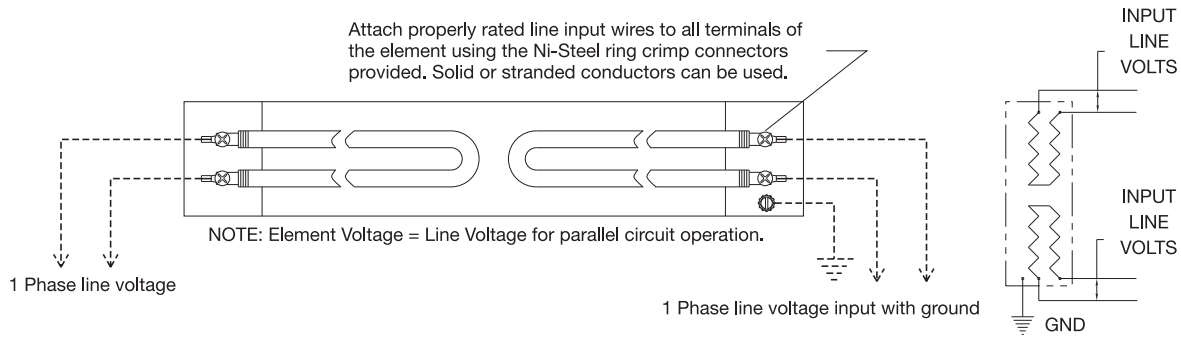

Attach properly rated line input wires to all terminals of the element using the Ni-Steel ring crimp connectors provided. Solid or stranded conductors can be used.

TRH4 (page 7-79) and TRH6 (page 7-81) Standard Double-End Wiring

NOTE: This is the only option available for TRH 6 series.

Attach properly rated line input wires to all terminals of the element using the Ni-Steel ring crimp connectors provided. Solid or stranded conductors can be used.

Wiring Options

Prewired with Plain Leads, Armor Cable or Wire Braid (includes ground wire)

Stainless steel armor cable — 18" armor cable over 24" leads

Galvanized armor cable — 18" armor cable over 24" leads

Stainless steel wire braid — 18" wire braid over 24" leads

Fiberglass leads (450°C rating) — 12" long plain leads

If longer leads and/or longer armor cable are required, specify when ordering.

Prewired with 24" SJO Cable (includes ground wire)

- 16 ga. cable (Up to 15 Amps)
- 14 ga. cable (Up to 22 Amps Max.)
- 12 ga. cable (Up to 28 Amps Max.)
- Max. terminal box temperature 194°F (90°C)
- If longer cable is required, specify when ordering.

Stock Heavy Duty Quick Disconnect Plugs and Connectors

Reference	NEMA P or R	Max. Amps	Volts	Plug Part Number	Connectors (Female) Part Number

Infrared Medium Wave Panel Heaters

4 EMITTER FACE CONSTRUCTION STYLES

*Will Accommodate a Diverse Selection
of Process Heating Applications
Requiring the Advantages of
Medium Wave Infrared Heating*

Energy Efficient
80% of the Radiant
Energy is Transmitted to the Process

Rugged Construction
Excellent Durability
Life Expectancy of up to 25,000 Hours

Direct Retrofits for Existing Applications and Custom Design/Engineering for New Applications

Rugged Construction for Trouble Free Service

Panel Infrared Heaters are available in a complete range of standard emitter face construction styles, sizes, electrical ratings and watt densities (watts/in²) with optional thermowell only or including a type J or K thermocouple.

Ordering information and product selection can be found on pages 7-89 through 7-95.

Experience the Tempco Advantage

Panel Infrared Heaters shown on this page are a small representation of the many Custom Engineered and Manufactured designs we have produced.

If you have a special application and need free technical assistance, consult our team of professionals with your requirements.

(See page 7-93)

Construction Characteristics

The placement of the resistance coils is carefully designed to provide uniform heat distribution.

The refractory material is backed by layers of insulation to minimize back heat loss. The standard housing is made of heavy gauge aluminized steel. Optional housing materials include 304 Stainless Steel.

The backside of the housing has a terminal box for electrical wiring with ceramic terminal bushings and stainless steel screw terminals.

Options available include: Standard quartz tube thermowell and clamp on the short side, standard Type K or J 1/8" diameter thermocouple probes and various back mounted thermowell/thermocouple combinations described on page 7-95.

DANGER: Fire Hazard

Infrared Panel Heaters are not to be used in applications where flammable vapors, gases or combustible materials are present as defined in the National Electrical Code. Do not mount the heater closer than 6 inches to any structural or surrounding material that does not have a minimum temperature rating of continuous operation at 395°F (200°C). Proper ventilation is required to expel vapors or fumes away from the process and personnel.

Design Features

- * Available in convenient standard building block sizes
- * Standard mounting screw studs (1/4-20 x 1"L) on the back side
- * Available in four emitter face styles
- * Can be ordered with standard side mounted thermowell, clamp bracket and/or Type J or K thermocouple
- * 3 different back mounted thermowell/thermocouples are available
- * Does not require external reflectors, which require maintenance
- * Voltages available include 120, 240, 480 VAC, 1 or 3 phase, dual voltage and custom
- * Maximum watt densities from 25 to 40 watts /in²
- * Multiple zones and distributed wattage in the same panel heater
- * Uniform infrared heating coverage
- * Stainless Steel power screw terminals

Note:

Not hermetically sealed.

Ordering Information

Catalog Heaters

To order a **Radiant Panel** from the tables on the following pages, fill in the last digit of the part number indicating built-in thermowell and thermocouple as follows:

- 0** = Plain, no thermowell or T/C
- 1** = Thermowell only
- 2** = Thermowell and type K T/C
- 3** = Thermowell and type J T/C

If a thermowell is selected, specify the type from page 7-95

Custom Engineered/Manufactured Heaters

Understanding that an electric heater can be very application specific, for sizes and ratings not listed, Tempco can manufacture a Radiant Panel Heater to meet your requirements. **Standard lead time is 4 weeks.**

Please Specify the following:

- Construction Style (RPB, RPG, RPW or RPM)
- Length and Width
- Watts, Volts and Phase
- Thermowell Type only
- Thermowell and Type K or J Thermocouple

⚠ WARNING: Cancer and Reproductive Harm - www.P65Warnings.ca.gov.

Style RPB Panel Heater

Style RPB Black Quartz Composite Face Infrared Panel Heaters

Design Features

- * Panel heater can be mounted in any direction
- * High temperature black quartz composite face
- * High temperature black coating
- * Precision wound resistance wire
- * Heavy gauge aluminized steel enclosure box standard
Optional: 304 Stainless Steel
- * Optional: quartz thermowell tube
Standard: side mount with clamp
Optional-3 back mounted styles
- * Refractory blanket insulation
- * Stainless Steel power screw terminals
- * Mounting screw studs
Standard: 1/4-20 x 1"L
- * Electrical junction box, standard

Construction Characteristics

Tempco Style RPB panel infrared heaters have a woven silica quartz composite surface that is transparent to radiant energy and is coated with a high temperature black coating for high emissivity.

The resistance wire is helically wound from a high temperature iron/chromium/aluminum alloy. A uniform pattern across the face is milled out in the high temperature ceramic fiberboard, and the resistance coil is cemented in place. Refractory blanket insulation backs up the fiberboard face assembly.

Tempco Style RPB Radiant Heaters can transmit up to 79.5% of the input energy and can be positioned as close as 2 to 4" from the material being heated.

Typical Applications

- ↔ Thermoforming
- ↔ Paint Drying
- ↔ Ink Drying
- ↔ Curing of Plastic Coatings
- ↔ Silk Screen Painting
- ↔ Food Warming
- ↔ Laminating

SPECIFICATIONS

Maximum Size: In addition to the standard sizes listed below; custom sizes up to 30"W x 84"L can be manufactured.

Thickness: Standard — 3", Optional — 1.5" to 5"

Maximum Watt Density: 25 Watts/in²

Maximum Voltage: Voltage can be single, dual or 3-phase up to 600 VAC (depending on heater size and wattage)

Maximum Face Temperature: 900°C (1652°F)

Wavelength Range: Between 2.5 and 6.0 microns (μm)

Distributed Wattage and Zoning: Yes, dependent on size

Infrared / Convection Radiant Panels

RPB Radiant Panels can also be supplied for combination radiant/convection applications. Holes are drilled in a uniform pattern in the face of the panel to allow air flow from the rear plenum. A 3" hole is typically provided in the rear panel for mounting a blower or ductwork. Submit your requirements to Tempco.

Standard (Non-Stock) Sizes and Ratings of Style RPB Black Face Infrared Heaters

To complete the part numbers below, include the designated number that applies to the following options:

0 = Plain, no thermowell or T/C **1** = Thermowell only **2** = Thermowell and type K T/C **3** = Thermowell and type J T/C

Available Thermowell/Thermocouple types and descriptions can be found on page 7-95.

For the part numbers below, if a thermowell is specified, the standard Side Mount Thermowell with Clamp is supplied.

Style RPG High Temperature Glass Face Infrared Panel Heaters

Design Features

- * Panel heater can be mounted in any direction
- * High temperature transparent red/black glass emitter face
- * Precision wound resistance wire
- * Milled ceramic fiberboard to hold resistance wire, cemented in place
- * Heavy gauge aluminized steel enclosure box standard
Optional: 304 Stainless Steel
- * Optional: quartz thermowell tube
Standard: side mount with clamp
Optional-3 back mounted styles
- * Refractory blanket insulation
- * Stainless Steel power screw terminals
- * Mounting screw studs
Standard: 1/4-20 x 1" L
- * Electrical junction box, standard

Construction Characteristics

The Tempco Style RPG Radiant Panel Heater has a red/black high temperature ceramic glass for the exterior radiant surface. The RPG Radiant Panel Heater is the ideal heater when a cleanable surface is required, such as for the bottom heaters of a thermoforming oven.

Behind the glass, a 1" thick ceramic fiberboard is milled out to support the helically wound iron/chromium/aluminum alloy based resistance element. The resistance coils are placed into the precision machined grooves in the fiberboard and cemented into place. Ceramic cloth is placed between the glass and the resistance coil.

Tempco Style RPG Radiant Heaters can transmit up to 78.5% of the input energy and can be positioned as close as 2 to 4" from the material being heated.

Typical Applications

- ➔ Moisture Removal
- ➔ Paint Drying
- ➔ Glass Processing
- ➔ Curing of plastic coatings, paint, ink, etc.
- ➔ Thermoforming
- ➔ Heat Setting
- ➔ Film Shrinking
- ➔ Blister Packaging
- ➔ Food Processing
- ➔ Textile Drying

SPECIFICATIONS

Maximum Size: In addition to the standard sizes listed below; custom sizes up to 34"W x 36"L can be manufactured.

Thickness: Standard — 3", Optional — 1.5" to 5"

Maximum Watt Density: 20 Watts/in²

Maximum Voltage: Voltage can be single, dual or 3-phase up to 600 VAC (depending on heater size and wattage)

Maximum Face Temperature: 750°C (1382°F)

Wavelength Range: Between 2.5 and 6.0 microns (μm)

Distributed Wattage and Zoning: Yes, dependent on size

Standard (Non-Stock) Sizes and Ratings of Style RPG High Temperature Glass Infrared Heaters

To complete the part numbers below, include the designated number that applies to the following options:

0 = Plain, no thermowell or T/C **1** = Thermowell only **2** = Thermowell and type K T/C **3** = Thermowell and type J T/C
Available Thermowell/Thermocouple types and descriptions can be found on page 7-95.

For the part numbers below, if a thermowell is specified, the standard Side Mount Thermowell with Clamp is supplied.

Style RPW Panel Heater

Style RPW Very High Temperature Ceramic Glass Face Infrared Panel Heaters

Design Features

- * Panel heater can be mounted in any direction
- * High temperature white translucent glass emitter surface
- * Precision wound resistance wire
- * Milled ceramic fiberboard to hold resistance wire, cemented in place
- * Heavy gauge aluminized steel enclosure box standard
Optional: 304 Stainless Steel
- * Optional: quartz thermowell tube
Standard: side mount with clamp
Optional-3 back mounted styles
- * Refractory blanket insulation
- * Stainless Steel power screw terminals
- * Mounting screw studs
Standard: 1/4-20 × 1"L
- * Electrical junction box, standard

Construction Characteristics

Tempco Style RPW Radiant Panel Heaters use a very high temperature ceramic glass for the emitter surface. The RPW Radiant Panel Heater is the perfect heater when a cleanable surface is required at a higher watt density.

Behind the very high temperature glass, a 1" thick ceramic fiber refractory board is milled out in a uniform pattern to accept the helically wound iron/chromium/aluminum alloy resistance element. The resistance coils are set into the precision machined grooved board and cemented into place. A ceramic cloth is placed between the very high temperature glass and the resistance coils.

Tempco Style RPW Radiant Heaters can transmit up to 78.5% of the power input as infrared energy.

Typical Applications

- ↔ Moisture Removal
- ↔ Paint Drying
- ↔ Glass Processing
- ↔ Curing of plastic coatings, paint, ink, etc.
- ↔ Thermoforming
- ↔ Heat Setting
- ↔ Film Shrinking
- ↔ Blister Packaging
- ↔ Food Processing
- ↔ Toasting
- ↔ Textile Drying

SPECIFICATIONS

Maximum Size: In addition to the standard sizes listed below; custom sizes up to 24"W × 24"L can be manufactured.

Thickness: Standard — 3", Optional — 1.5" to 5"

Maximum Watt Density: 40 Watts/in²

Maximum Voltage: Voltage can be single, dual or 3-phase up to 600 VAC (depending on heater size and wattage)

Maximum Face Temperature: 800°C (1472°F)

Wavelength Range: Between 2.5 and 6.0 microns (μm)

Distributed Wattage and Zoning: Yes, dependent on size

Standard (Non-Stock) Sizes and Ratings of Style RPW Very High Temperature Glass Infrared Heaters

To complete the part numbers below, include the designated number that applies to the following options:

Style RPM Metal Face Infrared Panel Heaters

Design Features

- * Panel heater can be mounted in any direction
- * Metal emitter face
Stainless steel with black finish
- * Precision wound resistance wire
- * Milled ceramic fiberboard to hold resistance wire, cemented in place
- * Heavy gauge aluminized steel enclosure box standard
Optional: 304 Stainless Steel
- * Optional: quartz thermowell tube
Standard: side mount with clamp
Optional-3 back mounted styles
- * Refractory blanket insulation
- * Stainless Steel power screw terminals
- * Mounting screw studs
Standard: 1/4-20 x 1"L
- * Electrical junction box, standard

Construction Characteristics

Tempco Style RPM Radiant Panel Heaters have a stainless steel metal with a black finish for the emitter surface. The RPM Radiant Panel Heater is a good heater when a cleanable surface and a robust design is required.

The ceramic fiber refractory board is milled out in a uniform pattern to accept the helically wound iron/chromium/aluminum alloy resistance element. The resistance coils are set into the precision machined grooved board and cemented into place. A ceramic cloth is placed between the metal face and the resistance coils.

Tempco Style RPM Radiant Heaters can transmit up to 65.0% of the power input as infrared energy. They can be positioned as close as 2 to 4" from the material being heated.

Typical Applications

- ➔ Thermoforming
- ➔ Paint Drying
- ➔ Ink Drying
- ➔ Curing of Plastic Coatings
- ➔ Silk Screen Painting
- ➔ Food Warming
- ➔ Heat Setting
- ➔ Film Shrinking
- ➔ Blister Packaging

SPECIFICATIONS

Maximum Size: In addition to the standard sizes listed below, custom sizes up to 24"W x 48"L can be manufactured.

Thickness: Standard — 3", Optional — 1.5" to 5"

Maximum Watt Density: 15 Watts/in²

Maximum Voltage: Voltage can be single, dual or 3-phase up to 600 VAC (depending on heater size and wattage)

Maximum Face Temperature: 700°C (1292°F)

Wavelength Range: Between 3.0 and 6.0 microns (μm)

Distributed Wattage and Zoning: Yes, dependent on size

Standard (Non-Stock) Sizes and Ratings of Style RPM Metal Face (SS) Infrared Heaters

To complete the part numbers below, include the designated number that applies to the following options:

0 = Plain, no thermowell or T/C **1** = Thermowell only **2** = Thermowell and type K T/C **3** = Thermowell and type J T/C

Infrared Medium Wave Panel Heater Warm-Up Curves

Warm-up curves are measured from heaters running facedown in open air. The thermocouple is located in the standard location, in the thermowell located behind the coil. The curves will change with environment and thermocouple location.

The curves are also useful in determining what the potential maximum temperature and peak wavelength are for various watt density heaters.

Infrared Panel Heater Options

Construction Options

The standard enclosure case is aluminized steel. Aluminized steel is the optimum choice for most applications. It will reach 650°C/1200°F without discoloring or degrading.

304 Stainless Steel is available when cleanliness is of the utmost importance. (Note: 304 SS will discolor at a lower temperature than aluminized steel).

Rivets are normally used to hold the case together. In addition to the side slots, this allows for expansion/contracting of the case and minimizes potential warping. There are applications that require minimal potential particulate matter. For these applications the side slots are not put in and the metal seams can be welded closed.

Thermowell/Thermocouple Temperature Sensing Options

Standard Side Mount Thermowell with Clamp

The standard Side Mount Thermowell with Clamp is a 5" long, 4 mm ID quartz glass tube, installed in the short side of the panel, just behind the resistance coil. The screw pressure clamp and thermowell are designed to hold a 0.125" diameter probe.

Replacement TC Probes (with 48" leads, SS overbraid)

Type K — Part Number MTA00839

Type J — Part Number MTA00840

Back Mount Thermowell with Compression Fitting

The optional Back Mount Thermowell with Adjustable Compression Fitting is a short, 4 mm ID quartz glass tube, mounted perpendicular to the face with a ceramic disk at the bottom. The compression fitting and glass tube are sized for a 0.125" diameter probe.

Replacement TC Probes (with 48" leads, SS overbraid)

Type K — Part Number MTA00839

Type J — Part Number MTA00840

Back Mount Thermowell with Bayonet Fitting

The optional Back Mount Thermowell with Bayonet Fitting is a short, 8 mm ID quartz glass tube, mounted perpendicular to the face with a ceramic disk at the bottom. The bayonet fitting and glass tube are sized for a 0.187" diameter probe.

Replacement TC Probes (with 48" leads, SS overbraid)

Type K — Part Number TCP50270

Type J — Part Number TCP50269

Back Mount Thermowell – Parallel to Face

The optional Back Mount Thermowell (Parallel to Face) is a 5", 6 mm ID quartz glass tube with a soft 90° bend, mounted along the face, exiting in the rear. A maximum 0.063" diameter probe is required to make the bend. Screws and ceramic spacers are provided.

Replacement TC Probes (with connector set)

Type K — Part Number MTA01546

Type J — Part Number MTA01775

Introduction to Infrared Radiation

Infrared Radiant Heaters Are Ideal for Many Diverse Applications

Plastics and Rubber

- *Plastifying of plastic sheets and rolls for thermoforming and vacuum forming*
- *Preheating or vulcanizing rubber sheets*
- *Heating glass fiber reinforced plastic during production*
- *Curing plastisols*
- *Laminating and plastic welding*

Paper/Pulp

- *Drying of paper pulp*
- *Quick drying of gummed, sized, or lacquered paper*
- *Drying of unprocessed and printed wallpaper*
- *Heating papier-mâché before pressing*
- *Adhesive activation*

Textiles

- *Setting Nylon® and Perlon® threads*
- *Gelling PVC paste coatings on fabrics*
- *Drying washed, dyed, and finished textile fabrics*
- *Heat set synthetic fabrics*

Food

- *Baking and browning small bakery products*
- *Keeping food warm*
- *Heating processed cheeses*
- *Packaging food products*

Miscellaneous Processes

- *Drying and curing of paint and powder coatings*
- *Drying raw tobacco*
- *Evaporation of water and solvents*
- *Manufacturing shrink packaging equipment*
- *Ink drying*
- *Comfort heat for agricultural, zoological and reptilian pet applications*

Introduction to Infrared Radiation Heating Systems

Tempco's Radiant Heaters

fall into the medium wavelength range of electromagnetic infrared radiation. Infrared energy is commonly used to heat plastics, remove moisture, cure painted finishes or heat food products. This is because plastics, organic substances and water absorb infrared energy more efficiently than other materials in industrial applications.

A Straightforward Approach to Infrared Radiant Heating Technology

Radiant heating is regarded by many as a black magic technology that is complicated and difficult to work with. While radiation theory can be complicated, it is far easier to apply when given the appropriate heating devices and guidance on which device best suits your application.

In this section, Tempco will present an overview of our product offerings, their capabilities, and relevant technical data that will aid you in selecting the heating system that best serves your requirements.

No matter what the application needs, Tempco has the right product to satisfy your requirements.

The Basics

The three main modes of heat transfer are:

Conduction – When two bodies of different temperature are brought in contact with each other, heat energy flows from the hotter to the colder body.

Convection – Heat energy is transferred from a higher temperature region in a gas or liquid to a lower temperature region as a result of movement of masses within the fluid or gas.

Radiation – Infrared radiant energy is transported through space by electromagnetic waves without the need for a conductive media. Consequently, heat can be delivered in concentrated areas at very fast rates.

Electromagnetic radiation can be further broken down into four basic categories:

1. Ultraviolet
2. Infrared – (Short/Medium/Long Wavelength)
3. Microwave
4. Radio Frequency/Induction

Operating life

A ceramic infrared E-Mitter should not be immersed in or have contact with any liquids. The E-Mitter surface must be kept clean and free of any contamination. Failure to do so can compromise heater operating life.

Explosion Protection

Ceramic Infrared Heaters are not explosion-proof heaters. These heaters can only be used in atmospheres where the vapor concentration is well below the explosion limits of the processed material. Special provisions, such as forced ventilation, must be made to remove highly flammable vapors from the heater's path. Strict observance of the drying temperature is required for enamel-based materials.

The user is solely responsible for the installation of the E-Mitters and strict observance of all applicable regulations.

Ceramic Infrared E-Mitter Technical Data

Heat Transfer Theory Summary

A heat transfer mode that will naturally occur at the surface of the heater is called radiation. Its intensity does not depend on the characteristics of the surrounding fluid (it works in a vacuum too) but on the characteristics of the heater and the surrounding bodies.

Therefore, the efficiency of radiation heat transfer exchange between bodies depends on:

1. **The emissivity values of the emitter (i.e. ceramic heaters).**
2. **The absorption, reflection and transmission properties associated with the receiving medium.**
3. **The relative temperature differences.**
4. **The surface characteristics.**
5. **Relative position and physical geometry.**

The Technical References presented here are intended to enhance your knowledge of various aspects of infrared radiant heating, enabling you to make better choices when selecting Tempco ceramic infrared E-Mitters.

Many applications in the field are unique and present substantially different operational parameters and characteristics. This application diversity should be evaluated accordingly, and while the material presented in this section is intended to provide some background reference, it is very generalized and is not to be construed as application specific.

Note: It is highly recommended that you contact our staff of knowledgeable sales engineers with specific technical questions relating to your application.

Infrared radiant energy is transported through space by electromagnetic waves without the need of a conductive media (as opposed to conduction or convection processes). Consequently, **heat can be delivered in concentrated areas at very fast rates.**

Understanding these important characteristics will lead to a better utilization of infrared heating technology.

Taking the Mystery Out of Infrared Energy

All matter emits radiant energy as a consequence of its finite temperature.

Only at absolute zero (-273°C), when all molecular activity ceases, does matter stop emitting radiant energy. In solids and liquids, emission of radiant energy is considered a surface phenomenon, while for gases and certain semi-transparent solids, such as glass and salt crystals (at elevated temperature), emission is considered a volumetric phenomenon.

WHY CAN'T WE SEE INFRARED RADIATION?

Electromagnetic radiation is measured in wavelength " λ " or in frequency " f ." Both quantities are related by the equation:

$$\lambda = c \div f$$

" c " is the speed of light (3×10^8 m/s)

Infrared radiation wavelengths fall outside the visible range in the electromagnetic spectrum; see adjacent figure. One micrometer, μm , is equal to 10^{-6} meter.

The total radiant energy " W " in watts per square centimeter emitted by an object is found with the Stefan-Boltzmann law:

$$W = \epsilon \sigma T^4$$

" ϵ " is the emissivity factor

" σ " is the Stefan-Boltzmann constant (5.67×10^{-12} W/cm 2 K 4)

" T " is the surface temperature of the object in $^{\circ}\text{K}$ (0°C equals 273°K).

What Kind of Material Do You Want to Heat or Dry?

This information is used to compare the absorption spectra of the material with the emission spectra of the infrared heaters. A good match ensures that the radiant energy from the E-mitter will be effectively absorbed by the material with minimum losses due to transmittance or reflectance. The table below was prepared to help you select the best heater rating for your particular application. If you need additional information, contact **Tempco** for technical assistance.

In situations where the material or its released solvents/vapors are easily flammable, special protection is required. Explosion-protected types of E-Mitters are not available. You will have to take proper steps to prevent the flammable media from coming into contact with the hot heater surfaces and electrical wiring. Current regulations and electrical codes must be complied with to prevent unsafe conditions.

Examples of Common Applications

The table below presents some of the most common infrared applications encountered in several industries. The wavelength of the infrared energy was matched to the absorption characteristics of the material to be heated. Various wattages for the same appli-

cation are recommended due to the absorption characteristics and variables of the application. Select the wattage according to the application requirements. Testing is strongly recommended before final selections are made.

Industry	Wattage	CRB Infrared Heater Ratings

How to Select a Ceramic Infrared Heater

Safe, economical and efficient infrared radiation heating systems can be designed, installed and operated by following some basic rules and guidelines.

Heating Distance for Stationary and Moving Systems

The optimum heating distance cannot be accurately determined for a given application without some preliminary testing because of the many different factors that affect the radiation transfer of heat. Therefore only general guidelines can be offered here.

In any heating application, it is recommended that Stationary Testing be done first. This can be accomplished by following some simple steps.

Stationary Testing

OBJECTIVE

Determination of the heating distance

DESIGN GUIDELINE

A General Information

1. Use the table on page 7-98 to match your target material with its corresponding ceramic E-Mitter rating. If the table does not list your target material, consult Tempco for assistance.

2. Select and order the ceramic E-Mitter based on the wattage rating. Tempco offers a complete line of industrial ceramic infrared heaters for you to choose from. Other wattage and voltage combinations can be designed and manufactured to suit your particular application. Consult Tempco with your requirements.

3. Next, what heating process are you going to apply to your target material: Process Heating, Drying, Curing, Cooking or another process? **Your answer will dictate the next design guideline and how to proceed for the determination of the correct heating distance.**

DESIGN GUIDELINE

B Process Heating

In many industrial applications, heat has to be applied to a target material before being processed further. In some cases, hot spots or large temperature gradients must be avoided. For this reason, it is highly recommended that several temperature controllers be used together with ceramic E-Mitters and integrated thermocouples. Three main processes require special attention:

1. Plastic sheets The fact that plastics have very low internal thermal conductivity causes localized heating if the applied heat is not uniformly distributed or if the sheets are too thick. In this situation, it is recommended that heat be applied to both sides of the sheet for the heat to be distributed throughout the material.

2. Metallic sheets or strips Metals are better internal conductors of heat than plastics but they absorb much less radiant energy because most of it is reflected at the surface. To overcome this problem, match the emission spectra of the radiant heater with the absorption spectra of the metal. Tempco's sales engineering staff will gladly help you in this endeavor.

3. Granular form material A relatively uniform heating of granulated compounds can be achieved by placing a thin layer of granules on a vibrating surface or conveyor to aerate the material while heating.

DESIGN GUIDELINE

C Drying, Curing & Cooking

Drying involves the release of water vapor, solvents or other materials that are vaporized during the process. In some cases, the solvents may be harmful or explosive and would require special protection. The user is solely responsible for the installation of the heating system and the strict observance of all applicable regulations.

Water vaporization, on the other hand, does not present this problem, but offers other related ones that also require special handling, such as how to remove the water vapor as it comes off the material being processed.

As for **curing and cooking**, because of the many different applications encountered within various industries, no specific rules can be offered in this general guideline. Testing of the application is recommended to determine the process requirements. Contact Tempco's sales engineers if assistance is needed.

Ceramic Infrared E-Mitter Technical Data

Moving Testing

OBJECTIVES

Determination of the heating distance and the velocity of the conveyor

Tips for Infrared Heating Systems

Infrared heating works best with materials that are thin enough for the heat to be absorbed and/or when the target material has high internal thermal conductivity. In metals, for example, heat is easily conducted from the surface to the interior of the material.

Multilayer materials present some difficulties when they are to be heated with infrared heaters. The top layer dries faster than the lower layers, causing different rates of shrinkage throughout the material. Infrared heat energy is transmitted with the speed of light from the surface of an emitter source (i.e. a ceramic heater) to the surface of the target material. Consequently, the top layer may be subjected to thermal loads that are too high for the composite target material to handle without degradation. In such cases, detection systems and/or overtemperature controls must be incorporated into the heating system to detect changes in normal operating conditions and trigger safety devices.

Higher heating rates can be achieved in moving systems that result in higher production output. This higher output can be easily accomplished without complications on properly designed, installed and maintained infrared heating systems.

Material Thickness

The thickness of any given material is very important for most infrared heating applications. This is because many materials do not transmit the infrared energy past a few tenths of an inch; therefore, the heat is either reflected or absorbed.

The absorbed heat is conducted in all directions. In some paint processes, it is more convenient to select an infrared heater based on the absorption characteristic of the substrate and the transmit-

tance characteristic of the paint. By doing so, the radiant energy will be transmitted farther within the material and absorbed mostly in the substrate material. The temperature in the top layer of the substrate material will rise and heat the material above, heating from the inside out. Blistering is avoided or reduced to a minimum by employing this technique.

Ceramic Infrared E-Mitter Technical Data

An Example of Emissive Power

All E-Mitter ceramic infrared heaters emit infrared energy in various wavelengths depending on their surface temperature. The CRE00002 E-Mitter (bulb style, 250W, 120V, white) was tested as an example with the results shown on the right. The values associated with temperature, emitted wavelength distribution and percentages were obtained when the heater reached steady state conditions in room ambient. The value of the peak wavelength λ_{max} (3.7 microns) was calculated using Wien's displacement law for a blackbody from the peak temperature obtained in the tests. This calculation is valid since the spectral emissive power of our ceramic E-Mitter closely approximates the theoretical values in the Planck's formulation for infrared wavelength distribution.

An Example of Emissive Power

Wien's Law is expressed by the following formula:

$$\lambda_{max} = 5215.6 \mu\text{m}/^{\circ}\text{F} \div (T + 460)$$

T = Temperature °F

λ_{max} = Peak Wavelength

Example:

What is the optimum peak E-Mitter surface temperature for heating a target material that has its best absorption in the infrared wavelength range of 4.0 to 3.4 microns (μm)?

$$\text{Average peak wavelength} = (4.0 + 3.4) \div 2 = 3.7 \mu\text{m}$$

Using Wien's law, we have:

$$3.7 \mu\text{m} = 5215.6 \div (^{\circ}\text{F} + 460) \text{ or } ^{\circ}\text{F} = (5215.6 \div 3.7) - 460 = 949.6^{\circ}\text{F}$$

This temperature is only a starting point and should be confirmed by testing and simulation of the exact conditions of the application. As you can see from the bar graph, this 950°F point coincides with the highest % of the radiated energy

from the CRE E-Mitter that was tested. Once the heater temperature has been established, the charts included in the various individual heater sections can be used to select the proper heater wattage starting point.

Conveyor Systems

Moving heating systems generally achieve higher output per hour than is possible with static systems. The radiant heater's setpoint temperature is set higher in conveyor systems than static systems due to the limited time the product is under the heaters. Tests should be carried out to determine the optimum conveyor speed, heating distance, and E-Mitter operating temperature.

In applications such as drying pulp paper, the higher power level required can potentially create a fire hazard if there are not safety mechanisms built into the system. If a malfunction of the conveyor system slows down or stops the conveyor completely, safety mechanisms should be triggered that would shut down power to the heaters to avoid burning the material being cured or dried.

Maximum Operating Temperature

Every heater has its maximum operating temperature printed on it. This temperature was measured with a thermocouple and with the heater facing down on a highly reflective material.

In many practical situations, however, this maximum temperature is rarely reached because most of the industrial materials absorb and transmit the heat while reflecting only a fraction of the infrared energy.

Ceramic E-Mitter Infrared Radiation Images

Infrared Radiation Images of Tempco's Ceramic E-Mitters (White, 240V, 400W)

Image of Part Number CRD00002

Side View The lighter color (yellow) represents the hottest area(s), while the black (background) represents the ambient temperature. The air gap and the ceramic fiber insulation produce a dramatic temperature gradient between the heating elements (yellow region), and the supporting clamps (purple region).

Bottom View The temperature distribution in this face is particularly homogeneous, assuring a uniform radiant heat to a given application. The convective heat losses are more noticeable at the edges of the heater. Except in vacuum conditions, convective losses must always be considered in a heating application.

Infrared Images

These infrared images were recorded at 30-second intervals. The photo sequence on the left illustrates how the elements heat up over time. The photo sequence on the right illustrates how the elements cool down.

Note: The temperature scale (°F) corresponding to each color is on the right side of the images.

CHANNEL STRIP HEATERS

**A Reliable Heat Source
with Seamless
Stainless Steel Sheath
For Flat Surface
Mounting Installations,
Used in Hundreds
Of Industrial and Commercial
Heating Applications . . .**

**Large selection IN STOCK
for immediate delivery**

A Type 304
Stainless
Steel

sheath provides the best combination of physical strength and resistance to high temperatures and chemical corrosion. Dependable at sheath temperatures of up to 1200°F (650°C).

B Stainless
Steel
10-32

threaded screws are standard and are securely fastened. Various termination configurations and options are available. See pages 8-4 through 8-7.

C Specially
selected
and de-

signed ceramic insulator houses the resistance wire coil, insulating it from the outer sheath.

D Helically
wound
resistance

wire coil made from nickel-chrome wire is evenly stretched and precisely strung through the ceramic insulator, providing uniform heat. Resistance wire is then mechanically connected to screw terminals or lead wires for a strong positive joint.

E A custom
mixture
of several

high purity magnesium oxide grain sizes, chosen to increase thermal conductivity and dielectric strength, are used to fill all remaining space inside and around the ceramic insulator. Voids are densely packed.

F Channel
strip
heaters

are available with or without mounting tabs. If without, the ends are silver soldered shut to prevent moisture and contaminants from entering the heater.

Typical Applications

- ➔ Ovens
- ➔ Hot Plates
- ➔ Dies
- ➔ Molds
- ➔ Drying
- ➔ Melting
- ➔ Baking
- ➔ Incubators
- ➔ Platens
- ➔ Food Warmers
- ➔ Welding Preheating
- ➔ Air Heating
- ➔ Sealing Bars
- ➔ Thermoforming
- ➔ Tank Heating

Note: Channel Strip Heaters are available with fins for air heating applications. See pages 8-12 through 8-15.

Agency Approvals

Channel Strip Heaters have been certified as Recognized Components by Underwriters Laboratories (File Number E65652) under CCN KSOT2/8 to meet UL standard 499 and Canadian Standard C22.2, No 72.

This file specifies the end use limitations and conditions of acceptability for the use of this type of heater. For additional information consult Tempco.

If you require UL, CSA, or other NRTL Agency Approvals, please specify when ordering.

Ceramic Insulated Channel Strip Heaters

Channel Strip Heaters have proven to be extremely efficient and dependable as a heat source for surface heating in hundreds of industrial and commercial applications.

For surface mounting installations, Channel Strip heaters must be securely clamped along their entire length to a smooth metal surface. When supported by mounting tabs, the terminal end should be secured firmly. Opposite end should be loose to allow for thermal expansion.

TEMPCO offers Channel Strip Heaters in three rectangular sizes

1" WIDE BY 5/16" THICK

Available with or without mounting tabs. When supplied with Type L lead wire termination, mounting tabs are not available.

1-1/2" WIDE BY 5/16" THICK

Available with or without mounting tabs. When supplied with Type L lead wire termination, mounting tabs are not available.

1-1/2" WIDE BY 3/8" THICK

Available with or without mounting tabs. When supplied with Type L lead wire termination, mounting tabs are not available. (3/8" thick heaters have radius corners)

Standard Specifications and Tolerances of Channel Strip Heaters
If tighter tolerances are required, consult Tempco.

PERFORMANCE RATINGS

- Maximum Sheath Temperature:** 1200°F (650°C)
- Nominal Watt Density:** 20 W/in² (3.1 W/cm²)
- Maximum Watt Density:** 45 W/in² (dependent on design parameters)

ELECTRICAL SPECIFICATIONS

- Maximum Voltage:** 480VAC (dependent on design parameters)
- Voltage Options:** Single-Phase, Three-Phase or Dual Voltage
- Maximum Recommended Voltage with Leads:** 480V
- Maximum Amperage:** Lead Wire Termination: 10 amp
Screw Terminations: 10-32UNF—25 amp
- Resistance Tolerance:** +10%, -5%
- Wattage Tolerance:** +5%, -10%

PHYSICAL SIZE CONSTRUCTION LIMITATIONS

- Width**
- 1" and 1-1/2" wide heaters +.000, -.010"
- Length**
- Up to 24" ±1/16"
- Over 24" ±1/8"
- Mounting Slot Size**
- Standard 5/16" × 1/2"
- Special Bushings 1/2" × 5/8"

Terminations

Screw Terminal Terminations

Type T1

- 10-32 Screw Terminals at each end
- Available on 1" and 1-1/2" wide heaters

No Mounting Tabs

With Mounting Tabs

Type T2

- 10-32 Screw Terminals (Tandem) at one end
- Available on 1" and 1-1/2" wide heaters

Type T3

- 10-32 Screw Terminals (Parallel) at one end
- Available on 1-1/2" wide heaters only

Type T4

- 10-32 Screw Terminals offset at one end
- Available on 1-1/2" wide heaters only

10-32 Screw Terminal Height

31/32"

Lead Wire Terminations

Type L Flexible lead wires exit from end of heater. 10" long leads standard; if longer leads are required, specify. Recommended only for tight quarters or where flexibility of the lead wire is required. Not available on heaters with tabs.

Maximum Amps: 10 at 240VAC **Maximum Volts:** 480

Type L1 Flexible lead wires exit from top of heater. 10" long leads standard; if longer leads are required, specify.

Maximum Amps: 10 at 240VAC **Maximum Volts:** 480

Type W1 Wire braid provides strength and protection to the lead wire insulation, offering sharp bending not possible with armor cable. 10" of wire braid over 12" long leads is standard; if longer leads or braid are required, specify.

Maximum Amps: 10 at 240VAC **Maximum Volts:** 480

Type W2 Stainless steel braid over each lead wire offers sharp bending not possible with armor cable, as well as abrasion protection. 10" long leads standard; if longer leads are required, specify. Not available on heaters with tabs.

Maximum Amps: 10 at 240VAC **Maximum Volts:** 480

Type R1 Armor cable provides strength and prevents contamination from getting into the heater. 10" of armor over 12" long leads are standard; if longer leads or armor are required, please specify.

Maximum Amps: 10 at 240VAC **Maximum Volts:** 480

Type R1A: Galvanized cable **Type R1B:** Stainless steel cable

Terminations

Lead Wire Terminations

Continued from previous page...

Type R2 Right-angle armor cable prevents contamination from getting into the heater. 10" of armor over 12" long leads is standard; if longer leads or armor are required, please specify.

Maximum Amps: 10 at 240VAC **Maximum Volts:** 480

Type R2A Galvanized cable

Type R2B Stainless steel cable

Type R2C Elbow and leads only (no cable)

No Mounting Tabs

With Mounting Tabs

Terminal Protection

Type P High-Temperature Quick Disconnect Plug. If armor protected lead wires are required, specify armor and lead length. Available on 1-1/2" wide heaters only.

Maximum Amps: 10 at 240VAC **Maximum Volts:** 250

Type P1A Cup only (UT900)

Type P1B Cup and straight plug (H900)

Type P1C Cup and 90° plug (HW900)

Type P1D Cup, straight plug and galvanized cable

Type P1G Cup, 90° plug and galvanized cable

No Mounting Tabs (Type P1D Shown)

With Mounting Tabs (Type P1D Shown)

No Mounting Tabs (Type P1G Shown)

With Mounting Tabs (Type P1G Shown)

Exposed electrical wiring on Strip Heaters is a violation of electrical safety codes, including O.S.H.A.

Terminal Protection

No Mounting Tabs

Type C Terminal box has a 1/2" trade size knockout (actual diameter 7/8"). Box provides excellent protection to exposed terminals. If armor-protected lead wires are required, specify armor and lead length. Available on 1" and 1-1/2" wide heaters.

- Type CA** No cable or braid
- Type CB** Galvanized cable
- Type CC** Stainless steel cable
- Type CD** Wire braid

With Mounting Tabs

Type MP Specially designed box is welded to the Channel Strip Heater and potted with epoxy. The ends of the heater are also welded. Leads exit through a 1/2" NPT nut that can be located at the top or in the front of the box. Armor cable can be supplied with the male fitting, providing a completely sealed Channel Strip. Available on 1 1/2" wide heaters only.

10" long leads standard; if longer leads are required, specify.

Maximum Amps: 25 **Maximum Volts:** 480

- Type MPA** Box only
- Type MPB** Box with prewired galvanized cable
- Type MPC** Box with prewired stainless steel cable
- Type MPD** Box with prewired wire braid

Ceramic Covers for Insulating Screw Terminals

Igloo™ Igloo Ceramic terminal covers consist of two individual ceramic parts. With a tight-fitting cap and a solid base, an Igloo cover will fully insulate any standard 10-32 terminal lug used for electrical wiring hookups. Igloo covers can be assembled on all Channel Strip heaters with Type T1 and Type T4 screw terminals.

Type C6

Double Port In-Line

Part Number: CER-101-104

Type C7

Double Port 90°

Part Number: CER-101-106

Type C8

Single Port

Part Number: CER-101-107

Ceramic Cap

Thread 10-32 **Part Number** CER-102-101

Three different types of Igloo bases are available for your wiring convenience. Double Port In-Line, Double Port 90° and Single Port. When ordering, specify the type of Igloo.

Strip Heaters

Standard Sizes and Ratings

Standard (Non-Stock) Sizes and Ratings

5/8" x 1/4" (15.88 x 6.35 mm) Channel Strip Heaters

Part numbers shown are for heaters with Type L Termination with 10" plain leads or Type L1 Termination with 10" plain leads.

- Additional available terminations: Type R2 and Type W1
- Mounting tabs are not available on this size.

Ordering Information

Catalog Heaters

Select a Channel Strip Heater from the Standard Sizes and Ratings lists on pages 8-8 through 8-11.

Channel Strip Heaters whose Part Numbers are in **RED** are available from Stock for immediate delivery.

Standard Non-Stock Part Numbers have a 3-week lead time.

Custom Engineered/Manufactured Heaters

An electric heater can be very application specific; for sizes and ratings not listed, **TEMPCO** will design and manufacture a Channel Strip Heater to meet your requirements. **Standard lead time is 3 weeks.**

Please Specify the following:

- Width & Thickness
- Length
- Wattage
- Voltage
- Termination (see pages 8-4 through 8-7)
- Lead Cable/Braid Length
- Special Features
- Quantity

Type ARC Channel Strip Radiant Heater Arrays

Tempco can design and manufacture a custom channel strip heater array for applications requiring infrared heat. Call for details.

Other type of infrared heaters can be found in [Section 7](#).

FINNED STRIP Heaters

Ceramic Insulated Finned Strip Heaters

TEMPCO Finned Strip Heaters are extremely efficient and dependable as a heat source for hundreds of industrial and commercial applications. They are used for both forced (mounted in a duct) and natural convection air heating (mounted at the bottom of cabinet type ovens).

The Finned Strip Heater's basic design consists of a helically wound resistance coil placed in a specially designed ceramic insulator. The resistance coil is mechanically connected to the screw terminal for positive connection. Stainless steel rectangular tubing is used to house the heater assembly. All remaining voids are filled with high purity magnesium oxide to increase thermal conductivity and dielectric strength.

Typical Applications

- ➔ Duct Heating
- ➔ Space Heaters
- ➔ Drying Ovens
- ➔ Food Warmers
- ➔ Dehumidifier
- ➔ Shrinking Tunnels
- ➔ Air Heating
- ➔ Heat Curing

Nickel-plated steel fins (Stainless Steel optional) are mounted to the rectangular tubing. The fins have been specially designed to provide maximum surface contact for good heat dissipation into the finned cross sections, thus resulting in rapid heat transfer to the air.

TEMPCO Finned Strip Heaters are manufactured in a full line of standard sizes, electrical ratings and terminations, or can be made to your specifications.

Design Features

- * Rugged, Durable Construction
- * Stainless Steel Sheath
- * Nickel-Plated Steel Fins (Stainless Steel Optional)
- * Various Terminations
- * Trouble-Free Installation
- * Various Sizes in Stock

Specifications & Tolerances

Standard Specifications and Tolerances of Finned Strip Heaters If tighter tolerances are required, consult Tempco.

PERFORMANCE RATINGS

Maximum Sheath Temperature: 1200°F (650°C)

Maximum Watt Density:

Still Air	Max. W/in ²	Max. W/cm ²
Up to 300°F (149°C)	20	3.1
300° to 600°F (149° to 316°C)	16	2.5
600° to 800°F (316° to 427°C)	10	1.6
Moving Air	Max. W/in ²	Max. W/cm ²
At 600 ft./min., up to 200°F	40	6.2
(3 m/sec., up to 93°C)		
At 600 ft./min., up to 400°F	30	4.7
(3 m/sec., up to 204°C)		
At 600 ft./min., up to 600°F	20	3.1
(3 m/sec., up to 316°C)		

ELECTRICAL SPECIFICATIONS

Maximum Voltage: 480VAC (when applicable)

Maximum Amperage: 25 amps

Resistance Tolerance: +10%, -5%

Wattage Tolerance: +5%, -10%

MATERIAL SPECIFICATIONS & PHYSICAL SIZES

Sheath: 304 Stainless Steel

Fins: Nickel Plated Steel (Stainless Steel Optional)

Screw Terminals: Stainless Steel 10-32 UNF Threads

Width Including Fins: 2"

Height Including Fins: 1-3/8"

Length Tolerance: Up to 24" ± 1/16", over 24" ± 1/8"

Mounting Slot Size: Standard 5/16" × 1/2"

Slot Size For Secondary Insulating Bushing:
1/2" × 5/8" for 300 Volts and above

Finned Channel Strip Heaters have been certified as Recognized Components by Underwriters Laboratories (File Number E65652) under CCN KSOT2/8 to meet UL standard 499 and Canadian Standard C22.2 No. 72.

This file specifies the end use limitations and conditions of acceptability for the use of this type of heater. For additional information consult Tempco.

If you require UL/CSA Agency Approval, please specify when ordering.

Secondary Insulating Bushings

Used to mount finned strip heaters in air heating applications. Also can be used when it is necessary to electrically isolate the heater from ground. When Insulating Bushings are required, a 1/2" × 5/8" slot is substituted for the standard slot size (5/16" × 1/2").

When using secondary insulating bushings, the heater must be guarded to avoid any accidental contact. The guard must be electrically isolated from the heater and must be properly grounded.

Insulating Bushing Assembly

Part Number: CERR-1001

NOTE: Two assemblies are required for each heater.

Ceramic Covers for Insulating Screw Terminals

Igloo™ Ceramic Covers

Igloo Ceramic terminal covers consist of two individual ceramic parts. With a tight-fitting cap and a solid base, an Igloo cover will fully insulate any standard 10-32 terminal lug used for electrical wiring hookups.

Igloo covers can be assembled on all Channel Strip and Finned Strip heaters with Type T1 and Type T4 screw terminals. Channel Strip heaters with screw terminals that have a minimum center to center distance of 7/8" can also be assembled with Igloo covers.

EHF — Finned Channel Strip Enclosure Heaters

Design Features

- * 10-32 offset screw terminals (T4 style) standard, other terminations available
- * UL recognized component
- * Stainless steel sheath and fins
- * Easy installation with special enclosure mounting brackets

Stock and Standard (Non-Stock) Series EHF Heaters

Stock Items Are Shown In **RED**

Overall Length	Mounting Dimension	Watts	Part Number	
			120V	240V

25.375	24.625	700	EHF00007	EHF00008

NOTE: See page 7-41, 9-18 and 11-114 for other type enclosure heaters.

Ordering Information

Catalog Heaters

Select a Finned Strip Heater from the Standard Sizes and Ratings lists on pages 8-14 and 8-15.

Finned Strip Heaters whose Part Numbers are in **RED** are available from Stock for immediate delivery.

Standard Non-Stock Part Numbers have a 3-week lead time.

Custom Engineered/Manufactured Heaters

An electric heater can be very application specific; for sizes and ratings not listed, **TEMPCO** will design and manufacture a Finned Strip Heater to meet your requirements. **Standard lead time is 3 weeks.**

Please Specify the following:

- Type of Application
- Length
- Wattage
- Voltage
- Termination Type
- Secondary Bushings (see page 8-13)
- Igloo™ Ceramic Terminal Covers

MAXISTRIP®

**A Reliable Heat Source with
Excellent Heat Transfer
Capabilities Due to the
Aluminum Shoe Construction**

**A Rugged and
Durable Heater
for Flat Surface
Heating Applications**

A Right-angle lug terminals with 10-32 binding head screws provide ease of electrical wiring.

B Crown nuts securely fasten the cover plate to the aluminum track, keeping contaminants from coming in direct contact with the tubular heating element.

C Ruggedly constructed .315 diameter heating elements are the heat source for Maxistrip heaters, providing excellent life and long, trouble-free service.

D Specially designed aluminum track houses the tubular heating element, providing an excellent heat sink for rapid heat transfer and good temperature uniformity.

E The surface contact on Maxistrip heaters is extremely smooth and flat, which is essential for good heat conduction. This results in exceptionally long heater life.

TEMPCO Maxistrip Heaters are specially designed and engineered for trouble-free performance and more efficient heating of flat surfaces. Due to the rugged construction characteristics of this type of strip heater, it is highly recommended for applications requiring excellent heat transfer and temperature uniformity.

Design Features

- * Quick Installation
- * Contamination Proof
- * Various Lead Terminations
- * Excellent Heat Transfer
- * Excellent Temperature Uniformity
- * Designed for Durability and Trouble-Free Service

Typical Applications

- ➔ Extrusion Dies
- ➔ Molds
- ➔ Hot Plates
- ➔ Drying
- ➔ Incubators
- ➔ Platens
- ➔ Sealing Bars
- ➔ Thermoforming
- ➔ Tank Heating
- ➔ Food Warmers

Note: Mounting holes can be provided down the center. For other locations see drawings on page 8-17.

Specifications & Tolerances

Standard Specifications and Tolerances of Maxistrip Heaters.

If tighter tolerances are required, consult Tempco.

PERFORMANCE RATINGS

Maximum Sheath Temperature: 650°F (343°C)

Maximum Watt Density: 20 W/in² (3.1 W/cm²)

ELECTRICAL SPECIFICATIONS

Maximum Voltage: 277VAC

Maximum Recommended Voltage w/ Leads: 240VAC

Maximum Watts: Dependent on width and length

Maximum Amperage: 25 Amps

Resistance Tolerance: +10%, -5%

Wattage Tolerance: +5%, -10%

PHYSICAL SIZE CONSTRUCTION LIMITATIONS

Widths: 1-1/2" (38.1 mm), 2-1/2" (63.5 mm), 3" (76.2 mm), 4" (101.6 mm)

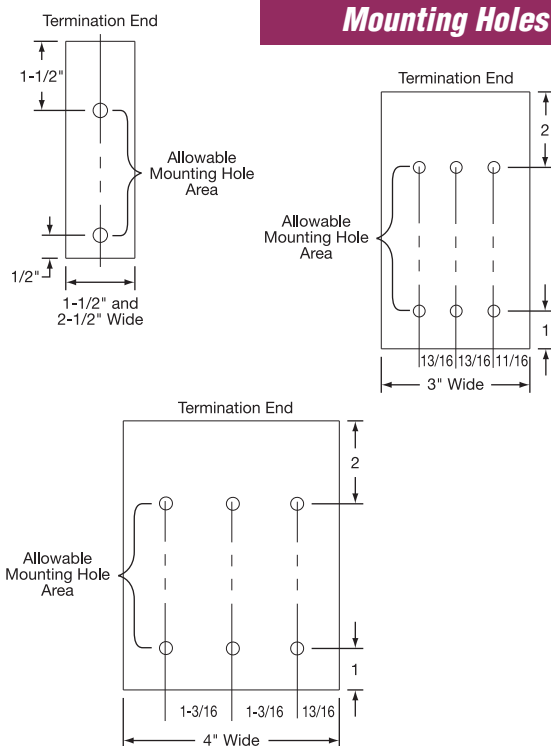

Thickness: 1/2" (12.7 mm)

Mounting Holes can be located only along the phantom lines between the holes shown on these drawings.

Standard Hole Diameter: 5/16"

Maximum Hole Diameter: 1/2"
(center of width only)

Mounting Holes

Screw Terminals

Type S Terminal Lugs

Terminal lugs with 10-32 binding head screws are the standard termination for all Maxistrip heaters.

Type T1 Straight Terminals

Straight outward screw terminals with 8-32 threads.

Type R 90° Blockhead Terminals

90° Blockhead Terminals with 10-32 threads. Special design can switch between 1800W and 900W at 240V.

Abrasion Resistant Terminations

Wire braid provides strength and protection to the lead wire insulation, offering sharp bending not possible with armor cable. 20" of wire braid and 24" flexible leads are standard.

Options: Longer leads or braid. Male or female plugs attached to leads.

Type W1 Straight Wire Braid Leads

Type W2 Straight-Up Wire Braid Leads

Special Widths

By combining one or more standard width (1-1/2", 2-1/2", 3" and 4") aluminum strip heater channels, wider surface areas can be developed. Consult Tempco with your requirements.

Terminations

Abrasion Resistant Terminations

Type W3 Single Wire Braid Leads

Wire braid provides strength and protection to the lead wire insulation, offering sharp bending not possible with armor cable. 20" of wire braid and 24" flexible leads are standard.

Options: Longer leads or braid. Male or female plugs attached to leads.

Type R1 Single Armor Cable Leads

Armor Cable provides excellent protection against abrasion and contaminants. The cable exits through an adapter that encapsulates the element ends. The adapter and cable are silver soldered on for maximum security and seal protection. 20" of cable and 24" flexible leads are standard.

Type R1A Galvanized cable **Type R1B** Stainless steel cable

Options: Longer leads or cable. Male or female plugs attached to leads.

Type C General Purpose Stainless Steel Terminal Box

Terminal Boxes provide a simple and economical way to eliminate all live exposed terminals and electrical wiring that can be a potential hazard to employees or machines. Boxes have 1/2" trade size knockouts (actual diameter 7/8") for standard connections to simplify installation. Strip heaters fitted with boxes can be supplied factory prewired with leads, armor cable or braid.

Type CA Box only

Type CB Box with galvanized cable

Type CC Box with SS cable

Type CD Box with wire braid

Type P2 Quick-Disconnect High Temperature Plug

Quick-Disconnect Plug assemblies are highly recommended and should be used whenever possible. They provide the simplest and safest way to apply power to strip heater installations. The combination of plug and cup assembly, along with armor cable cover leads, eliminates all live exposed terminals and electrical wiring that can be a potential hazard to employees and machines. To simplify installation, Maxistrips fitted with P2 plug assemblies can be supplied prewired, using high-temperature lead wire protected with armor cable or wire braid.

(for Type P on a 1-1/2" wide Maxistrip consult Tempco.)

Type P2A Box and cup only

Type P2C w/ straight plug and galvanized cable

Type P2D w/ straight plug and SS cable

Type P2E w/ straight plug and wire braid

MICA INSULATED

**Mica Insulated Strip Heaters
Are Used in Hundreds
of Industrial and Commercial
Heating Applications**

**AN ECONOMICAL,
PRACTICAL AND
RELIABLE
HEAT SOURCE
CAPABLE OF
PROVIDING
UNIFORM HEAT
TRANSFER TO
FLAT SURFACES**

A Specially treated rust-resistant steel sheath casing provides the best combination of physical strength, high emissivity and good thermal conductivity for sheath temperatures up to 900°F (480°C). For corrosive atmospheres and/or sheath temperatures up to 1200°F (650°C), stainless steel sheath is available.

B For maximum connecting surface, the specially designed stainless steel screw terminals are securely fastened to a connecting jumper, assuring positive contact with the windings, providing maximum current carrying capacity. For other terminal or lead arrangements, see pages 8-22 and 8-23.

C Specially selected mica grade and thickness is used to insulate the windings, providing excellent thermal conductivity and dielectric strength.

D A specific nickel-chrome resistance ribbon wire size is properly engineered to achieve the best combination of wire gauge and spacing between turns, thereby providing the lowest winding temperature possible. The ribbon wire is wound on a specially selected Mica Strip, providing even heat distribution for maximum heater life.

Typical Applications

- ➔ Food Warming Equipment
- ➔ Packaging Equipment
- ➔ Blow Molding Equipment
- ➔ Testing Equipment
- ➔ Vulcanizing Presses
- ➔ Vending Machines
- ➔ Hot Plates
- ➔ Ovens
- ➔ Molds
- ➔ Kettles
- ➔ Incubators

Agency Approvals

Mica Strip heaters are UL recognized and CSA certified in many design variations. Tempco's UL file number is E65652 and CSA file number is 043099.

If you require UL, CSA, or other NRTL agency approvals, please specify when ordering.

Specifications & Tolerances

Standard Specifications and Tolerances of Mica Insulated Strip Heaters
If tighter tolerances are required consult Tempco. A heater's physical size combined with electrical ratings will determine the actual minimums and maximums.

PERFORMANCE RATINGS

Maximum Sheath Temperature

Rust resistant steel: 900°F (480°C)
Stainless Steel: 1200°F (650°C)

Nominal Watt Density: 5-45 W/in² (0.8-7.0 W/cm²)

Maximum Watt Density: Depends on operating temperature and heater size. 38 W/in² (5.9 W/cm²) Maximum when UL & CSA approval is required.

ELECTRICAL SPECIFICATIONS

Maximum Voltage: 480 Volts

Maximum Amperage: lead wire termination: 10 amp
screw terminations: 8-32UNF—20 amp; 10-32UNF—25 Amps

Resistance Tolerance: +10%, -5%

Wattage Tolerance: +5%, -10%

Formula for Calculating Watt Density

$$\text{Watt Density} = \frac{\text{Heater Wattage}}{(\text{Heater Width} - 3/8) \times (\text{Heater Length} - \text{Cold Area}^*)}$$

* Cold Area consists of Holes or Cutouts.

MATERIAL SPECIFICATIONS & PHYSICAL SIZES

Standard Sheath Material: Rust resistant steel

Optional: Stainless Steel or Aluminum

Nominal Thickness: 3/16" (4.76 mm)

Minimum Width: 5/8" (15.88 mm)
May vary depending on Termination

Width Tolerance: ±1/32" (0.79 mm)

Maximum Length: 72" (1829 mm)

Length Tolerance: Up to 24" (610 mm) ±1/16" (1.59 mm)
Over 24" (610 mm) ±1/8" (3.18 mm)

Screw Terminals

1" (25.4 mm) wide strips: 8-32 threads

Over 1" (25.4 mm) wide strips: 10-32 threads

Minimum Termination Distance from Edge of Heater

Installation

- Tempco Mica Insulated Strip Heaters are available with mounting slots at each end for surface mounting applications or without mounting slots for insertion into milled slots.
- For surface mounting installations, Mica Strip heaters must be clamped securely along their entire length to a smooth metal surface by using metal clamps 3" to 5" apart.
- Holes along the body of the strip heater for mounting purposes are not recommended and should only be used when there is no other means of clamping the strip heater down. These holes take up valuable winding space, increasing watt density, resulting in poor heater life.

Instructions

- When supported by mounting slots, the terminal end should be secured firmly. Opposite end should be slightly loosened to allow for linear expansion.
- The surface being heated must be clean and smooth for efficient heat transfer. Small air gaps caused by imperfections can cause hot spots, resulting in heater failure.
- Contaminants such as oil, plastics, and dirt should not be allowed to collect on heaters, as they will find their way into the heater windings, eventually carbonizing and causing electrical shorts.

Terminations

Screw Terminal Terminations

Type T1

Screw terminals at opposite ends.
Minimum Width required is 7/8".

Type T2

Screw terminals tandem at one end.
Minimum Width required is 7/8".

Type T3

Screw terminals parallel at one end.
Minimum Width required is 2".

Note: Typical Termination locations shown (pages 8-22, 23). Specify terminal locations when ordering.

Terminal Protection

Type B__

Low-profile 10-32 button terminals with binding head screws. Same location and minimum width requirements as types T1, T2 and T3. 6-32 threads available.

- Type B1** Terminals at opposite ends (see T1)
- Type B2** Terminals same end (see T2)
- Type B3** Terminals same end (shown)

Type C__

Terminal box has one 1/2" trade size knockout (actual diameter 7/8") for ease of wiring. It provides excellent protection against exposed terminals. Boxes can be prewired with armor cable or wire braid.

- Type CA** Box only
- Type CB** Box with galvanized cable
- Type CC** Box with Stainless Steel cable
- Type CD** Box with wire braid

Type P1__

High-Temperature quick-disconnect plug. Available on 7/8" widths (depending on termination configuration) and wider with cup and plug assembly or just cup. Type P1Q shown with 90° plug and galvanized armor cable. Other options available. Consult Tempco.

Igloo™

Igloo ceramic terminal covers consist of two ceramic parts. With a tight-fitting cap and a solid base, an Igloo cover will fully insulate any standard 8-32 or 10-32 terminal lug used for electrical wiring hookup. Igloo covers can be assembled onto any standard mica strips with 10-32 screw terminals. Igloo covers are available in 3 different styles: single port, double port in-line and double port 90°. See page 15-13 for specific part numbers. Heater with double port in-line Igloo cover shown here.

Lead Wire Terminations

Type W1

Wire braid leads offer sharp bending not possible with armor cable. 10" of wire braid over 12" leads is standard. If longer braid or leads are required, specify.

Minimum Width required is 7/8".

Type W2

Flexible stainless steel braided lead wires exiting at same end. 10" stainless steel braid over 12" leads is standard. If longer braid or leads are required, specify.

Minimum Width required is 1-1/8".

Type W3

Flexible stainless steel braided lead wires exiting at opposite ends. 10" stainless steel braid over 12" leads is standard. If longer braid or leads are required, specify.

Minimum Width required is 3/4".

Type L1

Flexible lead wire exiting from the top through a brass eyelet. 10" long leads standard; if longer leads are required, specify.

Minimum Width required is 7/8".

Type L2

Flexible lead wire exiting same end. 10" long leads standard; if longer leads are required, specify.

Minimum Width required is 1-1/8".

Type L3

Flexible lead wire exiting at opposite ends. 10" long leads standard; if longer leads are required, specify.

Minimum Width required is 3/4".

Abrasion Resistant Terminations

Type R1

Armor cable provides far superior protection to lead wires where abrasion is a constant problem. Available with two- or three-prong plugs. 10" of armor cable over 12" leads is standard. If longer cable, leads or plugs are required, specify.

Minimum Width required is 1".

- Type R1A** Galvanized cable, crimped
- Type R1B** Stainless Steel cable, crimped
- Type R1C** Galvanized cable, tack welded
- Type R1D** Stainless Steel cable, tack welded
- Type R1E** Galvanized cable, full silver brazing
- Type R1F** Stainless Steel, full silver brazing

Type R2

Right-angle armor cable can be positioned in any direction. 10" of armor cable over 12" leads is standard. If longer leads are required, specify.

Minimum Width required is 1-1/4".

- Type R2A** Galvanized cable, crimped
- Type R2B** Stainless Steel cable, crimped
- Type R2C** Plain leads, no cable

Ordering Information

Catalog Heaters

Select a Mica Strip Heater from the Standard Sizes and Ratings List on pages 8-24 and 8-25. Specify Part Number and Quantity. Lead time is 2 weeks.

Custom Engineered/Manufactured Heaters

An electric heater can be very application specific; for sizes and ratings not listed, **TEMPCO** will design and manufacture a Mica Insulated Heater to meet your requirements. **Standard lead time is 2 weeks.**

Please Specify the following:

- Width
- Length
- Wattage
- Voltage
- Termination Type
- Lead Length
- Cable/Braid Length
- Optional Features

⚠ WARNING: Cancer and Reproductive Harm - www.P65Warnings.ca.gov.

Additional Mica Strip Heater Optional Features

Butt Case

Recommended for heating applications where strip heater will be placed in a milled slot between two steel plates.

Pressure Plate

Strip Heaters can be made with built-in pressure plate to add rigidity and minimize warping of the heater. Standard plate thickness is 1/8". Specify plate thickness and choice of mounting method 1 or mounting method 2.

Four Sides Closed

Mica Strip Heaters can be closed on all four sides to reduce contamination from getting inside the heater. Recommended on all strip heaters over 2-1/2" in width.

Cross-Section-Formed

Strip Heaters can be formed on their cross section for pipe heating applications. 2" minimum width required. Specify diameter of pipe on which heaters are to be mounted.

Flexible Heaters

section

Tempco Flexible Heaters: Silicone Rubber & Kapton® The Answer To Hundreds of Unique Heating Applications...

Designed for Trouble-Free Performance and Improved Operation Efficiency

Tempco's Flexible Heaters are capable of operating with excellent performance under many adverse conditions, including: moisture, outdoor exposure or ambient temperatures, radiation, ozone, compression set, vacuum, fungus, oils, solvents, and many other chemicals. The low thermal mass of flexible heaters allows their use in applications where the space for placing a heater is limited and weight is a concern.

Flexible Silicone Rubber and Kapton Heaters also have very good mechanical properties. They are of low mass construction and provide rapid heat-up due to direct bonding to the part— a desired requirement for applications where precise temperature control is important to the overall quality of the application. Flexible Heaters are not affected by mechanical shock, vibration or repeated flexing and will not stretch or tear over a temperature range of -70°F to +500°F (-56.6°C to +260°C).

Select a Flexible Heater for your specific application...

Tempco Flexible Heaters are a reliable and economical heat source capable of providing uniform heat transfer to irregular shaped or flat surfaces including three dimensional geometries, conforming to the part being heated. This flexibility allows you to design a heating element literally around the shape and size of the system, machine and/or component part.

Flexible heater use typically falls into the following applications:

- * Process Heat
- * Condensation Protection
- * Freeze Protection
- * Composite Bonding

Tempco's engineering staff, with many years of experience in heat processing and temperature control, can assist you in designing the right Silicone Rubber or Kapton Flexible Heater for your application.

Tempco's Flexible Heaters offer unlimited design possibilities!

Agency

Approvals

Tempco SHS, DHR & EHR Silicone Rubber Heaters are UL Recognized in the USA and for Canada under UL File Number E65652 (UL499) Component Recognition Program, and CSA Recognized under CSA File Number 043099.

If you require UL/cUL and/or CSA Agency Approval, please specify when ordering.

This heater, used for freeze protection, is vulcanized to the shaft in the base of a weather vane (machined parts also available from Tempco).

Heater manifold 3D formed for use on a snow making machine.

Heater vulcanized to black anodized aluminum for food-prep station (metal component also supplied by Tempco).

This formed heater is used to remove condensation on a vacuum canister.

Heater vulcanized to a metal plate is mounted in a refrigeration unit to minimize condensation within the control panel (metal component also supplied by Tempco).

Flexible Heater Construction Characteristics

The texture of the fiberglass/silicone material can be “smooth” or “rough”. Smooth silicone tends to be more flexible and stain resistant. Rough silicone has a more durable texture. Standard construction of a plain wire-wound flexible heater is made with rough silicone. Smooth silicone is standard for heaters with PSA, vulcanized to a metal plate or other options or constructions that are deemed necessary by engineering. If smooth silicone is desired, please specify when ordering.

Flexible silicone rubber heaters can be produced using different material thicknesses and texture. Multiple layers can be applied for a thicker heater application. Overlapping the perimeter by 1/2" with the outer layers of a four-layer construction are more “moisture resistant” than standard two-layer construction giving that additional seal around the internal heater. Example: a 10" x 10" heater sandwiched between 11" x 11" outer layers.

The internal heat distribution pattern(s) allows for the heater element wire to be placed as close as 5/32" from the edge of the flexible heater. The heat pattern can be distributed to accommodate holes or cutouts, or to concentrate the heat in specific sections of the flexible heater as the application dictates.

Flexible heaters are produced in two heating element choices: wire-wound elements and etched foil elements (see page 9-4).

Typical Applications

- Aerospace
- Air Horns
- Aircraft Comfort Heaters
- Airplane Propeller Repair
- Animal Feeders
- ATM Machines
- Autoclaves
- Automotive
- Battery Heaters
- Computer Memory Planes
- Copy Machines
- Credit Card Scanners
- De-Icing
- Drum Heaters
- Food Service Equipment
- Graphic Arts Equipment
- Guidance Systems
- Gyroscopes
- Heated Presses
- Incubators
- Laboratory Equipment
- Laminators
- Liquid Reservoirs
- Medical Equipment
- Mirror Heaters
- Optical Equipment
- Outdoor Antennas
- Packaging Machinery
- Photo Processing
- Recovery Systems
- Refrigeration Equipment
- Security Equipment
- Semiconductor Equipment
- Shoe Machinery
- Turbine Propeller Repair
- Vacuum Chamber
- Vending Machines
- X-Ray Processing

Heaters can be supplied up to
Standard Max 3' x 12' or
Optional Max 4' x 12'.

Small heater used to remove condensation in a gas filter is designed with two holes, two slits & Velcro® for easy installation while filter is in use.

An insulating heater used on a compressor pump to prevent freezing in Siberia.

Round heater with a center hole used in air horns for motorized vehicles such as Trains, Semi Trucks, or RVs where the leads need to go through the center.

Cone heater used on a soup dispenser kettle.

Formed heater with six thermocouples for six-zone control used to refurbish airplane propellers by applying heat to cure an epoxy compound that attaches a new nickel lead edge to the propeller blade.

Maximum Resistance Density for Heaters with Etched Foil Element: 125 Ω/in²

Note: Other materials are available, such as neoprene rubber or vinyl plastic. Consult Tempco for more information.

Wire-Wound Element Construction ●●●●●●●●●●

Tempco Silicone Rubber heaters with wire-wound elements provide excellent physical strength capable of withstanding repeated flexing without compromising the life and performance of the heater. They are also very effective for manufacturing geometrically challenged shapes, including three dimensional ones.

The wire-wound element process consists of resistance wire wound on a fiberglass cord for added support and flexibility. The wire-wound element is laid out in a special designed pattern to ensure uniform heat profile and to conform to the size and shape of the silicone rubber heater, avoiding holes and cutouts, or to concentrate the heat profile in a specific section(s) of the heater as the application dictates.

Power lead wires or cord sets are attached to the heater windings with solder and firmly secured in place through a vulcanizing process, ensuring that the assembly becomes homogenous.

The wire-wound process is recommended and preferred for small to medium size quantities, medium to large size heaters, and to produce prototypes to prove out the design parameters prior to entering into large volume production runs when using etched foil.

Etched Foil Element Construction ●●●●●●●●●●

Etched Foil Silicone Rubber or Kapton flexible heaters are made with a thin metal foil (.001"), usually a nickel base alloy, as the resistance element. The resistance pattern to be etched is designed in CAD and transferred to the foil, which is laminated to the insulating substrate. The element/substrate is then processed through an acid spray to produce the desired resistance pattern.

The top layer is then added and vulcanized for silicone rubber or laminated for Kapton heaters. For silicone rubber heaters, lead wires are then attached to the heater and insulated with additional silicone rubber to complete the heater. For Kapton® heaters, lead wires are attached to the heater and insulated with epoxy cement to complete the heater.

The etched foil heater has exceptional heat transfer compared to wire wound elements, due to its large flat surface area. It can deliver more uniform heat profiles with higher watt densities, providing longer operating heater life. It can also be zoned with distributed wattage or separate heating circuits to compensate for load variations. The etched foil process is recommended for small size heaters in large quantities.

Flexible Heater Wattage Recommendations

Step 1 Determine the Required Wattage

Every process has a unique wattage requirement to heat that particular load up to temperature or to maintain a particular temperature.

If the required heater wattage is not known, estimate the required wattage using the thermodynamic formulas listed in chapter 16, Engineering. A safety factor of 25% additional wattage is recommended to compensate for unknown variables.

Example

To raise the temperature of an aluminum plate 6" x 12" x 0.5" (3.53 lb.) 200°F (from 70° to 270°F) in 0.5 hours:

$$\text{Watts} = \frac{3.53 \text{ lbs.} \times (0.24 \text{ Btu/lb.}^\circ\text{F}) \times 200^\circ\text{F}}{3.412 \text{ btu/watt hr.} \times 0.5 \text{ hrs.}} = 99 \text{ watts}$$

Add safety margin: 99 W + 25% = 124 watts

Step 2 Determine the Heater Size and Watt Density

A flexible heater should use the maximum space available for mounting and heating the process. Factors that affect heater size include the mounting method and watt density.

$$\text{Watt Density} = \frac{\text{Heater Wattage}}{\text{Area of the Heater}}$$

As a general rule, the following can be applied for silicone rubber heaters:

Low Heat-Up: 2.5 w/in²

Average Heat-Up: 5 w/in²

High Heat-Up: 7.5 w/in² and greater

Continuing the aluminum plate example, determine what size the heater should be:

Silicone Rubber Heater: 5" x 10" = 50 in²

Watt Density = 135 watts ÷ 50 in² = 2.7 watts/in²

Since the watt density falls between 2.5 and 5 w/in², the silicone rubber heater selected should work satisfactorily.

Referring to the chart below for a wire wound silicone rubber heater, pressure sensitive adhesive mounting should work well for this application at the required temperature.

If the calculated watt density is too high, a larger heater will lower the required watt density and still produce the same wattage.

Silicone Rubber Heater Surface Temperature vs. Watt Density

Graph shows the relationship between the maximum surface temperature and the watt density of standard silicone rubber heaters.

The heater was energized in still air without insulation or a load. Using this graph the designer can estimate the maximum temperature the heater can reach compared to the watt density of the heater.

ΔT = Temperature Rise From Ambient at Specified Watt Densities

Ordering Information

Catalog Heaters

Chose from the tables of common sizes of Silicone Rubber and Kapton in round or rectangular shapes.

The heaters listed are 5 W/in². Standard configuration includes 10" Teflon® leads, exit style A or L (see page 9-9) and no mounting option.

Custom Engineered/Manufactured Heaters

An electric heater can be very application specific; for sizes and ratings not listed, **TEMPCO** will design and manufacture a Flexible Surface Heater to meet your requirements. **Standard lead time is 4 to 5 weeks.**

Please Specify the following:

- Diameter
- Wattage and Voltage
- Lead Type
- Sensors or Thermostats
- Special Features or Cutouts
- Lead Location

⚠ WARNING: Cancer and Reproductive Harm - www.P65Warnings.ca.gov.

Flexible Heater Lead End Termination Options

Tempco's standard lead termination is stripped lead ends — 1/4" (6.3mm). Any type of connector can be attached to the leads to complete the assembly and make wiring into applications quick and easy.

From simple ring crimp connectors to complex male or female crimp pins and housings such as Molex® components, Tempco does it all!

Tempco's expert designers and assemblers can also provide complete wire harnesses if required. Consult Tempco with your requirements.

Crimp Connectors: insulated or non-insulated

- Ring Terminal
- Spade Terminal
- 1/4" Female Straight Disconnect
- 1/4" Female Right-Angle Disconnect

Miniature Connectors: example – Molex

Plugs:

- Standard 120 or 240 Vac – straight blade
- Twist locking plugs, 120 to 480 Vac
- Specify NEMA or manufacturer's part number

Special Connectors and Plugs:

- Consult Tempco with your requirements.

Flexible Heater Lead Exit Location Options

- Notes:**
1. Oriented so X is always greater than Y.
 2. Specify lead exit location using identification letters A through M.
 3. Provide a sample and/or drawing indicating power leads or cord set exit location for shapes other than those shown above.

Lead and Termination Options

Flexible Heater Lead Options

Standard Leads — Teflon®

Tempco's standard leads are 10" long, Teflon® insulated, flexible, stranded, plated copper wire. Stripped: 1/4"

- UL1180 rated 300V 200°C
- UL1199 rated 600V 200°C

On silicone rubber heaters, the lead connections are insulated with vulcanized silicone rubber, which also acts as a strain relief.

For Kapton® insulated heaters, high temperature epoxy is used to insulate and reinforce the lead connection.

Optional Leads

HPN Cord

For portable heaters, a two-conductor neoprene cordset can be vulcanized to the heater in any desired length.

HPN Cord and Plug Set

A two-conductor neoprene cord and plug set can be vulcanized to the heater. Standard Length: 6 ft. (1.83 M), 7 ft. (2.13M), or custom length as specified. Supplied with standard straight blade ungrounded plug, or grounded plug. 120Vac only.

- 2-Pole 2 wire non-grounding (NEMA 1-15P)
- 2-Pole 3 wire grounding (NEMA 5-15P)

SJO Power Cord

For industrial applications, SJO heavy duty power cords can be attached to the heaters in any desired length.

SJO Power Cord and Plug Set

SJO heavy duty power cord and plug set can be attached to the heaters. Standard Length: 6 ft. (1.83 M), or custom length as specified. Supplied with standard straight blade ungrounded plug, or grounded plug. 120Vac only. (For 240Vac see page 15-15 for optional plugs)

- 2-Pole 2 wire non-grounding (NEMA 1-15P)
- 2-Pole 3 wire grounding (NEMA 5-1)

Silicone Rubber Leads

Ensures a moisture seal on the heater. Due to the similarity in material, the heater will fuse to the leads during the vulcanization process. Silicone rubber leads are more flexible, but are not as abrasion resistant as Teflon® leads.

Built-Up Molded Lead Exit

Used to encase lead exit and optional snap action thermostat. (See page 9-15 for thermostat specifications) Shown with SJO cord rated -50°C to 105°C.

Special Lead Options

Special lead wire types and lengths in many configurations can be done. Consult Tempco.

Abrasion Protection Options

Various materials can be put over Teflon® or Silicone Rubber leads to provide mechanical or abrasion protection. The leads exit the heater as a single unit.

- Silicone Rubber/Fiberglass Sleeving (356°F/180°C)
- Heat Shrink Sleeving

Flexible Heater Optional Design Features

Internal Ground Screen Plane

Some applications may require the heater to be grounded. Due to the fact that the heater sheath is non-conductive, this can only be done artificially. A second layer of insulating material and a conductive grid can be added to the heater. A ground wire is attached to the grid.

A less expensive alternative for setting up a ground wire, especially for the required ground lead of a cordset, is to have a “flying ground lead” (6" long, green) exit the lead patch for attaching to the metal load surface, effectively grounding the process.

Dual Voltage and 3-phase

Due to the flexibility in circuit design for flexible heaters, heating circuits can be designed to accommodate dual voltage. On dual voltage heaters, three leads, including a common in a different color, are provided for wiring the heater in series for the higher voltage and parallel for the lower voltage. 120/240 Vac or 240/480 Vac can be specified. (see page 16-11 for more information)

Three-phase circuits can also be designed for large high-current applications.

Self-Limiting/Self-Regulating Wire Wound Heater

The alloy used for this heater’s resistance wire has a high positive temperature coefficient of resistance that allows the heater to reduce power as temperature increases. This self-regulating feature is ideal for many low temperature applications. This feature can also be beneficial when a fast start-up time is required before the heater power levels off to normal operating temperature. See Chart for Ratio of Hot to Cold Resistance of the Heater wire at various wire temperatures.

Thermal Sponge Insulation and Thermal Conductive Sponge

To increase heater efficiency, silicone sponge rubber insulation can be bonded to the top side of the heater. Available thicknesses are 1/16", 1/8", 1/4", 3/8" or 1/2".

Thermal Conductive Sponge can be used to transfer heat evenly to various surfaces. Available in 1/8" thickness.

Foil Backing

Aluminum foil can be added to the back of the heater to help dissipate the heat between element runs and eliminate hot spots. Due to the foil, higher watt densities and better temperature uniformity can be attained. The foil would be applied to the back of the heater, on the mounting surface.

Distributed Wattage

In order to compensate for heating losses around the edges or mounting holes, the heating circuit can be designed in a distributed wattage pattern. More wattage can be added to the high loss areas to compensate for the higher losses.

Lead Exit Tab

An unheated lead exit tab can be added to the heater for a variety of reasons such as maintaining a rectangular heater with no cold sections or when used in a compression application to remove the lead exit area from between the plates. (Standard 2" x 2")

Multiple Zones

Multiple circuit areas can be zoned to compensate for various heating effects desired. In the picture above there are three zones with separate leads (A, B, and C).

Holes and Cutouts

Holes and cutouts in the surface of a silicone rubber or Kapton® heater can generally be placed anywhere in the heater assembly. Holes and cutouts can be used to allow space for bolts, nuts, temperature sensors, brackets, etc. For most holes and cutouts, a detailed drawing will be required for quoting or ordering.

Mounting Methods

Flexible Heater Pressure Sensitive Adhesive (PSA)

PSA

For ease of attachment specify PSA. Installation is simple: just peel off the protective liner and apply. It will adhere to most clean smooth surfaces. Care must be taken when installing to attain a smooth, consistent, uniform bond to achieve maximum results.

Maximum Temperature:

Continuous – 300°F (149°C)
Intermittent – 500°F (260°C)

Recommended Watt Density:

Under 5 W/in² (0.78 W/cm²)

Note: To obtain the expected life of **Silicone Rubber** or **Kapton®** heaters, *care must be taken to mount correctly*. Regardless of the mounting technique used, do not trap any air under the heater; this can cause hot spots and possible premature heater failure. Use a rubber roller over the heater surface to assure good adhesion.

PSA Plus

A layer of aluminum foil is vulcanized to the back of the heater for added heat dissipation prior to the application of PSA.

Flexible Heater Factory Vulcanizing to Metal Component

Factory Vulcanizing

Flexible heaters can be factory vulcanized to bare or anodized aluminum, Stainless Steel, Marble, or other hard surfaces for permanent attachment and excellent heat transfer.

The uncured silicone rubber heater is placed on the metal part and placed in the vacuum oven where the heater vulcanizes and adheres to the part in one operation. This procedure forms an extremely strong permanent bond with most metals due to the fact that the silicone rubber flows into and fills the micro structure in the surface of the metal. The metal part can be manufactured by Tempco or supplied by the customer. Consult Tempco for other materials including granite.

Flexible Heater Magnetic Mounting

Magnetic Mounting

A flexible magnetic material can be attached to the back of a silicone rubber flexible heater. Will adhere to many varieties of steel. Ideal for those situations where you need to “Slap On” some heat! Specify when requesting a quote.

Maximum Temperature: 200°F / 93°C

Maximum Watt Density: 1 W/in² (0.16 W/cm²)

Maximum Width: 24" (610 mm)

Flexible Heater Field Applied Adhesive

Field Applied Adhesive

For a field applied permanent bond, a room temperature and ambient humidity curing silicone rubber adhesive is recommended. Tempco offers two types:

Both RTV106 and RTV116 will retain physical and electrical properties up to 500°F (260°C).

When using RTV adhesive, cover the heater completely with a thin layer of RTV, position the heater in place, and use a small roller to remove air bubbles, which could cause hot spots and lead to premature failure of the heater.

RTV106 — a red, paste consistency, high-temperature resistant adhesive sealant.

Part Number: **SEA-102-109** 10.1 ounces
Part Number: **SEA-102-105** 2.8 ounces

RTV116 — a red, pourable, high-temperature resistant adhesive sealant that will flow or self-level on a surface.

Part Number: **SEA-102-102** 9.5 ounces

Flexible Heater Mechanical Fasteners

Various techniques are routinely used when flexible heaters must be detachable from cylindrical parts. The mechanical fastener options include the following:

**Heavy Duty D-Rings
& 3-Layer Straps**

**Standard D-Rings
& 2-Layer Straps**

Velcro® Straps

Boot Hooks & Springs

Boot Hooks & Lacing Cord

Grommets & Lacing Cord

Heavy Duty Spring Clamps

Snaps

Consult Tempco for detailed specifications on the mechanical fasteners shown.

Flexible Heater Clamping

Clamping

Flexible heaters may be applied by clamping or compression between two rigid materials. The plate surfaces must be ground reasonably smooth. Care must be taken not to damage the heater or pierce the insulation. Mill out an area or cutout in the top plate for the added thickness of the lead exit area.

Recommended Maximum Pressure: 40 PSI

Note: For added durability, mill out the space for the heater to mount in the same thickness as the heater.

Mounting Methods

Outside Diameter Mounting

Tempco has developed the techniques necessary to permanently mount silicone rubber heaters to the outside diameters of pipes and medium size vessels. This technique is particularly useful for heated drums and air or gas heating.

Minimum Diameter: 0.5" (12.7 mm)

Maximum Diameter: 6" (152.4 mm)

Maximum Length: 20" (508.0 mm)

Flexible Heater Three-Dimensional Configurations

Dimensional silicone rubber heaters can be vulcanized to fit a shaped outline. This technique is particularly useful for wrapping Silicone Rubber heaters around pipes or small vessels. Custom tooling or special forms may be required.

7/8" Hexagon

Heater used to keep wax melted as it passes through a pump

An insulating heater used on a compressor pump to prevent freezing in Siberia

One-Piece Y-Pipe Heater
(Shown on Pipe at left;
Shown flat below)

Heater used to remove condensation on a vacuum canister

Heater manifold 3D formed for use on a snow making machine

Flexible Heater Built-In Temperature Sensors

Temperature Sensors

Flexible surface heaters can be manufactured with temperature sensors of various types including thermocouples, RTDs, and thermistors. Thermal fuses can also be incorporated into the design to prevent dangerous temperatures in the event of a control device failure (see page 9-17).

The sensors can be mounted on the heater to sense the temperature of the part being heated or the heater surface temperature itself. For silicone rubber heaters, temperature sensors are mounted to the surface of the heater under a vulcanized patch. For Kapton® heaters the sensor is affixed to the surface with epoxy. The leads are run on the exterior of the heater to avoid heat and mechanical interference with the resistance element inside.

Tempco offers three types of sensor mounting:

Heater Sensing: The sensor is located over heater wiring to sense the temperature of the heater surface (standard).

Indirect Load Sensing: A cold section is designed into the resistance element layout for where the sensor is to be located.

Direct Load Sensing (silicone rubber only): A hole/window is cut into the bottom layer of the heater so that the sensor is mounted in the “window” under a vulcanized patch, allowing it to be in contact with the load. (Note: higher cost and subject to potential mechanical damage.)

Lead Wire Connectors

Tempco has the tooling to attach many different types of “quick connectors” that are used with sensors. Consult Tempco with your requirements.

Sensor Types

Thermocouples

Tempco can incorporate common Type J or K thermocouples almost anywhere on the heater surface. Other thermocouple types can also be used. Standard thermocouple temperature ranges apply. Specify when ordering. See page 14-90 for optional plugs.

Note: Standard length is 10". Specify sensor lead wire length and the distance from where the sensor leads exit the heater to the heater edge (Dimension X) when ordering.

RTDs (2- or 3-wire)

The RTDs used are platinum thin film 100 ohm @ 100°C. The standard curve is 0.00385 TCR / DIN432760. Other common RTDs such as 1000 ohm can also be used. Specify when ordering.

The RTD's resistance increases with a rise in temperature and is considered the most accurate and stable sensor.

Thermistors

Thermistors are also a resistive-based temperature sensor. They do not generally respond in a linear style and are used in a limited temperature range or at a specific single temperature.

Small bead style thermistors can be mounted directly on the heater.

The thermistor's response is generally designed directly into the customer's electronic control system. Therefore if a thermistor is required, specify manufacturer, specific model number, type and specifications when requesting a quote. Consult Tempco for more information.

Flexible Heater Built-in Thermostats

Flexible Heater Pre-Set and Adjustable Built-In Thermostats

Pre-set thermostats provide a low-cost means of providing built-in control of surface heaters. The thermostat is normally wired directly into the heater. If the current draw of the heater exceeds the rating of the thermostat, the voltage is over 250V, has a Dual Voltage Design, or is 3-ph, separate leads on the thermostat will be supplied for use with a separate (remote) relay to control the heater (see pages 13-94, 95, 96).

The thermostats are normally mounted over a heated section to sense the heater's temperature or optionally over a cold section to indirectly sense the temperature of the load. The thermostat is enclosed in a molded silicone rubber housing and permanently attached to the heater.

Specify type and location when ordering.

Note: If heater amps exceed thermostat electrical ratings, separate leads will be provided for use with a relay (see pages 13-94 through 13-96).

Snap Action Thermostat – Automatic Reset

Quick cutout on rise to temperature. The contacts will open on rise when the temperature increases to the snap point of the calibrated bimetal disc.

Setpoint (opens): available from 50 to 450°F in 10°F increments
most thermostats close 20 to 30°F below setpoint (see page 13-82)

Electrical Ratings: 125 Vac, 15 Amp, 1875W
250 Vac, 10 Amp, 2500W

Minimum Heater Width: 1.312"

Adjustable Thermostat

Adjustable thermostats allow the user to dial-in a specific temperature and attain a desired result. The thermostat is enclosed in a molded silicone rubber housing and permanently attached to the heater. The adjustment shaft extends through a pre-formed hole. A high temperature knob is included.

Amps: 12.5A @ 125V, 6.5 A @ 250V

Watts: 1500W @ 120V, 1560W @ 240V

Adjustment Ranges Available:

- 50 to 425°F (10 to 218°C)
- 90 to 140°F (32 to 60°C)
- 100 to 190°F (38 to 88°C)
- 70 to 190°F (21 to 88°C)
- 50 to 160°F (10 to 71°C)
- 70 to 140°F (21 to 60°C)

Minimum Heater Width: 1.75" (44.5 mm)

Flexible Heater Built-In Thermostats

Snap Action High Limit Thermostats – Manual Reset

A High Limit with a manual reset push button can also be designed in. Specify when requesting a quote.

NOTE: See page 13-83 for stock temperature ratings.

Creep Action Thermostat

Sustained response, and a slow cutout at the trip point. The creep action thermostat has a slow make/slow break action around setpoint.

Setpoint (opens): available in a limited selection from 50 to 300°F in 10°F increments. Consult Tempco.

Electrical Ratings: 120 Vac, 12 Amp, 1440W
240 Vac, 6 Amp, 1440W

Flexible Heater Built-In Thermal Fusing

Temperature Range: 151 to 464°F (66 to 240°C)
Single temperature point only, in 10° to 20° steps. Consult Tempco with your requirements.

NOTE: See page 13-84 for stock thermal cutoff temperature ratings.

Thermal fuses / cutoffs are used as high limit protection devices to guard the object being heated from dangerous temperatures in the event of a primary control device failure.

The thermal fuse can be mounted using various methods depending on other options. If the heater does not have a thermostat, the thermal fuse would be mounted under the lead exit patch. If used in conjunction with a thermostat, it could be mounted under the thermostat cover.

Voltage: 120/240 Vac

Maximum Amperage: 10 Amps, continuous

Note: The thermal cutoff is a one-shot, non-resettable component.

PVC Pipe/Conduit Bending Heaters

Tempco's PVC Pipe/Conduit Bending Heater Assembly

makes it easy to form PVC plastic pipe and conduit at the job site. To bend the PVC pipe/conduit, just wrap the heater assembly around the pipe at the location desired and plug it in. In 4 to 18 minutes, depending on pipe size, it will be soft enough to bend by hand to the desired radius or shape.

This heavy-duty assembly, made from our proven wire-wound silicone rubber heater technology, will provide hundreds of hours of use.

Stock PVC Pipe Bending Heaters

Pipe Diameter	Length	Watts	Volts	Warm-Up Time	Part Number
1/2" to 1-1/2"	12"	180	120	4 – 10 minutes	SHS01210
2" to 4"	20"	950	120	7 – 18 minutes	SHS01222

Design Features

- * Built-in thermostat limits temperature to 194°F (90°C)
- * Standard Voltage is 120 Vac
- * 6-ft. plug and cordset standard

Design Features

- * Available with or without an Integrated Thermostat (See EHA below for Remote Thermostats)
- * Custom Design and Alternate Thermostat Settings Available
- * Heater Vulcanized to an Aluminum Mounting Plate for Easy Installation
- * 120V Standard; Custom Voltages Available upon Request
- * 48" Teflon® Leads Standard
- * Dimensions Listed are for Heater and Bracket; Actual Heater Width is 1/2" Less
- * Safe to Operate, No Exposed Electrical Connections

EHR — Silicone Rubber Heaters are designed for easy installation and safe operation. These rectangular shaped wire-wound Silicone Rubber Heaters are vulcanized to an aluminum mounting plate with mounting holes. They provide superior protection for enclosures of all types against condensation, humidity and freezing.

It is recommended that the enclosure heater be used with a thermostat either built in or mounted remotely to limit the maximum temperature reached and conserve energy. The suggested mounting method is at the bottom of the enclosure, mounted vertically. If a remote mounted thermostat is preferred, mount the heater on the bottom of the enclosure and the thermostat in the middle of the enclosure.

EHA — Remote Thermostats for Enclosure Heaters

Design Features

- * Standard 16ga Teflon® lead length: 48"
- * Can easily be located anywhere in the enclosure using the pressure sensitive adhesive.
- * Any standard thermostat can be used (see page 13-82 for available ranges)
- * Silicone rubber base and enclosure
- * Ratings: 10A/250 Vac, 15A/120 Vac

Pressure Sensitive Adhesive for easy mounting

EHA00005 D-ring and strap mounting thermostat. Can be applied to sense the air around an object or an object directly.

Composite Curing Flexible Heater Blankets

Specialized Silicone Rubber Heater Blankets are used in the composite industry to bond and cure composite structures using vacuum bagging techniques which have become standard in the industry.

Tempco's composite bonding and curing heater blankets are designed with the field technician in mind with an extra strong strain relief, and even heat distribution to produce the best possible cure or bond.

Temperature uniformity is optimized for even heating through computer designed resistance elements. Circuit spacing is maintained at 1/4" for larger heater blankets or less on smaller heaters. This technique guarantees a $\pm 10^{\circ}\text{F}$ ($\pm 5.5^{\circ}\text{C}$) temperature uniformity across the heater blanket.

The lead wires exit the heater through an unheated 2" x 2" lead exit tab. This allows the overall heater surface to be heated while maintaining a separate unheated section for the transition from resistance element to the leads and a solid strain relief.

Tempco's Composite Curing Heater Blankets emphasize strength, durability, flexibility and overall temperature uniformity.

Design Features

- * **Maximum Temperature:** 500°F/260°C intermittent
450°F/232°C continuous
- * **Material:** Fiberglass reinforced Silicone Rubber
- * **Smooth bottom layer for contact with the composite under cure**
- * **External Lead Exit Tab, 2" x 2"** maximizes heating area and uniformity
- * **Lead wire:** Teflon®, 5-ft. length, 400°F/200°C, 600V
- * **Composite Industry Watt Density Standard of 5 watts/in²**
- * **Available Voltage:** 120 Vac or 240 Vac
- * **Meets Composite Industry uniformity standard of $\pm 10^{\circ}\text{F}$**
- * **Each heater blanket has a serial number for traceability**
- * **Heat Mapping Certification available**
- * **Made to Order:**
Maximum Width: 36" (914mm)
Maximum Length: 120" (3048mm)
Maximum Diameter: 32" (813mm)
- * **UL recognized**

Standard (Non-Stock) Round Flexible Heater Blankets

Diameter		Watts	Voltage

- ➔ **All composite, metal bonding, curing applications**

Thermal Mapping

It is a known fact in the composite repair industry that the quality of the overall repair often relates directly to the quality of the cure. The cure in turn is directly affected by the temperature uniformity of the heat blanket.

Thermal/heat mapping certification of the heater blanket is rapidly becoming the standard operating procedure for many repair facilities to optimize the cure process.

As an added value service, Tempco can certify that the heat blanket you order follows the guidelines established by the Commercial Aircraft Composite Repair Committee (CACRC), SAE document ARP 5144 Section 7, which states specific recommendations for the "...handling, maintenance and thermal testing of heat blankets..." The heater blanket certification also meets the requirements of Boeing document D6-56 273 "Qualification of Heat Blankets for Hot Bonding Composites."

Flexible Heaters

Silicone Rubber Drum Heaters

Silicone Rubber Drum and Pail Heaters

Design Features

- * Maximum operating temperature of 425°F (218°C).
- * Power cord is 6-foot long, SJO Type 16/3 complete with three-prong plug for 120 VAC models. Plugs are not included on 240 VAC models but are available (see page 15-15).
- * Surface grounded electrically with internal ground screen.
- * 1250 volts dielectric tested.
- * Vulcanized silicone rubber construction resistant to moisture, ozone, fungus, and radiation.
- * Adjustable thermostat, see page 9-16 for specifications.

- Built tough
- Resistant to chemicals
- Ratings for Metal and Plastic Drums and Pails
- Easy to clean
- Stock to 2-week lead time

Agency Approval:
(See page 9-2 for details) 

Tempco flexible drum heaters can save time by heating stored viscous fluid to a pourable temperature.

The heater is built to be tough, long lasting, and resistant to chemicals. Because few materials stick to its silicone rubber with fiberglass reinforced construction, it is easy to clean. The heater comes with a 6-foot cord and plug (120V only). When not in use, it rolls for convenient storage.

The total wattage (number of heaters) and the material being heated inside of the drum must be considered when determining the actual temperature to which that specific material can be heated.

Note: Metal Jacketed Drum Heaters and heated Drum Dollies can be found on page 11-122, Drum Immersion Heaters on page 11-123, and Drum Blanket Heaters on page 11-124.

Hazardous Area Rated Silicone Rubber Drum Heaters

Design Features

- * Dual setpoint NEMA 7 temperature controller connected to a high temperature limit indicator light
- * Extra wide 8" coverage area
- * Exceptional durability and flexibility
- * Grounded heating element meets NEC 427.23
- * Designed for metal drums

Hazardous Area Rated

Class I Division 2:
Groups A, B, C and D

Class II Division 2:
Groups F and G

NEMA 7 Thermostat Control Assembly with High Limit Indicator Lamp

Specifications

Physical Description

Heating element is laminated between two layers of 23 mil and two layers of 25 mil fiberglass reinforced silicone rubber.

Power Density: 2.5W/sq.in.

Nominal Silicone Rubber Density: 26 oz/sq.yd.

Electrical Ratings

Wiring from Drum Heater to Controller: 6 ft. liquid-tight conduit

Line Cord from Controller Assembly: 6 ft. industrial power cord

Line Cord Termination: 120V – Hazardous area rated 5-15P plug
240V – No plug, flying leads

Thermostat

High Limit Thermostat:

- Designed to keep blanket below NEC article 500-T rating:

T Rating	NEC Temperature	Actual High Limit
T3	392°F (200°C)	292°F (145°C)
T4A	248°F (120°C)	158°F (70°C)

- High limit red indicator lamp
- Attached adjustable dual setpoint thermostat NEMA 7 temperature controller. Moisture and chemical resistant.

Thermostat Range: 25°-325°F/-4°-163°C, dual scale limited by the "T Rating"

Ordering Information

Adhesive Backed Heating Tape

Electrical Resistance Heating Tape — Adhesive Backed

Designed For High Heat Transfer

All electrical resistance elements create heat, but some systems are better at transferring this energy. The secret to this heating tape is in its thermally conductive adhesive and its outer reflective sheath.

The adhesive surrounds the resistance wire and transfers the thermal energy directly to the surface of the load. The resistance wire itself has a back and forth kink that acts as a spring to absorb expansion and contraction.

The outer aluminum sheath spreads heat evenly over the entire surface of the tape and also reflects heat back onto the load.

The end result is a highly efficient heating source with maximum heat being transferred to the desired material.

Typical finished assembly with leads.

ADHESIVE SPECIFICATIONS

	Silicone	Acrylic
Operating Temperature Range	-100°C to 250°C -148°F to 482°F	-100°C to 180°C -148°F to 356°F
Outgassing... TML/VCM	1.047%/.322%	.264%/.000%
Adhesion to Etched Aluminum (oz/inch width)	28 @ +125°C 450 @ -100°C	29 @ +125°C 50 @ -100°C
Overall Thickness Applied	.025" (.63 mm)	.028" (.71 mm)
Dielectric Strength	600 Vdc	600 Vdc

Typical Applications

- ➔ Cylinder wrap ideal for tubes, pipes or vessels.
- ➔ Placed directly on PVC, PTFE plastic pipe without the need for other material.
- ➔ Excellent for prototype engineering, placing heat exactly where it is needed.
- ➔ Even heating throughout the length of a heated hose for hot wax handling, food processing, hot melt and other plastic processing.
- ➔ De-fogging, de-icing, fuel line warming.
- ➔ Acrylic product approved by NASA for space flight.
- ➔ Acrylic low outgassing perfect for vacuum applications.

Product Types

4 Conductor Tape 1/2" (12.7 mm) wide; has the highest watt density and the most variety of resistances. It can have leads at one end in the case of a series connection or a series/parallel connection, or leads at either end in a parallel connection.

The tightest wrap this tape can achieve is on a 1/4" (6.3 mm) O.D. surface. A smaller tube should be wrapped with 1/4" (6.3 mm) or 1/6" (4.2 mm) tape.

2 Conductor Tape 1/4" (6.3 mm) wide; has leads on one end in the series connection, and leads at both ends for parallel connections. This tape will wrap down to 1/8" (3.17 mm) O.D.

1 Conductor Tape 1/6" (4.2 mm) wide; can wrap down to .060" (1.52 mm) O.D. A lead will be present at both ends.

General Purpose Wattage Calculations for Tube and Pipe Heating

$$T_p = P \times L \times \Delta T$$

T_p = Total Watts Required

P = Watts per lineal foot of tube per °F temp. rise (see chart below)

L = Length of tube in feet

ΔT = Temperature rise, °F above ambient

To Find P: Look at the intersection of Tube O.D. and Insulation thickness.

Insulation Thickness	Tube Outside Diameter			
	1/4"	1/2"	1"	2"
Bare	.10	.13	.21	.40
1/2"	.07	.09	.13	.20
1"	—	.05	.08	.11

Note: This is for estimating power requirements only. Confirmation by prototype testing is recommended.

- If the temperature rise is over 100 degrees, increase the wattage by 10%.
- For rapid start-up and to allow for colder material entering the hose, increase the wattage by 25% and use a temperature controller with a temperature sensor.

Warning !! FTP Heat Tape is essentially resistance wire in a mountable high temperature adhesive backed tape. In order to be used properly, the heater design must be done and the math worked out, following the example provided.

Electrical Resistance Heating Tape — Adhesive Backed

Engineering Example

A 10 ft. stainless steel braided hose, 1/2" O.D., needs to be heated to 400°F from 70°F. Insulation: 1/2". The voltage is 220V.

- Determine the Length.** To cover the hose completely would take $\pi \times 1/2" \times 120" = 188$ sq. in. A 12" length of 1/2" tape would cover 6 sq. in. of hose; therefore, 31 ft. of 1/2" tape would completely cover the hose, spiral wrapped edge to edge.
- Determine the Watts.** Total Power (Tp) = P × L × ΔT
From the chart, P = .09 for a 1/2" hose with 1/2" insulation, therefore
Tp = .09 × 10 ft. × (400-70) = 297 Watts. For rapid start-up and to compensate for colder material flowing through the hose, increase the wattage by 25% to 400W.
- Calculate the Ohms per Foot.** The ohms/ft. = E² ÷ (Tp × L)
Therefore ohms/ft. = 220² ÷ (400W × 31 ft.) = 3.9 ohms per ft.
- Calculate the Watts per Foot.** The Watts per ft. = Tp ÷ L
Therefore the watts/ft. = 400 watts ÷ 31 ft. = 12.9 watts/ft.
- Choose Heat Tape Material from the Table.** From the table, the FTP00035, 1/2" tape with four conductors and silicone adhesive in the parallel/series connection at 4.0 ohm/ft. would fill the requirements. The required 12.9 watts/ft. is well under the maximum rating of 62 watts/ft.

Bulk roll of Heat Tape

CHART NOTES

Resistance Wiring

Type 1. Ohms per foot, with all conductors in a *Parallel Connection*.

Type 2. Ohms per foot, with all conductors in a *Series Connection*.

Type 3. Ohms per foot, with all conductors in a *Parallel - Series Pair Connection*.

Max. Watts/ft. in Ohms-Per-Foot Table

The maximum wattage per lineal foot is when the heat tape is applied to a metal heat sink at room temperature. Reduce these ratings linearly to zero watts output at 500°F. Adhesion to heat sink along entire length is important to prevent burnout when tape is used near maximum wattage rating.

Example: A tape that is 70W/ft. maximum watt density at 74°F, would derate to about 35W/ft. maximum watt density at 250°F.

Heating Tape — Ohms-Per-Foot Table

Width		1/8" (4.2 mm)		1/4" (6.3 mm)		1/2" (12.7 mm)

FTP0009	FTP1009	21.3	13	10.6	42.6	20	5.3	21.3	85.2	32	
FTP0010	FTP1010	26.8	10	13.4	53.6	16	6.7	26.8	107.2	25	

Accessories

	16-20 Ga.	22-26 Ga.
Terminal Kit for 1-wire	FTP00911	FTP00913
2-wire	FTP00912	FTP00914
Additional solderless crimps	FTP00920	FTP00921
Aluminum/Silicone Heat Transfer Tape	3/4" × 27 ft. FTP00930	1-1/4" × 27 ft. FTP00931

Terminal kits are required to terminate the bulk tape into a finished heater assembly. To determine 1-wire or 2-wire, refer to the number of wires being terminated at the end of the heater. For example, to complete the heater in a parallel connection, two 1-wire terminal kits would be required because one lead exits from each end of the heater assembly. The "solderless crimps" are used to complete the non-lead end of the heater. The Heat Transfer Tape is used to provide additional adhesion, placed over the heating tape.

Ordering Information — Bulk Heat Tape

Heat Tape can be ordered in **bulk in 50 or 100 ft. rolls** or in custom assemblies. The part number for each item is completed by filling in the with a number from the following table to detail adhesive type and tape width:

- | | | |
|---------------------------------|---------------------------------|---------------------------------|
| 1—silicone, 1/6" wide (1 cond.) | 2—acrylic, 1/6" wide (1 cond.) | 3—silicone, 1/4" wide (2 cond.) |
| 4—acrylic, 1/4" wide (2 cond.) | 5—silicone, 1/2" wide (4 cond.) | 6—acrylic, 1/2" wide (4 cond.) |

High Temperature Heating Tape

Flexible Heating Tape — Duo-Tape®

Design Features:

- * 1400°F (760°C) temperature rating
- * 2 ft. (610 mm) long high temperature lead wires on one end
- * Highly flexible & rugged, knitted design
- * High, medium and low watt density designs
- * Constant wattage (min. ohm change cold to hot)

Typical Applications:

- ➔ Laboratory, general application
- ➔ Research and Development
- ➔ Pilot plant research heaters
- ➔ High temperature hose heating
- ➔ Industrial applications, anywhere high temperature and flexibility are required (non-hazardous and dry locations only)

OPTIONS

- 1. Plug** A 120V plug can be ordered on indicated heaters only as a custom assembly. Since the leads of the Duo-Tape are on one end, the plug is a single molded unit.
- 2. Lead Wire** Standard lead wire length is 2 ft. (61 cm)

Note: When a plug is requested, lead wire length may be 2 ft. or shorter. Optional lengths may be ordered to 8 ft. For special length, width, watts or volts—contact **Tempco**.

Tempco Heating Tapes

We provide high temperature, flexible electric heating elements. They were developed to offer the unique convenience of wrap-on heat for tubing, laboratory apparatus or any dry environment application where flexible surface spot heat is required.

Heating tapes are offered in many standard sizes, having watt densities from 3.25 to 13 watts per square inch, and temperature ratings to 1400°F (760°C).

CONSTRUCTION

The construction begins with bundled, fine strand resistance wire, 37 to 40 gauge, covered with a minimum of 2 layers of high temperature braided AMOX yarn. The insulated resistance wire is then knitted into a serpentine configuration, forming a flat tape. Once the lead wires are attached, most tapes have an additional braided, dielectric protection layer of AMOX yarn for use on conductive (metal) surfaces.

DURABILITY FEATURE

Unlike other straight element heating wires and tapes, knitting allows for cushioning during heating and cooling. The element expands in all directions rather than one, virtually eliminating “thermal growth.” In addition, knitting prevents the tape from tensile stress when stretched (a typical problem of elements applied to flexible hoses).

LOW WATT DENSITY, WELL DISTRIBUTED HEAT FEATURE

Knitting allows dense distribution of wire per unit length of tape. This feature provides longer life resulting from lower watts per inch of wire. (A typical 1 inch wide tape may contain 10 inches (25.4 cm) of wire element.)

DUO-TAPE

Duo-Tape is a breakthrough design innovation that allows two wires to be knitted side by side. The advantage is that the lead wires may be attached on the same end rather than opposite ends. The balance of the tape is constructed the same as the other single wire tapes.

Flexible Heating Tape — Duo-Tape®

Duo-Tape Standard (Non-Stock) Sizes and Ratings

Part Numbers in table are for heaters without plugs.
Plugs are available for 120V heaters only.

Duo-Tape® — Silicone Rubber Insulated Flexible Heating Tapes

The same proven internal design of all Duo-Tapes of knitted Amox yarn over serpentine resistance is used. The heavy silicone rubber extruded outer cover provides abrasion and dielectric protection for the heating element.

Silicone Rubber Duo-Tapes may be used on conductive surfaces, and in applications where moisture, chemical and abrasion resistance is required.

Design Features:

- * 400°F (204°C) temperature rating, non-energized exposure to 500°F (260°C)
- * 2 ft. (610 mm), 16 gauge, 600 VAC silicone rubber insulated leads
- * Vulcanized fiber reinforced silicone rubber end cap
- * Standard low watt density of 4.3 w/inch²
- * All standard 120 Volt units are provided with plug
- * Multi strand wire element for maximum flexibility
- * Highly flexible and durable design

Standard Sizes — with 2 ft. leads, 120V only with plug

Silicone Rubber Heating Tapes with Thermostat or Time Percentage Control

FTF3 with Adjustable Thermostat Control

* Adjustable Thermostat: 50°F to 425°F (10°C to 218°C)

NOTE: The heat sensing plate on the bottom of the thermostat enclosure must make firm contact with the load being sensed.

Design Features:

- * Maximum exposure temperature: 450°F (232°C)
- * Moisture and chemical resistant silicone rubber extruded outer sheath
- * Fiberglass reinforced serpentine-wound stranded heating element
- * Rapid heat-up and thermal response
- * Power density: 6.0 watts/inch²
- * 6 foot (2 m) long power cord with
120VAC: standard 2-prong NEMA 1-15 plug
240VAC: bare wire connection
- * Suitable for electrically conductive surfaces

FTF4 with Time Percentage Control

* Easily adjust percentage of time heater is on and off: 0 to 100%

NOTE: The time percentage control varies the length of time the heater is the on vs. off heating mode. The controller does not use a temperature sensor and therefore requires occasional supervision under changing load conditions.

Typical Applications

- ↔ Valves
- ↔ Pipes
- ↔ Bearings
- ↔ Pumps
- ↔ Gas Tubing
- ↔ Filter Housings
- ↔ Actuators
- ↔ De-icing

The FTF3 thermostats shown have a °F temperature label. For a °C temperature label, consult Tempco.

*Derated watt density due to maximum current limits

Thick Film

Printed Thick Film Heating Elements

Tempco's flexible Thick Film Heating Elements offer a wide range of design options for OEM applications. By utilizing printed thick film technology, the heaters can more efficiently spread the heat across the surface, and are more cost effective systems when compared to etched foil or wire elements.

The ink can be designed in various patterns and densities, concentrating power exactly where it is needed. The element traces can be widened or narrowed to allow for cutouts and holes.

Construction

Conductive and resistive inks are printed on a film substrate layer, and then covered with another film layer laminated together with pressure sensitive adhesive (PSA). Typically, the film layers are .005" thick thermoplastic or thermoset polymers, like polyester (up to 105°C) or polyimide (up to 180°C), that exhibit good thermal conductivity while serving as electrical insulators.

An additional layer of PSA can be added to the bottom of the assembly so the element can be bonded directly to the surface to be heated, ensuring excellent thermal transfer.

Cooler Operating Temperature

By spreading the heat trace over a larger percentage of the surface of the element, as compared to wire wound elements, a Tempco thick film element will operate at a cooler operating temperature due to the lower watt density in a given area. The low thermal mass of the heater allows the heat to be transferred more quickly to the surface to be heated.

Controls and Sensors

More exacting control is available for the heaters as well. Thermostats and temperature sensors can be mounted directly on the heaters for direct temperature control. Thermal fuses/TCOs are available for overtemperature/runaway condition protection.

Typical Applications

- ↔ *Blanket Heaters for Battery Back up Systems*
- ↔ *Video Camera Lens Defoggers*
- ↔ *Outdoor Enclosure Warmers*
- ↔ *Fluorescent Bulb Starters*
- ↔ *Clear LCD Heaters*
- ↔ *Packaging/Sealing Bar Element*
- ↔ *Medical Equipment*
- ↔ *Food Service Equipment*
- ↔ *Mirror Heater/Defoggers*

Specifications

Overall Maximum Temperature: 900°F (482°C)

Substrate Materials – Maximum Ratings

Polyester: 221°F / 105°C

Polyethylene: 221°F / 105°C

Polyvinyl Chloride (PVC): 221°F / 105°C

Thermoset Laminate: 284°F / 140°C

Polyethylene Naphthalate (PEN): 320°F / 160°C

Polyimide (Kapton®): 392°F / 200°C

Silicone Rubber: 392°F / 200°C

Pressure Sensitive Adhesive

Acrylic: 221°F / 105°C

High Temperature Acrylic: 300°F / 149°C

Silicone: 392°F / 200°C

Dimensional Limits

Minimum Width: 0.25" (6mm)

Maximum Length: 30" (508mm)

Heaters can be manufactured that have a length much greater than the width. Up to 24" x 98" have been made.

Electrical

Voltage: Up to 277 VAC or VDC

Watt Density: Standard, up to 25 w/in².

Can go higher under certain conditions.
Consult Tempco with your requirements.

Dielectric Strength: 1500 VAC

Ordering Information

Custom Engineered / Manufactured Heaters

Understanding that an electric heater can be application specific, Tempco will design and manufacture a Thick Film Heater to meet your requirements. Copy the form on page 9-22, fill it out, and fax it to Tempco to receive a quote.

Introduction

Tubular Heater Introduction

Typical Applications

- ↔ *Forced air heating*
- ↔ *Thermal forming machines*
- ↔ *Direct immersion in liquids*
- ↔ *Comfort radiant heaters*
- ↔ *Welded, brazed or clamped to tanks and pipes*
- ↔ *Hot runner molds*
- ↔ *Combination radiant and convection heater for ovens and dryers*

Design Guidelines

Resistance Tolerance

Tubular heating elements have an Industry Standard Resistance Tolerance of +10%, -5% which translates to a Wattage Tolerance of +5%, -10%. Consult Tempco if tighter tolerances are required for your application.

Watt Density

Element Watt Density is the wattage dissipated per square inch of the element sheath surface and is critical to the proper heating of the application and to the life expectancy of the heater. The Watt Density is calculated with the following formula:

$$\text{Watt Density (w/in}^2\text{)} = \frac{\text{Element Wattage}}{\pi \times \text{Element Dia.} \times \text{Element Heated Length}}$$

For a particular application element watt density will govern element sheath and internal resistance wire temperature. Factors to consider when choosing a suitable watt density are:

1. Many materials are heat sensitive and can decompose or be damaged if the element is running too hot.
2. Air and other gases that are poor conductors of heat require watt densities matched to the velocity of the gas flow to prevent element overheating.
3. When heating hard water or cleaning solutions, mineral deposits can build up on the element sheath, acting as a heat insulator and raising the internal element temperature. If these deposits cannot be periodically removed, use a lower watt density element to increase heater life expectancy.
4. When tubular heaters are used in UL recognized oil immersion heating applications the heated oil temperature cannot exceed 257°F (125°C). Steel sheath elements are limited to 60 watts/in². Tubular heaters with steel or stainless steel bulkhead fittings used in UL oil heating applications are not pressure rated. Contact Tempco for other application specific UL file information.
5. Page 16-12 in the Engineering Data Section of this catalog lists the maximum recommended heater watt density for many materials. For additional information and help please contact Tempco.

Construction Characteristics

Tempco Tubular Heaters are the most versatile and widely used source of electric heat for industrial, commercial and scientific applications. They can be designed in a wide range of electrical ratings, diameters, lengths, terminations, and sheath materials. Important and useful characteristics of tubular heaters are that they can be formed into virtually any shape, brazed or welded to any metal surface, and cast into metals. Carefully researched manufacturing methods and quality materials have made Tempco tubular heaters stand apart from other heating elements claiming similar performance.

The cutaway view shows the tubular heater's basic construction. A computer-designed helical coil of 80% Nickel 20% Chromium alloy resistance wire is fusion welded to the nickel-coated steel terminal cold pin. This coil assembly is precisely stretched and centered in the element metal sheath, which is then filled with Grade "A" Magnesium Oxide powder (MgO). The filled tube is then compacted by a roll reduction mill

into a solid mass, permanently stabilizing the coil in the center of the tube while providing excellent heat transfer and dielectric strength between the coil and the sheath.

Tempco Tubular Heating Elements are certified as Recognized Components by Underwriters Laboratories (File Number E90771) under CCN UBJY2/8 to meet UL Standard UL1030. Tempco's equivalent CSA File Number is 043099. Tubular elements with bulkhead fittings have also been certified for oil heating (File Number MP4154) under CCN MDST2/8 to meet UL Standard 574.

If you require UL, CSA, or other NRTL agency approvals, please specify when ordering.

Important Note — When heating any substance it is critical to match the heater watt density, operating temperature and sheath material to the specific medium being heated. Failure to do so will result in premature heater failure and/or unsafe conditions.

Table 2 Sheath and Heated Length Tolerance (applicable for all diameters)

Tubular Heater Standard Sheath Materials

The selection of a sheath material should be made based on the chemical composition of the gas or liquid being heated, the characteristics of the materials entering the solution, and the processes controls. A material selection guide can be found on page 16-12.

NOTE: The best source for chemical/sheath compatibility is the supplier of the gas or liquid to be heated.

The following are the most common tubular element sheath materials. For other materials consult Tempco.

Incoloy® 840: Nickel 18-20%, Chromium 18-22%, Iron balance. Has about 10% less nickel than Incoloy 800. Used in many air heating applications, where it has exhibited superior oxidation resistance at less cost than Incoloy 800.
Maximum Sheath Temperature: 1600°F / 871°C

Incoloy® 800: Nickel 30-35%, Chromium 19-23%, Iron balance. The high nickel content of this alloy contributes to its resistance to scaling and corrosion. Used in air heating and immersion heating of potable water and other liquids.
Maximum Sheath Temperature: 1600°F / 871°C

316 Stainless Steel: Chromium 16-18%, Nickel 11-14%, Iron balance. Modified with the addition of Molybdenum (2-3%) to improve corrosion resistance in certain environments, especially those which would tend to cause pitting due to the presence of chlorides. Applications include deionized water.
Maximum Sheath Temperature: 1200°F / 649°C

304 Stainless Steel: Chromium 18-20%, Nickel 8-11%, Iron balance. Used in the food industry, medical, and chemical heating.
Maximum Sheath Temperature: 1200°F / 649°C

321 Stainless Steel: Chromium 17-20%, Nickel 9-13%, Iron balance. Modified with the addition of Titanium to prevent carbide precipitation and resulting intergranular corrosion that can take place in certain mediums when operating in the 800-1200°F (427-649°C) temperature range.
Maximum Sheath Temperature: 1200°F / 649°C

Copper: Standard Copper Alloy

A low temperature, inexpensive material used mainly for clean water heating.

Maximum Sheath Temperature: 350°F / 177°C

Steel: Low Carbon

Used for high to low viscosity oils, asphalt, tar, wax, molten salt, heat transfer liquid media and other compatible solutions.

Maximum Sheath Temperature: 750°F / 399°C

Other Sheath Materials: Available for a limited number of diameters. Consult Tempco for more information.

Inconel® 600: Iron 6-10%, Chromium 14-17%, Nickel balance
Maximum Sheath Temperature: 1800°F / 982°C

Incoloy® 825: Nickel 38-46%, Chromium 19.5-23.5%, Molybdenum 2.5-3.5%, Iron balance
Maximum Sheath Temperature: 1100°F / 593°C

Maximum Sheath Temperature refers to the maximum temperature of the element sheath material.

Consideration must be given to the maximum temperature that can be safely applied to the heated material.

See **Watt Density** on the previous page for additional information.

Incoloy® and Stainless Steel Element Sheath Surface Treatments

Standard Surface Finish

The standard tubular heater element surface finish is a black chrome oxide, produced when the element is annealed prior to forming in an exothermic atmosphere furnace.

Optional Surface Finishes

Bright Annealing is an option where the tubular heater is annealed in a dissociated ammonia atmosphere furnace. This produces a clean metallic appearance without surface-etching the sheath.

Electro-Polishing is an electrochemical process that removes surface imperfections and contaminants, enhancing the corrosion resisting ability of the sheath. The resulting surface is clean, smooth and has a bright finish; it is highly recommended for medical, food and other harsh applications.

Passivation removes surface contamination, usually iron, so that the optimum corrosion resistance of the stainless steel is maintained. Surface contamination could come from the small amount of steel that may be worn off a tool during the manufacturing process.

Standard Tubular Heater Terminations

Select the termination style that meets your requirements for space, accessibility and reliability.

TYPE T—STANDARD

Threaded stud terminal with ceramic insulator.

Element Diameter		Standard Thread Size
in	mm	
.260	6.6	6-32
.315	8.0	8-32
.375	9.5	8-32
.430	10.9	10-32
.475	12.0	10-32
.625	15.9	10-32

TYPE TM—Stud with Mica Insulator

Stud terminal with mica insulator.

Other thread sizes and lengths are available.

TYPE P—Plain Pin

Plain terminal pin. Specify Length "L." Standard 1/2" (12.7 mm) pin length.

Element Diameter		Nominal Pin Diameter	
in	mm	in	mm
.260	6.6	.091	2.3
.315	8.0	.105	2.7
.375	9.5	.105	2.7
.430	10.9	.125	3.2
.475	12.0	.125	3.2
.625	15.9	.160	4.1

TYPE SF & SF9 (90°)—Quick Connect

1/4" male (3/16" optional) quick connect (slip-on) terminals are welded to the element terminal pin. They provide quick and easy installation of lead wire with excellent holding force. Specify if an optional mica or ceramic insulator is required. Material: Nickel-Plated Steel.

TYPE L_— & L9_— (90°)—Terminal Lug

A nickel-plated steel lug is projection welded to the terminal pin straight (Type "L_—") or at 90° to the sheath (Type "L9_—"). Specify if an optional mica or ceramic insulator is required.

Standard LA, L9A 10-32 screw Optional LB, L9B 8-32 screw

Tubular Heater Standard Terminations

TYPE E__ – Right-Angle Lug Terminal

- Type E1A** 8-32 screw with mica insulator (Standard)
- Type E1B** 8-32 screw with ceramic insulator
- Type E2A** 10-32 screw with mica insulator
- Type E2B** 10-32 screw with ceramic insulator

TYPE A__ – Right-Angle Terminal (for use when space is tight)

- Type A1A** 8-32 screw with mica insulator
- Type A1B** 8-32 screw with ceramic insulator
- Type A2A** 10-32 screw with mica insulator
- Type A2B** 10-32 screw with ceramic insulator (Standard)

TYPE F1__ – Lead Wire

When selecting a lead wire type, consideration should be given to the maximum ambient temperature the lead wire is exposed to and the environment it is in. Lead wire options Type R1 and W1 below will provide additional environmental protection to the Type F1 lead wire selected.

- Type F1A** 250°C (482°F) TGGT insulation
- Type F1B** 450°C (842°F) MGT insulation
- Type F1C** 200°C (392°F) Teflon® insulation
- Type F1D** 150°C (302°F) Silicone Rubber insulation
- Type F1E** 105°C (221°F) Thermoplastic (PVC) insulation

Standard 10" (254 mm) leads with fiberglass sleeve. Specify if other lead length is required.

F1C F1D & F1E available with optional heat shrink sleeving. Specify when ordering if required.

Lead wire gauge is determined by the ampacity of the heater with the lead wires in an ambient temperature of 40°C (104°F). Higher ambients may require heavier gauge lead wires.

Lead Wire Termination Options

TYPE R1__ – Flexible Armor Cable

- Type R1A** Galvanized cable
- Type R1B** Stainless steel cable

Provides excellent protection to lead wires in abrasive environments.
Standard 10" (254 mm) armor cable over 12" (305 mm) leads.
Specify if other lead and/or cable lengths are required.

TYPE W1__ – Stainless Steel Wire Braid

Provides good protection to lead wires where flexibility is needed.
Standard 10" (254 mm) braid over 12" (305 mm) leads.
Specify if other lead and/or cable lengths are required.

Tubular Heater Standard Mounting Methods

TYPE B – Bulkhead Fittings

Bulkhead fittings provide a leakproof method for mounting tubular heating elements through tank walls. Standard are round brass fittings crimped onto the element that are suitable for low pressure water (up to 80 psig) and non-pressure air. A brass hex nut, plated steel washer and gasket are supplied as standard.

Fittings for vacuum or high pressure gas and liquid use are silver brazed or TIG welded. Method will vary by material and application. Fittings in table are most commonly used. Special fittings can be made to meet your application requirements.

Standard fitting location is with threads flush at the end of the element sheath as shown below. For other locations specify distance from end of sheath.

CAUTION Do not locate the fitting over the heated section of the element.

Specify: Material; Round (Standard) or Hex Flange; Thread Type and Length; Location on Sheath; Crimped, Brazed, or Welded Construction.

Fitting Attachment Method — General Guidelines

These are guidelines only. Consult Tempco if you require assistance in determining the method best suited to your application.

Fittings Crimped: Low pressure water (up to 80 psig) and non-pressure air applications

Fittings Brazed: Non-ferrous alloys (copper) and dissimilar non-weldable metals

Fittings Welded: High pressure liquids and gases, and high temperature applications

Standard Bulkhead Fittings For Tubular Heaters — Round Flanged Standard

TYPE MC – Mounting Collar

Plated steel mounting collars are locked in place with a set-screw and serve as an adjustable stop for through-the-wall mounting. Collars are shipped in bulk unless otherwise specified. Mounting collars can be ordered with the heater or purchased separately.

TYPE LR – Locator Washer

Locator washers are permanently attached to the heater sheath by staking/crimping and are used to limit the movement of the heater while allowing for expansion and contraction of the heater sheath. When ordering, specify location from end of sheath.

Multiple element heater assembly with a custom mounting bracket.

TYPE MF – Mounting Bracket

Tempco's made-to-order mounting brackets are made from 18 gauge stainless steel for strength and stiffness. It is an economical way to mount the heater in non-pressurizing, non-liquid applications. Unless otherwise specified, the bracket will be located 1/2" from the edge of the heater sheath. OEM quantity brackets are manufactured by Tempco on our own high speed precision N/C Turret Press. The standard method of attaching the tubular element to the bracket is staking or crimping.

The rectangular mounting bracket shown at right is a popular made-to-order design. Specify all dimensions shown when requesting a quote.

Custom brackets of any size, thickness or material can be supplied to meet your requirements.

Tubular Heater Standard Moisture Seals

Magnesium Oxide (MgO) is used as the insulating material in Tempco tubular heaters because of its excellent thermal conductivity and dielectric strength. However, MgO is hygroscopic and can absorb moisture from the atmosphere. This absorption of moisture may be detected when an Insulation Resistance (IR) test is done with a megohmmeter prior to energizing the heater circuit. In very humid environments, circuits utilizing a GFI (ground fault interrupter) for safety may experience nuisance tripping when energizing the heater.

The Tempco manufacturing process produces a dry element with an IR of several thousand megohms minimum. However, after shipment and depending on humidity levels and storage time, a heater can absorb moisture and show a decrease in IR. In many cases, depending on the supply voltage and the application, the heater can be safely energized and will dry itself out.

Style SS—Silicone Resin Seal

A brushed-on coating that penetrates the MgO, offering economical moisture protection under humid storage conditions.

Maximum Usable Termination Temperature: 390°F (200°C)

UL Rated Maximum Termination Temperature: 221°F (105°C)

Type V2A: conformal coating

Type V2B: silicone oil

Style SER—RTV Seal

RTV (room temperature vulcanizing) silicone rubber adhesive sealant provides a good moisture seal.

UL Rated – Maximum Termination Temperature:

Type R: 302°F (150°C)

Type R1: 392°F (200°C)

If a heater has absorbed moisture, a safe and effective method of drying it out prior to installation is to bake it in an oven at 300°F (149°C) until an acceptable IR reading is obtained. When possible, removing the terminal hardware will expedite this process. If this method is not practical consult factory for other recommendations.

For applications where moisture absorption would be unacceptable Tempco has several optional element end seals to retard absorption of moisture in the MgO. If a true hermetic seal is required, ceramic to metal end seals (Type H) are available. With any of these seals, the maximum recommended termination temperature in the seal area must not be exceeded.

Style SEH—Epoxy Resin Seal

Epoxy resin provides a moisture resisting barrier.

UL Rated – Maximum Termination Temperature:

Type V: 194°F (90°C)

Type V1: 266°F (130°C)

Type V4: 392°F (200°C)

TYPE M—Self Sealing Heat Shrinkable Boot with Lead Wire

This type seal is used primarily for defrost heaters.

Temperature range -67 to 300°F (-55 to 149°C).

Standard 10" (254 mm) leads; specify longer leads if required.

Heater Diameter		"A"		"B"	
in	mm	in	mm	in	mm
.260	6.6	2-1/8	54	7/16	11
.315	8.0	2-1/8	54	7/16	11
.430	10.9	2-1/8	54	9/16	14

TYPE H—Hermetic Seal

Ceramic to metal seals provide an airtight seal for temperatures to 500°F (260°C) in the seal area.

Heater Diameter		"A"		"B"		Thread Size
in	mm	in	mm	in	mm	
.260	6.6	1-11/16	43	13/32	10	8-32
.315	8.0	1-11/16	43	13/32	10	10-32
.430	10.9	2-1/8	54	21/32	17	1/4-28
.475	12.1	2-1/8	54	21/32	17	1/4-28

Tubular Heater Standard Bend Formations

Forming Tubular Elements

The MgO insulation used in tubular heating elements is compacted by reducing the element diameter in a roll reducing mill. The elements are then annealed in a controlled atmosphere furnace to relieve the metal stressing (work hardening) that takes place during the rolling to size reduction of the sheath. Annealing brings the metal back to a soft state, allowing the element to be bent into virtually any configuration. However, since forming also work hardens the metal, some precautions must be observed in order to prevent the sheath from breaking during bending or developing stress cracking marks.

Note: Elements with tight bends and some applications require the bends to be recompacted in special dies to restore the integrity of the insulation density and maintain dielectric strength. Large bends do not need to be recompacted.

Avoid bends within a minimum of 1/2" of the terminal pin and resistance wire junctions unless the bending radius is a minimum 3" (75 mm).

Elements are being fed into a roll reducing mill to compact the MgO insulating powder. After rolling, the elements are annealed in the conveyor belt furnace seen in the background.

Note: Smaller inside bending radius than listed in the table can be factory accomplished. It requires special forming techniques to prevent damage to the tubular heater. Consult Tempco with your requirements.

Element Diameter		Factory Bend Minimum R		Field Bend Minimum R		Minimum S	
in	mm	in	mm	in	mm	in	mm
.260	6.6	3/8	9.5	3/4	19.1	1/2	12.7
.315	8.0	1/2	12.7	1	25.4	1/2	12.7
.375	9.5	9/16	14.3	2	50.8	5/8	15.9
.430	10.9	3/4	19.1	2-1/2	63.5	3/4	19.1
.475	12.0	7/8	22.2	2-1/2	63.5	1	25.4

Tubular Heaters for Hot Runner Manifolds

Construction

Hot Runner Manifold Heaters are made to order using .260", .315" or .375" diameter Incoloy® tubular heating elements. Commonly specified terminations include threaded stud or wire leads.

Important Information on Forming

Precise forming of the tubular heater is required for it to seat properly into the milled slot in the manifold. To ensure this fit, we use a physical template as an inspection tool in the forming process to verify bending accuracy.

The template is a reproduction of the milled slot in the form of a plastic or aluminum plate. It can be customer supplied or manufactured by Tempco. Only through the use of a forming template is bending accuracy guaranteed.

When ordering for new applications:

Supply a drawing or forming template if available.

When ordering for replacement:

Supply a sample heater and/or a drawing of the manifold indicating the milled heater slot.

Note: For heaters originally manufactured by Tempco only the Tempco Part Number is required.

Examples of Mold Heater Formations

*Consult Tempco With Your Requirements.
We Welcome Your Inquiries.*

Heat Transfer Cement

When tubular heating elements are used in a milled slot any air gaps between the element and the plate can cause hot spots on the element. Heat transfer cement is used to fill these air gaps, permitting the heater to run cooler, thus maximizing its life expectancy. Cement is water soluble and can be applied with a putty knife or trowel and can be used in temperatures up to 1250°F (675°C).

Part Number SEA-108-101 (1 Gallon)
SEA-108-102 (1 Quart)

Ordering Information

TEMPCO will design and manufacture a Tubular Hot Runner Manifold Heater to meet your requirements.

Please Specify the following:

- Wattage and Voltage
- Diameter
- Heated Length
- Unheated Length at each end
- Termination Type (see pages 10-4 and 10-5)
- Supply a Drawing or Template

Tubular Heater Standard (Non-Stock) and Stock Sizes and Ratings

Standard tubular heaters are fully annealed for field or factory bending. They are inventoried with plain pin extensions that allow quick installation of Termination Types T, TM, F1, A, E, SF, SF9, L and L9. Part Numbers listed are for heaters with Type “T” termination. For other terminations a Part Number will be issued at time of order.

Ordering Information

Catalog Heaters

Part Numbers in **RED** are in stock for immediate delivery with Type T termination.

Termination Types TM, F1, A, E, SF, SF9, L, and L9 can be applied to stock heaters. For these terminations the Heater Part Number will be issued at time of order.

Non-Stock Part Numbers are standard designs that are available straight in 2 weeks and formed in 4 weeks.

Custom Engineered/Manufactured Heaters

An electric heater can be very application specific; for sizes and ratings not listed, **TEMPCO** will design and manufacture a tubular heater to meet your requirements. **Standard lead time is 4 weeks.**

Please Specify the following:

- Type of Application
- Wattage and Voltage
- Diameter
- Heated Length
- Unheated Length at Each End
- Sheath Material
- Termination Type
- Type of Mounting, if Required
- Type of Moisture Seal, if Required
- Bending Configuration (supply Drawing and/or Sample)

Tubular Heaters

Finned Tubular Heaters

Finned Tubular Heaters

Shown with optional bulkhead fittings

Shown with optional mounting flange at end of sheath

Design Features

- * Copper brazed steel fins on steel sheath standard. Aluminum based protective coating available.
- * Stainless steel fins on stainless alloy sheath standard.
- * .315, .430, & .475 Sheath diameters standard. .260 & .375 diameters optional. .625 diameter is special order in limited lengths.
- * 5/16" fins standard on .315 diameter units, 3/8" fins on .430 & .475 diameter heaters. See physical specifications for optional sizes.
- * Monel fins on Monel sheath available on special order only. Consult Tempco for details.
- * 4.5-5 fins/in standard. 3.5-6 fins/in optional
- * Steel finned catalog heaters have brazed brass bulkheads. Welded steel or staked bulkheads available. Stainless steel welded bulkheads are standard on cataloged stainless steel finned heaters. Fittings will have UNF threads unless custom threads are specified. See page 10-16B.
- * Custom Mounting Brackets can be provided. See page 10-16C.

Construction Characteristics

THF finned heaters are constructed using Tempco's robust tubular element as the basis of construction. Fin material is continuously spiral wound tightly onto the element surface to increase the convective surface area for air and non-corrosive gas heating. Fin spacing and size have been tested and selected to optimize performance. Steel finned units are then furnace brazed, bonding the fins to the sheath to increase conductive efficiency. This allows higher wattage levels to be achieved in the same flow area and produces lower sheath temperatures prolonging heater life. For higher temperature or more corrosive applications, stainless steel fins securely wound on alloy sheath are available. Application conditions such as vibration and toxic/flammable media should be taken into consideration when installing heaters. Protective coatings are available for use on steel finned heaters for mildly corrosive or high humidity applications.

Finned tubular elements are safer to operate than open coil heaters as the risk of fire from combustible particles in the flow stream and electrical shock is minimized. Increased service life and less maintenance required due to the rugged finned element construction. Power loading (w/in) of finned tubulars can be matched to any open coil installation. Pressure drop when using finned elements will be slightly more than with open coil but normally not enough to matter. It varies with flow velocity ranging from .04"H₂O at 500 fpm to about .30"H₂O at 1500 fpm when elements are banked together in several rows for duct heaters.

- * Type T Post terminals standard. .315 dia. heaters have 8-32 threads and 10-32 threads are used on .430 & .475 dia. heaters. Full selection of tubular terminations available See page 10-4.
- * Catalog units have V2A silicon resin seals as standard. Most all other tubular seal options available. See page 10-16C.
- * Numerous factory bending formations available. Supply Tempco with dimensional sketch, drawing, or photo. See page 10-9.
- * Bright annealed, Nickel plating, Hi-heat aluminum, or Hi-heat flat black finishes available Furnace brazed Stainless Steel fins available as an option.
- * U2 & M2 formations are ideal for duct heating applications
- * Unfinned sections in bends or straight lengths of heated area can be provided on heaters up to 32wsi sheath watt density.
- * Catalog listed Steel heaters are UL recognized for use up to 750°F sheath temperature & Stainless construction up to 1000°F at a maximum of 85 wsi on sheath.

The finned tubular elements are normally used in forced or free convective air applications at low to medium temperatures. Typical applications are for heating indoor clean air from ambient conditions up to 250/275°F for steel finned units & 550°F for stainless fins. Steel finned heaters can be operated up to 750°F on sheath and stainless steel finned heaters used up to 1200°F (1000°F UL limit) sheath temperatures. Nominal sheath watt density and recommended operating conditions for the cataloged heaters are included in the table headings & footnotes. Lower airflows will require lower watt density ratings. Consideration should be given to using un-finned alloy sheath tubular elements for heating to higher outlet air temperatures or if operating in higher ambient air. Application conditions of flow velocity and inlet/outlet temperatures will govern sheath watt density to be used. The airflow graphs and examples presented will help with determining proper heater watt density. The cataloged designs are suitable for most low temperature applications that will be encountered.

Finned Tubular Heaters are UL recognized and CSA certified up to 85W/in² and 750°F for Steel sheath/steel finned and .85W/in² and 1000°F for Alloy or SS sheath/SS finned. The UL File Number is E65652 (CCN KSOT2/KSOT8).

If you require UL, CSA, or other NRTL agency approvals, please specify when ordering.

Typical Applications

- ➔ Convective air & gas heating in ducts
- ➔ Load resistor banks
- ➔ Moisture removal (dehumidification)
- ➔ Curing ovens & plastics dryers
- ➔ Low/medium temperature heat treating
- ➔ Convection ovens for food preparation
- ➔ Exhaust gas heating
- ➔ Forced air electric heaters
- ➔ Heat pump auxiliary systems
- ➔ Return air heating
- ➔ Inert Industrial process gas heating
- ➔ Organic Resins & Paint curing, baking & drying
- ➔ Autoclaves
- ➔ Film & ink drying
- ➔ Hopper heating
- ➔ Chemical processing & core drying
- ➔ Food Roasting & baking
- ➔ Textile & Varnish drying
- ➔ Heating for rail & marine applications

TUBULAR ELEMENT SIZES & MATERIALS

Sheath Diameter: .315", .375", .430" and .475"

Sheath Material: Steel, 304L SS, 316L SS, Incoloy 840 and Incoloy 800

Sheath Lengths: 12" to 196" depending on sheath diameter

Sheath Material Selection

Standard steel finned heaters are ideal for use in low temperature clean air applications not containing toxic contaminants or high humidity. When coated with one of the optional coatings available they are suitable for high humidity, organic vapors, or mildly corrosive applications. Stainless steel finned heaters should be employed for higher temperature uses or if the air/gas contains vapors known to be corrosive to steel. Optional nickel plated heaters can also be provided.

PERFORMANCE RATINGS

Maximum Temperature:

Steel fins on steel sheath—750°F (400°C)

Steel fins on Incoloy or SS sheath—750°F (400°C)

Stainless Steel fins on stainless, Incoloy 840 or Incoloy 800 sheath—1200°F (650°C)

Maximum Element Power Density Limits:

.315 dia.—84 watts/linear inch

.375 dia.—100 watts/linear inch

.430 dia.—115 watts/linear inch

.475 dia.—127 watts/linear inch

These values are for heaters with 3/8" fins at 4.5-5 fins/inch.

De-rate to 83% for heaters with 5/16" fins or that have less than 4.5 fins/inch.

ELECTRICAL RATINGS

Maximum Voltage: Up to 600VAC (480V for UL)

Resistance Tolerance: +10%, -5%

Wattage Tolerance: +5%, -10%

Sheath watt density range: 20-85 wsi (2-13 w/cm²), @ 4.5-5 fins/in

OPTIONAL FEATURES

Bulkhead Fittings: Brazed brass are standard. Welded or brazed Steel & SS optional. UNF threads standard, metric or special threads available.

Custom mounting brackets: (type MF or special). Dimensional sketch or drawing needed with material specs.

Locator washer: (type LC) specify location

Adjustable mounting collar: (type MC) w/set screw

Full selection of tubular termination options: Bulkhead fittings & type T post terminals standard.

Moisture Seals: V2A Silicon resin seal standard

SPECIFICATIONS AND PHYSICAL SIZE OF FINNS

Fin Materials and Attachment Method:

Steel & 304 SS

Steel wound with copper wire between fins for oven brazing to sheath. Stainless steel is mechanically wound but can be oven brazed as an option if a bright annealing atmosphere is used.

Fin Strip Width:

5/16" on .315, .375 and .430 diameters

3/8" on .315, .375 .430 and .475 diameters

Fin Thickness:

26 Ga. (.018) for Steel and 304 SS. Optional 24 Ga. (.024) for steel only

Finned OD's:

.315" dia. with 5/16" fins— .92" OD

.315" dia. with 3/8" fins—1.05" OD

.375" dia. with 5/16" fins— .98" OD

.375" dia. with 3/8" fins—1.11" OD

.430" dia. with 5/16" fins—1.04" OD

.430" dia. with 3/8" steel fins—1.15" OD, SS fins 1.16" OD

.475" dia. with 3/8" fins—1.21" OD

Fin Pitch Standards:

5±.5 for 5/16 material, 4.5-5 for 3/8 material (up to 6 per inch maximum)

SURFACE FINISHES

Oven brazed steel finned units - standard

Copper brazed stainless steel fins using inert atmosphere - special

Bright annealed steel or stainless steel finned heaters

High heat aluminum painted steel — 700°F Maximum

High heat flat black painted surface — 1000°F Maximum

Nickel plated finish — 500°F Maximum

FORMING LIMITATIONS

Minimum Element Centerline Bend Radius:

.315" dia. with 5/16" fins 3/4"

.315" dia. with 3/8" fins 7/8"

.375" dia. with 5/16" fins 7/8"

.375" dia. with 3/8" fins 1.00"

.430" dia. with 5/16" fins 1.00"

.430" dia. with 3/8" fins 1.00"

.475" dia. with 3/8" fins 1.00"

The above values are for factory formed heaters. Consult Tempco for field bending limits.

Tubular Heaters

Finned Tubular Heaters

Fitting Attachment Method — General Guidelines

These are guidelines only. Consult Tempco if you require assistance in determining the method best suited to your application.

Fittings Crimped: Low pressure water (up to 80 psig) and non-pressure air applications

Fittings Brazed: Non-ferrous alloys (copper) and dissimilar non-weldable metals

Fittings Welded: High pressure liquids and gases, and high temperature applications

Standard Bulkhead Fittings For Tubular Heaters — Round Flanged Standard

TYPE MC — Mounting Collar

Plated steel mounting collars are locked in place with a set-screw and serve as an adjustable stop for through-the-wall mounting. Collars are shipped in bulk unless otherwise specified. Mounting collars can be ordered with the heater or purchased separately.

TYPE LR — Locator Washer

Locator washers are permanently attached to the heater sheath by staking/crimping and are used to limit the movement of the heater while allowing for expansion and contraction of the heater sheath. When ordering, specify location from end of sheath.

TYPE MF — Mounting Bracket

Tempco's made-to-order mounting brackets are made from 18 gauge stainless steel for strength and stiffness. It is an economical way to mount the heater in non-pressurizing, non-liquid applications. Unless otherwise specified, the bracket will be located 1/2" from the edge of the heater sheath. OEM quantity brackets are manufactured by Tempco on our own high speed precision N/C Turret Press. The standard method of attaching the tubular element to the bracket is staking or crimping.

The rectangular mounting bracket shown at right is a popular made-to-order design. Specify all dimensions shown when requesting a quote.

Custom brackets of any size, thickness or material can be supplied to meet your requirements.

Tubular Heater Standard Moisture Seals

Magnesium Oxide (MgO) is used as the insulating material in Tempco tubular heaters because of its excellent thermal conductivity and dielectric strength. However, MgO is hygroscopic and can absorb moisture from the atmosphere. This absorption of moisture may be detected when an Insulation Resistance (IR) test is done with a megohmmeter prior to energizing the heater circuit. In very humid environments, circuits utilizing a GFI (ground fault interrupter) for safety may experience nuisance tripping when energizing the heater.

The Tempco manufacturing process produces a dry element with an IR of several thousand megohms minimum. However, after shipment and depending on humidity levels and storage time, a heater can absorb moisture and show a decrease in IR. In many cases, depending on the supply voltage and the application, the heater can be safely energized and will dry itself out.

If a heater has absorbed moisture, a safe and effective method of drying it out prior to installation is to bake it in an oven at 300°F (149°C) until an acceptable IR reading is obtained. When possible, removing the terminal hardware will expedite this process. If this method is not practical consult factory for other recommendations.

For applications where moisture absorption would be unacceptable Tempco has several optional element end seals to retard absorption of moisture in the MgO. If a true hermetic seal is required, ceramic to metal end seals (Type H) are available. With any of these seals, the maximum recommended termination temperature in the seal area must not be exceeded.

Style SS—Silicone Resin Seal

A brushed-on coating that penetrates the MgO, offering economical moisture protection under humid storage conditions.

Maximum Usable Termination Temperature: 390°F (200°C)

UL Rated Maximum Termination Temperature: 221°F (105°C)

Type V2A: conformal coating

Type V2B: silicone oil

Style SER—RTV Seal

RTV (room temperature vulcanizing) silicone rubber adhesive sealant provides a good moisture seal.

UL Rated – Maximum Termination Temperature:

Type R: 302°F (150°C)

Type R1: 392°F (200°C)

Style SEH—Epoxy Resin Seal

Epoxy resin provides a moisture resisting barrier.

UL Rated – Maximum Termination Temperature:

Type V: 194°F (90°C)

Type V1: 266°F (130°C)

Type V4: 392°F (200°C)

Finned Tubular Heaters

Design Guidelines

The major factors that need to be considered when specifying THF finned tubular heaters are as follows:

- Minimum FPM airflow velocity at heater inlet. Is it continuous or fluctuating
- Inlet air temperature
- Outlet air temperature and temperature rise through heating elements
- Selection of element watt density to keep sheath material within its temperature limits
- Sheath material selection
- Condition of air or gas to be heated
- Mounting & airflow restrictions around elements
- KW sizing and # of circuits required (48 amp max/circuit)
- Temperature sensors & flow controls

Heater KW Sizing

Once the inlet temperature, outlet temperature, process CFM, and operating pressure are known, the KW required for the application can be determined using the following equations. If the process is heating air & operating from ambient temperature and atmospheric pressure (70° +/- 10°F & 14.7 psi), the following formula can be used;

$$KW = \{[SCFM \times (T2-T1)] \div 3190\} + S.F.$$

Where:

T2 = °F outlet temperature

T1 = °F inlet temperature

SCFM = standard air flow in cu.ft./min. at atmospheric pressure and ambient temperature

S.F. = safety factor % to account for process losses

Converting CFM to SCFM

If the air heating process is pressurized or operating at an inlet temperature other than at or near ambient, the CFM at a point in the process with a known pressure & temperature must be used & converted to standard SCFM by the following formula;

$$SCFM = 35.4 \times CFM_2 \times \{(P_2+14.7) \div (T_2 + 460)\}$$

Where CFM₂ is cu.ft./min. air flow at process pressure P₂.

P₂ = process pressure (psig)

T₂ = inlet °F or temperature at point of measured CFM₂

Using the SCFM and the heater face flow area we can now calculate the air velocity in SFPM into the heater core as follows;

$$SFPM = SCFM \div A1$$

SFPM = inlet air velocity at standard conditions.

A1 = Sq.Ft. of inlet flow area at heater

An alternate method for calculating KW needed to heat air or other gas, from any inlet to outlet temperature can be done using the following general energy equation;

$$KW = \{[60 \text{ min/hr} \times SCFM \times \text{Density} \times \text{Sp Ht} \times \Delta T] \div 3412\} + S.F.$$

Where:

SCFM = standard air flow in cubic feet/min (@ 70°F & 14.7 psia)

Density = Gas density in lbs/cuft at standard conditions or if pressurized process at process pressure and inlet temperature. (see table)

Sp Ht = Specific heat of gas in Btu/lb-°F at standard conditions or if pressurized process at process pressure and inlet temperature. (values for air are shown in the gas density table)

ΔT = Process gas temperature rise -°F

3412 = conversion factor for Btu/hr to KW (1 KW = 3412 Btu/hr)

S.F. = safety factor % to account for process losses.

Using the inlet air velocity at the heater and the maximum outlet temperature desired the maximum sheath watt density can now be determined from the following charts for the type of heater being specified if a cataloged design is not suitable. The physical size and constraints of the application will dictate the final configuration and number of heaters required. For large installations, 3 phase circuits need to be balanced and all circuits limited no more than 48 amps per circuit. If voltages are higher than 250V, .375, .430, or .475 diameter elements are recommended.

Sheath Watt Density

The maximum sheath watt density to be specified is directly determined by the operating variables of FPM airflow velocity and inlet/outlet air/gas temperatures required. It must be selected such that sheath operating temperatures are not exceeded; 750°F for steel sheath-steel finned, or 1200°F for stainless steel/alloy sheath with stainless fins. Cataloged heaters are designed to operate within these parameters. The following charts will help guide the user in selecting proper watt density.

Allowable Sheath Watts/Square Inch at Various Air Velocities for Steel or Stainless Steel Finned THF heaters

Chart 1 for steel (or SS) finned elements relates the maximum allowable sheath wsi to outlet air temperature that will be obtained at various air velocity levels.

These curves are for 750°F (or lower) sheath operating temperature.

The following Examples Illustrate the Graph's Use

Example 1

An application requires a heater to output 275°F air at an air velocity of 750 FPM. Entering the curves with 275°F, then up to 750 FPM level we find that a maximum of 62-64 wsi can be applied. Depending on voltage and space constraints either a .315 or .430 diameter catalog heater could be used.

Example 2

A curing oven needed 325°F outlet air at a minimum velocity of 1500 FPM. Entering chart at 325°F up to the 1500 FPM curve, we see that the heater could have a maximum of 70-72 sheath wsi. If a higher outlet air temperature is required, or if the airflow velocity is lower, then a reduced a sheath wsi would have to be specified.

Air Outlet Temperature vs Air Velocity
for various THF Sheath WSI Levels

Chart 2 shows the relationship of maximum outlet air temperature obtained vs inlet air velocity at several sheath wsi levels.

This chart can be used for either steel or stainless steel finned elements operating at a maximum of 750°F and provides a way of establishing either airflow required or outlet temperature that will be obtained when sheath wsi is known for an application.

These curves show that to obtain a higher air outlet temperature at a constant FPM, the sheath wsi must be reduced to keep the element within the 750°F temperature limit of sheath & fin materials. These curves are for air entering a heater at or near ambient (60°-105°F).

**Sheath Temperature vs wsi for THF Finned Tubular Elements
in various velocities of forced air at 80°F**

Chart 3 is a plot of sheath temperature and sheath watt density at various levels of inlet forced air at 80°F

It can be used to determine a maximum allowable sheath wsi for heating applications not restricted to the steel sheath limit of 750°. It can be used directly for most ambient air heating processes using Incoloy or Stainless Steel sheathed elements with stainless steel fins.

The following Example Illustrates the Graph's use when Operating in a Higher Ambient

Application

A recirculating process oven with organic vapors, moisture & other air contamination present, requires 500°F air at a minimum flow velocity of 900 FPM. Can a Stainless steel finned alloy sheathed heater at 80 wsi be used?

Using the Graph

Entering this chart at 900 FPM and 80 wsi, we find the sheath temperature when operating at 80°F ambient will be 700°F. The ambient temperature difference from the graph value of 80°F to the new higher 500°F ambient is 420°F (500-80). The new sheath temperature when operating in the 500°F ambient will be approximately 1120°F. (700 + 420). This is just 80° lower than the 1200°F limit for a stainless steel finned heater.

To conserve heater life it would be best to use a lower watt density & operate the heater at the lowest point possible given voltage, size, and construction constraints of the application. Consideration should be given to increasing the air velocity or using un-finned alloy sheath tubular heaters for this application. (See page 11-104)

Tech note: The reverse is true if element is operating in an ambient lower than 80°F. The sheath temperature would be reduced by the difference in the temperatures. The WSI range shown on the chart is approximately 4.25 times an unfinned tubular. The data has been confirmed by Tempco lab testing on .430 & .475 diameter finned heaters with 4.5-5 fins/in.

.315 diameter elements are typically used for air heating from ambient to 250/275°F at a minimum airflow of 700 FPM.

Maximum sheath temperature is 750°F. Reduced sheath watt density (wsi) required for lower airflows.

.430 diameter elements are typically used for air heating from ambient to 275/300°F at a minimum airflow of 750 FPM.

Maximum sheath temperature is 750°F. Reduced sheath watt density (wsi) required for lower airflows.

.475 diameter elements are typically used for air heating from ambient to 450/500°F at a minimum airflow of 1400 FPM.

Maximum sheath temperature is 1200°F. Reduced sheath watt density (wsi) required for lower airflows.

Finned Duct Heaters can be found on Page 11-113A and 11-113B

Single-Ended Tubular Heaters

The **Single-Ended Tubular Heater** manufacturing and design process is similar to that of the double ended tubular heater. Single ended tubular heaters are made strictly per customer request, providing an economical alternative to cartridge heater applications, simplifying wiring and installation for applications requiring localized heat. Flanges, bulkhead and NPT fittings can be attached to the sheath for mounting or immersion heating applications.

Specifications

Diameters: .315" .430" .475" .490" .625"

Material: 304SS, 316SS, Monel, Steel

Min. Sheath Length: 11" **Max. Sheath Length:** 96"

Termination: Lead Wires

Max. Volts: 277 Vac **Max. Amperage:** 30 Amp

Ordering Information Single-Ended Tubular Heaters

Please Specify the following:

- Sheath Material and Diameter
- Heater Length and Cold Ends
- Bulkhead Fittings
- Wattage and Voltage
- Terminations and Seals
- Mounting Flange

Process Heaters

Screw Plug Immersion Heaters

Screw Plug Immersion Heaters consist of tubular elements welded or brazed into a threaded screw plug which can then be inserted into a threaded opening in a tank wall or through a mating full or half coupling.

Design Features

- * *Stainless Steel, Brass or Steel Screw Plugs*
- * *Four Standard Screw Plug Sizes—1", 1-1/4", 2", 2-1/2"*
- * *Recompact element bends restore insulation resistance after forming*
- * *Thermowell for optional bulb & capillary thermostat, RTD or T/C probe*
- * *Corrosion-Resistant electrical wiring hardware*
- * *Four standard sheath materials — Copper, Steel, 316 Stainless Steel and Incoloy®800*
- * *NEMA 1 round terminal housing*
- * *Silicone resin element seal standard*

Optional Features

- * *NEMA 4 Moisture-Proof and/or NEMA 7 Explosion-Resistant terminal housings*
- * *Integral Single or Double Pole Thermostats in various temperature ranges to suit the application*
- * *Passivation, Electropolishing or Bright Annealing surface treatments available for Stainless Steel & Incoloy® elements*
- * *Type J & K Thermocouples or RTD probes for sensing process temperatures, or over-temperature protection when attached to the sheath*
- * *Special sheath materials*
- * *Special straight bulkhead or European thread fittings*

For Type TSP Screw Plug Heaters used in UL Recognized Oil Immersion Heating Applications

- The heated oil temperature cannot exceed 257°F (125°C)
- Steel sheath elements are limited to 60 watts/in²
- Steel or Stainless Steel mounting plugs (no Brass)
- Heaters with tapered threads (NPT, BSPT, or Metric) are UL rated for 60 psig maximum

Contact Tempco for other application specific UL file information.

Tempco Screw Plug Immersion Heaters are UL recognized and CSA certified in many design variations. The UL File Numbers are E90771 (CCN ÜBJY2/8) for heaters not containing a thermostat and E234452 (CCN KSXF2) for heaters used in water based solutions that include a thermostat. Tempco's equivalent CSA file number is 043099. Screw Plug heating elements and assemblies with thermostats have additionally been evaluated to UL574 (File Number MP4154) under CCN MDST2/8 for oil heating applications.

If you require UL, CSA, or other NRTL agency approvals, please specify when ordering.

Checklist — Selecting the Proper Screw Plug Heater

☑ Determine a Safe and Efficient Element Watt Density

Element Watt Density is the wattage dissipated per square inch of the element sheath surface and is calculated with the following formula.

$$\text{Watt Density} = \frac{\text{element wattage}}{\pi \times \text{element dia.} \times \text{element heated length}}$$

For a particular application, element watt density will govern element sheath temperature.

Factors to consider when choosing a suitable watt density are:

1. Many materials are heat sensitive and can decompose or be damaged if the element is running too hot.
2. Air and other gases that are poor conductors of heat require watt densities matched to the velocity of the gas flow to prevent element overheating.
3. When heating hard water and cleaning solutions mineral deposits can build up on the element sheath, acting as a heat insulator and raising the internal element temperature. If these deposits cannot be periodically removed, use a lower watt density element to increase heater life expectancy.

☑ Select the Element Sheath Material

Sheath Material Selection

CORROSION. In addition to selecting a sheath material that is compatible with the heated medium, other factors that affect corrosion need to be considered.

1. The temperature of the corrodent. As temperature increases the degree of corrosion increases. Also remember that usually the element temperature is higher than the material it is heating.
2. The degree of aeration to which a corrodent is exposed. Stagnant conditions can deprive the stainless steels of oxygen, which is required to maintain their corrosion resistant surface.
3. Velocity of the corrodent. Increased velocity can increase the corrosion rate.

Note: See pages 16-12 through 16-20 for the recommended sheath materials for many immersion heating applications. If you are purchasing the material you are heating, check with the supplier for their recommendations.

Typical Applications

Copper Sheath—Process water, water with very weak chemical solutions, potable water, hot water storage for washrooms, showers, cleaning and rinsing parts, for freeze protection of cooling towers and sprinkler systems and other aqueous solutions not corrosive to copper sheath. Sheath temperatures to 350°F (177°C).

Incoloy® Sheath—Weak chemical solutions, oils, tar, caustic soda, detergent, alkaline solutions, molten salts, demineralized, deionized or pure water (sheath passivation is recommended), and other aqueous solutions not corrosive to Incoloy® sheath. Air, gas mixtures and superheated steam. Sheath temperatures to 1600°F (871°C).

Steel Sheath—Fluid heat transfer media, tar, high to low viscosity petroleum oils, asphalt, wax, paraffin, degreasing solvents, alcohol, molten salt, and other solutions not corrosive to steel sheath. Sheath temperatures to 750°F (399°C).

Surface Treatments for Stainless Steel and Incoloy® Elements and other Wetted Parts to Improve Corrosion Resistance

Screw Plug Immersion Heater surfaces in contact with the material being heated can be passivated or electro-polished to improve their resistance to corrosion.

Passivation removes surface contamination, usually iron, so that the optimum corrosion resistance of the stainless steel is maintained. Surface contamination would come from the small amount of steel that may be worn off a tool during the manufacturing process. Passivating is accomplished by dipping the heater in a warm solution of nitric acid.

Electro-Polishing is an electrochemical process that removes surface imperfections and contaminants, enhancing the corrosion resisting ability of the stainless steels. The resultant surface is clean, smooth and bright. Many medical and food applications require this finish.

CONTINUED

Checklist — Selecting the Proper Screw Plug Heater, *continued*

Select the Terminal Housing Type

Standard catalog screw plug immersion heaters are supplied with the **Type 1N** general purpose (NEMA 1) terminal housing with a single Dual 1/2"-3/4" conduit knockout as shown on page 11-2. Additional housings with and without a thermostat include:

Moisture Resistant (NEMA 4)

Explosion Resistant (NEMA 7)

Moisture/Explosion Resistant (NEMA 4/7)

If the housings on this page do not meet the size, construction or other criteria of your application, consult Tempco with your requirements.

Explosion resistant terminal housings are intended to provide containment of an explosion in the enclosure only. No portion of the heater assembly outside the enclosure is covered under this NEMA rating. Abnormal use of a heater which results in excessive temperature can create hazardous conditions such as a fire. Never perform any type of service nor remove the housing cover prior to disconnecting all electrical power to the heater.

Standard NEMA 1 Housing Dimensions

TYPE 1N
(for no thermostat)
for 1", 1-1/4", 2" and 2-1/2"
Screw Plug Heaters

TYPE 1T
(for a single pole thermostat)
for 1", 1-1/4", 2" and 2-1/2"
Screw Plug Heaters

TYPE 6T
(for a double pole thermostat)
for 1", 1-1/4", 2" and 2-1/2"
Screw Plug Heaters

Standard NEMA 4 and/or 7 Housing Dimensions

NEMA 4 rating requires the use of the cover gasket.

TYPE 2N
(for no thermostat)
for 1", 1-1/4", 2" and 2-1/2"
Screw Plug Heaters

TYPE 2T
(for use with a single pole thermostat)
for 1" and 1-1/4" Screw Plug Heaters

TYPE 3T
(for use with a double pole thermostat)
for 2" and 2-1/2" Screw Plug Heaters

Screw Plug Immersion Heaters

Alternate NEMA 1 Housing

Type 3N

(for no thermostat)

for 1", 1-1/4", 2" and 2-1/2" Screw Plug Heaters

Alternate NEMA 4 Housing

TYPE 4N

(for no thermostat)

for 1", 1-1/4", 2" and 2-1/2" Screw Plug Heaters

Alternate NEMA 4 Housing

TYPE 4T

(for a single pole thermostat)

for 1" and 1-1/4" Screw Plug Heaters

Alternate NEMA 4 Housing

TYPE 5T

(for a single or double pole thermostat)

for 2" and 2-1/2" Screw Plug Heaters

Wiring Diagrams — Screw Plug Heaters with Two Elements

Note: Dual-Voltage heaters are factory wired for the higher voltage (series connection) unless otherwise specified. Easily rewired for lower voltage operation (parallel connection).

Wiring Diagrams — Screw Plug Heaters with Three Elements

NOTE: Standard screw plug immersion heaters with three elements, factory wired for three-phase delta, can be rewired for single-phase operation with no wattage change. Wattage can be reduced to one-third of the designed wattage by switching from three-phase delta to wye connection.

Heaters wired for three-phase wye should not be changed to single-phase or three-phase delta connection, since this will increase wattage and watt density on the elements by three times the original designed wattage, causing premature heater failure.

Thermostat Styles and Selection

Construction Characteristics

This type of control operates by expansion and contraction of a liquid in response to temperature change. Liquid contained within the sensing bulb and capillary

flexes a diaphragm, causing the opening and closing of a snap-action switch. For heating applications the contacts are normally closed and open on temperature rise.

Style A Single-Pole Thermostat

Style B Double-Pole Thermostat

Thermostat Electrical Ratings: Normally Closed Contacts, Open on Temperature Rise – Adjustable

- Notes:**
- Knobs, Bezels and Pilot Lamps are optional and must be ordered separately from the thermostat.
 - Knob TST-104-119 graduated in °C (15-120) is available as an alternate for the standard TST-104-103 knob graduated in °F (60-250).
 - For Thermostat Enclosures refer to page 11-9.

Thermostat Wiring Diagrams

Thermostat Style A (Single Pole—Single Throw)

Typical circuit when voltage and/or line current does not exceed thermostat ratings

1Ø or 3Ø circuit if line voltage and/or current exceeds thermostat rating

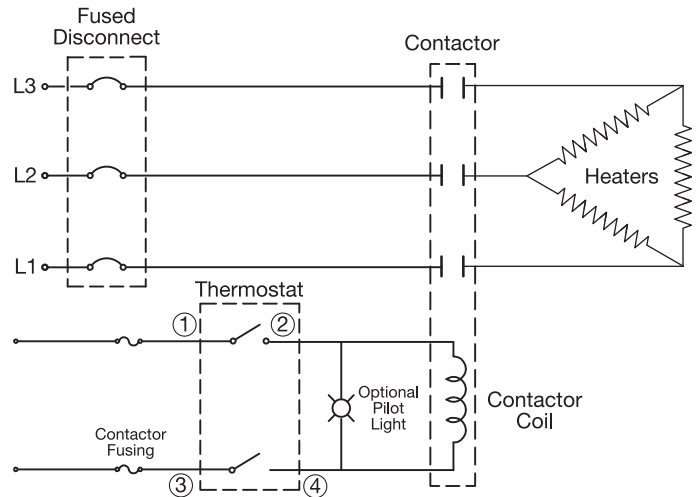

Thermostat Style B (Double Pole—Single Throw)

Typical circuit when voltage and/or line current does not exceed thermostat ratings

1Ø or 3Ø circuit if line voltage and/or current exceeds thermostat rating

Stock Thermostat Kits

Double-Pole Thermostat Kits include the following components:

Kit Number TSTR-1008 with Style B Thermostat	
TST-110-103	Thermostat with 100 to 550°F Range
TST-104-104	Knob
EHD-109-103	Pilot lamp
TST-111-101	Bezel

Kit Number TSTR-1009 with Style B Thermostat	
TST-110-102	Thermostat with 60 to 250°F Range
TST-104-103	Knob
EHD-109-103	Pilot lamp
TST-111-101	Bezel

Note: Double-Pole Thermostat Kits can also be installed separately from the heater in housing HSGR-1004 shown on page 11-9.

Bulb & Capillary Thermostats

Thermostat Styles and Selection

Style C Double-Pole Thermostat

- * Secondary high limit circuit with manual reset
- * High limit tracks 25°F above setpoint temperature
- * High limit latches open until manual reset is pushed in the event that temperature goes up to 25°F above setpoint
- * Capable of controlling loads up to 30 Amps at 277 VAC

Style D Single-Pole Thermostat

- * General purpose thermostat recommended for most applications
- * Capable of controlling loads up to 25 Amps at 240 VAC

Thermostat Electrical Ratings: Normally Closed Contacts, Open on Temperature Rise – Adjustable

NOTES:

- Knobs, Bezels and Pilot Lamps are optional and must be ordered separately from the thermostat.
- Knob **TST-104-119** graduated in °C (15-120) is available as an alternate for the standard TST-104-103 knob graduated in °F (60-250).
- Knob **TST-104-105** is a plain pointer knob, not calibrated for the range.
- Knob **TST-104-102** is printed with 4 through 10, not calibrated for the range.
- For Thermostat Enclosures refer to page 11-9.

Thermostat Style C (Double Pole—Single Throw) with Reset

Typical circuit when voltage and/or line current does not exceed thermostat ratings

1Ø or 3Ø circuit if line voltage and/or current exceeds thermostat rating

Thermostat Wiring Diagrams

Thermostat Style D (Single Pole—Single Throw)

Typical circuit when voltage and/or line current does not exceed thermostat ratings

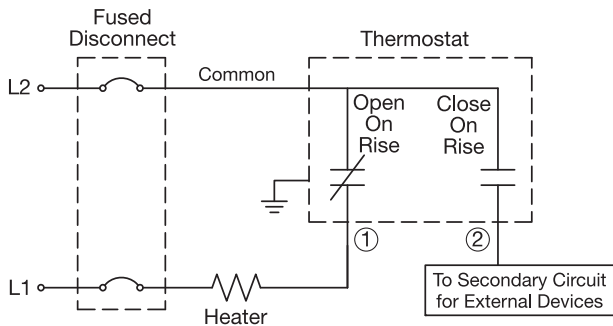

1Ø or 3Ø circuit if line voltage and/or current exceeds thermostat rating

Thermostat Style D (Single Pole—Double Throw)

Typical circuit when voltage and/or line current does not exceed thermostat ratings

1Ø or 3Ø circuit if line voltage and/or current exceeds thermostat rating

Stock Thermostat Enclosures

Thermostat Installation Warnings & Recommendations

1. Do not use the thermostat as a power switch. Use some other means of disconnecting power to the heater for servicing.
2. A thermostat is not a fail-safe device. Use an approved high temperature limit control and/or pressure limit control for safe operation.
3. Avoid kinking or bending the capillary tube too sharply as this will alter the calibration and/or render the thermostat inoperable.
4. Excess capillary tube should be coiled neatly in junction box.
5. The capillary tube must never touch the thermostat contacts as this will create an electrical short capable of harming personnel and/or equipment.

NEMA 1 Enclosure

For Single-Pole Thermostats
Size: 4-1/4"H × 3"W × 2"D
with 3/4" trade size knockout
Part Number: HSGR-1003

NEMA 1 Enclosure

For Double-Pole Thermostats
Size: 5-3/4"H × 3"W × 2"D with 1/2"
trade size knockout
Used with Thermostat kits TSTR-1008
and TSTR-1009 shown on page 11-7.
Part Number: HSGR-1004

Style F Temperature High Limit Switch with Manual Reset

Thermostat Electrical Ratings: High Limit – Manual Reset, Normally Closed Contacts, Open on Temperature Rise at Fixed Temperature

Stock Items Are Shown In **RED**

	F1	572 ±15	30	30	30	20	0.21	2.63	30	#10 screw	TST-103-106	IDP-119-104

NOTES: F2 style has a side vertical mounting bracket instead of #8 tapped holes for mounting. Refer to IDP-119-104 for mounting details.

Hi-Limit Thermostat Style F (Single Pole—Single Throw)

- * General purpose high limit switch with manual reset
- * Once fixed trip point is reached, the high limit switch will remain open until the manual reset button is pushed

Thermowells (Stainless Steel or Plain Steel)

Thermowells provide protection for bulb and capillary sensors. They are supplied with a 1/2" NPT male thread for mounting and a 3/8" NPT internal thread that can be used with the stuffing box assembly to secure the capillary to the well. ID: 0.50", OD: 0.56" See pages 14-76 through 14-83 for other thermowell styles.

Stock Items Are Shown In **RED**

Immersed Length		Part Number	
in	mm	Steel	Stainless Steel
12	305	MPT-120-101	MPT-121-101
18	457	MPT-120-102	MPT-121-102
24	610	MPT-120-103	MPT-121-103
36	914	MPT-120-104	MPT-121-104

Stuffing Box Assembly

The Stuffing Box Assembly is used to seal the thermostat capillary when the sensing bulb (3/8" max. OD) is immersed directly in a liquid rather than in a thermowell. The Stuffing Box consists of six slotted washers used to compress a graphite packing into a 3/8" NPT male pipe thread fitting.

Assembly Instructions

Feed sensing bulb through hole in upper and lower fitting. Insert washers and packing into top cavity of lower fitting. Upper fitting then screws into lower fitting, creating the seal.

Part Number: TST-109-101

Standard (Non-Stock) and Stock Screw Plug Immersion Heaters

Stock Items Are Shown In **RED**

8 watts/in² (1.3 watts/cm²) — Typical Applications: Fuel Oils (Bunker C and Number 6)

- * Steel Screw Plug * Steel Sheath Heating Elements * NEMA 1 Terminal Housing

NOTE: 3-Phase only. Cannot be rewired for single phase.

Ordering Information

Catalog Heaters

Screw Plug Immersion Heaters whose Part Numbers are in **RED** are in stock for immediate delivery. Standard Non-Stock Part Numbers are stocked as sub-assemblies for 2-3 week delivery.

Custom Engineered/Manufactured Heaters

Understanding that an electric heater can be very application specific, for sizes and ratings not listed, **TEMPCO** will design and manufacture a Screw Plug Immersion Heater to meet your requirements.

Standard lead time is 4 weeks.

Please Specify the following:

- Wattage, Voltage and Phase
- Screw Plug Size and Material
- Element Sheath Material
- Element Watt Density
- Element Immersion Length
- Electrical Enclosure Type
- Thermostat— if required
- Optional Features

⚠ WARNING: Cancer and Reproductive Harm - www.P65Warnings.ca.gov.

Standard (Non-Stock) Self-Contained Immersion Heaters

Design Features

This immersion heater is specifically designed for commercial dishwashers and sterilizing equipment. However, due to the unique construction characteristics of these heaters, they are readily adaptable for use in other water heating applications. The heating elements are prewired to a Definite Purpose contactor, thermostat and high limit cutout. The thermowell is located at the top of the element bundle for fast shut-off response, preventing overheating due to low water level conditions.

- * 2" NPT Brass screw plug
- * Three Incoloy® 800 tubular elements
- * Thermostat — 60°F (15°C) to 250°F (120°C) range
- * 350°F (177°C) Over-temperature cutout with manual reset
- * Internal Definite Purpose contactor with 120V holding coil
- * NEMA 4 moisture resistant housing
- * Silicone resin element seal standard

Optional Mounting Kit (Part Number KTT00281) — Clamping nut, flat washer and gasket for mounting heater in thin wall tanks with a 2-3/8" (60 mm) diameter opening.

Standard lead time is 2 to 3 weeks.

Standard (Non-Stock) General Purpose Hot Water Tank Heaters

Design Features

- * 1"-11 1/2" NPSM Brass Plug with O-Ring gasket (NPT optional)
- * Incoloy® 800 Tubular Element
- * 10-32 plated screw terminals
- * 90°C epoxy seal standard
- * Optional ceramic terminal block for high temperature applications

Type FAH Flanged Aluminum Finned Oil Immersion Heaters

Design Features

- * 3" - 150 lb rated 7 1/2" OD Aluminum Flange and Gasket
- * 2-7/8" OD Finned body designed for 3" Schedule 40 pipe
- * 2" OD x 5" long un-finned area under flange for fluid inlet
- * NEMA 1 (type 1N) Terminal Housing
- * 3-phase single circuit winding designs (48 amps max.)
- * 1/4-20 threaded studs for secure connections to power supply
- * Flange mates to standard 3" CHF Circulation Heater pipe body

Optional Features

- * Single- or three-phase designs from 120V to 600V maximum
- * Alternate terminal housings — None, NEMA 4, NEMA 4/7 or NEMA 12
- * 3" — 300 lb & 600 lb rated Aluminum mounting flanges
- * Optional internal overtemperature type K or J thermocouple sensor in heated zone. 24" pigtail leads standard in housing. (700°F maximum controller setting)
- * Alternate size ASA style Flanges — 3-1/2" & 4" in 150 lb ratings
- * Round, rectangular/square non-pressure rated Aluminum mounting flanges.
- * 3" or 4" size cast aluminum screw plug mounting in place of flange
- * Finned area watt densities 4 -16 for oil/organic fluids
- * External power wiring options including armored cable, braided or plain lead wire

Type FAH heaters are primarily designed for use in oil heating and oil separation systems at immersion media temperatures not exceeding 250°F. Heaters must be used with suitable high-limit temperature controls to keep the external aluminum finned surface area from exceeding 500-550°F. A liquid level sensor is required to insure that the heater is always fully immersed.

Heater must not be allowed to operate if not fully immersed or there is no or low liquid flow (below 2 gpm). If used for heating static liquids in a tank, an internal high-limit thermocouple and an external temperature control set to 700°F should be used. See catalog Section 13 and 14.

Optional NEMA 4/7 Housing

FAH Immersion Heaters are designed for immersion heating of oils, heat transfer fluids, hydraulic fluids, and organic fluids non-corrosive to aluminum. The lightweight outer finned structure in contact with the heated media provides a low watt density surface in shorter immersion lengths for heating sensitive organic fluids that are susceptible to coking and carbonization.

The heaters are designed for fuel oil heating up to 250°F, and higher watt density versions are available for heat transfer fluid circulation systems up to 400°F. They are also ideal for heating glycol water solutions non-corrosive to the 6063 aluminum finned body and welded flange. They can be used in static tank heating or flowing oil applications.

The FAH series presents a smooth uniform heat transfer area to the flowing fluid, resulting in efficient heating with a minimum pressure drop. When used with a standard 3" schedule 40 pipe body it provides a 3.75 sq.in. cross-sectional flow area for the fluid. It can also be used effectively in 3-1/2" or 4" ID pipe bodies in order to provide an increased flow area for heavier, higher viscosity fluids. When used in the 3-1/2" pipe, the cross-sectional flow is 6.64 sq.in., and is 9.05 sq.in. for 4" pipe. Pipe ID's larger than this may not heat the flowing fluid properly.

Tempco Finned Aluminum Heaters have been certified as Recognized Components by Underwriters Laboratories (File Number MP4154) under CCN MDST2/8 to meet UL Standard 574 for oil heating. These heaters are also CSA certified for general immersion use under Tempco CSA File Number 043099.

If you require UL, CSA, or other NRTL agency approvals, please specify when ordering.

For Type FAH Flanged Heaters used in UL Recognized Oil Immersion Heating Applications

- The heated oil temperature cannot exceed 257°F (125°C)
- Flanged heater designs are UL rated to a maximum operating pressure of 150 psig
- Optional NPT screwplug designs are UL rated to a maximum operating pressure of 60 psig.
- The maximum finned surface area watt density is 16 watts/in²
- Maximum Wattage/Voltage: 24KW/600V

Contact Tempco for other application specific UL file information.

Flanged Immersion Heaters With Custom Size And Shape Flanges

Custom Immersion Heaters

This design consists of tubular heating elements silver brazed or TIG welded to a flange cut from steel or stainless steel plate. Flange plate size, thickness and shape are determined by the application. A fiber gasket is supplied with each heater.

The various style heaters in the Stock Lists on pages 11-22 through 11-25 are direct replacements for heaters in many OEM applications.

This type construction also lends itself to be easily and economically engineered into new equipment.

Typical Applications

- ↔ Hot Air Dryers
- ↔ Dehumidifying Dryers
- ↔ Heat Exchange Systems
- ↔ Water and Water Solutions
- ↔ Steam Tables
- ↔ Air Heating

For Type TPN Flanged Heaters used in UL Recognized Oil Immersion Heating Applications

- The heated oil temperature cannot exceed 257°F (125°C)
- TPN designs are not UL pressure rated
- Steel sheath elements are limited to 60 watts/in²

Contact Tempco for other application specific UL file information.

Tempco TPN Flanged Immersion Heaters are UL component recognized and CSA certified in most design variations for (non-pressure rated) general immersion heater use. The UL File Number is E90771 (CCN UBJY2/8) and the equivalent CSA File Number is 043099. They are also UL recognized under UL standard UL574 for oil heating, File Number MP4154 (CCN MDS2/8)

If you require UL, CSA, or other NRTL agency approvals, please specify when ordering.

Ordering Information

Catalog Heaters

Flanged Immersion Heaters whose Part Numbers are in **RED** are available from Stock for immediate delivery.

Standard Non-Stock Part Numbers have a 2-3 week lead time.

Custom Engineered/Manufactured Heaters

An electric heater can be very application specific; for sizes and ratings not listed, **TEMPCO** will design and manufacture a Flanged Immersion Heater to meet your requirements. **Standard lead time is 3 to 4 weeks.**

Please Specify the following:

- Wattage, Voltage and Phase
- Flange Size and Material
- Element Sheath Material
- Element Watt Density
- Element Immersion Length
- Electrical Enclosure, if required
- Optional Features

⚠ WARNING: Cancer and Reproductive Harm - www.P65Warnings.ca.gov.

Flanged Immersion Heaters

Flanged Immersion Heaters are designed for use in tanks and pressurized vessels to heat both liquids and gases. They mate to a companion flange that is either welded to a tank

wall or, for circulating type heaters, to a pipe. See pages 11-46 through 11-69 for TEMPCO circulation heaters, which consist of a flange heater and a pipebody pressure vessel assembly.

Design Features

The catalog items listed on pages 11-32 through 11-44 have the following features, making them suitable for many applications:

- * 150-lb forged steel or 316 stainless steel flanges
- * Gasket Supplied
- * Incoloy® 800, 316 stainless steel, steel or copper tubular elements
- * Element hairpin bends are spanked in specially designed dies to re-compact the MgO insulating powder
- * Silicone resin seal of elements standard
- * 1/2" OD thermowell for a 3/8" diameter sensing bulb
- * NEMA 1 electrical enclosure
- * Standard heaters have elements wired into branch circuits having a maximum current of 48 Amps

The items listed in this catalog are only a small sample of the heaters that can be supplied by TEMPCO. The next few pages will describe both standard and optional materials and features available to meet the requirements of your application.

Checklist – Selecting the Proper Flanged Heater

Determine a Safe and Efficient Element Watt Density

Element Watt Density is the wattage dissipated per square inch of the element sheath surface and is calculated with the following formula:

$$\text{Watt Density} = \frac{\text{element wattage}}{\pi \times \text{element dia.} \times \text{element heated length}}$$

For a particular application, element watt density will govern element sheath temperature. Factors to consider when choosing a suitable watt density are:

1. Many materials are heat sensitive and can decompose or be damaged if the element is running too hot.
2. Air and other gases that are poor conductors of heat require watt densities matched to the velocity of the gas flow to prevent element overheating.
3. When heating hard water and cleaning solutions mineral deposits can build up on the element sheath, acting as a heat insulator and raising the internal element temperature. If these deposits cannot be periodically removed, use a lower watt density element to increase heater life expectancy.

Determine Pressure-Temperature Rating of Flange Required

NOTE: Catalog heaters listed on pages 11-32 through 11-44 have Class 150-lb flanges. For heaters with a higher Pressure-Temperature Rating consult Tempco.

Pressure-Temperature Ratings Class 150-LB (Pressure in PSIG)

Flange Material	Temperature °F (°C)													
	-20 to 100 (-28.9 to 37.8)	200 (93.3)	300 (148.9)	400 (204.4)	500 (260.0)	600 (315.6)	650 (343.3)	700 (371.1)	750 (398.9)	800 (426.7)	850 (454.4)	900 (482.2)	950 (510.0)	1000 (537.8)

Checklist — Selecting the Proper Flanged Heater, *continued*

Select the Element Sheath Material

Sheath Material Selection

CORROSION. In addition to selecting a sheath material that is compatible with the heated medium, other factors that affect corrosion need to be considered:

- 1. The temperature of the corrodent** — As temperature increases the degree of corrosion increases. Also remember that usually the element temperature is higher than the material it is heating.
- 2. The degree of aeration to which a corrodent is exposed** — Stagnant conditions can deprive the stainless steels of oxygen, which is required to maintain their corrosion resistant surface.

- 3. Velocity of the corrodent** — Increased velocity can increase the corrosion rate.

Note: See pages 16-12 through 16-20 for the recommended sheath materials for many immersion heating applications. If you are purchasing the material you are heating, check with the supplier for their recommendations.

Standard Element Sheath Materials

Incoloy® 800 — A Nickel (30-35%), Chromium (19-23%), Iron alloy. The high nickel content of this alloy contributes to its resistance to scaling and corrosion. Used in air heating (also see Incoloy® 840) and immersion heating of potable water and other liquids that are not corrosive to an Incoloy® 800 sheath.

Low Carbon Steel — Applications include fluid heat transfer media, tar, high to low viscosity petroleum oils, asphalt, wax, molten salt, and other solutions not corrosive to a steel sheath.

316 Stainless Steel — A Chromium (16-18%), Nickel (11-14%), Iron Alloy with Molybdenum (2-3%) added to improve corrosion resistance in certain environments, especially those that would tend to cause pitting due to the presence of chlorides. Applications include deionized water.

Copper — Mainly used in clean water heating for washrooms, showers, rinse tanks and freeze protection of storage tanks.

Optional Element Sheath Materials

304 Stainless Steel — A Chromium (18-20%), Nickel (8-11%), Iron Alloy used in the food industry, sterilizing solutions, air heating and many organic and inorganic chemicals.

321 Stainless Steel — A Chromium (17-20%), Nickel (9-13%), Iron Alloy modified with the addition of titanium to prevent carbide precipitation and the resulting intergranular corrosion that can take place in certain mediums when operating in the 800-1200°F (427-649°C) temperature range.

Incoloy® 840 — A Nickel (18-20%), Chromium (18-22%), Iron alloy. Incoloy 840® has about 10% less nickel than Incoloy 800. Used in many air heating applications where it has exhibited superior oxidation resistance at less cost than Incoloy 800®.

Incoloy® 825 — A Nickel (38-46%), Chromium (19.5-23.5%), Molybdenum (2-3%) Iron alloy. Consult Tempco for more information.

Surface Treatments for Stainless Steel and Incoloy® Elements and other Wetted Parts to Improve Corrosion Resistance

Flanged Immersion Heater surfaces in contact with the material being heated can be passivated or electro-polished to improve their resistance to corrosion.

Passivation removes surface contamination, usually iron, so that the optimum corrosion resistance of the stainless steel is maintained. Surface contamination would come from the small amount of steel that may be worn off a tool during the manufacturing process. Passivating is accomplished by dipping the heater in a warm solution of nitric acid.

Electro-Polishing is an electrochemical process that removes surface imperfections and contaminants, enhancing the corrosion resisting ability of the stainless steels. The resultant surface is clean, smooth and bright. Many medical and food applications require this finish.

Select Optional Flange and Gasket Materials

Optional flange materials include:

- * 304, 304L Stainless Steel
- * 316L Stainless Steel
- * Incoloy® 800

Gaskets of different types, including spiral wound metal with non-metallic filler, are available to properly seal any flanged heater. Gasket material choice depends on operating conditions and fluid compatibility. Consult TEMPSCO for help with your selection.

CONTINUED

Checklist – Selecting the Proper Flanged Heater, *continued*

Select Standard Terminal Housing

Standard catalog flanged immersion heaters are supplied with the general purpose **Type 1N** (NEMA 1) terminal housing as shown below. If an optional thermostat is installed, the housing supplied is the **Type 1T** (NEMA 1). See pages 11-6 through 11-10 for thermostats and accessories.

Additional housing types for use with and without a thermostat include:

- Moisture Resistant** (NEMA 4)
- Explosion Resistant** (NEMA 7)
- Moisture/Explosion Resistant** (NEMA 4/7).

If the housings on this and the following page do not meet the size, construction or other criteria of your application, consult Tempco with your requirements.

Standard NEMA 1 Terminal Housings for all Size Flanges

TYPE 1N (For use with heaters having no thermostat)

Flange Size	"K"		"L"		Conduit Opening

Standard NEMA 4 and/or 7 Terminal Housings for 3" Flanges

TYPE 2N (For use with heaters having no thermostat)

NEMA 4 rating requires the use of the cover gasket.

TYPE 2T (For use with heaters with thermostat)

NEMA 4 rating requires the use of the cover gasket.

Standard NEMA 4 and/or 7 Terminal Housings for 4" and 5" Flanges

TYPE 3N (heaters having no thermostat)

NEMA 4 rating requires the use of the cover gasket.

TYPE 3T (heaters with thermostat)

NEMA 4 rating requires the use of the cover gasket.

Standard NEMA 4 Terminal Housings for 6" through 14" Flanges

TYPE 4N (For use with heaters with no thermostat)

Flange Size	"K"		"L"		Hub Size (NPT)
	in	mm	in	mm	
6	8	203	6	152	2
8	10	254	6	152	2
10	13-3/4	349	6	152	2-1/2

14	17-1/2	438	6	152	2-1/2

TYPE 5T (For use with heaters with thermostat)

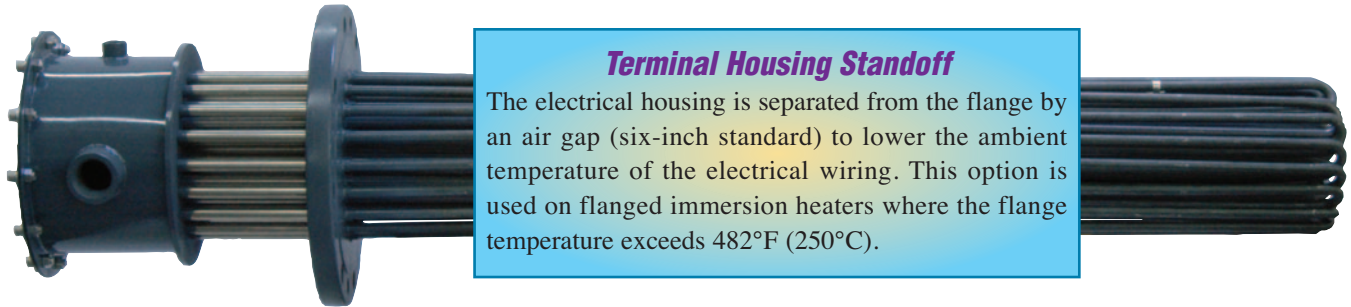

Flange Size	"K"		"L"		Hub Size (NPT)
	in	mm	in	mm	
6	9-3/8	203	7-1/2	191	2
8	11-1/2	254	7-1/2	191	2
10	13-3/4	349	7-1/2	191	2-1/2
12	13-5/8	397	7-1/2	191	2-1/2
14	17-1/2	438	7-1/2	191	2-1/2

Explosion resistant terminal housings are intended to provide containment of an explosion in the enclosure only. No portion of the heater assembly outside the enclosure is covered under this NEMA rating. Abnormal use of a heater which results in excessive temperature can create hazardous conditions such as a fire. Never perform any type of service nor remove the housing cover prior to disconnecting all electrical power to the heater.

Optional Terminal Housing Standoff Construction

Optional Flanged Heater Features

Flow Control Baffles

For flange heaters used in circulation tanks, to aid heat transfer by forcing the liquid or gas back and forth across the elements. Baffles can be custom designed and positioned for your application.

Temperature Control

Thermostats

Thermostats are an optional feature for flanged immersion heaters. This type of control operates by expansion and contraction of a liquid in response to temperature change. Liquid contained within the sensing bulb and capillary flexes a diaphragm, causing the opening and closing of a snap action switch. For heating applications the contacts are normally closed, and open on temperature rise.

Installation Warnings and Recommendations

1. Do not use the thermostat as a power switch. Use some other means of disconnecting power to the heater for servicing.
2. A thermostat is not a fail-safe device. Use an approved high temperature limit control and/or pressure limit control for safe operation.
3. Avoid kinking or bending the capillary tube too sharply as this will alter the calibration and/or render the thermostat inoperable.
4. Excess capillary tube should be coiled neatly in junction box.
5. The capillary tube must never touch the thermostat contacts as this will create an electrical short capable of harming personnel and/or equipment.

Thermocouples

Type J or Type K thermocouples can be supplied for process temperature or over-temperature control. Type J is reliable and accurate for temperatures up to 1000°F (537.8°C). Type K should be used for higher temperatures.

For measuring process temperatures, the thermocouple can be mounted in a thermowell in the center of the element bundle. Note that a location somewhere away from the heater may give a more accurate measurement of process temperature.

For over-temperature protection, the thermocouple is usually attached to one of the elements and any unusual rise in element temperature would shut the heater down. This thermocouple may also be mounted in a thermowell, which is then attached to one of the heating elements if desired. This protects the thermocouple from the solution being heated and allows you to replace it without removing the heater, but does increase its response time.

Temperature and over-temperature controls and how to choose the best control for your application can be found in Section 14.

Flanged Heater Installation and Maintenance

1. Immersion heaters should be positioned to insure they are completely covered with the liquid they are heating. However, do not position the unit too low in structures where sludge buildup could cover it. Either of these conditions could cause overheating and subsequent premature failure of the elements.
2. Heated section should start sufficiently inside tank to assure good heat transfer. On large tanks, use several smaller KW rated heaters rather than one large heater for uniform heat and watt density distribution.
3. Install adequate controls and safety devices to prevent build-up of temperature and/or pressure.
4. Make sure gasket surface is clean and dry before seating the heater.
5. Do not operate heater at a voltage in excess of that stamped on the heater. A heater can be run at a reduced voltage, remembering that this will decrease the heater's output wattage.
6. A wiring diagram is supplied in the electrical enclosure and as required, circuits on the heater are labeled.
7. All heater terminal connections should be wrench or screwdriver tight with maximum torque consistent with terminal strength. To prevent twisting heater terminals when tightening connections, use backup wrench for countertorque. Periodically check that electrical connections are clean and tight.
8. The electrical insulating material used in electric heaters is hygroscopic and may absorb moisture when subjected to a humid environment during shipping, while in storage or during long equipment shutdowns. This moisture may lower the insulation resistance enough to cause heater failure.
A meg-ohmmeter should be used to check the insulation resistance before applying power to any questionable heater.
If a moisture condition exists it can be corrected by baking the heater in an oven at approximately 350°F (176.7°C) until the moisture is expelled and the meg-ohms have risen to an acceptable level.
9. For heaters supplied with an integral thermostat, this thermostat functions as a temperature control only and is not a fail-safe device.
10. For TFP flanged heaters used in UL recognized oil heating applications:
 - The heated oil temperature cannot exceed 257°F (125°C)
 - TFP designs with ASA pressure rated flanges are UL rated to a maximum operating pressure of 150 psig
 - Steel sheath elements are limited to 60 watts/in²
 - Maximum Wattage/Voltage: 45KW/480V, in 5" and smaller flange sizes with 9 elements maximum

Contact Tempco for other application specific UL file information.

Quality Assured Through 100% Final Inspection

1. Resistance test — to verify wattage
2. Insulation test — to measure leakage current resistance
3. High voltage test — to “proof-test” the insulation against grounds and short circuits
4. Hydrostatic or air pressure testing — to leakproof test all welding of the elements to the flange

The tubular heating elements used in type TFP Flanged Immersion Heaters are UL component recognized and CSA certified in most design variations for general immersion heater use. The UL File Number is E90771 (CCN UBJY2/8) and the equivalent CSA File Number is 043099. They are also UL recognized under UL standard UL574 File Number MP4154 (CCN MDS2/8) for oil heating.

If you require UL, CSA, or other NRTL agency approvals, please specify when ordering.

Ordering Information

Catalog Heaters

Catalog Part Numbers are stocked as sub-assemblies for 2-3 week delivery.

Custom Engineered/Manufactured Heaters

An electric heater can be very application specific; for sizes and ratings not listed, **TEMPCO** will design and manufacture a Flanged Immersion Heater to meet your requirements. **Standard lead time is 4 weeks.**

Standard Flanged Immersion Heaters

Continued from previous page...

16 watts/in² (2.5 watts/cm²) — Typical Applications: Heat Transfer Oils • Liquid Paraffin

* 150-lb Raised Face Forged Carbon Steel Flange

* Incoloy®800 sheath heating elements

NOTE: 3-Phase only. Cannot be rewired for single phase.

Custom Designed Flanged Heater for Sanitary Process Solutions

Sanitary fittings are commonly used in the commercial food, dairy and soft drink processing industries. Compared to common pipe flange connections, the sanitary pipe connections' crevice-free interiors provide quicker access for easier cleaning.

Fittings and pipe made from 304 Stainless Steel is suitable for most food industry applications. Type 316L, which is more corrosion resistant, is commonly used in the pharmaceutical and chemical industries.

Design Features

- * 304 SS flange (end cap) suitable for most food applications
- * 316L SS flange (end cap) used in chemical industries
- * 304 SS, 316 SS and Incoloy heating elements
- * Element hairpin bends are spanked in specially designed dies to re-compact the MgO insulating powder
- * Silicone resin seal of elements standard
- * NEMA 1 electrical enclosure standard, NEMA 4/7 optional

Heater Construction

This passivated heater assembly consists of tubular electric heating elements welded into a 6" sanitary end cap fitting which would then be clamped to another fitting in the system. This particular sanitary process uses manufacturer Alfa Laval's fittings.

Connection Components

A typical sanitary type connection is made by joining two ferrules together with a clamp and a gasket. The ferrule is the end of the fitting or pipe that has a lip with a gasket groove making it half of a finished connection.

The heater in the picture at right is shown clamped to the Butt-Weld fitting shown on the left.

Circulation Heaters

**Self-contained heating units designed for optimum operating efficiency and performance—
Providing trouble-free service and application flexibility!**

All of the heat generated by the elements is immediately transferred to the medium being processed with minimal losses.

Standard and optional features include...

A General purpose (NEMA 1) terminal housing is standard. Moisture proof (NEMA 4) and/or explosion resistant (NEMA 7) housings are optional. A set of installation and maintenance instructions along with a wiring diagram can be found inside the terminal housing of each unit.

B Heating source—1-1/4" and 2-1/2" Screw Plug Heaters are used on smaller units. 3" to 14" size heaters use Flanged Immersion Heaters. The flanges are made from forged steel rated for 150 lbs with raised face. Supplied with threaded eyebolts for ease of handling and installation. Optional stainless steel flanges or 300 lb ratings available.

C Inlet-outlet connections are NPT pipe threads for 3" to 8" Circulation Heaters (flanges are optional). Standard inlet-outlet connections on 10" and larger units are 150 lb. rated flanges.

D Optional feature double-pole non-indicating bulb and capillary type thermostat can be located in the terminal box (standard) or attached to the insulation jacket as pictured. Solid state temperature controllers and indicating thermostats are available. Over-temperature protection can be provided by attaching a thermocouple to one of the elements.

E Threaded mounting lugs to support the unit are welded to the steel vessel. Custom supports can be designed to fit your structure.

F Wide selection of heating element sheath materials for maximum corrosion resistance to the medium being processed. On smaller circulation units with screw plug heaters, the element diameter is .315" or .475". On larger units with flanged heaters, the element diameter is .475".

G The vessel is surrounded with 1" thick insulation rated to 750°F (399°C) to minimize heat loss. Additional insulation or a high temperature ceramic fiber insulation is optional. Vessels can also be supplied uninsulated.

H Vessel material is SA53B or SA106B steel. Good for up to 750°F (399°C) operating temperature. For drainage and cleaning purposes, a drain plug is located in the base of the tank. Optional: Stainless steel vessel.

I Outer stainless steel sheet metal jacket protects the insulation from the environment and keeps it dry. Optional: Stainless steel outer jacket with a weather-tight seal.

Note: Branch Circuit Wiring: Flange heater elements are wired into branch circuits having a maximum current of 48 Amps. The number of circuits is listed next to the heater's voltage and phase in the standard sizes and ratings chart. For different circuit wiring configurations, consult Tempco.

Checklist — Selecting the Proper Circulation Heater

Determine a Safe and Efficient Element Watt Density

Element Watt Density is the wattage dissipated per square inch of the element sheath surface and is calculated with the following formula:

$$\text{Watt Density} = \frac{\text{element wattage}}{\pi \times \text{element dia.} \times \text{element heated length}}$$

For a particular application, element watt density will govern element sheath temperature. Factors to consider when choosing a suitable watt density are:

1. Many materials are heat sensitive and can decompose or be damaged if the element is running too hot.
2. Air and other gases that are poor conductors of heat require watt densities matched to the velocity of the gas flow to prevent element overheating.
3. Mineral deposits when heating hard water and cleaning solutions can build up on the element sheath, acting as a heat insulator and raising the internal element temperature. If these deposits cannot be periodically removed, use a lower watt density element to increase heater life expectancy.

Select the Element Sheath Material

Sheath Material Selection

CORROSION. In addition to selecting a sheath material that is compatible with the heated medium, other factors that affect corrosion need to be considered:

1. **The temperature of the corrodent** — As temperature increases the degree of corrosion increases. Also remember that usually the element temperature is higher than the material it is heating.
2. **The degree of aeration to which a corrodent is exposed** — Stagnant conditions can deprive the stainless steels of oxygen, which is required to maintain their corrosion resistant surface.
3. **Velocity of the corrodent** — Increased velocity can increase the corrosion rate.

Note: See pages 16-12 through 16-20 for the recommended sheath materials for many immersion heating applications. If you are purchasing the material you are heating, check with the supplier for their recommendations.

Standard Element Sheath Materials

Incoloy® 800 — A Nickel (30-35%), Chromium (19-23%), Iron alloy. The high nickel content of this alloy contributes to its resistance to scaling and corrosion. Used in air heating (also see Incoloy® 840) and immersion heating of potable water and other liquids that are not corrosive to an Incoloy® 800 sheath.

Low Carbon Steel — Applications include fluid heat transfer media, tar, high to low viscosity petroleum oils, asphalt, wax, molten salt, and other solutions not corrosive to a steel sheath.

316 Stainless Steel — A Chromium (16-18%), Nickel (11-14%), Iron Alloy with Molybdenum (2-3%) added to improve corrosion resistance in certain environments, especially those that would tend to cause pitting due to the presence of chlorides. Applications include deionized water.

Copper — Mainly used in clean water heating for washrooms, showers, rinse tanks and freeze protection of storage tanks.

Optional Element Sheath Materials

304 Stainless Steel — A Chromium (18-20%), Nickel (8-11%), Iron Alloy used in the food industry, sterilizing solutions, air heating and many organic and inorganic chemicals.

321 Stainless Steel — A Chromium (17-20%), Nickel (9-13%), Iron Alloy modified with the addition of titanium to prevent carbide precipitation and the resulting intergranular corrosion that can take place in certain mediums when operating in the 800-1200°F (427-649°C) temperature range.

Incoloy® 840 — A Nickel (18-20%), Chromium (18-22%), Iron alloy. Incoloy 840 has about 10% less nickel than Incoloy 800. Used in many air heating applications where it has exhibited superior oxidation resistance at less cost than Incoloy 800.

Incoloy® 825 — A Nickel (38-46%), Chromium (19.5-23.5%), Molybdenum (2-3%) Iron alloy. Consult Tempco for more information.

Surface Treatments for Stainless Steel and Incoloy® Elements and other Wetted Parts to Improve Corrosion Resistance

Flanged Immersion Heater surfaces in contact with the material being heated can be passivated or electro-polished to improve their resistance to corrosion.

Passivation removes surface contamination, usually iron, so that the optimum corrosion resistance of the stainless steel is maintained. Surface contamination would come from the small amount of steel that may be worn off a tool during the manufacturing process. Passivating is accomplished by dipping the heater in a warm solution of nitric acid.

Electro-Polishing is an electrochemical process that removes surface imperfections and contaminants, enhancing the corrosion resisting ability of the stainless steels. The resultant surface is clean, smooth and bright. Many medical and food applications require this finish.

Checklist — Selecting the Proper Circulation Heater, *continued*

☑ Standard Terminal Housings

Terminal Housings

Tempco Circulation Heaters are supplied with a **General Purpose Housing** (NEMA 1) as standard unless otherwise specified.

Additional housing types include:

Moisture Resistant (NEMA 4)

Explosion Resistant (NEMA 7)

Moisture/Explosion Resistant (NEMA 4/7).

Descriptions and dimensions of housings for circulation heaters with screw plugs can be found on page 11-4, and for flange heaters on pages 11-26 and 11-27. If none of these housings meet the size, construction or other criteria of your application, consult Tempco with your requirements.

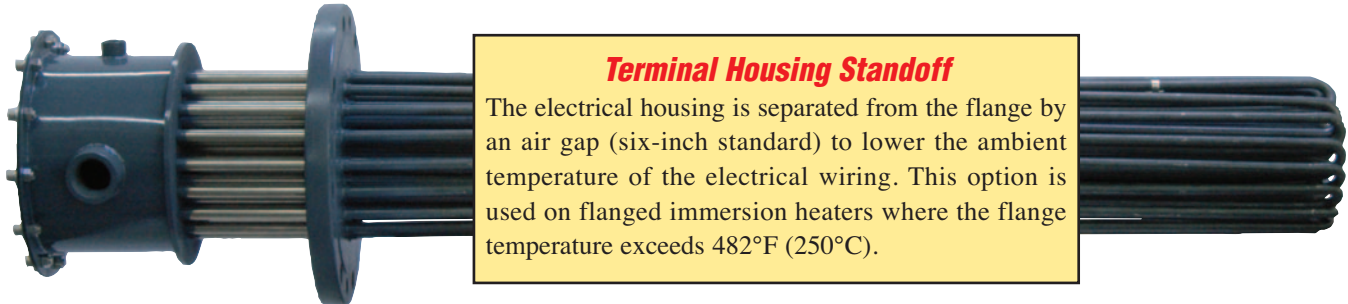

Explosion resistant terminal housings are intended to provide containment of an explosion in the enclosure only. No portion of the heater assembly outside the enclosure is covered under this NEMA rating.

Abnormal use of a heater which results in excessive temperature can create hazardous conditions such as a fire. Never perform any type of service nor remove the housing cover prior to disconnecting all electrical power to the heater.

Optional Terminal Housing Standoff Construction

Terminal Housing Standoff

The electrical housing is separated from the flange by an air gap (six-inch standard) to lower the ambient temperature of the electrical wiring. This option is used on flanged immersion heaters where the flange temperature exceeds 482°F (250°C).

Optional Circulation Heater Features

Flow Control Baffles

Used on circulation tank heaters to aid heat transfer by forcing the liquid or gas back and forth across the elements. Baffles can be custom designed and positioned for your application.

Temperature Control

Thermostats

Thermostats are an optional feature on flanged immersion heaters. This type of control operates by expansion and contraction of a liquid in response to temperature change. Liquid contained within the sensing bulb and capillary flexes a diaphragm, causing the opening and closing of a snap action switch. For heating applications the contacts are normally closed and open on temperature rise.

Installation Warnings and Recommendations

1. **Do not use the thermostat as a power switch. Use some other means of disconnecting power to the heater for servicing.**
2. **A Thermostat is not a fail-safe device. Use an approved high temperature limit control and/or pressure limit control for safe operation.**
3. **Avoid kinking or bending the capillary tube too sharply as this will alter the calibration and/or render the thermostat inoperable.**
4. **Excess capillary tube should be coiled neatly in junction box.**
5. **The capillary tube must never touch the thermostat contacts as this will create an electrical short capable of harming personnel and/or equipment.**

Thermocouples

Type J or Type K thermocouples can be supplied for process temperature or over-temperature control. Type J is reliable and accurate for temperatures up to 1000°F (538°C). Type K should be used for higher temperatures.

For measuring process temperatures the thermocouple can be mounted in a thermowell in the center of the element bundle. Note that a location somewhere away from the heater may give a more accurate measurement of process temperature.

For over-temperature protection the thermocouple is usually attached to one of the elements (Figure A) and any unusual rise in element temperature would shut the heater down. This thermocouple may also be mounted in a thermowell (Figure B), which is then attached to one of the heating elements if desired. This protects the thermocouple from the solution being heated and allows you to replace it without removing the heater, but does increase its response time.

Temperature and over-temperature controls for using the signal generated by thermocouples and how to select the best control for your application can be found in Section 13.

Series CHX-100, CHX-200 and CHX-300 Circulation Heaters — See Pages 3-12 through 3-17

Construction

Series CHX circulation heaters are compact lightweight units used for heating gases or liquids. The material being heated is pumped through the coiled seamless 316 SS tubing which has been cast into an aluminum body which acts as the heat exchanger. A replaceable Hi-Density cartridge set into a hole bored into the aluminum is the heat source for the CHX-100, and a tubular heating element is the heat source for the CHX-200 and CHX-300. The material being heated never comes into contact with the heating element.

Circulation Heater Installation Recommendations

Tempco Circulation Heaters will have a long life and provide dependable, trouble-free service if properly installed, operated and maintained as per the following recommendations:

Installation

1. Flange heaters are supplied with two drilled and tapped holes for threaded eye bolts, providing ease of handling during installation and flange removal during maintenance cleaning or heater replacement.
2. Replacement of heater is inevitable. Therefore, provide adequate space for installation, allowing ample room to remove the flange heater for cleaning or replacement.
3. In applications requiring the circulation heater to be fed by an inline pump, install the pump at the inlet end.
4. To maintain the lowest possible temperature at the terminal box, place the outlet at the end opposite to the terminal box. If your process temperature is circulating at 450°F (232°C) or above (at the nozzle closest to the flange), stand-off terminal box construction is recommended.
5. To prevent temperature and/or pressure buildup on closed loop circulation heater systems, adequate and strategically located thermocouples for temperature controllers and pressure relief valves should be installed. Never over-rate pressure relief valves beyond the pressure temperature rating of the flange being used.
6. During the process cycle, flow rate of the medium being heated should never be interrupted or reduced, thus creating an overheating condition. Excess temperature can result in damage to the medium being processed and premature heater failure.
7. Make sure that your circulation heater is equipped with the proper terminal housing for the environment in which the heater is being used. NEMA 1—General purpose, NEMA 4—Moisture resistant, and NEMA 7—Explosion resistant.

Wiring

1. All heater installations must be properly earth grounded to eliminate electric shock hazard. Electrical wiring must be in accordance with Local and/or National Electrical Codes.
2. Circulation heaters are supplied standard with NEMA 1 terminal housings. All power to heaters must be disconnected before removing the terminal housing cover and performing any type of service.
3. Electrical connections on heater terminals must be kept tight. Loose connections will create arcing, over-heating, and eventually will destroy the heater terminal and cause premature heater failure.
4. If the amperage rating of your circulation heater exceeds the amperage capacity of the supplied thermostat, mercury relays or magnetic contactors should be used with the thermostat. See pages 13-92 through 13-96.
5. Over-temperature protection thermocouples require a separate conduit to the control panel for the thermocouple wire.
6. Tempco offers a large selection of Power Control Panels for circulation heaters. See pages 13-56 through 13-63.

Maintenance

1. Never perform any type of service on the unit prior to disconnecting all electrical power and shutting off all intake lines.
2. Remove sludge deposits through the drain plug.
3. Check flange bolts for tightness.
4. Check terminal connections for tightness.
5. Check thermocouple or thermostat bulb for response to temperature changes. If defective, replace immediately.
6. Check for leaks.
7. Depending on operating conditions and medium being processed, the flange or screw plug heater should be periodically removed for physical inspection and cleaning of the element bundle.

Vertical Mounting—Liquids

With terminal housing up and inlet pipe on the bottom, the heating elements will be immersed at all times to prevent premature failure.

Horizontal Mounting—Liquids and Gases

Always mount heater with inlet-outlet pipes facing up to ensure the heating elements will be immersed at all times to prevent premature failure. For liquid heating, outlet may be at either end. When heating gases the inlet should be closest to the terminal enclosure to minimize terminal box wiring temperatures.

Vertical Mounting—Gases

Mount with terminal enclosure and inlet pipe at bottom of tank to minimize terminal box wiring temperatures.

Circulation Tank Assembly Maximum Immersed Element Length

Standard circulation heaters shown in the tables on pages 11-51 through 11-69 have element immersion lengths determined by the element wattage and element watt density. The screw plug or flange heater containing the elements is matched to a standard circulation heater tank assembly to assure proper heat transfer and heated material flow. When designing a system with a heater not

shown on these pages the table below can be used to select a tank size based on the calculated immersion length. If a standard tank size is not suitable for your installation, Tempco will design and manufacture a custom tank and heater assembly to satisfy the requirements of your application.

Nominal Pipe Size	Dimension Drawing Number	Maximum Immersed Element length	
		in	mm
1 1/4" NPT	1.1	18.0	457

Ordering Information

Catalog Heaters

Order by Part Number for catalog heaters listed on pages 11-51 through 11-68.

Standard lead time is 4-5 weeks.

Custom Engineered/Manufactured Heaters

For sizes and ratings not listed, **TEMPCO** will design and manufacture a Circulation Heater to meet your requirements. **Please Specify** the following:

- Application, including operating temperature/pressure
- Wattage, Voltage and Phase
- Screw Plug or Flange Size and Material
- Element Sheath Material
- Element Watt Density
- Element Immersion Length
- Electrical Enclosure Type
- Thermostat— if required
- Vessel Material
- Additional Insulation
- Flow Control Baffles
- Other Optional Features

WARNING: Cancer and Reproductive Harm - www.P65Warnings.ca.gov.

Mightybooster™ Circulation Heater — Point of Use

Design Features

- * Integral 60°F (15°C) to 180°F (82°C) Thermostat
- * NEMA 1 Terminal Housing
- * Insulated Carbon Steel or Bronze Vessel
- * 1" NPT Inlet and Outlet
- * Copper Sheath Heating Elements and Brass Screw Plug
- * Watt Density of 60 watts/in² (9.3 watts/cm²)

Typical Heating Application: Clean Water • Aqueous Solutions

Vessel Material	KW	"A" OAL		"B" Inlet-Outlet		Part Number 120/240V	Approximate Net Weight

Process Circulation Heating Systems

TEMPCO Circulation Systems include a circulation heater and power control panel skid mounted in a compact package to use minimal floor space. Heater vessel is carbon steel and can be vertically or horizontally mounted.

The pre-wired panel contains a process temperature control and a manual reset over-temperature control. The Zero Cross SCR power controller provides proportional power to the heater load for precise temperature control.

Design Features

- * 150-lb Flanged Heater Sizes
- * Steel Sheath Heating Elements
- * NEMA 1 Terminal Housing
- * Watt Density of 15 watts/in² (2.3 watts/cm²)
- * NEMA 12 Control Panel with Main Fused Disconnect, Door Interlock and FM High Limit Cutout

Standard (Non-Stock) Vertically Mounted Process Circulation Heating Systems

Typical Heating Applications: Medium Weight Oils • Heat Transfer Oils

Ordering Information

Catalog Heaters

Order by Part Number for catalog heaters.

Standard lead time is 6-7 weeks.

Custom Engineered/Manufactured Heaters

For sizes and ratings not listed, **TEMPCO** will design and manufacture a Circulation System to meet your requirements. **Please Specify** the following:

- Maximum temperature rise and operating pressure
- Inlet-Outlet size and type
- Vertical or horizontal mounting
- Element sheath material (Steel, Incoloy® or Copper)
- Vessel material (carbon steel or stainless steel)
- Element Watt density
- Wattage (up to 600KW), Voltage, Phase

WARNING: Cancer and Reproductive Harm - www.P65Warnings.ca.gov.

Floor-Mount, Double-Door Panel

This 2-zone, SCR power control unit with 8 output heater circuits in a NEMA 12 enclosure is used to control trim heaters in a paper pulp mill.

Deep Tank/Sump Immersion Heater with Electrical Enclosure

Electrical Enclosure

- * NEMA 4 housing
- * TEC-4100 PID Temperature Controller
- * Liquid Level Sensor

Immersion Heater

- * 10KW, 480V, 3-Phase Heater
- * Incoloy® 800 Heating Elements
- * 316 SS for all other wetted parts
- * Overall Length: 172 inches

See page 11-82 for additional information.

Panel with Air Conditioner Cooling

This 304 SS, NEMA 4X control panel features a thermostat-controlled, side-mounted air conditioner that maintains safe interior temperatures for the electrical components while operating in high outdoor ambient temperatures.

Turnkey Power Control and Circulation Heating Systems Fuel Circulation Heating System

Control Panel

- * NEMA 4 Control Panel
- * Purge & Pressurization Enclosure Protection System
- * TEC-4100 PID Temperature Controller
- * TEC-410 FM High Limit Control
- * PPR-1800 Videographic Data Logger
- * Safety Contactors for Over-Temperature, Over-Pressure and Low-Flow Conditions
- * Intrinsically Safe Sensor Barriers

Circulation Heater

- * 90KW, 480V, 3-Phase Heater
- * NEMA 4 Terminal Housing
- * Flow Rate: 80 GPM
- * Operating Pressure: 0-150 PSIG
- * Maximum Operating Temperature: 300°F/148°C

Rear View

- * 10HP TEFC Motor
- * Double Positive Displacement Internal Gear Pump

Fluid Circulation Heating System

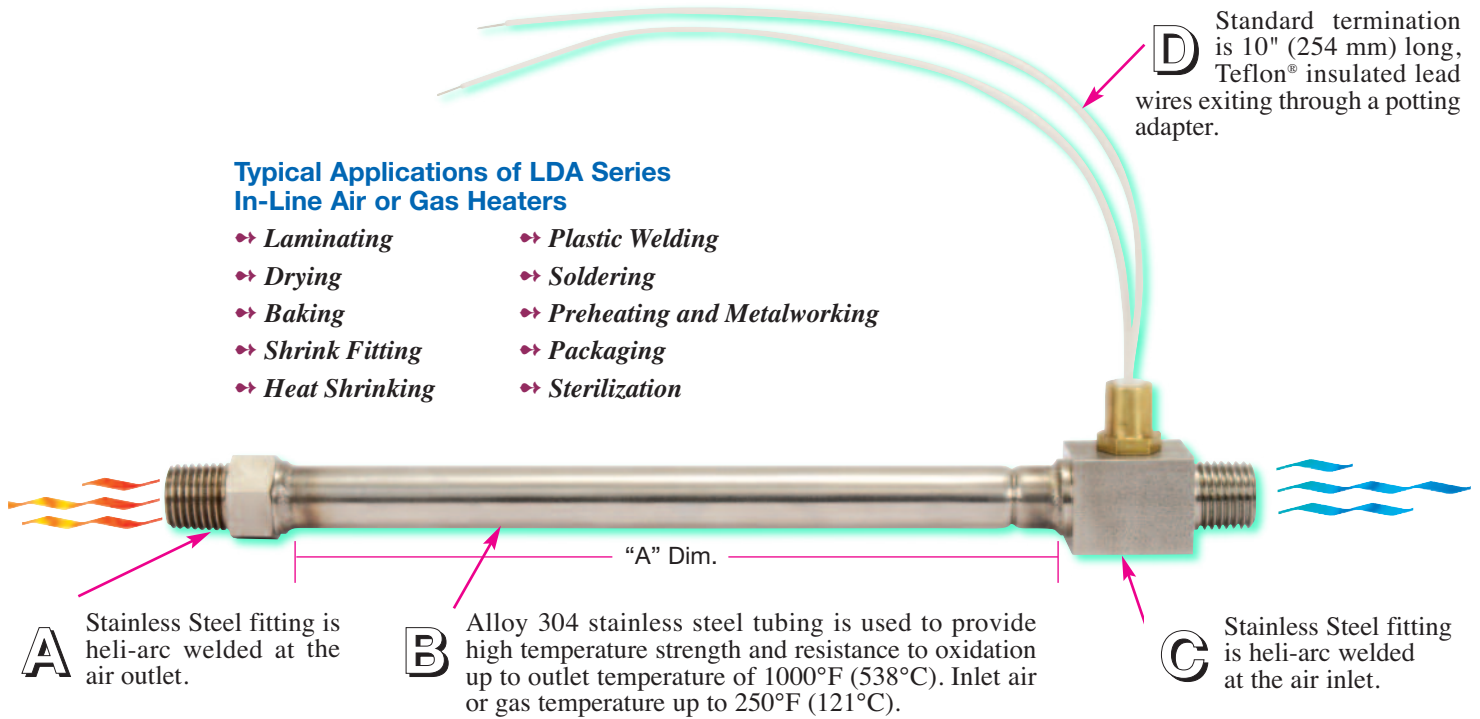

Control Panel

- * NEMA 12 enclosure
- * TEC-4100 PID Temperature Controller
- * TEC-410 FM High Limit Control
- * 300A SCR Power Controller
- * Six Heating Circuits
- * Cooling Fan & Filter Kit

Process Heater

- * 200KW, 380V, 3-Phase Heater
- * NEMA 4 Terminal Housing

LDA In-Line Forced Air & Gas Heating — Stainless Steel Inlet Fitting

LDA In-Line Air Process Heater Specifications

Heater Diameter (in)	Maximum Amperage	Cross Sectional Flow Area (in ²)	Maximum SCFM (ft ³)	Maximum Wattage/Linear Inch Of Heated Length
3/8	6	.030	8	200
1/2	8	.040	10	250
3/4	15	.120	20	500

Heater Selection

To ensure maximum heater life, heater wattage must be calculated so that it is suitable for the desired air flow. To calculate wattage, determine the air flow and temperature rise required. The following relationship can be used to determine the wattage.

$$\text{Wattage} = \frac{\text{SCFM} \times \text{Temperature rise } (^\circ\text{F})}{3}$$

Table below shows the relationship between standard cubic feet per minute versus maximum watts per linear inch of heated length on different heater diameters.

SCFM	Maximum Watts per Linear Inch of Heated Length		
	3/8" Dia.	1/2" Dia.	3/4" Dia.
2	80	80	120
4	100	100	120
6	150	150	150
8	200	200	200
10	—	250	250
15	—	—	375
20	—	—	500

Air heaters must always have air flowing through them and must operate in a horizontal position to balance the internal resistance coil. Air Heaters can be made in any practical length. These sizes can be adapted with many types of fittings.

Optional Features

- * Other wattages and voltages
- * Other diameters or lengths
- * 1/8", 1/4", and 3/8" NPT male or female threads are available for the inlet and outlet fittings
- * External MI cable thermocouple
- * Other custom made fittings or flanges
- * S/S cable or braid for lead wire protection
- * SJO cord
- * Explosion proof box

HAC In-Line Forced Air Process Heaters

Design Features

- * Two standard sizes:
1/2" diameter × 8" long,
11/16" diameter × 6" long
- * 304 Stainless Steel sheath
- * 120 Volt only
- * Exit air or gas temperature up to 1400°F (760°C)
- * Inlet air or gas temperature up to 250°F (121°C)
- * Ceramic coil support and insulator
- * Three different terminations
- * Customized termination, inlet, outlet, and wattage to customer specification available

Type SL
Straight Leads

Type SA
Straight Air Inlet

Barbed Fitting
for 1/4" ID Tube

Type NT
90° Air Inlet

Daisy Wound Heating Element

This continuous wound heavy gauge high temperature alloy wire is supported on a custom designed ceramic insulator. This unique coil design rapidly and efficiently removes heat from the resistor wire to achieve higher air/gas temperatures than conventional coil wound designs. The coil assembly is enclosed in a stainless steel housing for safety and durability. Termination can be customized to suit your specific application. Consult Tempco with your requirements.

Standard (Non-Stock) 120V In-Line Air Process Heaters

Heaters have 12" Teflon® leads standard, and the air inlet is a barbed fitting for a 1/4" ID tube.

Termination Type	1/2" Diameter, 120V 8" Heater Length				11/16" Diameter, 120V 6" Heater Length	
	325W	400W	500W	600W	500W	600W
SA	HAC00001	HAC00004	HAC00007	HAC00010	HAC00013	HAC00016
SL	HAC00002	HAC00005	HAC00008	HAC00011	HAC00014	HAC00017
NT	HAC00003	HAC00006	HAC00009	HAC00012	HAC00015	HAC00018

Air heaters must always have air flowing through them and should preferably be operated in a horizontal position. Use clean air.

HAC In-Line Air Process Heaters

Pressure vs. Temperature
(1/2" diameter heaters)

Pressure vs. Temperature
(11/16" diameter heaters)

Exit air temperature depends on heater wattage and air flow rate. The above charts show exit air temperature at various inlet air pressures and wattages on 1/2" and 11/16" OD heaters.

Linear Air Pumps for HAC In-Line Air Process Heaters

(Data below is for Pump Part Number PMP-101-101)

Design Features

- * High Efficiency
- * Low Vibration
- * Quiet Operation
- * UL Component Recognition

Temperature vs. Time
(1.1 CFM Pump)

The above chart shows the time for the exit air temperature to reach steady state condition at 1.1 CFM using Tempco's air pump.

Pump Data (Part Number PMP-101-101)

Head Configuration:		Pressure			
Pressure:		Flow @ 115V/60			
CFM@PSI	LPM@BAR	CFM	LPM	Amps	Watts
0	0	1.1	31.1	0.23	15
1	.1	0.62	10.5	0.23	12
2	.2	0.09		0.24	9
Max. Continuous Pressure:		2.0 PSI		0.14 bar	
Max. Intermittent Pressure:		2.32 PSI		0.16 bar	

HAC In-Line heaters can be connected to your air supply lines with an air pressure regulator. For self-contained units, Tempco air pumps can be directly connected to HAC In-Line process heaters. The pump comes with a 12" rubber hose for easy connection to the heater inlet.

Over-the-Side Immersion Heaters

Application

Tempco Over-the-Side Immersion Heaters are specifically designed for heating fluids in tanks. Depending on the tank shape, size, accessibility and working area inside the tank, choose a round or L shaped heater.

Standard sheath materials are Incoloy® 800 and steel with all wetted parts made with compatible alloys.

Construction

Tubular heating elements are welded into a liquid-tight junction box. Power leads for the elements travel up through the riser pipe and are connected to a terminal block in a NEMA 4 Housing. Unless otherwise specified, heaters are wired for three-phase from the factory but can easily be converted to single-phase.

A thermowell for a 3/8" diameter bulb is standard to accommodate an optional thermostat. A thermostat can be field installed to mounting lugs located in the electrical enclosure.

4" (102 mm) sludge legs keep the elements off the bottom of the tank and above any deposits that may accumulate there.

Optional Features

- * 304 or 316 Stainless Steel construction for all wetted parts
- * Passivation of all wetted parts. Electropolished or bright annealed surface treatments for Stainless Steel or Incoloy designs (heating elements only)
- * NEMA 1 or NEMA 4/7 (explosion resistant) terminal housings
- * Flange, fixed or adjustable bracket on riser for mounting
- * Mounting flange for terminal housing
- * External power wiring options include flexible cord/plug, armored cable, wire braided or plain lead wire
- * Double- or Single- pole thermostat (see page 11-6 for available ranges)
- * Process or Hi-limit thermocouple in thermowell in place of the thermostat
- * Hi-limit MI thermocouple on sheath
- * Special riser and/or sludge leg heights
- * Up to 12 elements per heater assembly
- * Right-angle riser design

Design Features

- * Lightweight and Portable
- * Easy Installation and Removal
- * NEMA 4 Electrical Enclosure
- * Single- or Three-Phase Wiring

Typical Heating Applications: Lightweight Oils • Degreasing Solutions • Mineral Oil

Design Features

- * Steel Sheath Heating Elements
- * NEMA 4 Terminal Housing
- * Watt Density of 23 watts/in² (3.6 watts/cm²)

Catalog Heaters

Over-the-Side Immersion Heater Part Numbers in red are in stock for immediate delivery.

Non-Stock Part Numbers are standard designs that are stocked as sub-assemblies for 2-3 week delivery.

Custom Engineered/Manufactured Heaters

An electric heater can be very application specific, for sizes and ratings not listed, **TEMPCO** will design and manufacture an Over-the-Side Immersion Heater to meet your requirements.

Standard lead time is Stock to 3 weeks.

Please Specify the following:

- Application
- Wattage, Voltage and Phase
- Element Sheath Material
- Number of Elements
- Element Watt Density
- "A" and "B" dimensions
- Optional Features
- Quantity

⚠ WARNING: Cancer and Reproductive Harm - www.P65Warnings.ca.gov.

General Purpose Tank or Reservoir Water Immersion Heater

Design Features

- * Immersion section of heater made of 316 Stainless Steel
- * Cold riser extends to the top of container where control housing is located
- * Cord set with 3-wire grounding plug is included for easy installation and wiring.
- * Adjustable vapor-proof thermostat control with temperature range of 55°F to 115°F (±3°)
- * Hi-limit cut switch set to 125°F (±4°)
- * Stainless Steel mounting bracket also supplied for easy mounting
- * Pilot light and on-off switch provided

Hi-Limit:

If the thermostat should fail and its contacts stick in a closed position, the heating element will continue to heat to about 125°F. At this temperature the Hi-Limit will open and turn the heating element off. After repairing or replacing the thermostat the Hi-Limit can be manually reset.

Hazard of electric shock. Installation must be grounded to earth and heater connected to line input through properly sized GFCI circuit breaker.

Disconnect power to heater before servicing. There should be no body contact with the water while the heater is in the water.

Under NO circumstances should this heater be turned on unless the system is full of water.

Vertical Loop – Low Profile Immersion Heaters

Design Features

- * Used on open-top tanks for heating water, water-based solutions, citrus juices, plating tanks, oil tempering, salt baths and other mild corrosive solutions.
- * NEMA 4 (moisture resistant) housing with integral grounding terminal is standard. Other NEMA ratings available.
- * Low-profile design with adjustable SS mounting bracket.
- * Optional Passivated, Electropolished, or Bright Annealed surface treatments available for Stainless Steel or Incoloy sheath designs.
- * External power wiring options including flexible cord/plug, armor cable, braided or plain lead wire.
- * Optional Hi-limit MI thermocouple on heater sheath.

Deep Tank/Sump Immersion Heater

Application

These fluid immersion heaters are designed for top mounting in large or deep enclosed tanks having a manhole access or opening suitable to insert & attach the heater. They are usable for either outdoor or indoor applications, within exposed or in-ground tanks and sewerage sumps. They are designed for permanent mounting and can be sealed weather-tight with supplied gaskets and adjustable riser fittings.

NEMA 4 terminal housing is easily removable & resealed to facilitate installation. Units are available with element watt densities from 6 wsi for heavy oils, to 60 wsi for clean water immersion applications. Element bundle diameters ranging from minimum of 10" OD to a maximum of 30" OD are available.

Construction

The tubular elements are welded into a submersible liquid-tight stainless steel junction box. Element power leads are routed up through adjustable riser pipe and connected to a terminal block inside the upper NEMA 4 terminal housing. Unless specified otherwise, heaters are factory wired for three phase and are easily converted to single phase.

All wetted parts are 300 series stainless steel. Standard unit includes 60-250°F double-pole thermostat mounted in upper housing that has a 3/8" dia. bulb & capillary installed in watertight thermowell with adjustable compression fitting.

Design Features

- * .475 diameter Incoloy elements and stainless steel wetted parts standard
- * Designed for permanent installation in outdoor/indoor applications
- * 2 ft to 12 ft vertical riser height (for thermostat designs)
- * Weathertight mounting hardware supplied
- * Riser adjustable to facilitate mounting variations
- * NEMA 4 Electrical Enclosure with 3/4 conduit fitting
- * 1-1/2" Sludge legs
- * Double-pole 60-250°F pilot duty thermostat
- * Watertight thermowell sized for 3/8" max. dia. sensing bulb
- * 120V, 208V, 277V, & 575V versions available (consult Tempco)

Optional Features

- * 316 SS, Steel, or Copper element designs
- * Passivation, electropolished, or bright annealed surface treatments for stainless steel or Incoloy designs (elements only)
- * Custom or ASI pressure rated flange on riser for mounting
- * NEMA 1 or NEMA 4/7 (explosion resistant) terminal housings
- * Alternate single- or double-pole thermostat (see page 11-6 through 11-9 for ranges)
- * Internally mounted definite purpose Magnetic Contactor, single circuit units only (see page 13-96 for volt/amp ratings and coil voltages available)
- * RTD or Process MI thermocouple in thermowell in place of thermostat
- * Hi-limit thermocouple on element sheath
- * Special riser or sludge leg heights
- * Right-angle riser design for offset terminal housing
- * Up to 24 elements per heater assembly
- * 1/32 DIN temperature controller, internal or panel mounted on terminal housing and used with T/C or RTD probe & contactor for heater control
- * Integrated float switch for liquid level control

Tank Immersion Heaters

Over-the-Side Chemical Bath Immersion Heaters

Tempco Over-the-Side Chemical Bath Immersion Heaters offer a wide variety of sheath materials and heater configurations to cover the widest possible spectrum of chemical heating applications. From plain steel to PTFE covered, Tempco is sure to have the correct heater for even the most difficult solution.

Built-in thermal overload protection prevents premature heater burnout in low liquid level conditions. This thermal protection also guards against a potentially hazardous situation should the heater be in close proximity to combustibles, such as a plastic tank or the medium being heated.

3 Construction Styles to select from...

Teflon®

- Low watt density for long service life
- Non-contaminating .030 PTFE covered stainless steel element
- Lightweight, non-floating construction
- Polypropylene guards (optional PTFE guards for chromic acids or solutions exceeding 180°F)

Quartz

- Replaceable element and quartz tube
- Standard heater with polypropylene guard (optional PTFE guards for chromic acids or solutions exceeding 180°F)

Metal Tube

- Variety of materials including steel, SS 304, SS 316, and titanium for chemical compatibility
- Rugged, long-lasting construction

Design Features

- * Heavy duty, long-lasting construction
- * Standard thermal protection
T1 replaceable, standard
T2 resettable, optional
- * Fully grounded for safety
- * Vapor-tight polypropylene terminal enclosure
- * Standard 3 ft. flexible PVC liquid-tight conduits and leads

Agency
Approval

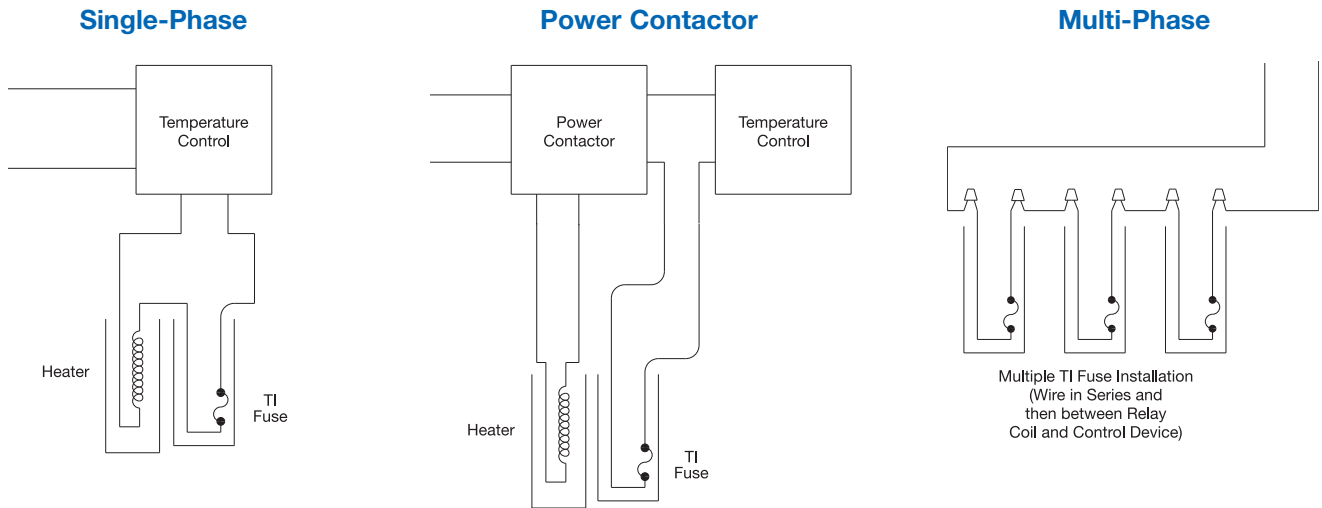

Tempco TMT, TMM (except plain steel) and KMH (up to 4KW/assembly) are UL listed in the US and for Canada under UL File Number E176527.

Application Guide for Thermal Over-Temperature Devices

T1 Thermal Fuse Devices

The T1 Over-Temperature Device is a eutectic switch with a pre-specified melt temperature. The “one shot” characteristic is useful in alerting operators to identify and remedy the cause of the over-temperature condition in the course of T1 fuse replacement.

UL listed rating of 15 Amps up to 277 Vac

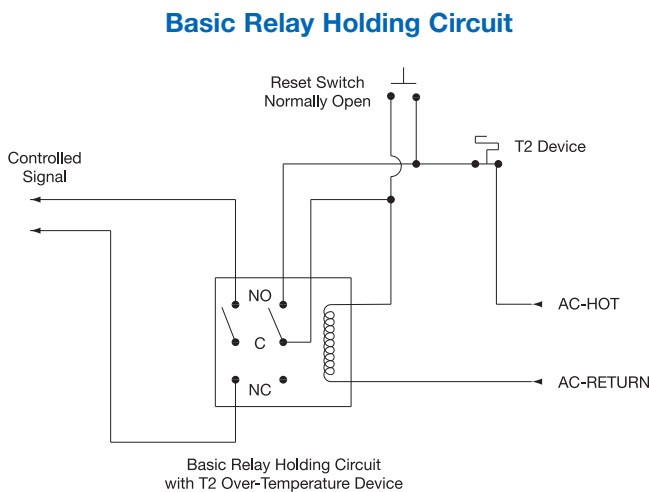

T2 Bi-Metal Switch

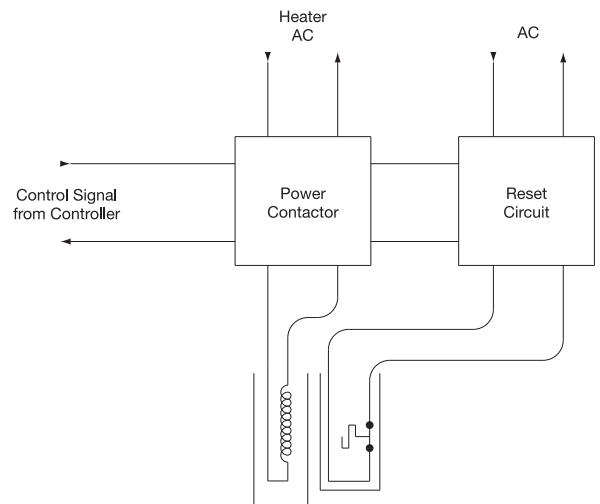

The T2 Over-Temperature Device is a slow make/slow break bimetallic thermostat with a pre-specified calibration temperature. The slow break characteristic coupled with the pushbutton reset feature is extremely useful when a low liquid level occurs.

The T2 Over-Temperature Device is electrically installed with a holding circuit in conjunction with a power contactor to energize the heater. **The T2 device must never be used to directly control heater power.**

UL listed rating of 6 Amps @ 120 Vac or 4 Amps @ 240 Vac

Typical Installation

- NOTE:**
- Multiple heaters are hooked up according to standard electrical practices.
 - Multiple T2 devices are hooked up in series on one reset circuit.

Replacement Thermal Protection Accessories

Various construction methods are used in the manufacture of PTFE, Quartz and Metal Tube Over-the-Side Immersion Heaters.

The T1 or T2 Thermal Protection Devices are matched to the item they protect for lead length and mounting style.

T1 Thermal Fuse Devices

T2 Bi-Metal Switch for Quartz Over-the-Side Heaters (w/SS Braid Sleeving)	
• Low Temperature Range (to 180°F)	TMC90102
• Medium Temperature Range (to 220°F)	TMC90103
T2 Bi-Metal Switch for Straight Metal Over-the-Side Heaters	
• Low Temperature Range (to 180°F)	TMC90105
• Medium Temperature Range (to 220°F)	TMC90106
• High Temperature Range (to 300°F)	TMC90107
T2 Bi-Metal Switch for L-Shaped Metal Over-the-Side Heaters	
• Low Temperature Range (to 180°F)	TMC90108
• Medium Temperature Range (to 220°F)	TMC90109
• High Temperature Range (to 300°F)	TMC90110

- High Temperature Range**— Solutions from 220°F to 300°F (104.4°C to 149.0°C)
- Medium Temperature Range**— Solutions from 180°F to 220°F (82.2°C to 104.4°C)
- Low Temperature Range**— Solutions up to 180°F (82.2°C)

Thermal Over-Temperature Protection

The realities of any plating, cleaning, anodizing, etching or pickling operation are that something could go wrong such as:

- ◆ An undetected tank leak
- ◆ Undetected evaporation losses
- ◆ Failure to refill the system

Any of these conditions creates a situation where the potential for fire or other hazard is increased.

Standard Setup — All Tempco Over-the-Side Teflon®, quartz and metal tube heaters come equipped with a replaceable thermal fuse placed in a thermowell and positioned at the top of the heater's hot zone. When wired into the heater circuit, it will instantly cut power to the heater when the preset temperature is reached. If the heater is over 15 amp, the thermal fuse would be wired into the control relay circuit. Also available is the T2 bi-metal switch which would be wired into the control relay circuit and used with additional components to form a resettable system.

We highly recommend the use of liquid level switches tied into control circuitry to provide a failsafe backup to the thermal fuse.

Chemical Bath Temperature Control Systems

Single-Phase Non-Indicating Thermostat 12/25 Amp Output

Design Features

- * FEP sleeved bulb and capillary for chemical resistance; 5 or 12 ft. available
- * Double pole, 120 or 240 Volt operation
- * Enclosure: 3.75" x 5.87" x 3.375" deep
Mounting centers: 2.62" x 6.25"

Standard (Non-Stock) Sizes and Ratings

Part Number	Volts	Amps	Temperature Range	Capillary Length ft (mm)	Shipping Weight Lbs (kg)
TMC11001	120/240	12/25	30° to 220°F	5 (1525)	3 (1.5)
TMC11002	120/240	12/25	200 to 550°F	12 (3660)	3 (1.5)
TMC11003	120/240	12/25	200 to 550°F	5 (1525)	3 (1.5)

Standard lead is 2 to 3 weeks.

Note: Amperage is limited to 12A, if operating a heater in series with a Thermal Fuse Protector.

1- or 3-Phase Non-Indicating Thermostat Control Systems: 20 - 125 Amps

Design Features

- * FEP sleeved bulb and capillary for chemical resistance; 5 ft. standard or 12 ft. available
- * Gasketed plastic enclosure for corrosion resistance
- * 240 or 480 Volt operation
- * 3-pole contactor for single- or three-phase operation
- * 20 - 125 Amp capability

Standard (Non-Stock) Sizes and Ratings

Part Number		Volts	Amps	Shipping Weight Lbs (kg)
Temperature Range 30 to 220°F	Temperature Range 200 to 550°F			
TMC11040	TMC11048	240	20	15 (7)
TMC11041	TMC11049	480	20	15 (7)
TMC11042	TMC11050	240	40	16 (7.5)
TMC11043	TMC11051	480	40	16 (7.5)
TMC11044	TMC11052	240	80	24 (11)
TMC11045	TMC11053	480	80	24 (11)
TMC11046	TMC11054	240	125	32 (14.5)
TMC11047	TMC11055	480	125	32 (14.5)

Standard lead is 2 to 3 weeks.

NOTE: The control systems listed above have a 5 ft. bulb and capillary, 3-pole mechanical relay, step-down control transformer.

Enclosure Dimensions (in.)

	Length	Width	Depth	C-C Length	C-C Width
	A	B	C	D	E
20 to 40 Amps	14.375	9.63	6.25	13.625	6.0
80 Amps	18.0	13.75	7.625	17.0	10.0
125 Amps	20.25	15.75	8.375	19.25	12.0

Note: User is responsible for fuses or circuit breaker for main power.

Chemical Compatibility Guide

SOLUTION	TYPE OF HEATER	SOLUTION	TYPE OF HEATER
Acetic	PTFE or Quartz	Chromium (No Fluorides)	PTFE, Quartz or Titanium
Acid Sulfate	PTFE or Quartz	Citric Acid	Titanium
Actane 70, 80	PTFE	Clear Chromate	PTFE or Quartz
Actane Salt	PTFE	Cobalt Nickel	PTFE, Quartz or Titanium
Alcorite	PTFE or Quartz	Cobalt Plating	304 Stainless Steel
Alkaline Cleaners (Electrified)	304 Stainless Steel	Cobra Etch	PTFE
Alkaline Soaking Cleaners	304 Stainless Steel	Copper Acid	PTFE or Quartz
Alodine (most formulas)	316 Stainless Steel	Copper Bright Acid	PTFE or Quartz
Alstan	304 Stainless Steel	Copper Cyanide	304 Stainless Steel
Aluminum Anodizing	PTFE or Quartz	Copper Fluoborate	PTFE
Aluminum Bright Dip	PTFE or Quartz	Copper Pyrophosphate	304 Stainless Steel
Aluminum Chloride	PTFE or Quartz	Copper Strike	304 Stainless Steel
Aluminum Cleaners	304 Stainless Steel	Copper Sulfate	PTFE or Quartz
Aluminum Sulfate	304 Stainless Steel	Cyanide	304 Stainless Steel
Ammonia	304 Stainless Steel	Deionized Water	316 Stainless Steel
Ammonia Persulfate	PTFE or Quartz	Deoxidizer (Etching)	PTFE or Quartz
Ammonium Bi Fluoride	PTFE	Deoxidizer Non-Chromated	316 Stainless Steel
Ammonium Chloride	Titanium	Dichromic Seal	Steel
Ammonium Nitrate	316 Stainless Steel	Diethylene Glycol	304 Stainless Steel
Anodizing	PTFE or Quartz	Diversey, 511, 514	PTFE
ARP 28, 80 Blackening Salts	PTFE or Quartz	Dow Therm	316 Stainless Steel
Arsenic	304 Stainless Steel	Dye Solutions	304 Stainless Steel
Barium Chloride	Titanium	Ebonal C	Titanium
Benzoic Acid	Titanium	Electro Cleaner	304 Stainless Steel
Black Nickel	PTFE or Quartz	Electro Polishing	PTFE or Quartz
Black Oxide (High-Temp)	304 Stainless Steel	Electroless Copper	PTFE
Black Oxide (Low-Temp)	Titanium	Electroless Nickel	PTFE or Titanium
Bonderizing	316 Stainless Steel	Electroless Tin (Acid)	PTFE or Quartz
Boric Acid	Titanium	Electroless Tin (Alkaline)	316 Stainless Steel
Brass Cyanide	304 Stainless Steel	Enthone 80 Acid	PTFE
Bright Copper-Cyanide	304 Stainless Steel	Ethylene Glycol	Steel
Bright Nickel	PTFE, Quartz or Titanium	Ferric Ammonium Oxide	316 Stainless Steel
Bronze	304 Stainless Steel	Ferric Chloride	PTFE, Quartz or Titanium
Brown Oxide	Titanium	Ferric Nitrate	304 Stainless Steel
Burnite	PTFE or Quartz	Ferric Sulfate	304 Stainless Steel
Butyric Acid	Titanium	Fluoborate	PTFE
Cadmium (Alkaline)	304 Stainless Steel	Formic Acid	316 Stainless Steel
Cadmium Black	PTFE or Quartz	Glycerol	304 Stainless Steel
Cadmium Fluoborate	PTFE	Gold-Acid	PTFE, Quartz or Titanium
Calcium Chloride	Titanium	Gold Cyanide	304 Stainless Steel
Calcium Hypochlorite	Titanium	Gold-Immersion	304 Stainless Steel
Carbonic Acid	Titanium	Grey Nickel	PTFE, Quartz or Titanium
Caustic Etch	Steel	Hot Seal Dichromate	316 Stainless Steel
Caustics	Steel	Hydrochloric Acid	PTFE or Quartz
Caustics (highly concentrated 20% & over)	Steel	Hydrofluoric Acid	PTFE
Chloride	PTFE, Quartz or Titanium	Hydrogen Peroxide	PTFE or Quartz
Chlorine/Wet	PTFE or Quartz	Indium	PTFE or Quartz
Chlorosulfuric Acid	Titanium	Iridite (1, 2, 3, 4-C, 7, 8, 15)	PTFE or Quartz
Chromic Acetate	PTFE or Quartz	Iridite (4-75, 4-73, 14, 14-2, 14-9)	316 Stainless Steel
Chromic Anodizing	PTFE or Quartz	Iron Fluoborate	PTFE
Chromic Nickel	PTFE or Quartz	Iron Phosphate	316 Stainless Steel
Chromium (Fluoride)	PTFE	Isoprep (186, 187, 188)	316 Stainless Steel

Chemical Compatibility Guide

SOLUTION	TYPE OF HEATER	SOLUTION	TYPE OF HEATER
Isoprep Acid Salts	PTFE	Silver Lume	304 Stainless Steel
Jetal	304 Stainless Steel	Silver Nitrate	316 Stainless Steel

Potassium Acid Sulfate	PTFE or Quartz	Trioxide (Pickle)	PTFE or Quartz
Potassium Cyanide	304 Stainless Steel	Turco (4181, 4338)	316 Stainless Steel
Potassium Hydrochloric	PTFE or Quartz	Unichrome	PTFE or Quartz
Potassium Hydroxide	304 Stainless Steel	Water	316 Stainless Steel or Quartz
Potassium Permanganate	PTFE or Titanium	Wood's Nickel Strike	PTFE, Quartz or Titanium
Rhodium	PTFE or Quartz	Yellow Dichromate	PTFE or Quartz
Rochelle Salt Cyanide	304 Stainless Steel	Zinc Acid	PTFE or Titanium
Ruthenium	PTFE or Quartz	Zinc Ammonium Chloride	Quartz or Titanium
Salt (Actine)	PTFE	Zinc Cyanide	304 Stainless Steel
Sea Water	Titanium	Zinc Phosphate	316 Stainless Steel
Silver Bromide	316 Stainless Steel	Zinc Phosphate (Fluoride)	PTFE
Silver Cyanide	304 Stainless Steel	Zincate	304 Stainless Steel

Solutions requiring derated heaters are indicated in red type.

PTFE is the abbreviation for PolyTetraFluoroEthylene.

Note: The data listed is provided as a reference and is offered as a guide only. It is not intended to be used as the sole basis of design or to establish specification limits. **Tempco Electric Heater Corporation** assumes no obligation or liability for any advice furnished by it or for results obtained from its use. Due to the complexities of solutions and applications, it is the customer's responsibility to contact their chemical supplier for heater material compatibility and recommendations. Ultimate responsibility lies with the user.

Do not use electric immersion heaters to heat flammable solutions!

Please insure applicability of heater before installation since we cannot guarantee heaters against premature failure due to corrosion or chemical destruction caused by unusual conditions over which we have no control such as:

- Excessively high solution temperatures
- The concentration of the solution
- The presence of inhibitors
- The presence of other acids causing a secondary reaction
- Stray electrical currents
- Flux floating on the surface
- The presence of dissolved gases
- Excessive sludge buildup
- Aeration
- Stagnant or turbulent flow of the solution
- Presence of oxygen or an oxidizing agent in the solution
- Erosion
- High Pressures or Vacuum Conditions

Tank Immersion Heaters

Fluoropolymer (PTFE) Single-Element Coil Heater

Typical Applications

Compatible with most plating tank solutions; inert to acids, anodizing and pickling solutions up to 190°F (88°C). Check compatibility guide on pages 11-88 and 11-89 and with chemical supplier for proper sheath material selection.

Replaces more expensive alumina or graphite heaters.

Design Features

- * 10 watts/in² (1.6 watts/cm²) for long service life
- * Non-contaminating Fluoropolymer (PTFE) covered stainless steel elements
- * T1 thermal fuse protection standard; T2 bi-metal switch optional
- * Grounded internal metal element for safety
- * UL listed for US and Canada
- * Lightweight, non-floating construction
- * Vapor-tight polypropylene terminal enclosure with universal mounting flange
- * Standard 3-ft. flexible PVC liquid-tight conduit
- * Single-Phase only
- * 120, 240, 480 volts standard as listed — other voltages available
- * Longer and shorter vertical lengths available; consult Tempco

Note: Guards are recommended for all fluoropolymer heaters. Standard guards are made of polypropylene. Fluoropolymer (PTFE) guards are available for chromic acid and temperatures above 180°F (82°C).

Standard (Non-Stock) Sizes and Ratings with Polypropylene Guard

Watts	Part Number			Hot Zone		Vertical Length

Ordering Information

Catalog Heaters

The part numbers given are for the complete assembly including the heater, poly guard, and T1 thermal protector.

Other optional assemblies may be ordered; consult Tempco for the catalog number.

Custom Engineered/Manufactured Heaters

For sizes and ratings not listed, **TEMPCO** will design and manufacture a heater to meet your requirements. **Standard lead time is 2 to 3 weeks.**

Please Specify the following:

- Hot Zone and Vertical Length per model
- Voltage and Wattage
- PVC liquid-tight conduit length (3 ft. standard)

WARNING: Cancer and Reproductive Harm - www.P65Warnings.ca.gov.

Fluoropolymer (PTFE) Single-Element L-Shaped Coil Heater

Typical Applications

Compatible with most plating tank solutions; inert to acids, anodizing and pickling solutions up to 190°F (88°C). Check compatibility guide on pages 11-88 and 11-89 and with chemical supplier for proper sheath material selection.

Replaces more expensive alumina or graphite heaters.

Design Features

- * Bottom design for even heating and varying liquid levels
- * 10 watts/in² (1.6 watts/cm²) for long service life
- * Non-contaminating Fluoropolymer (PTFE) covered stainless steel elements
- * T1 thermal fuse protection standard; T2 bi-metal switch optional
- * Grounded internal metal element for safety
- * UL listed for US and Canada
- * Lightweight, non-floating construction
- * Vapor-tight polypropylene terminal enclosure with universal mounting flange
- * Standard 3-ft. flexible PVC liquid-tight conduit
- * Single-Phase only
- * 120, 240, 480 volts standard as listed — other voltages available
- * Longer and shorter vertical lengths available; consult Tempco.

Note: Guards are recommended for all fluoropolymer heaters. Standard guards are made of polypropylene. Fluoropolymer (PTFE) guards are available for chromic acid and temperatures above 180°F (82°C).

Fluoropolymer (PTFE) Nine-Element Over-the-Side Heater

Typical Applications

Compatible with most plating tank solutions; inert to acids, anodizing and pickling solutions up to 190°F (88°C). Check compatibility guide on pages 11-88 and 11-89 and with chemical supplier for proper sheath material selection.

Replaces more expensive alumina or graphite heaters.

Design Features

- * 10 watts/in² (1.6 watts/cm²) for long service life
- * Non-contaminating Fluoropolymer (PTFE) covered stainless steel elements
- * T1 thermal fuse protection standard; T2 bi-metal switch optional
- * Grounded internal metal element for safety
- * UL listed for US and Canada
- * Lightweight, non-floating construction
- * Vapor-tight polypropylene terminal enclosure with universal mounting bracket
- * Standard 3-ft. flexible PVC liquid-tight conduit
- * Standard three-phase wiring
- * 240, 480 volts standard as listed — other voltages available
- * Longer lengths available; consult Tempco

Note: Guards are recommended for all fluoropolymer heaters. Standard guards are made of polypropylene. Fluoropolymer (PTFE) guards are available for chromic acid and temperatures above 180°F (82°C).

Standard (Non-Stock) Sizes and Ratings with Polypropylene Guard

Tank Immersion Heaters

Metal Single-Tube Style Heater

Typical Applications

For plating tanks, rinse tanks and other acidic aqueous solutions. Check compatibility guide on pages 11-88 and 11-89 and with chemical supplier for proper sheath material selection.

Design Features

- * 18 and 35 watts/in² (2.8 and 5.5 watts/cm²) for long service life
- * Heavy duty, long lasting construction
- * T1 thermal fuse protection standard; T2 bi-metal switch optional
- * Grounded for safety
- * UL listed except plain steel; for US and Canada
- * Vapor-tight polypropylene terminal enclosure with universal mounting bracket
- * Standard 3-ft. flexible PVC liquid-tight conduit
- * Single-Phase standard; three-phase available as an option
- * 120, 240, 480 volts standard as listed — other voltages available
- * Longer lengths available; consult Tempco

Metal Triple-Tube Style Heater

Typical Applications

For plating tanks, phosphatizing and concentrated aqueous solutions. Check compatibility guide on pages 11-88 and 11-89 and with chemical supplier for proper sheath material selection.

Design Features

- * 18 and 35 watts/in² (2.8 and 5.5 watts/cm²) for long service life
- * Low watt density for extended service
- * Heavy duty, long lasting construction
- * T1 thermal fuse protection standard; T2 bi-metal switch optional
- * Grounded for safety
- * UL listed except plain steel; for US and Canada
- * Vapor-tight polypropylene terminal enclosure with universal mounting bracket
- * Standard 3-ft. flexible PVC liquid-tight conduit
- * Standard design includes a common wiring terminal enclosure with a single conduit hub for external connections; power wiring from the three tubes can be configured single- or three-phase.
- * 120, 240, 480 volts standard as listed — other voltages available
- * Longer lengths available; consult Tempco

Quartz Single and Triple-Tube Style Heaters

Design Features

- * 26 watts/in² (4.0 watts/cm²) for long service life
- * Heavy duty, long lasting construction
- * T1 thermal fuse protection standard; T2 bi-metal switch optional
- * Replaceable element and quartz tube
- * Grounded for safety
- * UL listed up to 4 KW/assembly for US and Canada
- * Vapor-tight polypropylene terminal enclosure with universal mounting bracket
- * Standard 3-ft. flexible PVC liquid-tight conduit
- * Standard guards are made of polypropylene. Fluoropolymer (PTFE) guards are available for chromic acid and temperatures above 180°F (82°C).
- * KMH1 Single-Phase standard; three-phase available as an option
- * KMH3 consists of three individual single-phase heaters, which can be wired delta in the field to achieve a three-phase balanced operating system; individual elements are field replaceable
- * 120, 240, 480 volts standard as listed—other voltages available
- * Longer lengths available; consult Tempco

Typical Applications

For plating tanks, pickling and other acidic aqueous solutions. Check compatibility guide on pages 11-88 and 11-89 and with chemical supplier for proper sheath material selection.

Not for use in hydrofluoric acid or alkaline solutions.

Custom Process Tubular DUCT Forced Air Heaters

Process air duct heaters are used for tempering forced air in many industrial processes. Heater wattage is dependent on air outlet temperature (up to 1200°F [650°C]) and air velocity. Smaller duct heaters can be tandem mounted in place of one large unit to meet space limitations and simplify installation.

Heavy wall Incoloy® tubular heating elements (field replaceable) provide protection against corrosive air environments and resistance to vibration when compared to open coil elements.

Air duct heaters can be designed specifically for high pressure and/or hazardous locations. Turnkey systems including the duct heater, power and temperature control panel, and the temperature and over-temperature sensors can also be provided.

Our creative team of professionals can design and manufacture your next process forced air duct heating system.

Consult us with Your Requirements.

Typical Applications

- ↪ Air Drying/Curing Operations
- ↪ Annealing
- ↪ Autoclaves
- ↪ Booster Air Heater
- ↪ Braking Resistor
- ↪ Core Drying
- ↪ Dehumidification
- ↪ Forced Air Comfort Heating
- ↪ Heat Treating
- ↪ Make-Up Air Heating
- ↪ Re-Heating
- ↪ Resistor Load Banks

Electrical Housings: NEMA 4 (moisture resistant), NEMA 7 (explosion resistant) and NEMA 12 (dust resistant) are available.

High Temperature Application:
The electrical housing is separated from the heater flange to lower the ambient temperature of the electrical wiring.

Finned Duct Heaters
See Page 11-113A

Element Configuration: Elements can be U-bends, W-bends and foldback design depending on the requirements of the application.

Selection and Sizing
See Page 11-107

Installation and Wiring
See Page 11-111

Standard Designs
See Page 11-113

Custom Designs

Duct Heater System: Tempco can supply the heater and blower assembled, ready for connection to the application duct work. The pictured 48KW, 480V unit produces 1500 CFM of heated air to dry metal parts after being coated with a rust inhibitor.

Complete Your Thermal Loop System with a Tempco Power/Temperature Control Panel.
See pages 13-56 through 13-63.

Duct Heaters

Forced Air Tubular and Finned Tubular Duct Heaters

A NEMA 1 terminal box enclosure with vented cover to help keep wiring cooler. Optional enclosures: NEMA 4 (moisture resistant), NEMA 7 (explosion resistant) and NEMA 12 (dust resistant).

B 3-1/2 inches (89 mm) of mineral insulation in a stainless steel enclosure below the mounting flange, minimizes heat losses while keeping the electrical wiring cooler.

C The heavy duty frame is composed of a 1/4 inch (6 mm) thick steel mounting flange, stainless steel support plate and corner posts to securely hold the heating elements rigid in any mounting position.

Standard Features

Finned Duct Heater

D Standard field replaceable elements are held in place with single-screw quick-release "V" clamps. Pressure resistant designs utilizing welded elements, bulkhead fittings, or compression fittings to attach elements to the flange are available to limit leakage of ducted air or gases into the terminal enclosure. Welded elements are used for gas tight applications.

E A 9/32" (7 mm) inside diameter thermowell accessed through a 1/8" NPT tapped hole in the flange allows installation of an optional Type J or K thermocouple for sensing temperature within the element bundle. It can be clamped directly to an element for use as a high limit providing a faster response. An excellent safeguard for your system.

F The .430" (11 mm) diameter elements are silicone resin sealed. High temperature tubular duct heaters utilize Incoloy® sheath material for excellent high temperature scaling and corrosion resistance. The medium temperature finned duct heaters have stainless steel fins on a corrosion resistant stainless steel sheath. High temperature Incoloy® elements have all bends repressed in special dies to recompact the MgO refractory to eliminate any electrical insulation voids and hot spots.

Compression Fittings

Bulkhead Fittings

Duct Heaters have been certified as Recognized Components by Underwriters Laboratories (File Number E90771) to meet UL standard 1030, and CSA certified to meet Canadian Standard C22.2, No 72 and 88 (File Number 043099).

These files specify end use limitations and conditions of acceptability for the use of this type of heater. For additional information consult Tempco.

If you require UL, CSA, or other NRTL Agency Approvals, please specify when ordering.

Checklist — Selecting a High Temperature Tubular Duct Heater

✓ Sizing the Duct Heater

To properly match a duct heater to an application, the wattage, air velocity and element watt density must be determined.

Formulas and graphs on the following pages that will aid you in your design include:

- Wattage calculation formulas and table
- Element Watt Density vs. Sheath Temperature and Air Velocity Graph
- Pressure Drop vs. Air Velocity Graph

In most applications the following design limitations should be adhered to:

- Maximum watt density of 40 watts/in² (6.2 watts/cm²)
- Maximum element sheath temperature of 1400°F (760°C)
- Minimum air velocity of 200 feet per minute (61 meters per minute)
- Maximum voltage for UL certified heaters is 480V.
- Maximum voltage for CSA certified heaters is 600V.

✓ Calculating Minimum Wattage Requirement

Calculating Minimum Wattage Requirement

Table is for quick-estimation purposes and is based on air under standard conditions (70°F inlet air temperature at 14.7 PSIA).

Note: If air flow is given in CFM at operating temperature and pressure it can be converted to SCFM (Standard Cubic Feet per Minute) with the following formula (use the equations to the right for compressed air):

$$SCFM = CFM \times \frac{P}{14.7} \times \frac{530}{T + 460}$$

P = operating pressure (gauge pressure + 14.7)

T = operating temperature

Remember when calculating wattage to use the maximum anticipated air flow and to compensate for any heat losses.

For free air use equations:

$$KW = \frac{SCFM \times \text{Temperature rise } (^\circ F)}{3000}$$

or

$$KW = \frac{SCMM \times \text{Temperature rise } (^\circ C)}{47}$$

For compressed air use equations:

$$KW = \frac{CFM^* \times \text{Density}^* (\text{lbs/cu. ft.}) \times \text{Temperature rise } (^\circ F)}{228}$$

or

$$KW = \frac{CMM^* \times \text{Density}^* (\text{kgs/cu. m}) \times \text{Temperature rise } (^\circ C)}{57.5}$$

*At heater inlet temperature and pressure

Note: The free air equations include a 6% safety factor.

KWH to Heat Air at Selected Flow Rates

Amt. of Air CFM	Temperature Rise (°F)

Note: For additional information or help with your application please consult TEMPCO.

Checklist – Selecting the Proper Duct Heater, *continued*

Element Watt Density vs. Air Temperature and Air Velocity

Use graph (English or Metric) to plot

Outlet Air Temperature vs. Outlet Air Velocity to determine Element Watt Density

The recommended watt density is based on a maximum element sheath temperature of 1400°F (760°C). Air and other gases that are poor conductors of heat require watt densities matched to the velocity of the gas flow to prevent element overheating. Selecting a lower watt density for the heating elements will extend heater life expectancy.

Element Watt Density is the wattage dissipated per square inch of the element sheath surface and is calculated with the following formula.

$$\text{Watt Density} = \frac{\text{element wattage}}{\pi \times \text{element dia.} \times \text{element heated length}}$$

Checklist — Selecting the Proper Duct Heater, *continued*

Element Watt Density vs. Sheath Temperature and Air Velocity

Use graph (English or Metric) to plot

Watt Density vs. Air Velocity to determine Sheath Temperature

or

Air Velocity (feet per minute)

English

Calculating Air Velocity

$$\text{Velocity (feet/minute)} = \frac{\text{SCFM (CFM measured at standard conditions)}}{\text{Duct cross sectional area at heater in square feet}}$$

Air Velocity (meters per minute)

Metric

Duct Heater Installation Recommendations

Installation Recommendations

1. Tempco Duct Heaters may be bolted to the ductwork through the side, bottom or top. Bottom and side mounting are preferred to minimize wiring/terminal enclosure temperatures.
2. Before mounting, consideration should be given to the strength of the ductwork required to support the weight of the heater. Add additional hangers or supports as required.
3. The inlet side of the unit should be at least 48 inches downstream from any change in duct size or duct direction.
4. To minimize pressure drop, mount the duct with the narrow width of the heater perpendicular to the air flow.
5. Duct heaters may be mounted in tandem to increase the KW that can be installed.
6. Process temperature sensing should be located downstream from the duct heater.
7. Air flows must never be interrupted. Such events will cause overheating and/or premature heater burnout. Your installation should include high limit temperature controls. All standard duct heaters have a thermowell attached to one element for installing a thermocouple to sense element temperature. Additional protection for the heater from low air flow can be achieved by installing an air flow switch or pressure switch on the inlet side.
8. Select the terminal housing that provides the best terminal protection from the environment surrounding the application.

Wiring

1. Power supply conductors must have a minimum ampacity of 125% of the maximum heater load and be rated for the ambient temperature of the heater enclosure.
2. The air handler should run on a time delay after the heater is de-energized. This allows the elements to cool without overheating adjacent areas.
3. Duct heaters drawing more than 48 Amps are divided into smaller branch circuits, each drawing 48 Amps or less. Please note that the number of circuits, can be changed to accommodate any wiring requirements you may have.

Note: Before you proceed to make any changes on factory prewired heaters, check the heater wiring schematic or consult Tempco.

All electrical wiring must be done in accordance with national and local electrical codes.

Maintenance Recommendations

1. Never perform any type of service on duct heaters prior to disconnecting all power supply lines.
2. After long periods of idle use, clean elements prior to start-up.
3. Periodically clean the elements even during regular use so as not to allow dirt to build up on the elements.
4. Periodically check that mounting screws or bolts have not become loose from blower vibration.
5. Periodically check that electrical connections are clean and tight.
6. Failed elements are field replaceable, minimizing downtime and saving the cost of a complete new heater.

Standard Duct Heater Features

Design Features

- * NEMA 1 General Purpose Ventilated Enclosure
- * Painted Steel Mounting Flange
- * Single- and Three-Phase Wiring
- * 3-1/2" (89 mm) Insulation
- * Field Replaceable Incoloy® 840 Elements
- * Element Bends Re-pressed
- * 1/4" (6 mm) Inside Diameter Thermowell
- * Stainless Steel Support Plate and Corner Posts

(C*) = Number of Branch Circuits per heater (48 amps each branch max). For different circuit wiring configurations consult Tempco.

The 42 watt/sq.in. heaters are rated for outlet air temperatures up to 475°F at a minimum 1000 SFPM inlet air velocity.

The 62 watt/sq.in. heaters are rated for outlet air temperatures up to 500°F at a minimum 1750 SFPM air velocity.

Heaters are designed for ambient air heating at a nominal inlet temperature range of 60°- 100°F.

Inlet air temperature should not exceed 300°F.

Maximum recommended sheath operating temperature is 1000°F. If a higher temperature is needed, an unfinned alloy sheath TDH unit should be used.

Ordering Information

Catalog Heaters

Order by catalog number for catalog heaters.

Standard lead time is 3 to 4 weeks.

Note that Replacement Element Part Numbers for each heater are also listed.

Custom Engineered/Manufactured Heaters

For sizes and ratings not listed, **TEMPCO** will design and manufacture a Duct Heater to meet your requirements. Specify if UL or CSA approval required.

Please Specify the following:

- | | | |
|---|--|---|
| <input type="checkbox"/> Duct size | <input type="checkbox"/> Element watt density | <input type="checkbox"/> Over-temperature thermocouple, if required |

Cabinet Enclosure Heaters

Tempco enclosure heaters are the answer to all your enclosure heater needs. Our heaters are designed to help electric, electronic, pneumatic, hydraulic and mechanical equipment perform at top capacity by protecting them against low temperatures, condensation and corrosion. Tempco offers many different styles of heaters that can be used in enclosure heating applications. Our most popular styles are displayed on the next few pages.

Typical Applications

- ✦ Traffic Signal Control Boxes
- ✦ Automatic Teller Machines
- ✦ Outdoor Electrical Power Enclosures
- ✦ Control Panels
- ✦ Control Valve Housings
- ✦ Switch Gear
- ✦ Clothing Lockers

Determining the Minimum Wattage for Your Application

1. Determine the lowest temperature to which the enclosure is expected to be exposed.
2. Determine the operating temperature to which you want the enclosure heated.
3. Subtract the ambient temperature from the enclosure temperature to get the temperature change required.
4. Calculate the surface area of the enclosure. For a rectangular enclosure use the formula:
 $2 [(Length \times Width) + (Length \times Height) + (Width \times Height)]$
5. Select the correct table below depending upon whether your box is insulated or non-insulated. Read from the table the wattage required depending upon your calculated temperature change and surface area.
6. Add an additional 50% of the determined wattage if the enclosure is to be located in windy conditions.

Selecting the Right Heater for Your Application

1. Determine the wattage of heater(s) that you need. See the instructions on this page to determine your wattage requirements.
2. Determine the type of heater that you need. Depending upon conditions, one heater type might be better than others. Items to take into consideration are space constraints inside the enclosure and wattages required.
3. Determine the number of heaters you need. You can combine multiple heaters to achieve your wattage requirements.
4. Determine how you will control the heaters. Will you use built-in thermostats to monitor the temperature? Or will you use a single temperature control to monitor and control the heaters? Tempco manufactures a wide range of temperature control devices and when multiple heaters are required, Tempco can supply you with the temperature controls that will meet your needs.

Insulated Enclosure Wattage Selection Table

Electrically Heated Hose Assemblies

Design Features

- * Base Hose has a smooth bore Teflon® core with Stainless Steel overbraid.
- * Self-vulcanizing Silicone TGL bedding tape at 50% overlap.
- * Kapton® insulation wrapped stranded nichrome alloy heater element.
- * 2 layers of 1/8" Nomex® felt insulation.
- * Layer of 2" wide black tape for final wrap.
- * Heavy duty abrasive resistant outer covering, polyester braid; optional water resistant jacket is available upon request.
- * Heat shrink tube end caps.
- * Male NPT or 37° JIC female swivel fittings are standard; options include Tri-Clamp or Tubing/Pipe for compression fittings. Choice of Stainless Steel or plated carbon steel.
- * Temperature range to 450°F/232°C.
- * Overall length up to 600 inches.
- * Temperature sensors such as thermocouples or RTDs can be built-in to the assembly.
- * Snap action thermostats can be built in to the assembly to limit the maximum temperature.
- * 6 ft. power leads standard; length can vary upon request.
- * Hose assemblies available in 120 and 240 Vac.
- * Ground connection to the Stainless Steel overbraid.

Tempco's Control Consoles

Ideal for controlling process temperatures on heated hose assemblies. Complete information can be found on page 13-52.

Tempco's Electrically Heated Hose Assemblies are designed for optimum transfer of non-explosive liquids or gases. Tempco's HEH Transfer Hoses are Teflon® lined stainless steel braid heated flexible assemblies. Style R (regular pressure) or Style H (high pressure) transfer hoses are used in a wide range of applications such as water (freeze protection), steam, wax, plastics and many others. Heated transfer hoses improve fluid transfer for many applications.

Typical Applications

- ↔ Hot Melt Systems
- ↔ Petroleum Products
- ↔ Food Products
- ↔ Hot Oil Lines
- ↔ Chemical Transfer
- ↔ Gas Analyzer Systems
- ↔ Steam Transfer
- ↔ Water & Waste Disposal
- ↔ Bulk Transfer
- ↔ Paint Systems
- ↔ Tar & Asphalt
- ↔ Waxes – Candle Making
- ↔ Adhesives

Construction Characteristics

Tempco's Heated Transfer Hoses are built to the most stringent standards. Each hose is hand assembled to exact physical and electrical specifications. The heated hose assembly starts with the highest quality Teflon® smooth bore core with Stainless Steel overbraid style hose. Over this is wrapped a layer of self-vulcanizing silicone TGL bedding tape at 50% overlap as a base for the resistance wire. The stranded resistance wire is pre-wrapped with Kapton® insulation before winding around the growing assembly in the precise pattern required for uniform heating. Next is wound two layers of Nomex® felt insulation, to maintain consistent heat and a safe cool-to-the-touch design, followed by a layer of 2" wide black tape. The standard hose outer cover is an abrasion resistant polyester braid for normally dry environments. An optional outer cover can be provided for water resistant protection.

The hose assembly is then finished with heat shrink end caps, specified hydraulic fittings and electrical connectors. Hoses are also manufactured with optional built-in sensors including RTDs or thermocouples.

HEH Heated Hose Assembly Length Definition

1. For Heated Hose Assemblies with 37° JIC Female Swivel fittings, the specified Length is defined as fitting seat to seat.
2. For Heated Hose Assemblies with other permanently attached fittings, such as Tri-Clamps, Rigid NPT or Tubing, regardless of fitting type or gender, the specified Length is measured from the outside edge to the outside edge of the fittings.
3. Fitting adapters such as male JIC to male NPT, are not included in the Length specification.
4. Length Tolerances are stated as follows:

17.99" or less: ±0.5"	10 feet to 20 feet: ±1.5"
18" to 36": ±0.75"	20 feet to 50 feet: ±2.5"
3 feet to 10 feet: ±1.0"

Ordering Information

Heated Hose Assemblies are offered with the features listed above. Create an ordering code by filling in the boxes with the appropriate number and/or letter designation for your requirements and a part number will be assigned.

Consult Tempco with your requirements.

Standard lead time is 2 to 3 weeks.

Accessory Item (Optional)

9-pin mating connectors, includes 12" of pre-attached leads to crimp sockets and cable clamp/strain relief.

Part Number	Mounting	Heated Hose Sensor Type
EHDR-1115	Cable	Type J thermocouple
EHDR-1207	Cable	Type K thermocouple
EHDR-1208	Cable	2 or 3 wire RTD temperature sensor
EHDR-1116	Panel	Type J thermocouple
EHDR-1209	Panel	Type K thermocouple
EHDR-1210	Panel	2 or 3 wire RTD temperature sensor

HET — Electrically Heated Tubing Assemblies

Tempco's electrically heat-traced tubing assemblies are designed for optimum transfer of non-explosive liquids or gases. Tempco's high purity PTFE Teflon® provides maximum flexibility for low pressure applications. Choose copper, aluminum or stainless steel tubing for high pressure applications.

We offer machine-wrapped heat tracing from 1/4" O.D. to 1-3/4" O.D., as well as hand-wrapped tracing of unusually small or large outer diameter tubing to meet a wide range of applications.

The key to Tempco's flexible, energy efficient, heat-traced tubing is the powerful low-profile heat tape spirally wrapped around your choice of tubing. The heat tape is manufactured with a top reflective layer to direct heat into the tube. This reflective layer, combined with the heat tape applied directly to the surface of the tube, results in a highly efficient thermal transfer. The simplicity of the heater design allows for the heated assembly to be extremely lightweight and flexible for use in portable and stationary applications. Each tube is then insulated with one or two layers of Nomex felt, depending on the temperature to be maintained.

Typical Applications

- ✦ **Aerospace** * * * * *Satellites, Vacuum Chambers, Testing, Laboratory*
- ✦ **Automotive** * * * * *Fuel Cell Development, Cold Chamber Testing*
- ✦ **Composites** * * * * *Adhesives, Epoxy Transfer, 2-Part Spray*
- ✦ **Environmental** * * * * *EPA-Required Testing, Diesel Emissions*
- ✦ **Food Industry** * * * * *Viscosity Control, Production Technology*
- ✦ **Gas Samples** * * * * *Stack Samples, Analyzer Components*
- ✦ **Government** * * * * *Meteorological Analysis*
- ✦ **Industrial** * * * * *Machinery, Systems Engineering, Semiconductors*
- ✦ **Laboratory** * * * * *Thermal Testing, Instrumentation*
- ✦ **Medical** * * * * *Flow Control, Instrumentation, Scientific Research*
- ✦ **Pharmaceutical** * * * * *Production Machinery, R&D, Testing*
- ✦ **Transportation** * * * * *Aviation Freeze Protection, Heated Lines*
- ✦ **Universities** * * * * *Mechanical, Chemical, Electrical Engineering*

Design Features

- * *Base tubing can be Teflon®, Nylon®, Stainless Steel, Copper or Aluminum*
- * *Machine-wrapped low-profile flexible heat-tape with multiple heat conductors provides efficient thermal transfer, resulting in even heating from end to end.*
- * *Spirally wrapped Nomex® felt insulation bound in place with nylon braid.*
- * *Outer layer from simple heat shrink to moisture/contaminant resistant durable outer silicone sleeve.*
- * *Temperature range to 400°F / 200°C.*
- * *Heated Length to 100 ft. available in 1ft. increments. 1ft. unheated section at each end, shipped bare or with fittings.*
- * *Assembly can be designed with a replaceable inner tubing.*
- * *Temperature sensors include Type J, K or T thermocouples and RTDs.*
- * *Thermostats can be built in, eliminating the need for separate control.*
- * *Standard power leads include flying leads, 6 ft. cordset with standard plug or industrial Hubbell Twist-Lock® plug.*
- * *Up to 5 total Heated / Unheated tubes in the same bundle.*
- * *Built-in indicator lamps for Power On, Heat On or Over Temperature.*
- * *Voltage from 12VDC - 240 VAC.*

Silicone Rubber Drum and Pail Heaters

Built tough

Resistant to chemicals

Ratings for Metal and Plastic Drums and Pails

Easy to clean

Stock to 2 week lead time

UL and CSA Approval
See page 9-2 for details

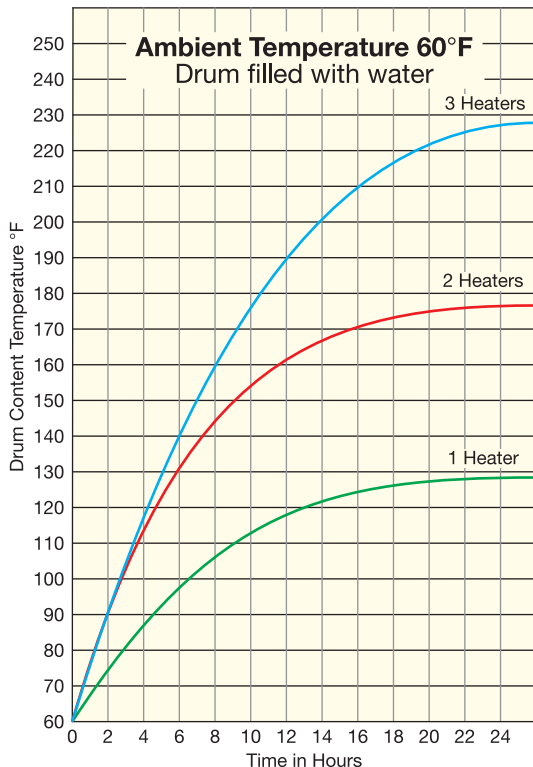

Design Features

- * Maximum operating temperature of 425°F (218°C).
- * Power cord is 6-foot long, SJO Type 16/3 complete with three-prong plug for 120 VAC models. Plugs are not included on 240 VAC models but are available (see page 15-15).
- * Surface grounded electrically with internal ground screen.
- * 1250 volts dielectric tested.
- * Vulcanized silicone rubber construction resistant to moisture, ozone, fungus, and radiation.
- * Adjustable thermostat, see page 9-16 for specifications.

Tempco flexible drum heaters can save time by heating stored viscous fluid to a pourable temperature.

The heater is built to be tough, long lasting, and resistant to chemicals. Because few materials stick to its silicone rubber with fiberglass reinforced construction, it is easy to clean. The heater comes with a 6-foot cord and plug (120V only). When not in use, it rolls for convenient storage.

The total wattage (number of heaters) and the material being heated inside of the drum must be considered when determining the actual temperature to which that specific material can be heated.

Hazardous Area Rated Silicone Rubber Drum Heaters

Design Features

- * Dual setpoint NEMA 7 temperature controller connected to a high temperature limit indicator light
- * Extra wide 8" coverage area
- * Exceptional durability and flexibility
- * Grounded heating element meets NEC 427.23
- * Designed for metal drums

Hazardous Area Rated

Class I Division 2:
Groups A, B, C and D

Class II Division 2:
Groups F and G

NEMA 7 Thermostat Control Assembly with High Limit Indicator Lamp

Specifications

Physical Description

Heating element is laminated between two layers of 23 mil and two layers of 25 mil fiberglass reinforced silicone rubber.

Power Density: 2.5W/sq.in.

Nominal Silicone Rubber Density: 26 oz/sq.yd.

Electrical Ratings

Wiring from Drum Heater to Controller: 6 ft. liquid-tight conduit

Line Cord from Controller Assembly: 6 ft. industrial power cord

Line Cord Termination: 120V – Hazardous area rated 5-15P plug
240V – No plug, flying leads

Thermostat

High Limit Thermostat:

- designed to keep blanket below NEC article 500-T rating:

T Rating	NEC Temperature	Actual High Limit
T3	392°F (200°C)	292°F (145°C)
T4A	248°F (120°C)	158°F (70°C)

- High limit red indicator lamp
- Attached adjustable dual setpoint thermostat NEMA 7 temperature controller. Moisture and chemical resistant.

Thermostat Range: 25°-325°F/-4°-163°C, dual scale limited by the "T Rating"

Typical Drum Heater with Infinite/Variable Control

Optional Drip Guard
Prevents contamination of the heater from drum materials. Available for 55 gallon drums only.
Part Number: DHM00070

Design Features

- * Rapid heat-up of drum
- * Easy installation and removal
- * Durable metal design
- * Infinite switch or thermostat
- * 3-heat control
- * Indicator lamps: green for power, red for heater
- * 6 ft. power cord
- * Variety of diameters (all 5" wide) and ratings
- * Stock to 2 week lead time!
- * UL listed and CSA certified

Standard (Non-Stock) and Stock Sizes Stock Items Are Shown In RED

Drum Size	Temp Control	Watts	Volts	Part Number
55 GAL. 22.5" Diameter	Infinite/Variable Heat Control	1750	120	DHM00010

	60°-250°F Thermostat			DHM00120
	200°-400°F Thermostat			DHM00130
5 GAL. 11.25" Diameter	Infinite/Variable Heat Control	1500	120	DHM00140
	60°-250°F Thermostat			DHM00150
	200°-400°F Thermostat			DHM00160

Thermostat Control models sense temperature in an area remote from the heating element and will automatically cycle heater to maintain set temperature. Three-heat switch allows three wattage ratings per thermostat setting and voltage rating.

Infinite/Variable Control models cycle the current ON and OFF. The ratio of ON time will increase as the control is advanced. Three-heat switch allows the operator to control the heater output within a given 3 settings of high, medium, or low.

Standard lead time is Stock to 2 weeks.

† The 1920 Watt/120V model is equipped with a special high amperage plug. If required the matching receptacle is: Part Number EHD-103-108 (Hubbell® #5361, 20A, 125V)

†† The 3000 Watt/240V is equipped with a standard 15A/240V straight blade type plug.

Typical Applications

Industries	Applications	Industries	Applications
Mining & Oil Companies	Heat diesel fuel, grease, etc. in cold weather	Farm Supply Distributors	Heat tallow to 140°F to mix with feed ration
Candle Makers	Heat wax to make candles	Beekeepers	Reliquefy honey after crystallizing
Food Processors	Heat food additives	Roofers	Heat roofing material during cold weather
Aircraft Mechanics	Heat aircraft grease during cold weather	Chemical Manufacturers	Heat chemical components
Auto Mechanics/ Undercoaters	Accelerate flow of undercoating material	Chemical Users	During the manufacturing process
		Furniture Manufacturers	Heat adhesives

Stock Heated Drum Dolly for Metal Drums

Holds up to 900 lbs.

Chain Link Reinforced Power Cord

Infinite Variable Heat Control

Heat your 55 gallon drum while keeping it portable. Just place the drum on the dolly's 3/4" thick x 15-1/4" square heated platen.

The overall diameter is 28-1/2" with an inside diameter of 24". The dolly comes equipped with 3" diameter phenolic casters and a 6 foot long cord and plug.

Part Number: **DHM01001** 1750 Watts, 120VAC

Part Number: **DHM01002** 1920 Watts, 240VAC

Drum Immersion Heaters

Design Features

- * Fits through the standard 2" bung opening in 55 gallon drums
- * Ideal for improving the flow of lard, tar, oils and other high viscosity solutions
- * Double Pole 60-250°F thermostat with over-temperature cutout and pilot lamp to indicate heater on/off status
- * Only 8" of vertical riser is heated, allowing liquid level to fluctuate without damaging the heater
- * Adjustable stainless steel mounting bracket

Optional Features

- * Passivation, electropolished, or bright annealed surface treatments available for Stainless Steel or Incoloy sheath designs.
- * NEMA 4 (moisture resistant) and/or NEMA 7 (explosion resistant) terminal enclosures
- * External Power wiring options include flexible cord/plug, armored cable, wire braided or plain lead wire.
- * Process or Hi-Limit thermocouple in thermowell in place of the thermostat

Installation, Operation & Maintenance Instructions

1. Ensure the vertical heated portion, which extends 8" up riser from bottom of element, is always fully immersed.
2. Use in metal drums, containers or heat resistant tanks only.
3. All wiring should be in accordance with NEC/NFPA and local codes.
4. Use techniques safe for the heater and surrounding environment.
5. Use mounting brackets to position heater away from tank wall and above sludge buildup at bottom of tank.
6. Periodically remove the heater to clean residues and inspect for damage.

WARNING: Cancer and Reproductive Harm - www.P65Warnings.ca.gov.

Full Coverage Drum Blanket Heaters

Tempco's Full Coverage Drum Blanket Heaters are designed to wrap around a drum and heat the contents while insulating to keep the heat exactly where it needs to be.

Full Coverage drum heaters combine the convenience of quick heat-up time and the precision of a digital controller to provide you with the practical, efficient means of freeze protection, viscosity control, and maintenance of materials at elevated temperatures.

Design Features

* **Digital On-Off Controller Range:**

For Metal Drums: 50° to 450°F (10° to 232°C)

For Poly Drums: 50° to 160°F (10° to 71°C)

* **Facing and Liner Material: Silicone impregnated cloth**

* **Insulation: 1" thick Fiberglass**

* **Heated Area: Lower 67% (2/3)**

* **Unheated Area: Upper 33% (1/3)**

* **Maximum Exposure - Heating Surface: 500°F (260°C)**

* **Closure: Hook and Loop (similar to Velcro®)**

* **Grounded Heating Element**

* **Dielectric Strength: Over 2000VAC**

* **Power Cord: 120V: 6 ft. with standard NEMA 5-15 plug
240V: 6 ft. with standard NEMA 6-15 plug***

**(240VAC Celcius models have crimped wire ferrule terminated leads)*

* **Designed for Indoor Use only**

Typical Applications

- ↪ Viscosity Control
- ↪ Freeze Protection
- ↪ Melting of Solids
- ↪ Heat up drum contents to a desired temperature
- ↪ Thermal Mixing

55 Gallon Single Zone Full Coverage

55 Gallon Dual Zone Full Coverage

Dual Zone Drum Blanket Heaters include two independently controlled and wired heater sections for better uniformity, control and higher wattage.

Full Coverage Drum Blanket Heaters

Ordering Information
Drum Blanket Heaters are ordered by Part Number.
 Available set up for °C. Consult Tempco.
 Standard lead time is 3 weeks.

Full Coverage Drum Insulation Blanket & Accessories

55 Gallon Drum Full Coverage Insulation Blanket

Design Features

- * Compatible with any 55 gallon drum heater
- * Reduces heat loss
- * Improves uniformity
- * Similar construction as the Full Coverage Drum Blanket Heater
- * Designed for indoor use

Insulation Cover with openings for bung hole and vent

Part Number	Description
DHB00055	55 gallon, 22.3"/565 mm diameter Unheated Drum Insulation Assembly
DHB00001	Insulation Cover for 55 gallon drum
DHB00002	6" (152 mm) wide extension strip for 55 gal. drums to fit up to 24.2" (615mm) diameter. Required for 55 gal. drums with removable lids.

Ordering Information
Drum Blankets are ordered by Part Number.
 Standard lead time is 2 to 3 weeks.

⚠ WARNING: Cancer and Reproductive Harm - www.P65Warnings.ca.gov.

WCT - Tote Tank/IBC Heater Systems

The contents in Tote Tanks and Intermediate Bulk Containers (IBCs), such as honey, molasses, or lube oil, can be slow moving and uncooperative when the material is needed most, especially during winter. Heat allows the contents to flow at a manageable rate.

Design Features

- * *Two Styles: WCT1 Wraparound Full Coverage Blanket Heater
WCT2 Heating Pad that is placed underneath the Tank/Bladder*
- * *Does not contaminate or scorch your product*
- * *Durable and Long Lasting*
- * *Variety of Standard Sizes and Made-to-Order*

Typical Applications

- ↪ *Viscosity Control*
- ↪ *Freeze Protection*
- ↪ *Temperature maintenance*
- ↪ *Melting of Solids*
- ↪ *Heat-Up Tote Tank / IBC contents to a required temperature*
- ↪ *Thermal Mixing*

WCT1 Wraparound Full Coverage Blanket

How to measure your Tote Tank / IBC

1. Measure the height of the Tote Tank/IBC, not including the pallet or support.
2. Measure the length and width of the tank. This determines the tank perimeter.

$$\frac{\text{length}}{\text{(length)}} \times 2 + \frac{\text{width}}{\text{(width)}} \times 2 = \frac{\text{perimeter}}{\text{(perimeter)}}$$

Note: If the tank perimeter measurement is below 160" (4064 mm) or above 192" (4877 mm), contact Tempco for a Made-To-Order recommendation.

WCT1 Wraparound Full Coverage Blanket Heater

- Designed for caged, plastic, or metal tote tanks / IBCs
- Wraparound blanket design allows you to heat a tote tank / IBC from the outside to avoid contamination inside
- Does not contaminate or scorch your product
- Two separate heat zones allow you to adjust heater output when content levels decrease

Control each zone with dual thermostats. Protect contents with manual reset high limit safety thermostats.

Fits several Tote Tank sizes with adjustable nylon straps and buckles

Design Features

- * Full coverage plug-and-play system
- * Fits any tote tank from 40" x 40" (1016 mm x 1016 mm) to 48" x 48" (1219 mm x 1219 mm)
- * Three standard height sizes: 36" (914 mm), 42" (1067 mm) and 48" (1220 mm)
- * Two separate heat zones (top and bottom)
- * Adjustable thermostat: 50-160°F (10-71°C)
- * Built-in manual reset high-limit safety thermostat set at 195°F (91°C) for each heat zone
- * Attachment method: adjustable nylon straps with buckles (Two across the top and three around the tank)
- * Silicone impregnated cloth facing and liner
- * 1/4" (6 mm) fiberglass insulation
- * "Mouse hole" designed for spigot
- * Grounded for your safety
- * 120 or 240VAC
- * Total wattage: 120VAC = 1440 watts
240VAC = 2880 watts
- * Power cord 6 ft. (1.8M) long with standard 3-prong power plug: 120VAC (NEMA 5-15), 240VAC (NEMA 6-15)
- * Optional insulated top cover (reduces heat loss and accelerates heat-up)

Standard WCT1 Wraparound Full Coverage Blanket

Insulated Tote Tank / IBC Top Cover Part Number WCT90001

⚠ WARNING: Cancer and Reproductive Harm - www.P65Warnings.ca.gov.

Series WCT2 Silicone Rubber Heater Pad and Control — Used under Tote Tanks and IBCs

- Ideal for a wide range of outdoor and indoor caged tote tank / IBC heating applications.
- Quick heat-up time due to direct surface contact underneath plastic bladder.
- Non-invasive heat: Does not contaminate or scorch your product.
- Your choice of either Tempco's PCT-2000 Non-Indicating Temperature Control or PCT-3000 Digital TEC-220 based PID Temperature Control.

PCT-2000 Series

PCT-3000 Series

Design Features

- * Includes either Tempco's PCT-2000 Non-Indicating Dual °F/°C Scale Temperature Control (indoor use) or PCT-3000 Digital TEC-220 based PID Temperature Control (indoor/outdoor use). Easy plug-and-play connections
- * Wire-wound heating element is uniformly placed to maximize heat distribution
- * Heating element is laminated between two extra-thick layers of 20 mil fiberglass reinforced silicone rubber
- * Type K thermocouple built in to IBC heating pad
- * Moisture and chemical resistant silicone rubber heating pad
- * Weight-absorbent 1/2" (13 mm) thick foam pad
- * 180°F (82°C) maximum exposure temperature
- * Heater pad leads 6 ft. (1.8m) long with power and thermocouple plug
- * Temperature control input power cord is 5-foot (1.5m) long with standard three-prong plug 120VAC (NEMA 5-15), 240VAC (NEMA 6-15)

Installs Underneath the Bladder for Rapid Heat-Up

PPS Series Videographic Data Recorders

Now with Touch Screen Technology!

PPS-1000

PPS-2000

PPS-3000

Product Overview

- * The PPS Series is a major advance in the market for Paperless Videographic Data Recorders incorporating Touch Screen Technology for set-up and programming.
- * *The PPS Series encompasses three models:*
 - The PPS-1000 for basic 3 or 6 channel recording on a 4.3" screen
 - The PPS-2000 for up to 24 channels on a 5.6" screen
 - The PPS-3000 expandable to 48 channels on a 12.1" screen
- * The PPS Series displays data in real time on the touch screen.
- * The PPS saves data to internal memory that can be exported to SD memory cards or USB ports as well as over a LAN using the optional Data Acquisition Software.
- * Data logging supports notes being written directly on the Touch Screen that may be saved with the data files. The data files may be started and stopped as a batch operation with additional batch lot information.
- * *The Basic PC software package included at No Charge provides:*
 - Historical Viewer/Configuration capability to view, print, export and archive PPS Series data files imported via SD card or USB drive
 - Create and edit PPS configurations to be downloaded back to the recorder
- * Data Acquisition Studio software combined with the Basic package provides real time access from one or more PPS units via LAN, serial or Modbus with datalogging functions at the PC.
- * Optional firmware packages include the Panel Studio development software to design custom displays including digital and analog tags and values with animation.

Design Features

- * *Touch Screen Technology*
- * *TFT high resolution color LCD*
- * *100 millisecond sample rate and data logging*
- * *High accuracy 24 bit A-D analog inputs*
- * *16 bit A-D analog outputs*
- * *Digital count inputs, maximum frequency 100 Hz*
- * *Plug & Play I/O card/modules:*
 - Analog Input - 3 or 6 per card
 - Analog Output - 6 per card
 - Digital Input - 6 per card
 - Digital/Relay Output - 6 per card
 - Combo Card - 3 Digital Inputs + 3 Relay Outputs
- * *SD Slot for internal memory expansion*
- * *(2) USB host ports for downloading data or printer connection*
- * *6.73"/171mm short panel depth*
- * *Ethernet standard with optional RS-232 or RS422/485*
- * *NEMA 4X / IP65 water resistant housing*

PPS Series Videographic Data Recorders

PPS-2000 Front View

Front Panel Features

- * **High resolution TFT LCD Color Touch Screen**
 - PPS-1000: 4.3", 480 × 272 resolution
 - PPS-2000: 5.6", 640 × 480 resolution
 - PPS-3000: 12.1", 1024 × 768 resolution
- * **SD slot for external memory: 16G or 32G**
- * **1st USB slot, for memory, auxillary or printer**
- * **Reset - To Reset and Restore factory settings**
- * **Start/Stop - To Start or Stop channel recording, or to turn the screen on or off**
- * **Front Door - Key locked for security**

Back Panel Features

- * **Multiple slots for Input/Output modules**
 - PPS-1000 4 slots, 6 analog channels maximum
 - PPS-2000 4 slots, 24 analog channels maximum
 - PPS-3000 16 slots, 48 analog channels maximum
- * **Optional RS-232/422/485 Serial communications**
- * **Ethernet port, standard for Internet/Intranet coms**
- * **2nd USB slot for memory, auxillary or printer**
- * **Power Switch**
 - Optional for panel style mounting
 - Standard for portable style mounting
- * **Power Terminals, for input power connections**

PPS-2000 Rear View

Input / Output Modules

* **Input/Output modules can be added or removed to the rear of the unit easily. The modules are locked in with screws.**

* **Input/Output module types are:**

- 6 - channel Analog Inputs
- 3 - channel Analog Inputs
- 6 - Relay Outputs, 5A 240V, NO and NC
- 6 - Digital Inputs
- 3 - Relay Outputs and 3 - Digital Inputs
- 6 - Analog Outputs

I/O Modules for Simple Expansion

Protection Rating	NEMA 4X / IP65 front; IP20 rear		
Operating Temperature	32° to 122°F (0° to 50°C)		
Storage Temperature	-22° to 158°F (-30° to 70°C)		
Safety Standards	cURus, RoHS		

Firmware Features

Configuration in Indented Layout for easy operation

Free hand note taking, directly on the screen

Display simulates Circular Chart Recorder (PPS-3000 only)

Standard Firmware Package

- **AI:** Analog Input is offered in various logging speeds of 100mS, 1, 2, 5, 10, 20, 30 Sec., 1, 2 minutes
- **DI:** Digital Input can be configured for Normal Logic or High Frequency Pulse
- **AO:** Analog Outputs can be configured in mA or Volts and it's function defined.
- **DO:** Digital/Relay Outputs can be enabled for process functions
- **Display:** Various display speeds can be set in 100mS, 1, 2, 5, 10, 20, 30, Sec., 1, 2, 10, 30 min./page, 1, 2, 4, 8, 12 hrs./page, 1 day/page
- **Timer:** Timer configured in Countdown, Repeat Countdown, Daily, Weekly, of Monthly base and various jobs can be defined
- **Clock:** Date Style of MM/dd/yy or dd/MM/yy, Time Synchronize via Internet, and Daylight Savings Time can be defined
- **Communications:** Web Server and E-mail functions
- **Instrument:** Brightness adjustment & Screen Saver
- **Password:** If Normal Security is chosen, then one password is offered. If the high security of CFR-21 is chosen, then 9 levels of passwords can be defined
- **Demo:** Built-in Demonstration of the instrument's features can be activated

Optional Firmware Plus 1 Package

- Math, Counters and Totalizer functions within derived channels
- Derived Channels by Model Number:
PPS-1000: 15 derived channels
PPS-2000: 40 derived channels
PPS-3000: 60 derived channels
- High frequency pulse inputs can be configured from digital inputs
- With the CFR 21 security feature enabled, the PPS Series meets the requirements for electronic data for FDA 21 CFR part 11
- External Channel Input: The PPS Series is configurable as a Master or Slave device with the number of external channels varying by Model. The External Channels require Modbus RTU protocol over either the TCP/IP Ethernet port or the optional serial RS232/485
- Data log Batch start/stop allows batch data file name, file duration, lot number and up to 3 comments to be stored as part of the file

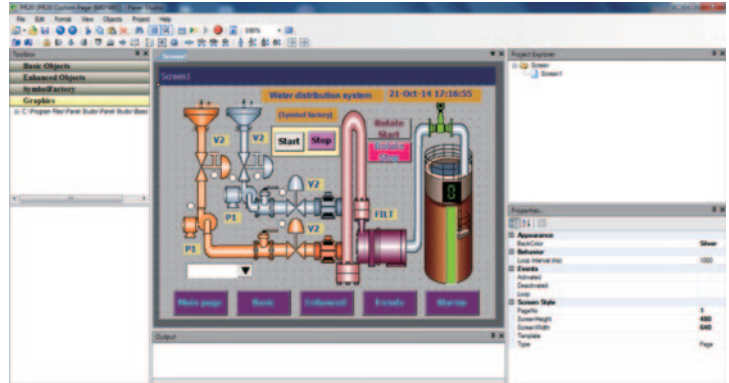

Firmware Features

Continued from previous page...

Optional Firmware Plus 2 Package

- Panel Studio development software allows the user to custom design display views that provide a graphical representation of the application including animation as well as digital and analog tags and values.
- The user can use Panel Studio to edit specific displays on the PC first and then download it onto the recorders.
- The custom edited displays will be added to the standard pages.

Create and edit the display on the PC

Optional Firmware Plus 3 Package

- This package is a combination of the Plus 1 and Plus 2 firmware features.
- It features Extended Math Functions, FDA 21 CFR part 11 compliance and Panel Studio development software.

Download it into the Recorder

Software Features

Standard Basic Software

- Configuration:** Create and edit recorder configurations including projects, analog channels, external and math channels, Events, Inputs, and Outputs, Power, etc. and download the configuration back to the recorder via LAN, SD or USB cards.
- Historical Viewer:** Provides the capability to view, print, export (csv.) and archive PPS Series data files imported via LAN, SD or USB cards.

Configuring an Analog Input Channel

Historical view of multiple channels

Software Features (continued)

Optional Extensive Software Package

- In addition to the standard Historical Viewer Configuration software, the Extensive Software Package, includes the Data Acquisition Studio to provide Real Time Access from one to multiple PPS units (2,048 tags) via LAN or serial Modbus.
- Provides data logging functions within the software in the PC.
- The software allows real time viewing of standard screen views from specific PPS recorders, to download data log files and download/upload configuration files to the recorder via the LAN or serial Modbus.
- The PPS Data Acquisition Studio is fee based and requires a hardware dongle to be inserted into one of the PC's USB drives to fully function. Without the hardware dongle, the software may be installed and run for 1-hour and then it will stop functioning.

Real Time Viewer on the PC

Rear Panel Layout

PPS-1000

4 slots, up to 6 Analog inputs

PPS-2000

4 slots, up to 24 Analog inputs

PPS-3000

16 slots, up to 48 Analog inputs

Portables

The portable version of the PPS Series is supplied with a handle, 120VAC cordset, and rear mounted Power Switch.

RCR-600 6-Point 100 mm Chart Recorder

Design Features

- * 6-Channel dotting recorder
- * 100 mm chart paper size
- * 144 × 144 mm metal housing
- * Weighs only 3.3 lb. (1.5 Kg)
- * NEMA 4 / IP65 Dustproof water resistant housing
- * Universal settable input and range
- * Optional 6 alarm-relay outputs
- * Optional 3 digital inputs
- * Optional communication interface for RS-232
- * Agency approvals:  

Standard Functions

Function	Description	Function	Description
Analog Recording	Makes analog recording with 6 colored dots.	Open Input Indication	Sets indicator at over 100% or 0% for an input.
Digital Display	Indicates channel number, process variable, date, chart speed and alarm setpoint.	Tag Number	Sets a tag number by 7 figures every channel.
Logging Print	Prints date, time, scaling, chart speed, process variable, and engineering unit at a programmed interval.	Copy Function	Copies a channel setup.
List Print	Prints chart speed, sensor type, measurement range, engineering unit, alarm setting value comment, printing description, logging print and on/off zone.	Setting Input Offset	Setting input offset is possible for every channel.
Affix Print	Prints channel number by the analog recording.	Zone Recording	Specifies a recording area for every channel to separate into tracks.
Dot Print Skip	Skips recording of an unused channel.	Alarm Print	Prints occurrence time, occurrence channel, setting number, and alarm type in purple at occurrence of alarm.
Programming	Programs chart speed, alarm setting value, logging, dot point skip, date and time.	Alarm Recovery Print	Prints recovery time, recovery channel, setting number, and alarm type in purple at recovering of an alarm.
Memory	A built-in lithium battery protects the clock function backup.	Alarm Hysteresis	Sets an alarm hysteresis width 0% full scale or 0.5% full scale.
Alarm	Sets 2 types—high and low—per channel for a total of 4 levels.		
Clock	Indicates year, month, day, hour and minute.		
Self Diagnostics	Indicates “Error” and code when there is a fault.		

Specifications & Features – RCR-600 Chart Recorder

DESIGN SPECIFICATIONS

Input Signal

Thermocouple: J, K, T, E, B, S, R, C, N, U, L, Au-Fe

RTD: PT100, JPT100

DC Voltage: ±10mV, 0-20mV, 0-50mV, ±1V, 1-5V

Current: 4-20 mA dc, with external 250W shunt resistor

Performance

Recording Width: 100 mm calibrated

Recording Accuracy: ±0.2%; ±1 digit maximum for display / printing

Input Impedance: mV/tc input - 10MΩ

Vdc input - 1MΩ, mA input - 100Ω

Common Mode Rejection Ratio (CMRR): 140 db

Normal Mode Rejection Ratio (NMRR): 60 db

Dielectric Strength: Power input/ground - 1500 Vac

Input/ground - 500 Vac

Vibration Resistance: 1 m/s² maximum 10 - 60 Hz

Shock Resistance: 2 m/s² maximum

Chart Feed Accuracy: ±0.1% maximum

Clock Precision: ±50 ppm

Power Source

Power Input: 85 to 264 Vac

Frequency: 45 to 65 Hz

Power Consumption: 30 VA

Recording and Printing

Recording: Raster-scan printing

Printing: Dotting with 6-color ribbon

Dot Print Interval: 10.0 second / 6 channel maximum

Chart Paper: Length - 52.5 ft. (16m)

Chart Speed: 28 speeds, user selectable, from 10-1500 mm/hr

Printing Colors: Purple, red, green, blue, brown, black

Alarm – Input/Output

Outputs: 1 relay drive per setting, up to 6 relays
250 Vac 3A/ 30Vdc 3A/ 125Vdc 0.5A

Quantity per Channel: 4

Digital Inputs: Maximum of 3

Normal Operating Conditions

Ambient Temperature: 32° to 122°F (0° to 50°C)

Relative Humidity: 35 to 85%, non-condensing

Communications

Standard: RS-232C

Optional: RS-485 (Modbus RTU)

Structure

Dimensions: 144 × 144 × 175 mm (5.7" × 5.7" × 6.9")

Mounting: Panel mount, allowable inclination – 30°

Panel Cutout: 138 × 138 mm (5.43" × 5.43")

Ordering Code: **RCR-600** -

Digital input / output BOX 1

0 = None

1 = 6 Relay output

2 = 3 Digital inputs

3 = 3 Digital inputs + 6 relay outputs

Data Communications BOX 3

0 = RS - 232C Interface

1 = RS - 485 Interface

Out of Paper Sensor BOX 2

0 = None

1 = Yes

Ordering Information

The **RCR-600** is offered with the options listed in the worksheet. Create an ordering code by filling in the boxes with the appropriate number and/or letter designation for your requirements and a part number will be assigned, or choose one of the basic systems.

Standard lead time is stock to 4 weeks.

⚠ WARNING: Cancer and Reproductive Harm - www.P65Warnings.ca.gov.

Basic Systems

Part Number	Description
RCR40001	6-point dotting, 6 relay/digital outputs, no out of paper sensor, with RS-232C data interface
RCR40002	6-point dotting, no relay/digital outputs, no out of paper sensor, with RS-232C data interface
RCR40003	6-point dotting, 6 relay/digital outputs & 3 digital inputs, no out of paper sensor, with RS-232C data interface
RCR40005	6-point dotting, 6 relay outputs, has out of paper sensor, with RS-232C data interface

Accessories – RCR-600

Part Number	Description
RCA40901	Chart paper – Z fold style, 52.5 ft. (16 m)
RCA40902	Replacement Multi-Color Ribbon
RCA40903	Precision Shunt Resistor, 250W

Rotating Multi-Pin Electrical Connectors

Do you want a superior connection or an ordinary slip ring assembly?

Choose TEMPCO's Rotating Electrical Connectors for Higher Operating Efficiencies . . .

Design Features

- * Superior to conventional slip rings
- * Extremely low electrical noise
- * Less than 1 milliohm resistance
- * Sealed, ball bearing construction
- * Increased reliability, no maintenance
- * Durable, compact, low cost

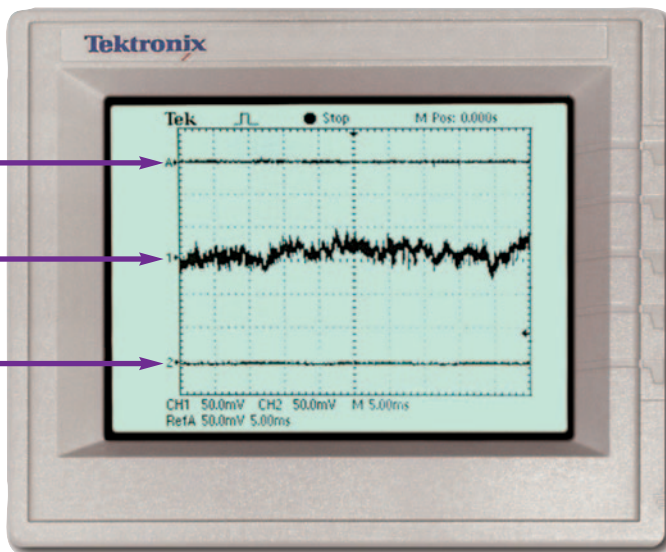

Multi-Pin Rotating Connectors Offer Superior Performance

Slip rings require maintenance and lose signal quality over time due to wear and debris on the brushes and commutator. **Tempco's Rotating Electrical Connectors** are maintenance free. They last much longer than slip ring assemblies, and the signal does not degrade over time.

Slip rings introduce electrical noise into the signal being transmitted, as shown on the oscilloscope below. **Tempco's Rotating Electrical Connectors** transmit with near zero electrical noise, so the same connector style can be used for power and signal transmission, saving money.

Slip rings typically last for a few million revolutions. **Tempco's Rotating Electrical Connectors** typically last hundreds of millions of revolutions. In many applications they can last over a billion revolutions.

The superior performance of **Tempco's Rotating Electrical Connectors** is attributable to the unique design of the connector. The electrical conduction path is a liquid metal that is molecularly bonded to the contacts. This creates a connection that is constant and unchanged for the life of the connector.

Typical Applications

- ➔ Heating Elements
- ➔ Lamps
- ➔ Thermocouples
- ➔ Signs
- ➔ Rotating Antennas
- ➔ Displays
- ➔ Turntables
- ➔ Packaging Equipment
- ➔ Cable Reels
- ➔ Robotics
- ➔ Instrumentation
- ➔ Strain Gauges
- ➔ Testing and Control Devices
- ➔ Heated Rollers

Ordering Information

Order by the part number of the rotating connector and accessories that match your requirements.

Standard lead time is stock to 4 weeks.

⚠ WARNING: Cancer and Reproductive Harm - www.P65Warnings.ca.gov.

TECHNICAL INFORMATION

MOUNTING

- Rotating connectors may be used in any position between vertical and 90° horizontal. The UP arrow should not point below horizontal.
- Model 110, 110-T, 205 and 305 connectors use the knurled receptacle inserted into the rotating member for mounting. This receptacle holds the rotating connector.
- Larger rotating connectors use either the body or the plastic collar for mounting to the rotating member.
- In horizontal applications, mount the connector with the body rotating to reduce mechanical loads on the bearing.
- Limit mounting eccentricity to a maximum of .005" TIR.
- Rotating connectors are not designed to carry mechanical loads. One end should be allowed to float, attached only by the connecting wires.

CONNECTION

- Use stranded wires of ample length and flexibility for the connection in order to avoid mechanical loads.
- Terminal accessories are push-on quick disconnects which crimp onto the connecting wires and push onto the connector tabs.
- Do not solder wires to the connector or bend tabs, as such misuse will cause connector failure and void the warranty.
- Provide overload protection to the electrical circuit containing the rotating electrical connector.
- If wire wrapping occurs from too much connector torque, it is suggested to use a torque arm positioned to float against a fixed stop.

TEMPERATURE

- Provide thermal insulation where necessary to prevent the connector temperature from exceeding 140°F (60°C). Rotating electrical connectors contain plastic materials that are sensitive to heat.
- Overheating will cause connector failure and voids the warranty.

VIBRATION/SHOCK

- Vibration or mechanical shock will reduce connector life or cause failure.
- If vibration or shock is present, we suggest a flexible isolating mounting.

FOOD APPLICATIONS

- Rotating electrical connectors are factory sealed but do contain mercury and other fluids.
- As a precaution, a protective housing is suggested to isolate the rotating connector from the food product.

BOOT KIT

- The boot kit is not watertight or intended for waterproofing but is designed to give protection to the wire terminals from splashing water or dust. The protection rating is IP51.

RECYCLING

Rotating electrical connectors contain mercury and should not be disposed of in the trash but only through mercury recycling programs. Tempco offers a mercury recycling service for this purpose. Ship spent connectors to our facility by UPS ground enclosed in a plastic bag. Include paperwork stating "for recycling" with your company name, phone and fax numbers. Do not send through the U.S. Mail.

Suggested Mounting Methods

Models 110, 110-T, 205, 305 are typically mounted to the knurled metal receptacle.

Receptacle Mount Hole Dimensions

MODEL	HOLE DIAMETER Ø	DEPTH
591, 592, 5920, 594	.283" (7.19)	.35" (8.89)
593	.408 (10.36)	.35" (8.89)

Inch (mm) Tolerances Ø $+0.01" (+0.25)$
 $-0.00" (-0.00)$

Typical Body Mount

Body Mount Hole Dimensions

MODEL	HOLE DIAMETER Ø	DEPTH*
230, 331	.998" (25.35)	.80" (20)
330, 430, 1250	1.248" (31.70)	.80" (20)
630	1.575" (40.00)	.80" (20)
435, 830	1.772" (45.00)	.80" (20)

Inch (mm) Tolerances Ø $+0.01" (+0.25)$
 $-0.00" (-0.00)$

*Minimum additional depth for disconnect clearance is 1.4" (35.5).

Typical Collar Mount

Collar Mount Hole Dimensions

MODEL	HOLE DIAMETER Ø	DEPTH*
230, 331	.500" (12.70)	.40" (10)
330, 430	.625" (15.88)	.40" (10)
430 w/ plug	.625" (15.88)	1.40" (36)
630	.875" (22.23)	.40" (10)
830	1.125" (28.58)	.40" (10)
435	1.250" (31.75)	.80" (20)
1250 Stud	3/8"-16 UNC	.81" (20.5)
1250-metric Stud	10 x 1.5 metric	.81" (20.5)

Inch (mm) Tolerances Ø $+0.01" (+0.25)$
 $-0.00" (-0.00)$

*Minimum additional depth for disconnect clearance is 1.4" (35.5).

Insulating Collar Mount

Mounting with an insulating collar may be required to insulate connector from conducted heat. Soft-mounting with rubber type material is needed if unit will be subjected to vibration.

INTRODUCTION TO

Melt Pressure Transducers

Designed for Maximum Operating Efficiency

Tempco Melt Pressure Transducers are used to sense the pressure associated with the extrusion processing of plastic materials. They range in pressure from 0-500 PSI to 0-20,000 PSI with temperatures in the range of 70-750°F. Typical transducer outputs are 3.3 mV/V, 4-20 mA, 0-5 V, or 0-10 V (at full scale output).

APPLICATION

Plastic materials are formed to shape by a process defined as extrusion. This is accomplished by first softening the material with heat. Through the use of a drive screw, which is rotated by a motor, the material is forced toward and then through an opening, called a die, used to shape the plastic melt.

Various compounds, colorants and additives can be mixed with the plastic materials as they move along the screw path. The heated materials are shaped by the die and/or other post-extrusion equipment and then cooled to retain their shape.

WHERE AND WHY TRANSDUCERS ARE USED

Melt pressure transducers can be effectively used along many points of the extrusion process for a variety of reasons:

1. From a **quality control viewpoint**, a transducer should be located in the die. The measurement of the melt pressure at this point is used as an indication of flow rate.
2. To indicate when a **screen is in need of changing** and also to insure the safety of personnel and equipment alike, a transducer will be located somewhere ahead of the screen changer. This is most likely located either in the adapter or along the screw path within the barrel. An even more accurate determination of screen plugging can be made by reading the differential pressure between transducers located on either side of the screen, one being in the adapter, the other located in the barrel ahead of the screw tip.
3. For **research and development** purposes, Tempco transducers should be located at various points along the barrel in order to accurately monitor the pressure and mixing characteristics of the melt.
4. Transducers are also used for **pressure sensing on post-extrusion equipment** such as blow-molding heads, extrusion pumps and spinnerettes.
5. Locating transducers anywhere along the apparatus also serves to **improve the safety** of the extruder.

END PRODUCTS OF EXTRUSION PROCESS

The end results of the extrusion process can be found in various products. Some examples include:

1. The feedstock for other plastic packaging systems used for compounding and mixing.
2. Plastic film used to create bags and packaging materials.
3. Plastic tubing, hose, and pipe to contain water, gases or chemicals.
4. Insulated cable and wire housing.
5. Filaments used to create textiles, brushes, rope and twine.

Melt Pressure Transducer Data

Transducer and Gauge Standard Material Diaphragm and Options

The standard Tempco transducer diaphragm is machined out of a single piece of type 15-5 PH stainless steel (.0045") and then heat treated and finally Armoloy coated. This material gives Tempco transducers the transverse strength and toughness needed for most standard applications.

There are, however, certain extrusion processes that require different types of diaphragm materials and/or coatings. Tempco is able to supply customers with diaphragms and coatings specifically suited to their needs and applications.

HASTELLOY® TIP AND DIAPHRAGM

This option gives the transducer a Hastelloy® C-276 tip. This Hastelloy® tip extends along the stem and includes the 45° cone and threads. The diaphragm (.0045") is also manufactured of Hastelloy®. Hastelloy® should be used when the following chemicals are present in the process:

HCl	Hydrochloric Acid
HF	Hydrofluoric Acid
HBr	Hydrogen Bromide
HI	Hydrogen Iodide

For example, HCL is present when processing PVC and HF is present when processing Teflon®. If Hastelloy® is not used during these processes, the transducer diaphragm will fail prematurely due to stress cracks as a result of stress corrosion.

Recommended Use: Applications that are extremely corrosive.

SPECIAL DIAPHRAGM

Special 0.006" thick Inconel® diaphragm with a proprietary coating of Titanium Aluminum Nitride.

This special diaphragm is designed to be used in extremely abrasive environments. Superior to all other diaphragm materials for corrosion and abrasion resistance, examples of applications requiring this diaphragm option are ceramics or glass-filled nylon.

Recommended Use: Applications that are extremely abrasive.

INTERNAL RESISTANCE CALIBRATION TRACKING

An internal compensation circuit insures that the shunt calibration output will track any changes in pressure sensitivity (output) due to changes in temperature of the strain gauge housing. The simulated output, therefore, is 80%, ±0.25% of the full scale pressure output over the entire operating temperature range.

CHROMIUM NITRIDE COATED DIAPHRAGM

The chromium nitride diaphragm option gives the transducer an advantage in abusive environments. The chromium nitride offers abrasion resistance and corrosion resistance. This is due to a phenomenon called reduced skin friction. This material will also cut down on diaphragm failures due to adhesion of melt to diaphragm during the process.

There are two different versions of this diaphragm option available. The first is a standard thickness (0.0045") diaphragm made of 15-5 PH stainless steel and then coated with a 0.0002" chromium nitride coating. This version is applicable for use in any pressure range plastic extruder. The second version is a 0.0080" thick diaphragm made of 15-5 PH stainless steel coated with a 0.0002" chromium nitride coating. This version is applicable for use in plastic extruders with pressure ranges of 7,500 PSI and up.

TITANIUM NITRIDE DIAPHRAGM

The titanium nitride diaphragm is offered for its excellent abrasion resistance. Its abrasion resistance is superior to the chromium nitride coated diaphragm and like the latter diaphragm the titanium nitride diaphragm comes in two different versions. The first is a standard thickness (0.0045") diaphragm made of 15-5 PH stainless steel and then coated with a 0.0002" titanium nitride coating. This version is applicable for use in any pressure range plastic extruder. The second version is a 0.0080" thick diaphragm made of 15-5 PH stainless steel coated with a 0.0002" titanium nitride coating. This version is applicable for use in plastic extruders with pressure ranges of 7,500 PSI and up.

INTERNAL RESISTANCE CALIBRATION

Tempco strain gauge sensors rely on the small change in resistance of each strain gauge to generate an analog signal that is proportional to the applied physical input. This resistance change is generated by straining a structural element to which the gauges are attached. The same output can be accomplished by electrically offsetting the resistance of one of the strain gauges through a simple shunt resistor network. This offsetting resistance network is built into each Tempco transducer.

During manufacturing, each Tempco transducer is pressure calibrated using highly accurate pressure sources and instrumentation. The signal output versus pressure input characteristic is thereby precisely known. The internal resistance network is adjusted so that the output generated by the shunt resistor simulation method matches precisely the calibrated output of the transducer at a selected point on its calibration curve. The standard simulation value is 80% of the full range rating of each transducer but other values may be chosen.

Applications of Melt Pressure Transducers

Pressure monitoring is a fundamental quality control technique used in modern extrusion processing. Typical applications include:

Film Adaptable for either blown process or slit casting, pressure monitoring can help produce thinner, more uniform film at faster process speeds. The pressure transducer also provides primary process information helpful for maximizing productivity and minimizing start-up scrap.

Synthetic Fibers Accurate, reliable pressure monitoring helps deliver greater consistency with less waste by reducing high speed variations, even with high performance fibers.

Wire Coating Pressure monitoring right in the crosshead die where the wire is coated with plastic insulation improves throughput, quality, and profits. This process parameter has become even more important as wire take-up systems go to higher and higher speeds.

Pipe, Tubing, and Profile A basic process parameter, pressure monitoring allows tighter tolerances, improves product quality and significantly improves cost effectiveness even for complex and multi-hollow extrusion.

Melt Pressure Transducers

3 Styles of Melt Pressure Transducers for Extrusion Processing

Melt pressure transducers are specifically designed for accuracy, stability, and repeatability. They can be specified with a 0.5% or 0.25% combined error accuracy, a performance that equals or exceeds any other strain gauge melt pressure transducer on the market.

Design Features

- * *Stainless Steel Construction*
- * *Fully Interchangeable with all Existing Strain Gauge Melt Pressure Transducers*
- * *Fluid Filled System for Temperature Stability*
- * *80% Output Signal for Easy Calibration*
- * *Resistance Calibration Tracking*
- * *All Stainless Steel Construction*
- * *Armoloy-Coated Diaphragm*
- * *Compatible with all Strain Gauge Signal Conditioning & Readout Instrumentation*
- * *6- or 8-Pin Bendix Style Connectors available*
- * *CE Approved*

Rigid Stem Transducer

This model converts applied pressure at the point of measurement to a proportional voltage output signal using well established bonded strain gauge design principles. The small capillary tube, filled with a special medium, isolates sensitive strain gauges and electronics from potential thermal damage. The rigid stem makes installation fast and easy.

Flexible Armor Tubing Transducer

This model offers all the advantages of the rigid stem transducer, but incorporates an 18-inch flexible capillary tubing with a stainless steel armored jacket between the strain gauge housing and the stem.

This transducer is designed for applications requiring further thermal isolation or where installation would be otherwise difficult or impractical.

Pressure and Temperature Transducer

This model provides simultaneous measurement of pressure and temperature at a single point. Only one transducer mount is required for installation.

The temperature probe is protected from process hazards and can be replaced without interrupting the pressure signal. Pressure performance is identical to other models.

Melt Pressure Transducers for Extrusion Processing

- 1** = 1/2-20 (Standard)
- 2** = M18 x 1.5
- X** = Other

ADDITIONAL OPTIONS AVAILABLE...

Exposed Capillary Transducer: for applications requiring a transducer capable of fitting into extremely tight places.

Connectors (*consult Tempco if you require one of these options*)

Gentran GT-76 compatible wiring: strain gauge connector is wired for compatibility with Gentran GT-76 connector.

Barber Coleman TD10 compatible wiring: strain gauge connector is wired for compatibility with Barber Coleman TD10 connector.

Ordering Information

Melt Pressure Transducers are offered with the options listed in the worksheet above. Create an ordering code by filling in the boxes with the appropriate number and/or letter designation for your requirements and a part number will be assigned.

Part Numbers for commonly used Melt Pressure Transducers can be found in table above.

Standard lead time is stock to 3 weeks.

Industry ~~CROSS~~ Reference Part Numbers

When using this cross reference please note that the box(□) in the Part Number is for the code for the pressure range. Since the pressure range differs from manufacturer to manufacturer, enter the code letter for the pressure range that best fits your application from **Pressure Range Box 4 on page 12-22**.

Also, though some equipment listed in this cross reference may differ in appearance, the fit and function of the products is equivalent.

NOTE: All transducers listed include 3.3mV/V output, mercury fill and 1/2-20 thread

Description	TEMPCO	Dynisco	ISI	Gefran	Gentran

Melt Pressure Gauges

Melt Pressure Gauge Styles for Extrusion Processing

Tempco's Melt Pressure Gauges provide highly reliable, maintenance free, local pressure indications for extrusion and other plastics processes. The sensing diaphragm is designed for minimum deflection, maximum durability, and maximum overload capability.

Two models are available with three styles each:

- Mechanical Gauge Model
- Digital Gauge Model with alarm and retransmission

Style 1 A 6" rigid stem unit for standard installations

Style 2 A 30" flexible capillary with stainless steel armored jacket between the gauge housing and the stem to allow greater installation flexibility in tight places or for easier viewing and durability.

Style 3 The third style provides all the features of the 30" flexible capillary model with the addition of a thermocouple (J-type) output for temperature. (Not displayed directly on digital models.)

All models are rugged, totally self contained and allow extrusion processors to benefit from the significantly improved efficiency that goes with pressure monitoring—at about half the cost of strain gauge melt pressure transducers for the mechanical gauge.

Optional diaphragm materials are available for applications that require extra abrasion and/or corrosion resistance. Refer to page 12-19 for available material options.

Mechanical Melt Pressure Gauge

Design Features

- * No Power (or Wiring) Required
- * No Maintenance, No Grease
- * Electron Beam Welded
- * 150% Overload Capability without Damage
- * Greater than 180° Movement for Optimum Readability
- * Stainless Steel Construction
- * 5.44"/138.2mm Diameter Face
- * An Economical Alternative for Many Applications

Specifications

Linearity, Repeatability, Hysteresis: $L \pm 1.0\%$ FSO

Measurement Range: 0-5000 PSI / 0-350 bar to 0-10000 PSI / 0-700 bar

Maximum overpressure: $1.5 \times$ FSO

Measurement principle: Bourdon tube

Maximum housing temperature: . . . 185°F / 85°C

Maximum diaphragm temperature: . 750°F / 400°C

Standard diaphragm material: 15-5 PH Stainless Steel with Armoloy coating

Standard style 3 thermocouple: . . . Type J (isolated junction)

Digital Melt Pressure Gauge

Design Features

- * Better than $\pm 0.50\%$ Accuracy
- * Economically Priced vs. Separate Transducer and Display
- * Electron Beam Welded
- * 200% Overload Capability without Damage
- * 15-5 Stainless Steel Diaphragm with Armoloy coating standard
- * Alarm Provides no/nc, 5A 115/240Vac High Pressure Only Relay
- * 115 VAC standard, 230 VAC Optional
- * 5.44"/138.2mm Diameter Face
- * An Economical Alternative for many Applications
- * Standard 4-20 mA Retransmission

Specifications

Linearity, Repeatability, Hysteresis: $M \pm 0.50\%$ FSO

Measurement Range: See ordering chart

Maximum overpressure: $2 \times$ FSO

Measurement principle: Strain gauge / bridge circuit

Power supply: 115 or 220 VAC (factory set)

Pressure retransmission: 4-20 ma (650Ω max. load)

Maximum housing temperature: . . . 130°F / 55°C

Maximum diaphragm temperature: 750°F / 400°C

Standard diaphragm material: 15-5 PH Stainless Steel with Armoloy coating

below 1000 PSI/70 bar: 17-7 PH SS Ti Ni coated

Standard style 3 thermocouple: . . . Type J (isolated junction)

Alarm: High only, no/nc, 5A 115/240Vac

Melt Pressure Gauges Standard Sizes and Ranges

Mechanical Gauges

Part Number	Style	Pressure Range
PDG00104	6" Rigid Stem	0-5000
PDG00105	6" Rigid Stem	0-10000
PDG00102	6" Rigid/30" Armor Cable	0-5000
PDG00103	6" Rigid/30" Armor Cable	0-10000
PDG00106	6" Rigid/30" Armor Cable with J tc	0-5000
PDG00107	6" Rigid/30" Armor Cable with J tc	0-10000

Digital Readout Gauges

Part Number	Style	Pressure Range
PDG00501	6" Rigid Stem	0-5000
PDG00502	6" Rigid Stem	0-10000
PDG00503	6" Rigid/30" Armor Cable	0-5000
PDG00504	6" Rigid/30" Armor Cable	0-10000
PDG00505	6" Rigid/30" Armor Cable with J tc	0-5000
PDG00506	6" Rigid/30" Armor Cable with J tc	0-10000

Note: All standard flexible armor cable over the pressure sense capillary include a 6" rigid stem and 30" of flexible armor. If a type J thermocouple is specified, a standard size type J plug is provided, similar to the Melt Pressure Transducer shown on page 12-20.

Gauges have standard 1/2-20 UNF drill pattern; see page 12-21.

Ordering Code: **PDG** - ¹ ² ³ ⁴ ⁵

Model and Style BOX 1

- A1** = Mechanical, Rigid Stem
- A2** = Mechanical, Rigid + Flexible Armor Tubing
- A3** = Mechanical gauge with Type J Thermocouple
- B1** = Digital, Rigid Stem
- B2** = Digital, Rigid + Flexible Armor Tubing
- B3** = Digital Gauge with Type J Thermocouple

Stem Length BOX 3

- 1** = 6 inches (*Most Common*)
- 2** = 12.5 inches

Flex Length BOX 4

- 00** = None (*Styles A1 & B1*)
- 30** = 30 Inches*
- *Other sizes can be made on special request.

Pressure Range BOX 2

Mechanical

- | | |

Melt Pressure Display and Alarm Indicators For Extrusion

Design Features

- * 1/8 DIN Size Front Panel
- * 2 Alarms, Programmable Relay Outputs
- * ISO 9001 Certified, CE Approved
- * Economically Priced
- * 4-Digit LED Display for Pressure
- * 3 Keys for Programming
- * Touch-Type Keypad
- * Easy to Calibrate with Sensitivity Auto Ranging
- * Built-In Strain Gauge Bridge Excitation – 10Vdc
- * Filter for Digit Stabilization
- * Coded Access for User Lockout

Model Number: PDA05010

Series **772** Melt Pressure Indicator

Design Features

- * 1/4 DIN Size Front Panel
- * NEMA 4X - IP65 Front Panel Protection
- * 10-point Red LED Bar Graph
- * ISO 9001 Certified, CE Approved
- * 2 Alarms, Programmable Relay Outputs
- * Calibration Output
- * Retransmission – Programmable for 0 - Vdc, 0 - 20 or 4 - 20mA
- * Multiple Programming Levels with Coded Access
- * Peak Value Memory
- * 4-Key Touch-Type Keypad
- * Built-In Strain Gauge Bridge Excitation – 10Vdc
- * Filter for Digit Stabilization
- * RS-232 & RS-485 Communication Available; Consult Factory for More Information

Model Number: PDA05020

Series **882** Melt Pressure Indicator

Design Features

- * 1/4 DIN Size Front Panel
- * Displays Pressure & Temperature Simultaneously on two 4-Digit LED Displays
- * ISO 9001 Certified, CE Approved
- * NEMA 4X - IP65 Front Panel Protection
- * 2 Alarms with Adjustable Setpoint for Temperature or Pressure
- * Calibration Output
- * Retransmission – Programmable for 0 - Vdc, 0 - 20 or 4 - 20mA
- * 10-point Red LED Bar Graph
- * Multiple Programming Levels with Coded Access
- * 4-key Touch-Type Keypad
- * Built-In Strain Gauge Bridge Excitation – 10 Vdc
- * Filter for Digit Stabilization
- * RS-232 & RS-485 Communication Available; Consult Factory for More Information

Model Number: PDA05030

Series **992** Melt Pressure and Temperature Indicator

Melt Pressure Display and Alarm Indicators For Extrusion

SPECIFICATIONS			
Part Number:	772 Series – 1/8 DIN PDA05010	882 Series – 1/4 DIN PDA05020	992 Series – 1/4 DIN PDA05030
Electrical			
Power:	120 Vac \pm 10% or 230 Vac \pm 10% (50/60 Hz) Optional: 11-27 Vac/Vdc for PDA05010 and 20-27 Vac/Vdc for PDA05020/PDA05030		
Operating Temp.:	+32°F to +130°F (0° to 55°C)		
Noise Immunity:	VDE 0843 & IEC 801		
Fascia Seal Rating:	N/A	NEMA 4X – IP65	
Termination:	Screw clamp terminals		
Signal Input			
Type:	350 Ω strain gauge bridge		
Input Sensitivity:	3.3 mV/V	1.5 to 7.5 mV/V	
Accuracy:	\pm 0.2% of full scale \pm 1 digit		
Sensor Excitation:	10 Vdc @ 120 mA		
Calibration:	Will accept transducers with internal shunt calibration values from 40%–100% or external calibration resistors		
Housing	1/8 DIN (48 x 96 x 160 mm)	1/4 DIN (96 x 96 x 160 mm)	
Panel Cutout	1.75 x 3.62 in. (44.5 x 92 mm)	3.62 x 3.62 in. (92 x 92 mm)	
Display			
Type:	4-digit LED display	Two 4-digit LED displays Red: Pressure Green: Temperature	
Ranges:	User programmable for pressure and temperature: –999 to +9999		Pressure: –999 to +9999 Temperature: Standard T/C limits
Units:	PSI, kg/cm ² , BAR, kPa, Pa, MPa	PSI, kg/cm ² , BAR, °F, °C	
Decimal:	Selectable from keyboard		
Setup Prompts:	Displays program steps and error conditions		
Alarms			
Type:	2 SPDT: In the event of a power failure relays go into alarm condition		
Mode:	Absolute, relative with direct or inverse functions can be set via front panel keyboard		
Set Point Range:	0-100% full scale		
Hysteresis:	Configurable per output		
Contact Rating:	5A @ 250 Vac for each alarm output		
Auxiliary Output			
Retransmission:	N/A	0-10 Vdc or 0/4-20mA	
Resolution:	N/A	4000 steps	
Isolation:	N/A	1500V	

Ordering Information:

Order by the part number of the display that meets your requirements.

Standard lead time is stock to 3 weeks.

Melt Pressure Transducer Kits

Melt Pressure Transducer Packages

Melt Pressure Transducer Packages

Special Melt Pressure Transducer Packages have been prepared by Tempco for sale at a discounted price. These packages contain all the components necessary for monitoring your extruder melt pressures.

The package contains:

- One [1] .5% combined error 6" rigid stem MELT PRESSURE TRANSDUCER and a standard Armoloy diaphragm tip in a variety of pressure ranges (see table below)

OR

- One [1] 18" flexible armor cable MELT PRESSURE TRANSDUCER with a 6-pin connector, 6" stem length, and a standard Armoloy diaphragm tip in a variety of pressure ranges (see table below)
- One [1] model 772 MELT PRESSURE INDICATOR
- One [1] 25-foot-long TRANSDUCER CABLE assembly for a 6-pin connector

ACCESSORIES – Connectors and Cable Assemblies

6-and 8-Pin Transducer Cables

These connectors and cable assemblies are designed to be compatible with the 6-pin and 8-pin connectors used on Tempco's line of melt pressure transducers.

The cable assemblies come with a female connector on one end to connect to the transducer, and the other end has 6 or 8 braided wire leads to connect to input and output sources, displays or controllers.

The transducer mating connector offered is the female mating connector with no cable or wiring attached.

Thermocouple Cables

The cable assemblies and connector are designed to be compatible with the connectors used on Tempco's line of melt pressure transducers with Type J thermocouples.

The cable assemblies come with a Type J female connector on one end to mate with the Transducer/Thermocouple assembly and leads on the other end.

The mating connector offered is a Type J two-pin female connector designed to mate with the male thermocouple connector on the Transducer/Thermocouple assembly.

Rupture Disks for Plastic Extrusion Protection

Custom Pressure Relief Solutions for your Extrusion Equipment

Construction Characteristics

Tempco's Extruder Rupture Disks are pressure relief devices designed for overpressure protection of plastic extruders. A rupture disk is soldered or welded to the end of a threaded hollow bolt to fit flush in the extruder barrel. This prevents plastic buildup and hardening that might render the rupture disk ineffective. Tempco carries a number of sizes to fit standard thermocouple wells to serve as replacements for expended units.

Design Features

- * 303 Stainless Steel Body, Inconel® Rupture Disk
- * 3/16" Burst Diameter
- * Rupture Pressure Tolerance $\pm 5\%$
- * NPT Fittings for Discharge Available
- * Designed to Fit Common Thermocouple or Transducer Drill Pattern
- * Select a Pressure Rating Exceeding your Normal Operating Pressure by 1.4 Times without Exceeding the Manufacturer's High Pressure Specifications

Beam-A-Temp™ Wide Range Mini-Infrared Thermometer

Measures non-contact surface temperature up to 1200°F/650°C

Temperature range from
-58 to 1200°F (-50 to 650°C)

Design Features

- * 12:1 distance to target ratio.
- * Compact thermometer measures temperature from -58 to 1200°F (-50 to 650°C) with 0.1° resolution up to 999.9°.
- * Adjustable High/Low setpoints with audible alarm alerts user when temperature exceeds the programmed setpoints.
- * Adjustable emissivity for better accuracy on different surfaces.
- * Built-in laser pointing identifies target area.
- * Backlighting illuminates display for taking readings in low light areas.
- * Data Hold and Min/Max.
- * Over-range indicator.
- * Complete with 9V battery and pouch case.

Specifications

Temperature Range: -58 to 1200°F (-50 to 650°C)
Basic Accuracy: ±(1% of reading + 2°F/1°C)
Maximum Resolution: 0.1°F/°C; 1°F/°C
Emissivity: 0.10 to 1.00 adjustable
Repeatability: ±0.5% or ±1.8°F/°C
Field of View: 12:1
Dimensions: 3.2 × 1.6 × 6.3" (82 × 42 × 160 mm)
Weight: 6.4 oz. (180g)

Agency Approval: 

Applications

- ➔ Measure the surface temperature of objects difficult to reach or unsafe to touch.
- ➔ Scan for hot spots on motors, electrical panels, electrical circuits and other equipment.
- ➔ Used extensively in processes where glass, iron and steel, non-ferrous materials, and minerals must be monitored.

Ordering Information

 **WARNING:** Cancer and Reproductive Harm - www.P65Warnings.ca.gov.

Beam-A-Temp™ Wide Range Infrared Thermometer with Type K input

Measures both non-contact and contact temperature with type K thermocouple input

Memory stores up to 20 readings!

REB30020 with Type K temperature probe (included range -4 to 482°F/-20 to 250°C) for contact temperature measurements. Compatible with other Type K thermometers with sub-miniature connector for higher temperature measurements up to 2498°F (1370°C).

Design Features

- * Wide temperature range for IR temperature and type K thermocouple instruments.
- * Automatic emissivity adjustment (for temperatures 212°F or higher).
- * Memory stores up to 20 readings.
- * Large LCD display with bright backlight for easy-to-read measurements and programming parameters.
- * Laser pointer provides better aim and accuracy.
- * Auto-hold activates when the measurement trigger is released.
- * Adjustable high/low alarm alerts user visually and audibly when temperature exceeds programmed limits.
- * MAX/MIN/AVG/DIF features display highest, lowest, average, and MAX minus MIN values.
- * Data Hold, Auto Power Off, and low battery indication.
- * Switches built into handle allow for °C/°F display selection, auto power off defeat, and alarm on/off control.
- * Complete with 9V battery, type K thermocouple sensor (-4 to 482°F / -20 to 250°C), and carrying case.
- * 1-year warranty.

Specifications

Display Counts: . . 4000 count backlit display
Range: Infrared: -58 to 1472°F (-50 to 800°C)
 Type K: -58 to 2498°F (-50 to 1370°C)
Basic Accuracy: . . Infrared: ±2% of reading or ±4°F/2°C
 Type K: (±1.5% of reading +2°F/1°C)

Maximum Resolution: 0.1°F/°C
Emissivity: Adjustable 0.10 to 1.00
Field of View: 13:1 distance to target ratio
Dimensions: 3.2 × 1.6 × 6.3" (82 × 42 × 160 mm)
Weight: 6.4 oz. (180g)

Agency Approval:

13:1 distance to target ratio

Beam-A-Temp™ High Temperature Infrared Thermometer

Measures surface temperature up to 1400°F/760°C

Temperature range from
-58 to 1400°F (-50 to 760°C)!

Design Features

- * Wide temperature range from -58 to 1400°F (-50 to 760°C).
- * High 16:1 distance to target ratio measures smaller surface areas at greater distances.
- * Adjustable emissivity from 0.1 to 1.00 increases measurement accuracy for different surfaces.
- * Adjustable High/Low setpoints alarm with audible alarm alerts user when temperature exceeds the programmed setpoints.
- * Data Hold, MAX/MIN/AVG plus differential between MAX - MIN.
- * Built-in laser identifies target area.
- * Backlit LCD display.
- * High resolution of 0.1° up to 199.9°.
- * Auto power off.
- * Complete with 9V battery and hard carrying case.
- * 3-year warranty.

Specifications

Range: -58 to 1400°F (-50 to 760°C)
Basic Accuracy: ±2% of reading or 4°F/2°C <932°F (500°C); ±(2.5% of reading +5°) >932°F (500°C)
Maximum Resolution: 0.1°F/°C
Emissivity: 0.1 to 1.00 Adjustable
Field of View (Distance to Target): . . 16:1
Dimensions: 3.9 × 2.2 × 9" (100 × 56 × 230 mm)
Weight: 10.2 oz. (290g)

Agency Approval: 

Applications

- Measure the surface temperature of objects difficult to reach or unsafe to touch.
- Scan for hot spots on motors, electrical panels, electrical circuits and other equipment.
- Used extensively in processes where glass, iron and steel, non-ferrous materials, and minerals must be monitored.

Beam-A-Temp™ Portable Infrared Thermometer

Measures up to 1832°F/1000°C with 50:1 distance to target ratio

*Temperature range from
-58 to 1832°F (-50 to 1000°C)!*

Design Features

- * Built-in laser identifies target area.
- * High and low alarms.
- * Adjustable emissivity increases measurement accuracy for different surfaces.
- * Adjustable High/Low setpoints alarm with audible alarm alerts user when temperature exceeds the programmed setpoints.
- * MAX/MIN/AVG plus differential between MAX – MIN.
- * Backlighting illuminates display for taking measurements at night or in areas with low background light levels.
- * High resolution of 0.1° up to 199.9°.
- * Automatic Data Hold when trigger released.
- * Auto power off.
- * Wide temperature range from -58 to 1832°F (-50 to 1000°C).
- * High 50:1 distance to target ratio measures smaller surface areas at greater distances.
- * Complete with 9V battery and carrying case.
- * 3-year warranty.

Specifications

Range:	-58 to 1832°F (-50 to 1000°C)
Basic Accuracy:	±2% of reading or +4°F/2°C
Maximum Resolution:	0.1°F/°C

Non-contact Infrared Temperature Measurement System — NCIT-LC Plus Series

Proven Technology

PRECISION INFRARED TEMPERATURE MEASUREMENT has been around for years to increase productivity, reduce costs and improve product quality. Microfabrication techniques have allowed us to reduce the size and cost of our sensors, bringing the benefits of this technology to a new group of users.

Many of the NCIT-LC Plus's features are typically only available on larger and more expensive units and offer more flexibility through remote monitoring and control of all sensor variables.

World's Smallest IR Sensor

The NCIT-LC Plus is a versatile two-piece system with a miniature sensing head and separate electronics. The sensor is small enough to be installed just about anywhere, yet it performs as well as much larger systems. The sensor is housed in rugged stainless steel to ensure long-term performance, even in harsh environments with ambient temperatures up to 85°C (185°F). And the NCIT-LC Plus's response time is as fast or faster than many high-end systems.

Rugged, Reliable, Practical Features

The NCIT-LC Plus's electronics include: Emissivity and selectable Peak Hold, Valley Hold, and Averaging, all of which (including output type) are programmable on the 5-digit/3-button LCD user interface.

Accessories, including an air purge jacket, air cooling jacket, and mounting adapters, ensure accuracy in applications ranging from plastics manufacturing to food processing.

Design Features

- * -40°F to 1132°F (-40° to 600°C)
- * Compact and Rugged
- * 5-digit backlit LCD User Interface
- * Designed for Online Monitoring and Control
- * Ultra-Fast Response Time - 150 ms
- * Stainless Steel Sensing Head
- * 10:1 and 22:1 Optics
- * 0/4 - 20 mA or 0 - 5Vdc, J or K thermocouple outputs
- * Choice of 3 ft. or 10 ft. cable
- * Mounting Hardware Included
- * 12-24VDC Powered

Common Industrial Applications

- Plastics
 - Paper and Pulp Converting
 - Chemicals
 - Food Processing
 - Pharmaceutical
 - Electronics
 - Construction
 - Industrial Maintenance

Optional Communications for PC Interfacing

Even more features are available with optional RS-232 or RS-485 communications and the new DataTemp® Multidrop Software. These features include remote control and monitoring of all sensor variables, a 5V alarm signal triggered by a target temperature or head ambient temperature. Also included is an 8-position "recipe" table that can be easily interfaced to an external control system, an external reset signal input for signal processing, and even external inputs for analog emissivity adjustment or reflected energy compensation.

Lower cost sensors are available with fixed emissivity; consult Tempco for further details.

Non-contact Infrared Temperature Measurement System — NCIT-LC Plus Series

Measurement Specifications

Temperature Range:	-40 to 1112°F (-40 to 600°C)
Spectral Response:	8 to 14 μm
Optical Resolution:	10:1
System Accuracy:	±1% or ±1°C, whichever is greater
Repeatability:	±0.5% or ±0.5°C, whichever is greater
Response Time:	150 ms, 95% of final reading
Emissivity:	Digitally adjustable, 0.1 to 1.10 by increments of 0.001 steps
Signal Processing:	Peak hold, Valley hold, Variable averaging filter, adjustable up to 998 sec.

Note:
The basic system includes the sensing head and nut, die cast housing with pre-mounted electronic board, 3m (10 ft.) cable, and operator manual.

Electrical Specifications

Programmable Outputs: 0/4 - 20 mA, 0 - 5 Vdc (scalable)
J or K thermocouple
10 mV / °C head ambient signal

Power (user to supply unit): 12 - 24 Vdc @ 100 mA
Max. Loop Impedance: 500Ω with 24 Vdc power supply

Sensor Specifications

Environmental Rating: NEMA 4 (IP65)
Max. Ambient Temperature: Sensing head: 32° to 185°F (0 to 85°C)
With air cooling up to 392°F (200°C)
Elect. housing: 32° to 149°F (0 to 65°C)
Relative Humidity: 10 to 95%, non-condensing
Weight: Sensing head: 50g w/cable, stainless steel
Electronics housing: 270g, Zinc, die-cast

Model Numbers

Part Number	Optical Resolution	Cable Length	Range Type
REN00150	10 : 1	10 ft. / 3 m	LT - low temp
REN00155	10 : 1	3 ft. / 1 m	LT - low temp
REN00170	22 : 1	10 ft. / 3 m	LT - low temp
REN00175	22 : 1	3 ft. / 1 m	LT - low temp

REN00176	22 : 1	3 ft. / 1 m	LT - low temp

Communication Accessory Connection Kits are required for setup and monitoring of extended multi-drop features. One kit can service multiple sensors. These kits contain DataTemp® Multi-Drop software and connectors to provide for simple setup of analog/digital inputs and outputs of the optional RS232 or RS485 interface via a PC.

- REN00306** — RS485 2-wire connection kit provides for setup and monitoring via DataTemp® Multi-Drop software and a RS485/RS232 converter provided with 110Vac power supply
- REN00307** — RS232 connection kit provides for setup and monitoring via DataTemp® Multi-Drop software and a 3-wire RS232 connection
- REN00209** — Power supply: 12 Vdc at 200 mA, 120 Vac input

Sensor Head

Electronics Enclosure

Optional: Electronics enclosure with view port window in cover
Part Number: REN00308

$$\text{Dim.} = \frac{\text{mm}}{(\text{in})}$$

Adjustable Mounting Bracket — REN00303

Air Cooling System — REN00301

Ordering Information

Choose the **NCIT-LC Plus**, accessories, and/or options desired, and order by the associated part number.

Standard lead time is stock to 3 weeks.

Non-contact Infrared Temperature Measurement System — NCIT-LC Advanced

Design Features

- * Rugged IP65 rated sensing heads survive ambient temperatures to 248°F (120°C) without cooling
- * Precision high resolution optics, up to 22:1
- * Fast response times of < 20 ms
- * Miniature sensing head fits where other sensors can't
- * Intuitive user interface with high resolution LCD display
- * Automatic sensing head detection — plug and play
- * User configurable analog outputs (0/4-20mA, 0-5/10V, type J, K, R or S t/c)
- * Isolated solid state alarm relay output
- * Adjustable Emissivity, Peak Hold, Valley Hold and Averaging functions
- * Standard USB 2.0 digital interface for remote setup

The NCIT-LC Advanced is a powerful **two-piece** infrared temperature measurement system with miniature sensing head and separate communications electronics. The sensor is small enough to be installed just about anywhere, yet it outperforms much larger systems.

Available in a rugged cast metal electronics enclosure, the **LC-Advanced** offers a host of advanced signal processing features you won't normally find in sensors costing much more.

Designed for an **endless range of applications**, the **LC-Advanced** features a variety of sensing head options. Low temperature sensors with a measurement range of -40°F to 1832°F (-40°C to 1000°C), fast response (<20 mSec) sensors, and 5 μm spectral response sensors, provide an impressive array of solutions for your process needs.

The **rugged stainless steel sensing head** ensures reliable long term performance in the harshest industrial environments. Although the LC-Advanced sensor is small in size, it has all the performance you need with 1% accuracy, and a **choice of high resolution optics up to 22:1**.

Standard features include adjustable Emissivity, Peak Hold, Valley Hold, and Averaging functions. All sensor parameters are easily adjustable on the built-in user interface keypad, or remotely with the Windows® 7 compatible DataTemp software via the **built-in USB interface**.

Advanced features further extend the power of the **LC-Advanced** and include user configurable alarm output, digital "recipe" table inputs that can be easily interfaced to an external control system, an external reset input for signal processing, and external inputs for analog emissivity adjustment or reflected energy compensation.

Optional RS485, Modbus® or Profibus® network interfaces simplify integration with a factory or machine control system.

The **NCIT-LC Advanced** — a new level of innovation and performance in non-contact temperature measurement!

Specifications

Spectral Response:LT (Low Temp.)— 8 to 14 microns
.....G5 (glass)— 5 microns

Optical Resolution: LTS — 2:1, 10:1, 22:1
LTF — 10:1
G5 — 22:1

Temperature Range:
LTS (2:1, 10:1) -40° to 1112°F (-40° to 600°C)
LTF (LTS 22:1) 32° to 1832°F (0° to 1000°C)
G5S 482° to 3002°F (250° to 1650°C)

System Accuracy: ±1% of reading or ±1°C, whichever is greater

Thermocouple Output Accuracy: <1°F (0.5°C)
±1% of reading or ±2.5°C, whichever is greater

System Repeatability: ±0.5% of reading or ±0.5°C (1°F), whichever is greater

Temperature Resolution: LT 0.1°C or 0.2°F

System Response Time: LTS 130ms (90%)
LTF 20ms (90%)
G5 55ms (90%)

Emissivity: 0.100 to 1.100 digitally adjustable increments of .001

Transmission: 0.1 to 1.000 digitally adjustable increments of .001

Signal Processing: Peak hold, valley hold, variable averaging filter, adjustable up to 998 seconds

Non-contact Infrared Temperature Measurement System — NCIT-LC Advanced

Sensor Head Specifications

Environmental Rating: NEMA 4 (IP65)

Head Ambient Temperature Range: 14° to 248°F (-10° to 120°C)

With air cooling up to 392°F (200°C)

Cable Length: 3.3 ft (1m) standard, optional: 9.9 ft (3m), 26 ft (8m), 50 ft. (15m)

Storage Temperature: -4° to 185°F (20° to 85°C)

Relative Humidity: 10 to 90%, non-condensing

Construction: Stainless Steel

Weight with 1 m cable: 1.75 oz. (50g)

Available Sensor Heads

Part Number	Optics	Sensing Temperature Range	Response Time	Maximum Ambient Temperature	Type	Cable Length	Comments
REN30001	2:1	-40° to 1112°F (-40° to 600°C)	130ms	248°F/120°C	LTS	3.3 ft./1m	General Purpose
REN30002	10:1	-40° to 1112°F (-40° to 600°C)	130ms	248°F/120°C	LTS	3.3 ft./1m	General Purpose
REN30003	22:1	32° to 1832°F (0° to 1000°C)	130ms	248°F/120°C	LTS	3.3 ft./1m	General Purpose
REN30004	10:1	32° to 1832°F (0° to 1000°C)	20ms	248°F/120°C	LTF	3.3 ft./1m	Fast Response
REN30005	10:1	482° to 3002°F (250° to 1650°C)	130ms	248°F/120°C	G5	3.3 ft./1m	5μm sensing for glass applications

The NCIT-LC Advanced Infrared sensor heads can be supplied with the following optional cable lengths:

- 10 ft. / 3m cable
- 26 ft. / 8m cable
- 49 ft. / 15m cable
- 98 ft. / 30m cable

Calibration Certificate with NIST/DKD traceability can be provided. Specify when ordering.

10:1 optics with close focus accessory

2:1, 10:1 and 22:1 optics

22:1 optics with close focus accessory

Non-contact Temperature Measurement

Non-contact Infrared Temperature Measurement System — NCIT-LC Advanced

REN30101 NCIT-LC Advanced Electronics and Enclosure Specifications

- Digital Interface:** USB 2.0
(RS485, Modbus® or Profibus® optional)
- Outputs:** Scalable 4-20mA, 0-20mA,
0-10V, 0-5V, J, K, R or S thermocouple
- Inputs:** Digital inputs for emissivity control, ambient background temperature compensation, trigger/hold input
- Alarm Relay:** 48 VAC, 300 mA optically isolated solid state relay
- Output Impedance (TC output):** 20 ohms
- Minimum Load Impedance:** (mV output): 10K ohms
- Maximum Loop Impedance:** (mV output): 500 ohms
- Power Draw:** 4W max
- Power Supply:** 8-32VDC
- Housing Construction:** Zinc, die cast
- Environmental Rating:** NEMA 4 (IP65)
- Electronics Housing, Max. Temp.:** 14° to 150°F (-10° to 65°C)
- Storage Temperature:** -4° to 185°F (-20 to 85°C)
- Relative Humidity:** 10 to 95%, non-condensing
- Electronics Weight:** 9.5 oz. (270g)

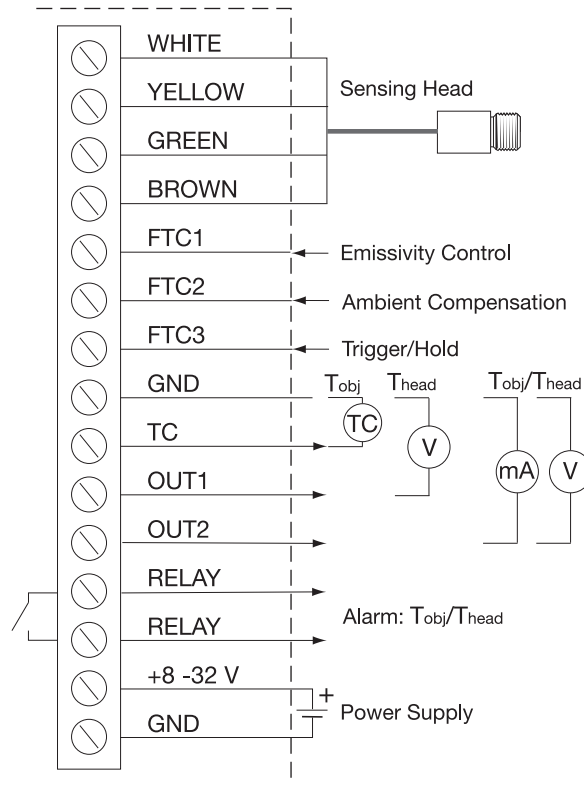

The **REN30101** NCIT-LC Advanced Electronics and Enclosure can also be ordered with the infrared sensor head pre-installed.

Specify which Sensor Head meets your requirements when ordering.

Ordering Information

Select the part numbers of the NCIT-LC Advanced Sensor Head, Electronics/Enclosure and Accessories that meet your requirements.

Non-contact Infrared Temperature Measurement System — NCIT-LLC Series

The NCIT - LLC model provides the advantages of infrared temperature measurement in a compact, low cost, integrated sensor. Designed for easy integration with a standard 4-wire system, the CI sensor can easily replace traditional contact probes with a type J or K thermocouple output, or with a 0-5 volt dc output if your application is susceptible to noise or requires a longer cable run.

Ordering Code:

REN2 - 1 2 3 4 & 5

Basic assembly includes: sensor with 3/4-16 UNF thread, preinstalled 3.3 ft./1 m cable and two mounting nuts.

Overall Range BOX 1

1 = 32° to 662°F (0° to 350°C)
2 = 86° to 932°F (30° to 500°C)

Output BOX 2

J = Type J thermocouple
K = Type K thermocouple
V = 10mV/°C

Cable Length and Type BOX 3

A = 3.3 ft./1m cable - 220°F/105°C
B = 10 ft./3m cable - 220°F/105°C
C = 50 ft./15m cable - 220°F/105°C
Specify D, E or F if ordering coolable housing
D = 3.3 ft./1m cable - 500°F/260°C
E = 10 ft./3m cable - 500°F/260°C
F = 50 ft./15m cable - 500°F/260°C

Options (Select 2) BOX 4 & 5

C = Coolable housing with air purge
M = 18M x 1 metric thread instead of 3/4-16 UNF
N = None

Ordering Information

Create an ordering code by filling in the boxes per your requirements and a part number will be assigned.

Standard lead time is stock to 4 weeks.

WARNING: Cancer and Reproductive Harm - www.P65Warnings.ca.gov.

Design Features

- * Type J or K thermocouple, or 0-5 VDC output
- * Two models cover temperature ranges from 32° to 932°F (0° to 932°F)
- * NEMA 4 (IP 65) stainless steel housing
- * 4:1 optics at 90% energy
- * 350 ms response time to 90% energy
- * Powered by 12-24 VDC at 20 mA
- * Accessories for cooling and air purging

Measurement Specifications

Overall Temperature Range: 32° to 662°F (0° to 350°C)

Accuracy: 32° - 240°F (0° - 115°C): ±6°F (±3°C)

241° - 440°F (116° - 225°C): ±5%

441° - 662°F (116° - 225°C): >±5%

Overall Temperature Range: 86° to 932°F (30° to 500°C)

Accuracy: 86° - 211°F (30° - 99°C): ±10°F (±6°C)

212° - 932°F (100° - 500°C): ±2% or ±6°F (3°C)

Spectral Response: 7 to 18 microns

Repeatability: 1% of reading or ±2°F (1°C)

Temperature Resolution: <1°F (0.5°C)

Response Time (95%): 350 ms

Emissivity: Fixed at 0.95

Electrical Specifications

Outputs: Select Type J or K thermocouple or 10 mV / °C

Output Impedance: 50 ohms

Min. Load Impedance: 50K ohms

Power Supply: 12 - 24 Vdc @ 20 mA

Standard Cable Length: 3.2 ft. (1 m)

Sensor Specifications

Environmental Rating: NEMA 4 (IP65)

Ambient Temperature Range: 32° to 160°F (0 to 70°C)

With air cooling 32° to 200°F (0 to 90°C)

With water cooling 32° to 500°F (0 to 260°C)

Thread: 3/4-16 UNF, optional 18M x 1

Storage Temperature: -22° to 185°F (-30 to 85°C)

Relative Humidity: 10 to 90%, non-condensing

Weight: 4.5 oz. (130g)

Accessories

Part Number	Description
REN25001	Fixed Mounting Bracket
REN25002	Adjustable Mounting Bracket
REN25003	Lens Air Purge Collar
REN25004	Right Angle Mirror

Non-contact Infrared Temperature Measurement System — NCIT Plus Series

If temperature is a factor in your quality and manufacturing yield, then put this technology to work for you.

Design Features

- * 0° to 1000°F (-18 to 538°C)
- * Compact 1/8 DIN digital monitor with large 4-digit display
- * User-defined thermocouple or 4-20 mA output
- * Universal 110-220 VAC power input
- * Adjustable emissivity at ambient parameters
- * Adjustable dual setpoints and deadband alarm outputs
- * Choice of sensing head to match application
- * Standard and close focus optics available
- * Accessories for cooling and air purging
- * Field interchangeable sensing heads

Common Industrial Applications

- ➔ Plastics
- ➔ Paper & Pulp Converting
- ➔ Chemicals
- ➔ Food Processing
- ➔ Pharmaceutical
- ➔ Electronics
- ➔ Construction
- ➔ Industrial Maintenance

Non-contact Temperature Measurement for Industrial Processes

The NCIT Plus Series is a versatile, two-piece temperature monitoring system that combines a compact, value-priced monitor with an infrared sensing head. The heart of the system is the 1/8 DIN NCIT Plus Monitor which provides advanced infrared processing capabilities including peak and valley hold, averaging, and user-adjustable offset.

Advances in optical and electronic design, originally developed for high-end infrared systems, have been adapted to this low-cost line without compromise in performance when compared to infrared sensors that cost twice as much just a few years ago.

The **NCIT Plus** models can't scratch, tear, smear or contaminate because they don't make contact with your product. They are easier and safer to install and maintain because they can be positioned away from hot and hazardous processes and moving products.

They remain accurate over a longer period of time because they're not subjected to the abuse that a contact device receives. And they deliver much faster response time than contact thermocouples, while rivaling their accuracy and repeatability.

In the long run, non-contact temperature measurement can help you improve quality, speed production, and save money.

1/8 DIN NCIT Plus Monitor

Along with its large 4-digit LED display, the monitor provides a user-defined 4-20mA or thermocouple output. Two adjustable setpoints/deadbands control 5V alarm outputs or optional 3A mechanical relays. The **NCIT Plus Monitor** accepts universal 110-220 Vac power input and provides a 24 Vdc / 50 mA excitation voltage for loop power to external sensors. All monitor functions are configured via the front panel, including °C/°F switching.

The **NCIT Plus Monitor** provides adjustable emissivity and ambient compensation when used with the **NCIT Plus Standard** infrared sensing heads.

Standard Sensing Heads

These high performance, 8-14 micron sensors combine current loop driven signals with high resolution optics.

The **NCIT Plus Standard w/ Laser** sensing head comes equipped with laser sighting for alignment in hard to reach locations, or to small or distant targets. The 50:1 distance to spot (D:S) ratio provides the capability of measuring a spot size of 1.2" at a distance of 5 ft.

The **NCIT Plus Standard** sensing head's D:S ratio of 35:1 allows a spot size of 1.7" at a distance of 5 ft.

Proven Technology

Non-contact infrared temperature sensors have proven advantageous and reliable in many industries for over 25 years. Tempco brings this technology to you at a price competitive with thermocouples.

Non-contact Infrared Temperature Measurement System — NCIT Plus Series

Measurement Specifications

Temperature Range (All Sensor Heads):	0 to 1000°F (-18 to 538°C)
Spectral Response:	Standard & Laser: 8 to 14 μm
Optical Resolution:	Laser: 50:1, close focus 45:1 Standard: 35:1, close focus 30:1
System Accuracy:	$\pm 1\%$ or $\pm 2^\circ\text{F}$ ($\pm 1^\circ\text{C}$), whichever is greater
System Repeatability:	$\pm 0.5\%$ or $\pm 2^\circ\text{F}$ ($\pm 1^\circ\text{C}$), whichever is greater
Response Time – (95% of final reading):	Standard & Laser: 500 ms
Emissivity:	Digitally adjustable, 0.1 to 1.09 by increments of 0.01 steps
Signal Processing:	Peak and valley hold (up to 998 sec, 999 = infinite hold with external reset), Variable averaging filter (up to 60 sec), T-ambient: fixed background ambient temperature compensation

Electrical Specifications

Power Supply:	110 /220 VAC, $\pm 20\%$, 50-60 Hz
Inputs:	User configurable inputs for Laser or Standard sensing heads, any 5-0 Vdc or 4-20 mA sensor, or thermocouple (J, K, E, N, R, S, T) External reset input to reset peak/valley hold
Outputs-Signal:	4-digit, LED display, $^\circ\text{F}/^\circ\text{C}$ selectable. User configurable 4-20 mA current or thermocouple output (J, K, E, N, R, S, T)
Alarm Output:	Two adjustable setpoints with deadbands controlling +5 Vdc alarm outputs or optional 3A mechanical relays
DC Supply Output:	24 Vdc / 50 mA excitation voltage for powering external sensors

Sensor Specifications

Environmental Rating:	Monitor Front Panel: NEMA 12 (IP54) Laser/Standard Head: NEMA 12 (IP65)
Ambient Temperature:	32° to 120°F (0 to 50°C)
Monitor	32° to 150°F (0 to 65°C)
Laser/Standard Head	laser shuts off automatically at 120°F (50°C)
With water cooling	32° to 350°F (0 to 177°C)
With air cooling	32° to 250°F (0 to 120°C)
Relative Humidity:	10 to 95%, non-condensing
Monitor Dimensions:	1/8 DIN, 96 × 48 × 120 mm 1.9" × 3.78" × 4.75"
Cutout Dimensions:	1.75" × 3.63" (92 × 44 mm)
Weight:	Monitor: 320g (0.7 lb.)

NCIT Plus Monitor

- REN01001** 1/8 DIN Panel Meter 110/220VAC
w/ 5 Vdc alarm outputs
- REN01003** 1/8 DIN Panel Meter 110/220VAC
with optional 3A relays for alarm outputs
- REN01002** Light duty aluminum mounting bracket to allow
for sub-panel mounting

NCIT Plus Standard Sensing Heads (includes mounting bracket and nut)

- REN01101** Standard focus infrared sensing head, 35:1 optics
- REN01102** Standard – close focus infrared sensing head,
30:1 optics
- REN01120** NIST/DKD calibration certificate (also for
water cooled) **Must be ordered with unit.**

With Water Cooled Housing and Lens Air Purge Collar

- REN01110** Standard focus infrared sensing head
- REN01111** Standard – close focus infrared sensing head

NCIT Plus Standard with Laser Sight Sensing Heads

(includes an adjustable mounting bracket and nut,
13 ft. (4m) cable for between the sensor and the
laser switch box, and 26 ft. (8m) cable to connect
the laser switch box to the NCIT Plus Monitor)

- REN01103** Standard focus infrared sensing head, 50:1 optics
- REN01104** Standard – close focus infrared sensing head,
45:1 optics
- REN01121** NIST/DKD calibration certificate (also for
water cooled) **Must be ordered with unit.**

With Water Cooled Housing and Lens Air Purge Collar

- REN01112** Standard focus infrared sensing head
- REN01113** Standard – close focus infrared sensing head

Air/Water Cooled Sensing Head

The Air/Water-Cooled Housing option allows the laser or standard sensor to be used in ambient temperatures **up to 250°F (121°C) with air cooling**, or **350°F (177°C) with water cooling**. It is supplied with two 1/8" NPT brass fittings.

Air flow at 77°F (25°C) should be **3 to 5 cfm** (1.4 to 2.4 liters/sec) with a pressure drop across the housing of 2 to 5 PSIG (0.14 to 0.35 kg/cm²). Water flow should be approximately **0.5 gallons (2 liters) per minute**; water temperature should be 50 to 80°F (10 to 27°C) for efficient cooling.

All units ordered with the Air/Water-Cooled Housing include the Air Purge Collar to avoid condensation and lens damage.

Note: The laser-equipped standard sensing head is 125 mm (4.92") long. The laser shuts off automatically at 120°F (50°C).

Standard / Laser Sensing Heads

All Standard sensors are supplied with a fixed bracket and a mounting nut. Alternatively, the sensor may be mounted through a hole, on a customer-supplied bracket, with the pipe adapter, or with other accessories. Avoid installing the sensor cable in noisy electrical environments. In this environment, it is recommended to install the cable in conduit. A conduit adapter accessory is available for this purpose.

Note: The laser-equipped standard sensing head is 125 mm (4.92") long.

Infrared Temperature Measurement — NCIT Plus Series Accessories

Pipe Adapter:

The Pipe Adapter is used to connect the Standard or Laser Head to a 1.5 inch NPT pipe thread.

REN00206

Conduit Adapter

The Pipe Adapter is used to connect the Standard or Laser Head to a 1/2-inch NPT conduit fitting.

REN00205

Lens Air Purge Collar:

The Air Purge Collar accessory is used to keep dust, moisture, airborne particles and vapors away from the lens. It may be installed before or after the bracket. Air flow should be a maximum of 1-3 cfm (0.5-1.5 liters/sec). Clean or "instrument" air is recommended to avoid contaminants from settling on the lens.

REN00204

NCIT Plus Standard Sensing Head Cables

5 conductor cables for connecting the standard sensing head to the panel meter.

REN01201	13 ft. (4m) – Regular temperature
REN01202	13 ft. (4m) – High temperature for Air/Water cooled Sensing Head
REN01203	26 ft. (8m) – Regular temperature
REN01204	26 ft. (8m) – High temperature for Air/Water cooled Sensing Head

Additional Accessories

REN00208	Fixed mounting bracket for the regular sensing head
REN00213	Adjustable mounting bracket for the regular sensing head
REN00207	Mounting nut

Used in conjunction with the Standard or Laser Sensing Head.

Ordering Information

Choose the **NCIT Plus, accessories, and/or options** desired, and order by the associated part number.

Temperature Transmitters

2-Wire Miniature Universal Temperature/Process Transmitters

ETM1

ETM2

ETM3

PROGRAMMABLE
in the field with your PC and easy to use software.
Can be ordered pre-programmed from Tempco.

Temperature transmitters are used for a variety of reasons. The use of temperature transmitters can eliminate the need for long costly runs of thermocouple wire with less expensive copper signal wire. When the environment is electrically noisy, sending a 4-20 mA signal to the control panel reduces the chance of error.

Design Features:

- * Three levels of accuracy: *ETM1*— $\pm 0.15\%$ of span
ETM2— $\pm 0.10\%$ of span
ETM3— $\pm 0.05\%$ of span
- * Accepts 11 thermocouple types and 3- or 4-wire RTD sensors
- * Field programmable with easy to use Windows®-based configuration software and a PC
- * Sensor break monitoring, programmable for upscale or downscale
- * Full access to all features while in operation
- * Temperature linear output
- * NAMUR-compliant
- * Configuration, editing & reading without external power
- * Easy wiring through the large center hole

The **Tempco ETM Series** of 2-wire transmitters are offered in isolated, non-isolated and high precision isolated versions. They are designed to fit in a standard aluminum, iron or plastic industrial connection head, DIN size B or larger.

Additional Design Features for the Isolated Versions

- * Fully universal, linearized and isolated 3/4 wire RTD, T/C, mV and Ohm
- * Sensor and system error correction
- * Low sensor isolation detection
- * Simplified loop check up with calibration output

The **ETM Transmitters** are built using surface mount components and employ digital technology with non-volatile memory to retain the configuration after programming and the cable is removed.

Temperature Transmitters

2-Wire Panel Rail Mount Universal Temperature/Process Transmitters

PROGRAMMABLE
in the field with your PC and easy to use software.
Can be ordered pre-programmed from Tempco.

Design Features:

- * Three levels of accuracy: *ETR1* — $\pm 0.15\%$ of span
ETR2 — $\pm 0.10\%$ of span
ETR3 — $\pm 0.05\%$ of span
- * Accepts 11 thermocouple types and 3- or 4-wire RTD sensors
- * Field programmable with easy to use Windows®-based configuration software and a PC
- * Sensor break monitoring, programmable for upscale or downscale
- * Full access to all features while in operation
- * Temperature linear output
- * NAMUR-compliant
- * Configuration, editing & reading without external power
- * Easy wiring with captive clamp style wire connections

Additional Design Features for the Isolated Versions

- * Fully universal, linearized and isolated 3/4 wire RTD, T/C, mV and Ohm
- * Sensor and system error correction
- * Low sensor isolation detection
- * Simplified loop check up with calibration output

The **ETR Transmitters** are built using surface mount components and employ digital technology with non-volatile memory to retain the configuration after programming and the cable is removed.

Temperature transmitters are used for a variety of reasons. The use of temperature transmitters can eliminate the need for long costly runs of thermocouple wire with less expensive copper signal wire. When the environment is electrically noisy, sending a 4-20 mA signal to the control panel reduces the chance of error.

The **Tempco ETR Series** of 2-wire transmitters is offered in isolated, non-isolated and high precision isolated versions. They are designed to fit directly on a standard 35 mm DIN rail.

Loop Powered (4-20mA) LCD Temperature/Process Indicator in Standard and Heavy Duty Connection Heads

The EMT1 & EMT2 are digital indicators for installation directly in a 4-20mA signal loop without the requirement of external power.

It is provided in a sensor connection head, ready for attachment to a thermowell or industrial sensor assembly.

The indicator is equipped with high contrast easy-to-read LCD digits.

Scaling the display is easily accomplished, without a reference signal, by three push buttons for any values between -9999 and 9999.

Shown with TC Assembly
(not included)

EMT10001

EMT20001

Design Features:

- * Installation directly in a 4-20mA signal loop without the need for an external power supply.
- * Works in conjunction with an ETM In-Head transmitter, sold separately
- * Minimal voltage drop
- * High contrast, 4-digit LCD display
- * Simple push-button scaling without a reference signal
- * Any range between -9999 and 9999 for the 4-20mA input
- * Labels for different engineering units are included
- * Typical accuracy of $\pm 0.1\%$ allows for high precision readouts.
- * HART transparent
- * NEMA 4X / IP65 / IP66 protection for display housings

Specifications

	ETM1	ETM2
Input current	4 - 20 mA

EMT20001

EMT10001 & EMT20001 Wiring with Internal Transmitter

EMT10001 & EMT20001 Wiring with External Transmitter

Portable 6-Station Temperature Monitor

Design Features

- * Thermocouple calibrations available are K, or J linearized in four sections for good accuracy.
- * RTD Cold Junction compensates accurately for ambient temperature changes as fast as 2°/min.
- * High Impedance Circuit allows use of probes with up to 1000 ft. of 24 ga. wire; several transformer-isolated monitors can connect to the same probe.
- * 1/2" High LCD Display is sunlight readable.
- * Powered by 9V alkaline "transistor" battery.
- * Durable Rotary Selector for displaying 6 thermocouple inputs.
- * Large Pointer Selector Knob clearly indicates the monitored location.
- * Polymer-Coated Circuit will perform indefinitely even in high humidity environments.
- * Made in the United States and warranted against material or workmanship defects for 1 year.

Multi-Station Portable Thermocouple Monitor

These thermocouple monitors were designed to assist field technicians with testing or calibrating HVAC/refrigeration systems, baking/curing ovens, motors, engines, and much more. Instant response circuits allow a technician to compare up to 6 temperature probes quickly.

These circuits have been optimized to deliver accuracy and stability over a wide environmental range. The durable carrying case is compact and features a compartment for storing wire and probes.

Specifications

Display Range:	-199 to 1999 °F or °C
Measuring Accuracy:	±1/2% of reading ±1°
Ambient Oper. Temp.:	-5° to 140°F (-21° to 60°C)
Relative Humidity:	90% max., non-condensing
Cold Junction Offset:	1° max. for 32° to 110°F (0° to 43°C)
Display Updates:	3 times per second
LCD Height:	0.5" (12.7 mm) high
Construction:	High-density polyethylene case, aluminum panel with meter and miniature thermocouple jacks
Dimensions:	12" x 8" x 3"
Power Requirement:	9 Vdc (9V "transistor" alkaline battery)
Weight:	2.0 lb. (0.9 kg.)

DISPLAY RANGE

Thermocouple Type	°F		°C	
	Min.	Max.	Min.	Max.
J-Fe/Constantan	-60	1400	-50	750
K-Chromel™/Alumel™	-60	1999	-50	1100

TEMPERATURE MONITORS

Ordering Information

Choose the Part Number of the **Temperature Monitor** that best fits the needs of your application.

A **120 Vac model** (with optional LED display) is available; please consult Tempco for order information.

Standard lead time is stock to 3 weeks.

12-Station Temperature Monitor

Design Features

- * Thermocouple calibrations available are T, K, J, or E linearized over sections for good accuracy.
- * RTD Cold Junction compensates accurately for ambient temperature changes as fast as 2°/min.
- * 1/2" high Red LED Display provides excellent readability.
- * Large Pointer Selector Knob clearly indicates the monitored location of 12 locations.
- * Polymer-Coated Circuit will perform indefinitely even in high humidity environments.
- * Made in the United States and warranted against material or workmanship defects for 1 year.

12-Station Temperature Monitor

DISPLAY RANGE

Thermocouple Type	Min. °F	Max. °F	Min. °C	Max. °C
J-Fe/Constantan	-60	1400	-50	750
K-Chromel [®] /Alumel [®]	-50	1975	-50	1100

These thermocouple monitors were designed for industrial or commercial applications that require monitoring of up to 12 locations economically. The circuits have been optimized to deliver accuracy and stability over a wide environmental range. Typical applications include monitoring HVAC systems, baking/curing ovens, food or medical freezers, solar installations, refrigeration equipment, motor bearings, engines, etc.

Specifications

Display Range:	-199 to 1999 °F or °C
Measuring Accuracy:	±1/2% of reading ±1°
Ambient Oper. Temp.:	-15° to 130°F (-26° to 54°C)
Relative Humidity:	90% max., non-condensing
Cold Junction Offset:	1° max. for 32° to 110°F (0° to 43°C)
Display Updates:	3 times per second
LED Height:	0.56" (14 mm) high
Construction:	Aluminum enclosure, surface mounting with swing-out front panel
Power Requirement:	120 or 230 Vac, 50/60 Hz.
Power Cord Length:	5 ft.
Weight:	1.7 lb. (0.8 kg.)

TEMPERATURE MONITORS			
Volts AC	Scale	Thermocouple J K	
120	°F	DTM20010	DTM20015
120	°C	DTM20020	DTM20025
230	°F	DTM20030	DTM20035
230	°C	DTM20040	DTM20045

Note: 230V units have internal terminal connections for AC power input.

Typical Applications

- ♦ Monitoring HVAC Systems
- ♦ Baking/Curing Ovens
- ♦ Food or Medical Freezers
- ♦ Molding Machines
- ♦ Industrial Process Equipment
- ♦ Refrigeration Equipment
- ♦ Motor Bearings
- ♦ Engines

Ordering Information

Choose the Part Number of the **Temperature Monitor** that best fits the needs of your application. If calibrations of type E or T are required, consult Tempco for part number.

Standard lead time is stock to 3 weeks.

Bimetal Dial Thermometers

Bimetal Dial Thermometers for Industrial Applications

Typical Applications

- ➔ Oil, Gas & Petrochemical
 - ➔ Waste Water
 - ➔ Pharmaceutical
 - ➔ Compost
- ➔ Food & Beverage
 - ➔ Military
 - ➔ Paper and Pulp
 - ➔ Dairy
 - ➔ Mining
- ➔ Power Generation
 - ➔ Utilities
 - ➔ Refrigeration
 - ➔ Marine
 - and Many More !!!

Bimetal Dial Thermometers are ideal for when you need a simple, "local" temperature display.

Tempco offers 2 styles: Backmounted and Adjustable Angle, each available with either 3" or 5" dials.

Backmounted Bimetal Dial Thermometers

Design Features

- * All Stainless Steel Construction
- * Hermetically Sealed (ASME B40.3)
- * Accurate to 1% of Full Scale
- * Standard External Reset
- * Silicone Fillable for Vibration Resistance
- * 1/2" NPT Connection Standard
- * Selected 3" and 5" Dial Thermometers Available from Stock

Backmounted Bimetal Dial Thermometers Standard Sizes and Ranges 1/2" NPT Connection Standard

Dial Dia. (in)	Stem Length (in)	Part Number by Temperature Range					
		-40 to 160°F	0 to 100°F	0 to 200°F	0 to 250°F	50 to 300°F	50 to 550°F

Adjustable Angle Bimetal Dial Thermometers

Design Features

- * Complete 180° Adjustability
- * 360° Case Rotation
- * All Stainless Steel Construction
- * Hermetically Sealed (ASME B40.3)
- * Accurate to 1% of Full Scale
- * Standard External Reset
- * Silicone Fillable for Vibration Resistance
- * 1/2" NPT Connection Standard
- * Selected 3" and 5" Dial Thermometers Available from Stock

Current Indicators

Current Indicators

Wire-Mounted Current Indicators

Tempco's wire-mounted electrical current indicators provide an effective method of monitoring electrical current. The indicator is attached directly to a current-carrying wire. When the current exceeds the turn-on point, the LED will illuminate to indicate the presence of current.

Red LED Indicator

Part Number: CTT00001

Green LED Indicator

Part Number: CTT00002

Panel Mounting Bracket

Part Number: CTT00003

Wire Passes	Turn-On Point (Amps AC)		Max. Wire Dia. (in.)
	Red LED	Green LED	
1	2	2.5	.29
2	1	1.25	.14
3	.66	.83	.13
N	$2 \div N$	$2.5 \div 2$	-

Design Features

- * Self Powered
- * Easy to Install
- * Supplied with Plastic Tie
- * Indicates Current from 2 to 100 Amps AC (1 Wire Pass)

Applications

- ➔ Monitor Heater Element Status
- ➔ Observe Remote Loads

Remote Current Indicators

The Tempco remote current sensing transformer is installed around the current-carrying wire and is connected directly to the LED panel indicator. When the current exceeds the turn-on point of the sensing transformer, the LED illuminates to indicate the presence of current. Two sizes of remote current sensing transformers are available for use with either of two types of LED indicators listed below at right.

Specifications

Max. Wire Dia.: .29 inches
 Indicating Range: 2 to 100 Amps AC
 Max. Transient Current: 150A for 5 sec.
 Working Class: 600 Volts, 50-60 Hz
 Lead Wire Length: 12"
 Max. Operating Temperature: 140°F/60°C
 Part Number: CTT00004

Specifications

Max. Wire Dia.: .55 inches
 Indicating Range: 2.5 to 100 Amps AC
 Max. Transient Current: 150A for 5 sec.
 Working Class: 600 Volts, 50-60 Hz
 Lead Wire Length: 24"
 Max. Operating Temperature: 140°F/60°C
 Part Number: CTT00005

Typical Applications

- ➔ Indicate Open Heater Elements
- ➔ Observe Remote Loads
- ➔ Indicate Phase Loss
- ➔ Monitor Motor Operation

Surface Mounting Bracket

For use on model CTT00005 only

Dimensions: 1.37" x 1.25"
 Mounting Dims.: (2) #6 screws .87" apart
 Part Number: CTT00006

All Items Available from Stock

Panel LED Indicators for Remote Current Transformers

Press-In Panel LED Indicator with 12" leads

Splash-Proof Panel LED Indicator with 12" leads

Press-In LED Panel Indicator

LED Type: T-1-3/4", Red Bipolar
 Mounting Hole: .250"
 Part Number: CTL00001

Splash-Proof LED Indicator

Supplied with rubber sealing washer LED Type: T-1-1/4", Red Bipolar
 Mounting Hole: .312"
 Part Number: CTL00002

Current Sensing Relay for Heater Monitoring

Specifications

Mounting: 2-3/16" dia. clearance holes on 1-15/16" by 2-15/16" centers

Environmental:

Operating Temperature: -30°C to +60°C

Storage Temperature: -55°C to +125°C

Power-On Delay: 100 ms max.

Hysteresis: 5% max.

Input Power Supply: 120 or 240Vac, 24 Vdc (Tolerance ±10%)

Input Terminals: 2-1/4" Male Quick Connect

Operating Class: 600 V

Sensed Current:

Max. Continuous: 200% Full Scale

Frequency: 60-400 Hz

Output Relay:

Arrangement: 1 Form C (SPDT)

Terminals: 3-1/4" Male Quick Connect

Contact Rating: NO-120/240 Vac: 20A, NC-120/240 Vac: 10A

Common Configurations

(with Calibrated Dial & Standard Relay)

Part Number	Trip Status	Supply Voltage	Trip Range (Amps)	Delay (sec)
CTR00201	LC	120	1 to 10	2 to 25
CTR00202	LC-Latch	120	1 to 10	2 to 25
CTR00203	LC	240	3 to 30	2 to 25
CTR00204	LC-Latch	240	3 to 30	2 to 25
CTR00205	LC	240	10 to 100	2 to 25
CTR00206	LC-Latch	240	10 to 100	2 to 25

The TEMPCO series of **Current Sensing Relays** provides an effective and highly stable method for monitoring electrical current. The current-carrying wire is routed through the opening extending from the top of the case. When current reaches the level set by the trip point adjustment, the electromechanical relay is energized. An adjustable timer is provided to delay activation of the relay. A precision voltage reference circuit ensures a highly repeatable trip point. Design of the power-on delay circuitry allows the supply power to be repeatedly cycled on and off without affecting the stability of the current sensing operation.

Design Features

- * Variable Trip Point and Time Delay
- * Monitors Currents from 10 mA to 100 AC Amps
- * Output Relay Rated Up to 20 Amps
- * LED Relay Status Indicator
- * Dead Band Prevents Relay Chatter
- * Calibrated Dial
- * Electrical Isolation Between Circuits

Typical Applications

- Monitor Electrical Heater Elements
- Sense Motor Over/Under Loads
- Detect Lamp Burnout
- Indicate Phase Loss

Ordering Code: CTR - 1 2 3 4 5 6

Relay Trip Status BOX 1

- 1** = Relay Energized on High Current (above trip point)
- 2** = Relay Energized on Low Current (below trip point)
- 3** = Latch on High Current
- 4** = Latch on Low Current

NOTE: For 3 and 4 relay remains latched until supply power is removed

Supply Voltage BOX 2

- 1** = 120 Vac
- 2** = 240 Vac
- 3** = 24 Vdc

Trip Ranges BOX 3

- 3** = 1.0 to 10 AC Amps
- 4** = 3.0 to 30 AC Amps
- 5** = 6.0 to 60 AC Amps
- 6** = 10 to 100 AC Amps

Time-On Delay BOX 4

- A** = .5 to 6 Sec.
- B** = 2 to 25 Sec.
- C** = .1 to 1 Sec.
- X** = None

Trip Point Dial BOX 5

- CD** = Calibrated Dial
- FP** = Fixed Setpoint (specify required value)

Output Options BOX 6

- R** = Standard Relay
- N** = Isolated NPN Transistor
- T** = Isolated Triac

Ordering Information

Current Relays are offered with the options listed in the worksheet above. Create an ordering code by filling in the boxes with the appropriate number and/or letter designation for your requirements and a part number will be assigned, or choose a common configuration. **Standard lead time is stock to 3 weeks.**

Digital Multimeter — For Volts, Amps, Ohms and Temperature

Design Features

- * True RMS Autoranging DMM
- * Type K thermocouple built in for air or water temperature measurements
- * Input fuse protection and misconnection warnings
- * Data Hold for AC/DC voltage and current
- * Relative function for establishing a baseline reference
- * Advanced measurements include Capacitance, Frequency and Duty Cycle
- * Low current capability — measure down to 0.1μA
- * CE, UL, CAT III – 600V
- * 3-year warranty

Specifications

Display: 4000 counts, backlit	Resistance: 0.1 to 40MΩ
Basic Accuracy: ±0.3%	Capacitance: 0.01nF to 100μF
DC Voltage: 0.1mV to 1000V	Frequency: 0.001Hz to 10MHz
AC Voltage: 0.1mV to 750V	Temperature Type K: -4° to 1382°F (-20 to 750°C)
DC Current: 0.1μV to 20A	Duty Cycle: 0.1 to 99.9%
AC Current: 0.1μV to 20A	Diode/Continuity: Yes

Part Number: EMV00018

Complete with CAT III test leads, multi-position tilt stand and velcro strip for hanging, protective holster with test lead holder, bead wire temperature probe and 9 Vdc battery.

All Items Available from Stock

400 Amp Clamp-On Multimeter with Temperature and Non-Contact Voltage Detector

Design Features

- * Built-in Non-Contact Voltage Detector with LED alert
- * 4000 count, backlit LCD display
- * 1.2" jaw size for conductors up to 350MCM
- * Relative Mode for Capacitance Zero and Offset Adjustment
- * Data Hold
- * Auto Power Off
- * Complete with test leads, general purpose Type K bead wire temperature probe, two AAA batteries, and carrying case

Specifications	Range	Maximum Resolution	Basic Accuracy
Display Counts:	4000		
AC Current:	40.00A, 400.0A	0.01A	±(2.5%+8d)
AC Voltage:	4.00V, 40.00V, 400.0V, 600V, 400.0mV, 4.000V, 40.00V, 400.0V	0.001V	±(1.8%+8d)
DC Voltage:	600V	0.1mV	±(0.8% +2d)
Resistance:	400.0Ω, 4.000kΩ, 40.00kΩ, 400.0kΩ, 4.000MΩ, 40.00MΩ	0.1Ω	±(0.8% +2d)
Frequency:	10Hz to 10kHz	0.01Hz	±(1.5%+2d)
Capacitance:	40.00nF, 400.0nF, 40.00uF, 100.0uF	0.01nF	±(3.0%+5d)
Temperature:	Type K tc, -4° to 1400°F (-20° to 760°C)	0.1°	±(3.0%+9°F or 5°C)
Duty Cycle:	0.5 to 99.0%	0.1%	±(1.2%+2d)
Diode Test:	Yes		
Continuity Test:	Yes		
Dimensions:	7.9" × 2.6" × 1.5" (200 × 66 × 37 mm)		
Weight:	7.2oz. (205g)		

Part Number: EMV00060

The EMV00060 is the perfect meter for plant maintenance or HVAC repair. Besides the standard voltage current and resistance, the additional functions of temperature, capacitance, frequency and duty cycle make this the perfect all-in-one service tool.

Megohmmeter/ Insulation Tester

Design Features:

- * Three test ranges:
200M Ω /1000VDC
200M Ω /500VDC
200M Ω /250VDC
- * Power lock for 3-minute test
- * Auto power off and Data Hold
- * No voltage drop at low resistance
- * Full function indication and Overload Protection
- * Measures resistance to 200 Ω and Volts to 750VAC
- * 1mA test current ensures 1000V/500V/250V rating
- * Complete with 6 AA batteries, test leads and case with neck strap

Part Number: EMM00010

Specifications	Range
Insulation Voltage:	250/500/1000
Insulation Resistance (accuracy):	200/2000M Ω (3% + 5 digits)
Output short circuit current:	\leq 2.5mA
Resistance (accuracy):	200 Ω (1% reading)
Overload Protection:	2200 V (<1 min)
Dimensions:	3.8" \times 6.3" \times 2.3" (97 \times 160 \times 58mm)

All Items Available from Stock

Digital Thermometers

Handheld Digital Thermometers — Heavy Duty, Accurate

Type J or K Thermometers with single or dual input, with direct or differential measurements to 0.1°

Design Features:

- * Rugged design for field use — includes rubber holster.
- * Displays Maximum reading and Data Hold at the touch of a button.
- * Single or dual input models available.
- * Dual input model provides differential readings.
- * Accurate to 0.3%, °F/°C switchable on the front panel.
- * Includes: 9V battery, holster with stand, wrist strap and bead-style temperature probe.

All Items Available from Stock

1/4 DIN Digital Controls

TEC-4100

- * 4 Programmable Outputs
- * NEMA 4X Front Optional
- * Retransmission Output
- See Page 13-34

TEC-4300

- * 5 Programmable Outputs
- * Heater Break Alarm
- * Differential Control
- * Loop Break Alarm
- * Analog Input
- * Event Input
- * Retransmission Output
- See Page 13-36

Ramp & Soak Controls

TEC-4500 1/4 DIN

TEC-9500 1/16 DIN

- * 9 Recipes
- * 16, 32 or 64 Segments per Recipe
- See Page 13-18

1/16 DIN Analog Controls

TEC-901
 * Non-Indicating
 * Potentiometer Setpoint
 See Page 13-22

TEC-902
 * With High /Low LEDs
 * Potentiometer Setpoint
 See Page 13-22

TEC-905
 * Pushwheel Setpoint
 * Process Digital Display
 See Page 13-20

1/8 DIN Analog Control

TEC-805
 * Primary Output
 * Deviation Alarm Optional
 * Multiple Ranges Available
 * Process Digital Display
 * Pushwheel Setpoint
 See Page 13-28

1/16 DIN Display Only

TEC-900
 * Display Only
 * T/C or RTD Inputs
 * High or Low Voltage Operation
 See Page 13-20

1/4 DIN Analog Controls

TEC-401
 * Non-Indicating
 * Potentiometer Setpoint
 * Low Cost
 See Page 13-40

TEC-402
 * Process Deviation Meter
 * Potentiometer Setpoint
 * Low Cost
 See Page 13-40

TEC-404
 * Potentiometer Setpoint
 * Process Digital Display
 * Deviation Alarm Optional
 See Page 13-38

TEC-405
 * Pushwheel Setpoint
 * Process Digital Display
 * Deviation Alarm Optional
 See Page 13-38

FM High Limit Controls

TEC-410 1/4 DIN
TEC-910 1/16 DIN
 * High Limit Control
 * External Reset Standard
 * Retransmission Optional
 * Latching Relay
 See Page 13-16

Temperature Controllers

Model TEC-2400 1/32 DIN

Model TEC-2400 1/32 DIN Temperature Controller

Design Features

- * 1/32 DIN size – 24 mm × 48 mm
- * Fuzzy Logic PID Autotune heat and cool control
- * Universal input, field configurable (Type J T/C default, PT100, mA, V) with high accuracy 18-bit D-A
- * Countdown display
- * RS - 485 and Analog Retransmission Available
- * Micro USB Programming Port
- * Fast sampling rate (200 msec)
- * Manual control & auto-tune function
- * Wide range of alarm mode selection
- * Lockout protection
- * Bumpless transfer during failure mode
- * Soft-start ramp & dwell timer
- * Bright LCD display using NFPA/IEC standard colors
- * High performance with low cost

Agency Approvals:

RoHS, REACH, WEEE

Hardware Code: TEC-2400 - 1 2 3 4 5

A Part Number based on the hardware code and any software pre-programming will be issued at time of order.

Standard lead time is stock to 2 weeks.

Power Input BOX 1

- 4** = 90-250 VAC
- 5** = 11-40 VDC / 20-28 VAC

Output 1 — BOX 2

- 1** = Relay: 2A / 240 VAC
- 2** = Pulse DC for SSR drive: 5 VDC (30 mA max)
- 3** = Isolated, 4-20 mA (default), 0-20 mA
- 5** = Isolated VDC, 0-10 scalable
- C** = Pulse DC for SSR drive: 14 VDC (40mA max)

Output 2 / Alarm 1 BOX 3

- 0** = None
- 1** = Relay: 2A / 240 VAC
- 2** = Pulse DC for SSR drive: 5 VDC (30 mA max)
- 3** = Isolated, 4-20 mA (default), 0-20 mA
- 5** = Isolated, VDC, 0-10 scalable
- C** = Pulse DC for SSR drive: 14 VDC (40mA max)

Option 1 BOX 4

- 0** = None
- 1** = RS-485 Interface
- 2** = 1 Event Input
- 3** = 1 CT Input

Option 2 BOX 5

- 0** = None
- 1** = Retransmit: 4-20mA / 0-20mA
- 2** = Retransmit: 0-10VDC
- 3** = Alarm 2 Relay: 2A / 240 VAC

Note: Detailed information on features common to digital microprocessor-based TEC temperature controls and the complete Table of Input Range and Accuracy can be found on page 13-46.

Transformer for Heater Break Alarm

(0-50 Amp current)

Part Number: TEC99998

Specifications on page 13-47

Power Input

Standard: 90-250 VAC, 47-63 Hz, 8VA, 4W maximum
Optional: 11-40 VDC / 20-28 VAC, 47-63 Hz, 8VA, 4W maximum

Signal Input

Resolution: 18 Bits
Sampling Rate: 5 Times / Second (200msec)
Maximum Rating: -2VDC minimum, 12VDC maximum
Sensor Break Detection: Sensor open for Thermocouple and RTD inputs, sensor short for RTD input, below 1mA for 4-20mA input, below 0.25V for 1 - 5V input, not available for other inputs
Sensor break responding time: Within 4 seconds for thermocouple and RTD inputs, 0.1 second for 4-20mA and 1-5V inputs

Event Input

Number of Event Inputs: 1
Logic Low: -10V minimum, 0.8V maximum
Logic High: 2V minimum, 10V maximum

CT Input

CT type: TEC99998
Accuracy: $\pm 2\%$ of full scale reading, ± 1 digit maximum
Input Impedance: 294 Ω
Measurement Range: 0-50A AC
Output of CT: 0-5V DC
CT Mounting: Wall (Screw) mount
Sampling Rate: 1 time/second

Output 1 / Output 2

Type: Relay, pulsed voltage, linear voltage and linear current
Relay Rating: 2A, 240V AC, 200000 life cycles for resistive load
Pulsed Voltage: Source voltage 5V, Current limiting resistance 66 Ω
Linear Output Resolution: 15 Bits
Isolation Breakdown Voltage: 1000 V AC
Load Capacity of Linear Output: Linear current: 500 Ω maximum, Linear voltage: 10K Ω minimum

Alarm

Relay Type: Form A
Maximum Rating: 2A, 240VAC, 200000 life cycles for resistive load
Alarm Functions: Dwell Timer, Deviation Low, Deviation High, Deviation Band Low, Deviation Band High, Process High, Process Low
Alarm Mode: Latching, Hold, Normal, Latching/Hold
Dwell Timer: 0.1-4553.6 minutes

Data Communications

Interface: RS-485
Address: 1-247
Parity Bit: None, Even or Odd
Data Length: 7 or 8 Bits
Protocol: Modbus RTU
Baud Rate: 2.8 - 115.2 Kbits/sec
Stop Bit: 1 or 2 Bits
Communication Buffer: 160 bytes

Analog Retransmission

Output Signal: 4-20 mA, 0-20 mA, 0-10V
Resolution: 15 Bits
Accuracy: $\pm 0.05\%$ of span $\pm 0.0025\%$ / $^{\circ}\text{C}$
Load Resistance: 0-500 Ω for current output, 10K Ω minimum for voltage output
Isolation Breakdown: 1000VAC minimum
Integral Linearity Error: $\pm 0.005\%$ of span
Linear Output Ranges: 0-22.2mA (0-20mA / 4-20mA), 0-5.55V (0-5V, 1-5V), 0-11.1V (0-10V)

User Interface

Keypad: 4 Keys
Display Type: 4 digit LCD display
No. of Display: 2
Upper Display Size: 0.4" (10mm)
Lower Display Size: 0.19" (4.8mm)

Programming Port

Interface: Micro USB
PC Communication Function: Automatic Setup, Calibration and Firmware Upgrade

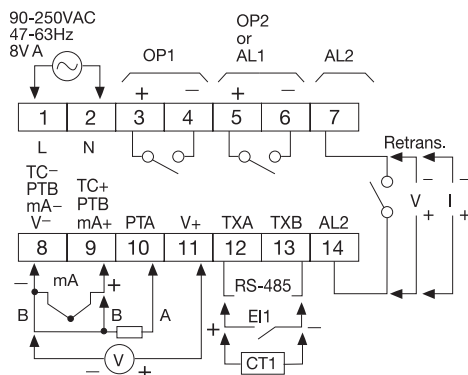

Control Mode

Output 1: Reverse (Heating) or Direct (Cooling) Action
Output 2: PID cooling control, Cooling P band 50~300% of PB, Dead band -36.0 ~ 36.0 % of PB
ON-OFF: 0.1-90.0 ($^{\circ}\text{F}$) hysteresis control (P band = 0)
P or PD: 0-100.0 % offset adjustment
PID: Fuzzy logic modified Proportional band 0.1 ~ 900.0 $^{\circ}\text{F}$, Integral time 0~3600 seconds, Derivative time 0-360.0 seconds
Cycle Time: 0.1-90.0 seconds
Manual Control: Heat (MV1) and Cool (MV2)
Failure Mode: Auto transfer to manual mode while sensor break or A-D Converter damage
Ramping control: 0 to 900.0 $^{\circ}\text{F}$ / Minute or 0 to 900.0 $^{\circ}\text{F}$ / Hour Ramp Rate

Environmental and Physical Specifications

Operating Temperature: -10 $^{\circ}\text{C}$ to 50 $^{\circ}\text{C}$
Storage Temperature: -40 $^{\circ}\text{C}$ to 60 $^{\circ}\text{C}$
Humidity: 0 to 90 % RH (Non-Condensing)
Insulation Resistance: 20M Ω minimum (@500V DC)
Dielectric Strength: 2000V AC, 50/60 Hz for 1 Minute
Vibration Resistance: 10 to 55 Hz, 10m/s² for 2 Hours
Shock Resistance: 200 m / s² (20g)
Moldings: Flame retardant polycarbonate
Mounting: Panel
Dimensions W x H x D: 15/16 x 1-7/8 x 3-13/16" (48 x 24 x 92 mm)
Depth Behind Panel: 3-15/16" (84 mm)
Cut Out Dimensions: 7/8 x 1-25/32" (22 x 45 mm)
Weight: .26 lbs (160 g)

Rear Terminal Connections

Stock and Common Part Numbers

Transformer for Heater Break Alarm

(0-50 Amp current)

Part Number: TEC99998

Specifications on page 13-47

Power Input

Standard: 90-250 VAC, 47-63 Hz; 10 VA, 5W max.
Optional: 11-40 VDC / 20 to 28 VAC, 47-63 Hz; 10 VA, 5W max.

Signal Input

Resolution: 18 bits
Sampling Rate: 5 Times / Second (200msec)
Maximum Rating: -2VDC minimum, 12VDC maximum
Sensor Break Detection: Sensor open for Thermocouple and RTD inputs, sensor short for RTD input, below 1mA for 4-20mA input, below 0.25V for 1-5V input, not available for other inputs
Sensor Break Response Time: Within 4 seconds for Thermocouple and RTD inputs, 0.1 second for 4-20mA and 1-5V inputs

Event Input

Number of Event Inputs: 2
Logic Low: -10V minimum, 0.8V maximum
Logic High: 2V minimum, 10V maximum

CT Input

CT Type: TEC99998
Accuracy: ±2% of Full Scale Reading, ± 1 digit maximum
Input Impedance: 294Ω
Measurement Range: 0-50A AC
Output of CT: 0-5V DC
CT Mounting: Wall (Screw) Mount
Sampling Rate: 1 Time/Second

Output 1 / Output 2

Relay Rating: 2A, 240V AC, 200000 Life Cycles for Resistive Load
Pulsed Voltage: Source Voltage 5V, Current Limiting Resistance 66Ω
Linear Output Resolution: 15 Bits
Isolation Breakdown Voltage: 1000 V AC
Load Capacity of Linear Output: Linear Current: 500Ω maximum, Linear Voltage: 10KΩ minimum

Alarm

Maximum Rating: 2A, 240VAC, 200000 Life cycles for resistive load
Alarm Functions: Dwell Timer, Deviation Low, Deviation High, Deviation Band Low, Deviation Band High, Process High, Process Low

Transformer for Heater Break Alarm

(0-50 Amp current)

Part Number: TEC99998

Specifications on page 13-47

TEC-8400 Rear Terminal Connections

TEC-8450 Rear Terminal Connections

Power Input

Standard: 90-250 VAC, 47-63 Hz, 8VA, 4W maximum
Optional: 11-40 VDC / 20-8 VAC, 47-63 Hz, 10VA, 5W maximum
 or 12VA, 6W maximum

Signal Input

Resolution: 18 Bits **Sampling Rate:** 5 Times/Sec. (200msec)
Maximum Rating: -2VDC minimum, 12VDC maximum
Normal Mode Rejection Ratio (NMRR): 55dB
Sensor Break Detection: Sensor open for thermocouple and RTD inputs, sensor short for RTD input, below 1mA for 4-20mA input, below 0.25V for 1-5V input, not available for other inputs
Sensor Break Responding Time: Within 4 seconds for thermocouple and RTD inputs, 0.1 second for 4-20mA and 1-5V inputs

Remote Set Point Input

Type: Linear current, Linear voltage **Range:** -3-27mA, -1.3-11.5V
Accuracy: ±0.05 % **Input Impedance:** Current: 2.5Ω, Voltage: 1.5MΩ
Resolution: 18 bits **Sampling Rate:** 1.66 times/second
Maximum Rating: 280mA maximum for current input, 12VDC maximum for voltage input
Temperature Effect: ±1.5μV / °C for voltage input, ±3.0μV / °C for current input
Sensor Break Detection: Below 1mA for 4-20mA input, below 0.25V for 1-5V input, not available for other inputs

Event Input

No. of Event Inputs: 6 **Logic Low:** -10Vmin., 0.8V max.
Logic High: 2V min., 10V max.

CT Input

CT Type: TEC99998
Accuracy: ±2% of full scale reading, ± 1 digit max.
Input Impedance: 294Ω **Measurement Range:** 0-50A AC
Output of CT: 0-5V DC **CT Mount:** Wall (Screw) mount
Sampling Rate: 1 time/second

Output 1 / Output 2

Type: Relay, pulsed voltage, linear voltage and linear current
Relay Rating: 2A, 240V AC, 200000 life cycles for resistive load
Pulsed Voltage: Source voltage 5V, Current limiting resistance 66Ω
Linear Output Resolution: 15 Bits
Isolation Breakdown Voltage: 1000 VAC
Load Capacity of Linear Output: Linear current: 500Ω maximum, Linear voltage: 10KΩ minimum

Alarm

Relay Type: Form A
Maximum Rating: 2A, 240VAC, 200000 life cycles for resistive load
Alarm Functions: Dwell timer, Deviation low, Deviation high, Deviation band low, Deviation band high, Process high, Process low
Alarm Mode: Latching, Hold, Normal, Latching/Hold
Dwell Timer: 0.1-4553.6 minutes

Data Communication

Interface: RS-485 **Protocol:** Modbus RTU
Address: 1-247 **Baudrate:** 2.8-115.2 KBPS
Parity Bit: None, Even or Odd **Stop Bit:** 1 or 2 bits
Data Length: 7 or 8 bits **Communication Buffer:** 160 bytes

Stock and Common Part Numbers (8400)

(Default Type "J" Thermocouple Input)

Analog Retransmission

Output signal: 4-20 mA, 0-20 mA, 0-10V
Resolution: 15 bits **Accuracy:** ±0.05% of span ± 0.0025%/°C
Load Resistance: 0-500Ω for current output, 10KΩ minimum for voltage output
Isolation Breakdown: 1000VAC minimum
Integral Linearity Error: ±0.005% of span
Linear Output Ranges: 0-2.2mA (0-20mA/4-20mA), 0-5.55V (0-5V, 1-5V), 0-1.1V (0-10V)

User Interface

Keypad: 4 Keys **Display Type:** 4 digit LCD display
No. of Display: 3 **Upper Display Size:** 0.7" (17.7mm)
Lower Display Size: 0.4" (11.2mm)

Programming Port

Interface: Micro USB **PC Communication Function:** Automatic Setup, Calibration and Firmware Upgrade

Control Mode

Output 1: Reverse (Heating) or Direct (Cooling) Action
Output 2: PID cooling control, Cooling P band 50~300% of PB, Dead band -36.0 ~ 36.0 % of PB
ON-OFF: 0.1-90.0 (°F) hysteresis control (P band = 0)
P or PD: 0-100.0 % offset adjustment
PID: Fuzzy logic modified Proportional band 0.1 ~ 900.0°F, Integral time 0-3600 seconds, derivative time 0-360.0 seconds
Cycle Time: 0.1-90.0 Seconds
Manual Control: Heat (MV1) and cool (MV2)
Failure Mode: Auto transfer to manual mode while sensor break or A-D Converter damage
Ramping Control: 0-900.0°F/Minute or 0-900.0°F/Hour Ramp Rate

Profiler

Availability: Option **No. of Segments/ Program:** 4 / 8 / 16

Environmental and Physical Specifications

Operating Temp.: -10°C to 50°C **Storage Temp:** -40°C to 60°C
Humidity: 0 to 90 % RH (Non-condensing)
Insulation Resistance: 20MΩ minimum (@500V DC)
Dielectric Strength: 2000V AC, 50/60 Hz for 1 minute
Vibration Resistance: 10-55 Hz, 10m/s² for 2 hours
Shock Resistance: 200 m/s² (20g)
Moldings: Flame retardant polycarbonate
Mounting: Panel

	TEC-8400	TEC-8450

Temperature Controllers

Model TEC-7400 3/16 DIN

Model TEC-7400 3/16 DIN Temperature Controller

Design Features

- * 3/16 DIN size – 72 mm × 72 mm
- * Fuzzy Logic PID Autotune heat and cool control
- * Universal input, field configurable (Type J T/C default, PT100, mA, V) with high accuracy 18-bit D-A
- * Countdown display
- * RS - 485 and Analog Retransmission Available
- * Micro USB Programming Port
- * Fast sampling rate (200 msec)
- * Manual control & auto-tune function
- * Wide range of alarm mode selection
- * Lockout protection
- * Bumpless transfer during failure mode
- * Soft-start ramp & dwell timer
- * Bright LCD display using NFPA/IEC standard colors
- * High performance with low cost

Agency Approvals:

RoHS, REACH, WEEE

Hardware Code: TEC-7400 - 1 2 3 4 5 6 7 8 9

A Part Number based on the hardware code and any software pre-programming will be issued at time of order.

Standard lead time is stock to 2 weeks.

Power Input BOX 1

- 4 = 90-250 VAC
- 5 = 11-40 VDC / 20-28 VAC

Output 1 BOX 2

- 1 = Relay: 2A / 240 VAC
- 2 = Pulse DC for SSR drive: 5 VDC (30 mA max)
- 3 = Isolated, 4-20 mA (default), 0-20 mA
- 5 = Isolated VDC, 0-10 scalable
- C = Pulse DC for SSR drive: 14 VDC (40 mA max)

Output 2 / Alarm 1 BOX 3

- 0 = None
- 1 = Relay: 2A / 240 VAC
- 2 = Pulse DC for SSR drive: 5 VDC (30 mA max)
- 3 = Isolated, 4-20 mA (default), 0-20 mA
- 5 = Isolated, VDC, 0-10 scalable
- C = Pulse DC for SSR drive: 14 VDC (40 mA max)

Alarm 2 and 3 BOX 4

- 0 = None
- 1 = Alarm 2: Relay: 2A / 240 VAC
- 2 = Alarm 2 and 3: Relays: 2A / 240 VAC

Event Inputs BOX 5

- 0 = None
- 1 = 6 Event Inputs

Option 1 BOX 6

- 0 = None
- 1 = RS-485 Interface & Remote Setpoint

Option 2 BOX 7

- 0 = None
- 1 = 1 CT Input and Remote Setpoint
- 2 = 2 CT Inputs and Remote Setpoint

Option 3 BOX 8

- 0 = None
- 1 = Retransmit: 4-20 mA / 0-20 mA and Remote Setpoint
- 2 = Retransmit: 0-10 VDC and Remote Setpoint
- 3 = Alarm 4 Relay: 2A / 240 VAC and Remote Setpoint

Option 4 BOX 9

- 0 = None
- 1 = Terminal Covers
- 2 = Ramp and Soak Firmware
- 3 = Terminal Covers and Ramp and Soak Firmware

Note: Detailed information on features common to digital microprocessor-based TEC temperature controls and the complete Table of Input Range and Accuracy can be found on page 13-46.

TEC44007	4-20mA	None	None
TEC44008	4-20mA	Relay	(2) Relays

Power Input

Standard: 90 to 250 VAC, 47–63 Hz, 12VA, 6W maximum
Optional: 11 to 40 VDC / 20 to 28 VAC, 47–63 Hz, 12VA, 6W maximum

Signal Input

Resolution: 18 Bits
Sampling Rate: 5 Times / Second (200msec)
Maximum Rating: -2VDC minimum, 12VDC maximum
Sensor Break Detection: Sensor open for Thermocouple and RTD inputs, sensor short for RTD input, below 1mA for 4-20mA input, below 0.25V for 1 - 5V input, not available for other inputs
Sensor break responding time: Within 4 seconds for Thermocouple and RTD inputs, 0.1 second for 4-20mA and 1 - 5V inputs

Remote Set Point Input

Type: Linear current, Linear voltage
Range: -3-27mA, -1.3-11.5V **Accuracy:** ±0.05 %
Input Impedance: Current: 2.5Ω, Voltage: 1.5MΩ
Resolution: 18 bits **Sampling Rate:** 1.66 times/second
Maximum Rating: 280mA maximum for Current Input, 12VDC maximum for Voltage Input
Sensor Break Detection: Below 1mA for 4-20mA input, below 0.25V for 1 - 5V input, not available for other inputs

Event Input

Number of Event Inputs: 6
Logic Low: -10V minimum, 0.8V maximum
Logic High: 2V minimum, 10V maximum

CT Input

CT type: TEC99998
Accuracy: ±2% of full scale reading, ± 1 digit maximum
Input Impedance: 294Ω
Measurement Range: 0-50A AC
Output of CT: 0-5V DC
CT Mounting: Wall (Screw) mount
Sampling Rate: 1 time/second

Output 1 /Output 2

Type: Relay, pulsed voltage, linear voltage and linear current
Relay Rating: 2A, 240V AC, 200000 life cycles for resistive load
Pulsed Voltage: Source voltage 5V, Current limiting resistance 66Ω
Linear Output Resolution: 15 Bits
Isolation Breakdown Voltage: 1000 V AC
Load Capacity of Linear Output: Linear current: 500Ω maximum, Linear voltage: 10KΩ minimum

Alarm

Relay Type: Form A
Maximum Rating: 2A, 240VAC, 200000 life cycles for resistive load
Alarm Functions: Dwell Timer, Deviation Low, Deviation High, Deviation Band Low, Deviation Band High, Process High, Process Low
Alarm Mode: Latching, Hold, Normal, Latching/Hold
Dwell Timer: 0.1-4553.6 minutes

Data Communications

Interface: RS-485 **Protocol:** Modbus RTU
Address: 1-247 **Baud Rate:** 2.8 - 115.2 Kbits/sec
Parity Bit: None, Even or Odd **Stop Bit:** 1 or 2 Bits
Data Length: 7 or 8 Bits **Communication Buffer:** 160 bytes

Analog Retransmission

Output Signal: 4-20 mA, 0-20 mA, 0-10V
Resolution: 15 Bits **Accuracy:** ±0.05% of span ± 0.0025% / °C
Load Resistance: 0-500Ω for current output, 10KΩ minimum for voltage output
Isolation Breakdown: 1000VAC minimum
Linear Output Ranges: 0-22.2mA (0-20mA / 4-20mA), 0-5.55V (0-5V, 1-5V), 0-11.1V (0-10V)

User Interface

Keypad: 4 Keys **Display Type:** 4 digit LCD display
No. of Display: 3
Upper Display Size: 0.98" (25mm)
Lower Display Size: 0.55" (14mm)

Programming Port

Interface: Micro USB
PC Communication Function: Automatic Setup, Calibration and Firmware Upgrade

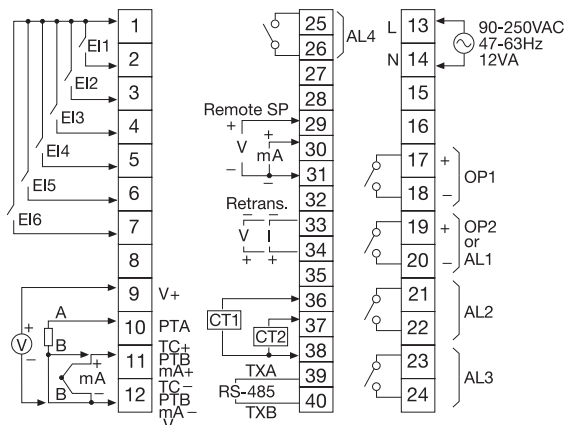

Control Mode

Output 1: Reverse (Heating) or Direct (Cooling) Action
Output 2: PID cooling control, Cooling P band 50~300% of PB, Dead band -36.0 ~ 36.0 % of PB
ON-OFF: 0.1-90.0 (°F) hysteresis control (P band = 0)
P or PD: 0-100.0 % offset adjustment
PID: Fuzzy logic modified Proportional band 0.1 ~ 900.0°F, Integral time 0~3600 seconds, Derivative time 0-360.0 seconds
Cycle Time: 0.1-90.0 seconds
Manual Control: Heat (MV1) and Cool (MV2)
Failure Mode: Auto transfer to manual mode while sensor break or A-D Converter damage
Ramping Control: 0 to 900.0°F / Minute or 0 to 900.0°F / Hour Ramp Rate

Environmental and Physical Specifications

Operating Temperature: -10°C to 50°C
Storage Temperature: -40°C to 60°C
Humidity: 0 to 90 % RH (Non-Condensing)
Insulation Resistance: 20MΩ minimum (@500V DC)
Dielectric Strength: 2000V AC, 50/60 Hz for 1 Minute
Vibration Resistance: 10 to 55 Hz, 10m/s² for 2 Hours
Shock Resistance: 200 m / s² (20g)
Moldings: Flame retardant polycarbonate
Mounting: Panel
Dimensions W × H × D: 3-3/4 × 3-3/4 × 2-3/8" (96 × 96 × 59 mm)
Depth Behind Panel: 2" (50 mm)
Cut Out Dimensions: 3-5/8 × 3-5/8" (92 × 92 mm)
Weight: .64 lbs. (290 g)

Rear Terminal Connections

Model TEC-6400 DIN Rail Mount Temperature Controller

Design Features

- * DIN Rail Mount, 35 mm
- * Fuzzy Logic PID Autotune heat and cool control
- * Universal input, field configurable (Type J T/C default, PT100, mA, V) with high accuracy 18-bit D-A
- * Countdown display
- * RS - 485 and Analog Retransmission Available
- * Micro USB Programming Port
- * Fast sampling rate (200 msec)
- * Manual control & auto-tune function
- * Wide range of alarm mode selection
- * Lockout protection
- * Bumpless transfer during failure mode
- * Soft-start ramp & dwell timer
- * Bright LCD display using NFPA/IEC standard colors
- * High performance with low cost

Transformer for Heater Break Alarm

(0-50 Amp current)

Part Number: TEC99998

Specifications on page 13-47

Power Input

Standard: 90-250 VAC, 47-63 Hz, 8VA, 4W maximum
Optional: 11-40 VDC / 20-8 VAC, 47-63 Hz, 8VA, 4W maximum

Signal Input

Resolution: 18 Bits
Sampling Rate: 5 Times / Second (200msec)
Maximum Rating: -2VDC minimum, 12VDC maximum
Sensor Break Detection: Sensor open for thermocouple and RTD inputs, sensor short for RTD input, below 1mA for 4-20mA input, below 0.25V for 1-5V input, not available for other inputs
Sensor break responding time: Within 4 seconds for thermocouple and RTD inputs, 0.1 second for 4-20mA and 1-5V inputs

Event Input

Number of Event Inputs: 1
Logic Low: -10V minimum, 0.8V maximum
Logic High: 2V minimum, 10V maximum

CT Input

CT type: TEC99998
Accuracy: $\pm 2\%$ of full scale reading, ± 1 digit maximum
Input Impedance: 294 Ω
Measurement Range: 0-50A AC
Output of CT: 0-5V DC
CT Mounting: Wall (Screw) mount
Sampling Rate: 1 time/second

Output 1 /Output 2

Type: Relay, pulsed voltage, linear voltage and linear current
Relay Rating: 2A, 240V AC, 200000 life cycles for resistive load

Model TEC-220 1/32 DIN Temperature Controller

Configurable for 3 Programmable Outputs!

Agency Approvals:

Design Features

- * 1/32 DIN size – 24 mm × 48 mm
- * Fuzzy Logic PID Autotune heat and cool control
- * Short panel depth – only 3-7/8" (98 mm) required
- * Universal input, field configurable (Type J T/C default, PT100, mA, V) with high accuracy 18-bit D-A
- * Highly versatile – 6 types of inputs available
- * Output 2 can be programmed as output or alarm
- * NEMA 4X / IP65 gasketed front panel
- * Universal input power, 90-250 VAC or 11-26 VAC/VDC
- * Highly accurate universal input with 18 bit analog to digital converter
- * Bumpless transfer to manual mode during sensor failure
- * Wide variety of alarm mode selections
- * RS-485 and RS-232 data communications interface optional
- * Bright 0.40" (10 mm) LED display
- * High performance at a very low price

Hardware Code: TEC-220- 1 2 3 4 5 6

A Part Number based on the hardware code and any software pre-programming will be issued at time of order.

Standard lead time is stock to 2 weeks.

Power Input BOX 1

- 4** = 90-250 VAC
- 5** = 11-26 VAC / VDC
- 9** = Other

Signal Input – Universal, can be programmed BOX 2 in the field for item 5 or 6

- 5** = Thermocouple: *J, K, T, E, B, R, S, N, L
0-60mV
- 6** = RTD: *PT100 DIN, PT100 JIS
- 7** = 0-1 VDC
- 8** = *0-5, 1-5 VDC
- A** = 0-10 VDC
- B** = *4-20, 0-20 mA
- 9** = Other * indicates default value

Output 1 BOX 3

- 1** = Relay: 2A / 240 VAC
- 2** = Pulse DC for SSR drive: 5 VDC (30 mA max)
- 3** = Isolated, 4-20 mA (default), 0-20 mA
- 4** = Isolated, VDC, 1-5 (default), 0-5, 0-1
- 5** = Isolated, VDC, 0-10
- 6** = Triac-SSR output 1A/240 VAC
- C** = Pulse DC for SSR drive: 14 VDC (40 mA max)
- 9** = Other

Output 2 / Alarm 1 BOX 4

- 0** = None
- 1** = Relay: 2A / 240 VAC
- 2** = Pulse DC for SSR drive: 5 VDC (30 mA max)
- 3** = Isolated, 4-20 mA (default), 0-20 mA
- 4** = Isolated VDC, 1-5 (default), 0-5, 0-1
- 5** = Isolated VDC, 0-10
- 6** = Triac-SSR output 1A / 240 VAC
- 8** = Isolated 20V @ 25 mA DC, Output Power Supply
- A** = Isolated 12V @ 40 mA DC, Output Power Supply
- 9** = Isolated 5V @ 80 mA DC, Output Power Supply
- C** = Pulse DC for SSR drive: 14 VDC (40 mA max)
- B** = Other

Communications BOX 5

- 0** = None
- 1** = RS-485 interface
- 2** = RS-232 interface
- 3** = Retransmission 4-20 mA (default), 0-20 mA
- 4** = Retransmission 1-5 VDC (default), 0-5 VDC
- 5** = Retransmission 0-10 VDC
- 9** = Other

Units – °F or °C BOX 6

- 1** = °F on faceplate
- 2** = °C on faceplate
- 3** = None (process units)

Note: Detailed information on features common to digital microprocessor-based TEC temperature controls and the complete Table of Input Range and Accuracy can be found on page 13-46.

Power Input

Standard: 90-250 VAC, 47-63 Hz, 10 VA, 5W maximum
Optional: 11-26 VAC / VDC, 10 VA, 5W maximum

Signal Input

Resolution: 18 bits
Sampling Rate: 5 samples / second
Accuracy: $\pm 0.24\%$ of span typical
Maximum Rating: -2 VDC minimum, 12 VDC maximum (1 minute for mA input)
Temperature Effect: $\pm 1.5 \mu V / ^\circ C$ for all inputs except mA input $\pm 3.0 \mu V / ^\circ C$ for mA input

Sensor Lead Resistance Effect: T/C: $0.2 \mu V / \text{ohm}$
 3-wire RTD: $2.6^\circ C / \text{ohm}$ of resistance difference of two leads

Burn-out Current: 200nA

Common Mode Rejection Ratio (CMRR): 120 dB

Normal Mode Rejection Ratio (NMRR): 55 dB

Sensor Break Detection: Sensor open for TC, RTD and mV inputs; sensor short for RTD input; below 1 mA for 4-20 mA input; below 0.25V for 1-5V input; unavailable for other inputs

Sensor Break Response Time: Within 4 seconds for TC, RTD and mV inputs; 0.1 second for 4-20 mA and 1-5 V inputs

Output 1 / Output 2

Relay Rating: 240 VAC, 2 Amp

Pulsed Voltage: Source voltage 5V, Current limiting resistance 66 Ω

Linear Output — Characteristics

Type	Zero	Span	Load
Tolerance	Tolerance	Capacity	
4-20 mA	3.6-4.0 mA	20-21 mA	500 Ω max
0-20 mA	0 mA	20-21 mA	500 Ω max
0-5 VDC	0 VDC	5-5.25 VDC	10 K Ω min
1-5 VDC	0.9-1.0 VDC	5-5.25 VDC	10 K Ω min
0-10 VDC	0 VDC	10-10.5 VDC	10 K Ω min

Resolution: 15 bit analog to digital converter

Output Regulation: 0.02% for full load change

Output Settling Time: 0.1 sec. (stable to 99.9%)

Isolation Breakdown Voltage: 1000 VAC

Temperature Effect: $\pm 0.01\%$ of span/ $^\circ C$

Solid State Relay (Triac) Output

Rating: 1A / 240 VAC

Inrush Current: 20A for 1 cycle

Min. Load Current: 50 mA rms

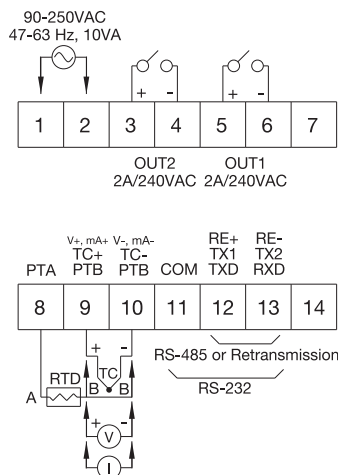

Max. Off-state Leakage: 3 mA rms

Max. On-state Voltage: 1.5 VAC rms

Insulation Resistance: 1000 Megohms minimum at 500 VDC

Dielectric Strength: 2500 VAC for 1 minute

Rear Terminal Connections

Output 2 / Alarm 1 — Programmable

Alarm 1 Relay: Form A, (NO)

Maximum rating: 240 VAC, 2 Amp

Alarm Functions: Dwell timer

Deviation High / Low Alarm

Deviation Band High / Low Alarm

Process High / Low Alarm

Sensor Break Alarm

Alarm Mode: Normal, Latching, Hold, Latching / Hold

Dwell Timer: 0 - 4553.6 minutes

Data Communications

Interface: RS-232 (1 unit), RS-485 (up to 247 units)

Protocol: Modbus Protocol – RTU mode

Address: 1-247

Baud Rate: 0.3 - 38.4 Kbits/sec

Data Bits: 7 or 8 bits

Parity Bit: None, Even or Odd

Stop Bit: 1 or 2 bits

Communication Buffer: 160 bytes

User Interface

Single 4-digit LED Display: 0.4" / 10 mm **Keypad:** 3 keys

Programming Port: For automatic setup, calibration and testing

Control Mode

Output 1: Reverse (heating) or direct (cooling) action

Output 2: PID cooling control, cooling P band 50-300% of PB, dead band -36.0 to 36.0% of PB

On-Off: 0.1 - 90.0 $^\circ F$ hysteresis control (P band = 0)

P or PD: 0 - 100.0% offset adjustment

PID: Fuzzy logic modified

Proportional band: 0.1 - 900 $^\circ F$

Integral time: 0 - 1000 seconds

Derivative time: 0 - 360 seconds

Cycle Time: 0.1 - 90 seconds

Manual Control: Heat (MV1) and Cool (MV2)

Auto-tuning: Cold start and warm start

Failure Mode: Auto-transfer to manual mode with sensor break or A-D converter damage

Ramping Control: 0 - 900 $^\circ F$ /min or 0 - 900 $^\circ F$ /hr ramp rate

Environmental and Physical

Operating Temperature: 14 to 122 $^\circ F$ (-10 to 50 $^\circ C$)

Storage Temperature: -40 to 140 $^\circ F$ (-40 to 60 $^\circ C$)

Humidity: 0 to 90% RH, non-condensing

Dielectric Strength: 2000 VAC, 50/60 Hz for 1 minute

Dimensions: 1-3/64 \times 2 \times 4-3/8" (26.5 \times 50 \times 110.5 mm) H \times W \times D
 Depth behind panel: 3-7/8" (98 mm)

Panel Cutout: 7/8 \times 1-25/32" (22 \times 45 mm) H \times W

Weight: 0.26 lb. (120 grams)

Approval Standards

Safety: UL61010C-1, CSA C22.2 No. 24-93

EN61010-1 (IEC1010-1)

Protective Class: Front Panel: NEMA 4X / IP65

Housing and Terminals: IP 20

EMC: EN61326

Model TEC-2500 1/32 DIN Temperature Controller

Configurable for 4 Programmable Outputs!

Agency Approvals: RoHS

Design Features

- * 1/32 DIN size – 24 mm × 48 mm
- * Fuzzy Logic PID Autotune heat & cool control
- * Short panel depth – only 3-7/8" (98 mm) required
- * Universal input, field configurable (Type J T/C default, PT100, mA, V) with high accuracy 18-bit D-A
- * Heater Break Alarm using 0-50 Amp current transformer
- * Output 2 can be programmed as output or alarm
- * NEMA 4X / IP65 gasketed front panel
- * Alarm 1 – programmable 5 VDC logic output
- * Universal input power, 90-264 VAC or 11-26 VAC/VDC
- * Bumpless transfer to manual mode during sensor failure
- * Power limiter output
- * Wide variety of alarm mode selections
- * RS-485 and RS-232 data communications interface
- * Bright 0.40" (10 mm) LED display
- * Fast input sample rate (5 samples/second)
- * Automatic programming
- * Differential control
- * "Soft-Start" ramp and dwell timer
- * Analog input for remote setpoint and current transformer
- * Event input for changing functions and setpoint
- * Hardware lockout plus remote lockout protection
- * Loop break alarm
- * Analog retransmission
- * DC power supply outputs
- * High performance at a low price

Hardware Code: TEC-2500-

1	2	3	4	5	6	7
---	---	---	---	---	---	---

A Part Number based on the hardware code and any software pre-programming will be issued at time of order.

Standard lead time is stock to 2 weeks.

Power Input BOX 1

- 4 = 90-264 VAC
- 5 = 11-26 VAC / VDC
- 9 = Other

Signal Input – Universal, can be programmed in the field BOX 2

- 1 = Input 1 – Universal input (factory default = tc type J)
Thermocouple: J, K, T, E, B, R, S, N, L
RTD: PT100 DIN, PT100 JIS
Current: 4-20 mA, 0-20 mA
Voltage: VDC, 0-1, 0-5, 1-5, 0-10
- Input 2 – not available if RS-232 is specified
CT: 0 - 50A AC current Transformer (factory default)
Voltage Input: 0-1V, 0-5V, 1-5V, 0-10V
Event Input
- 9 = Other

Output 1 BOX 3

- 1 = Relay: 2A / 240 VAC
- 2 = Pulse DC for SSR drive: 5 VDC (30 mA max)
- 3 = Isolated, 4-20 mA (default), 0-20 mA
- 4 = Isolated, VDC, 1-5 (default), 0-5, 0-1
- 5 = Isolated, VDC, 0-10
- 6 = Triac-SSR output 1A / 240 VAC
- C = Pulse DC for SSR drive: 14 VDC (40 mA max)
- 9 = Other

Output 2 / Alarm 2 BOX 4

- 0 = None
- 1 = Relay: 2A / 240 VAC
- 2 = Pulse DC for SSR drive: 5 VDC (30 mA max)
- 3 = Isolated, 4-20 mA (default), 0-20 mA
- 4 = Isolated VDC, 1-5 (default), 0-5, 0-1
- 5 = Isolated VDC, 0-10
- 6 = Triac-SSR output 1A / 240 VAC
- 7 = Isolated 20V @ 25 mA DC, Output Power Supply
- 8 = Isolated 12V @ 40 mA DC, Output Power Supply
- 9 = Isolated 5V @ 80 mA DC, Output Power Supply
- C = Pulse DC for SSR drive: 14 VDC (40 mA max)
- A = Other

Alarm 1 BOX 5

- 1 = 5 VDC Logic Output
- 9 = Other

Communications BOX 6

- 0 = None
- 1 = RS-485 Interface
- 2 = RS-232 Interface
- 3 = Retransmission 4-20 mA (default), 0-20 mA
- 4 = Retransmission 1-5 VDC (default), 0-5 VDC
- 5 = Retransmission 0-10 VDC
- 9 = Other

Units – °F or °C BOX 7

- 1 = °F on faceplate
- 2 = °C on faceplate
- 3 = None (process units)

Note: Detailed information on features common to digital microprocessor-based TEC temperature controls and the complete Table of Input Range and Accuracy can be found on page 13-46.

Transformer for Heater Break Alarm

(0-50 Amp current)

Part Number: TEC99999

Specifications on page 13-47

Power Input

Standard: 90-264 VAC, 47-63 Hz, 15 VA, 7W maximum
Optional: 11-26 VAC / VDC, 15 VA, 7W maximum

Signal Input

Input 1

Resolution: 18 bits **Sampling Rate:** 5 samples / second
Accuracy: ±.24% of span typical
Maximum Rating: -2 VDC minimum, 12 VDC maximum (1 minute for mA input)

Temperature Effect: ±1.5 $\mu\text{V} / ^\circ\text{C}$ for all inputs except mA input
 ±3.0 $\mu\text{V} / ^\circ\text{C}$ for mA input

Sensor Lead Resistance Effect: T/C: 0.2 $\mu\text{V}/\text{ohm}$
 3-wire RTD: 2.6 $^\circ\text{C}/\text{ohm}$ of resistance difference of two leads

Burn-out Current: 200nA

Common Mode Rejection Ratio (CMRR): 120 dB

Normal Mode Rejection Ratio (NMRR): 55 dB

Sensor Break Detection: Sensor open for TC, RTD and mV inputs;
 sensor short for RTD input; below 1 mA for 4-20 mA input;
 below 0.25V for 1-5V input; unavailable for other inputs

Sensor Break Response Time: Within 4 seconds for TC, RTD and mV inputs;
 0.1 second for 4-20 mA and 1-5 V inputs

Input 2

Resolution: 18 bits

Sampling Rate: 1.66 times per second

Sensor Break Response Time: 0.5 second

Types: **Current Transducer:** 0 to 50 Amp
mA: -3 to 27 mA **V:** -1.3 to 11.5 VDC

Event Input Functions: Select 2nd setpoint and/or PID, disable output 1 and/or output 2, remote lockout, reset alarm 1 and/or alarm 2

Output 1 or Output 2 / Alarm 2

Relay Rating: 240 VAC, 2 Amp

Pulsed Voltage: Source voltage 5V,
 Current limiting resistance 66 Ω

Linear Output — Characteristics

Type	Zero Tolerance	Span Capacity	Load
4-20 mA	3.6-4.0 mA	20-21 mA	500 Ω max
0-20 mA	0 mA	20-21 mA	500 Ω max
0-5 VDC	0 VDC	5-5.25 VDC	10 K Ω min
1-5 VDC	0.9-1.0 VDC	5-5.25 VDC	10 K Ω min
0-10 VDC	0 VDC	10-10.5 VDC	10 K Ω min

Resolution: 15 bit analog to digital converter

Isolation Breakdown Voltage: 1000 VAC

Solid State Relay (Triac) Output

Rating: 1A / 240 VAC **Inrush Current:** 20A for 1 cycle

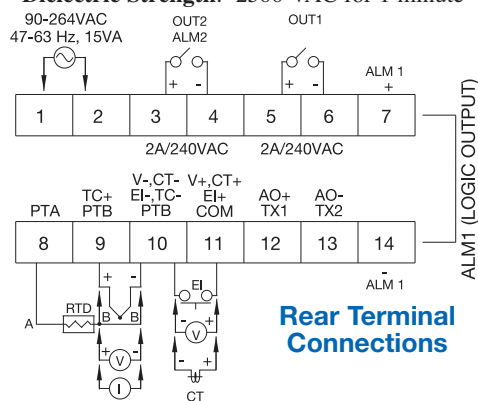

Min. Load Current: 50 mA rms

Max. Off-state Leakage: 3 mA rms

Max. On-state Voltage: 1.5 VAC rms

Insulation Resistance: 1000 Megohms minimum at 500 VDC

Dielectric Strength: 2500 VAC for 1 minute

Rear Terminal Connections

Alarm 1 / Alarm 2

Alarm 1: 5 VDC logic output

Alarm 2 Relay: Form A, (NO) **Maximum rating:** 240 VAC, 2 Amp

Alarm Functions:

Dwell timer PV1-PV2 High / Low Alarm
 Deviation Band High / Low Alarm Loop Break Alarm
 PV2 High / Low Alarm Sensor Break Alarm

Alarm Mode: Normal, Latching, Hold, Latching / Hold

Dwell Timer: 0 - 6553.5 minutes

Data Communications

Interface: RS-232 (1 unit), RS-485 (up to 247 units)

Protocol: Modbus Protocol – RTU mode

User Interface

Single 4-digit LED Displays: 0.4" / 10 mm Keypad: 3 keys

Programming Port: For automatic setup, calibration and testing

Control Mode

Output 1: Reverse (heating) or direct (cooling) action

Output 2: PID cooling control, cooling P band 1-255% of PB

On-Off: 0.1 - 100.0 $^\circ\text{F}$ hysteresis control (P band = 0)

P or PD: 0 - 100.0% offset adjustment

PID: Fuzzy logic modified

Proportional band: 0.1 - 900 $^\circ\text{F}$ (500 $^\circ\text{C}$)

Integral: 0 - 1000 seconds **Derivative:** 0 - 360 seconds

Cycle Time: 0.1 - 100 seconds

Manual Control: Heat (MV1) and Cool (MV2)

Auto-tuning: Cold start and warm start

Failure Mode: Auto-transfer to manual mode with sensor break or A-D converter damage

Ramping Control: 0 - 900 $^\circ\text{F}/\text{min}$ or 0 - 900 $^\circ\text{F}/\text{hr}$ ramp rate

Power Limit: 0 - 100% for output 1 and output 2

Remote Setpoint: Programmable range for voltage or current input

Digital Filter: Time constant: settable from 0.2 to 60 seconds

Analog Retransmission

Analog Retransmission Functions: PV1, PV2, PV1-PV2, PV2-PV1, setpoint, MV1, MV2, PV-SV deviation value

Output Signal: 4-20 / 0-20 mA, 0-1, 0-5, 1-5, 0-10 VDC

Accuracy: ±0.05 % of span, ±0.0025 %/ $^\circ\text{C}$

Environmental and Physical

Operating Temperature: 14 to 122 $^\circ\text{F}$ (-10 to 50 $^\circ\text{C}$)

Storage Temperature: -40 to 140 $^\circ\text{F}$ (-40 to 60 $^\circ\text{C}$)

Humidity: 0 to 90% RH, non-condensing

Dielectric Strength: 2000 VAC, 50/60 Hz for 1 minute

Dimensions: 1-3/64 × 2 × 4-3/8" (26.5 × 50 × 110.5 mm) H×W×D
 Depth behind panel: 3-7/8" (98 mm)

Panel Cutout: 7/8 × 1-25/32" (22 × 45 mm) H×W

Weight: 0.26 lb. (120 grams)

Approval Standards

Safety Standard: UL 3121-1, CSA C22.2 No. 24-93
 EN61010-1 (IEC1010-1)

EMC: EN61325

Protective Class: Front Panel: NEMA 4X / IP65
 Housing and Terminals: IP 20

Model TEC-920 1/16 DIN Temperature Controller

Single Display, Configurable for 2 Programmable Outputs!

Agency Approvals:

Design Features

- * 1/16 DIN size – 48 mm × 48 mm
- * Fuzzy Logic PID Autotune heat & cool control
- * Short panel depth – only 3-3/8" (86 mm) required
- * Universal input, field configurable (Type J T/C default, PT100, mA, V) with high accuracy 18-bit D-A
- * Highly versatile – 6 types of inputs available
- * Output 2 can be programmed as output or alarm
- * Universal input power – 90-250 VAC or 11-26 VAC/VDC
- * Highly accurate universal input with 18 bit analog to digital converter
- * Bumpless transfer to manual mode during sensor failure
- * Wide variety of alarm mode selections
- * Optional RS-485 communications interface
- * Bright 0.40" (10 mm) LED display
- * High performance at a very low price

Hardware Code: TEC-920- 1 2 3 4

A Part Number based on the hardware code and any software pre-programming will be issued at time of order.

Standard lead time is stock to 2 weeks.

Power Input BOX 1

- 4** = 90-250 VAC
- 5** = 11-26 VAC / VDC
- 9** = Other

Signal Input— Universal, can be programmed BOX 2 in the field for item 5 or 6

- 5** = Thermocouple: *J, K, T, E, B, R, S, N, L
0-60mV
- 6** = RTD: *PT100 DIN, PT100 JIS
- 7** = 0-1 VDC
- 8** = *0-5, 1-5 VDC
- A** = 0-10 VDC
- B** = *4-20, 0-20 mA
- 9** = Other * indicates default value

Output 1 BOX 3

- 1** = Relay: 2A / 240 VAC
- 2** = Pulse DC for SSR drive: 5 VDC (30 mA max)
- 3** = Isolated, 4-20 mA (default), 0-20 mA
- 4** = Isolated, VDC, 1-5 (default), 0-5, 0-1
- 5** = Isolated, VDC, 0-10
- 6** = Triac-SSR output 1A / 240 VAC
- C** = Pulse DC for SSR drive: 14 VDC (40 mA max)
- 9** = Other

Output 2 / Alarm 1 BOX 4

- 0** = None
- 1** = Relay: 2A / 240 VAC

- 9 = Isolated 5V @ 80 mA DC, Output Power Supply
- C = Pulse DC for SSR drive: 14 VDC (40 mA max)
- A = Other

Note: Detailed information on features common to digital microprocessor-based TEC temperature controls and the complete Table of Input Range and Accuracy can be found on page 13-46.

Power Input

Standard: 90-250 VAC, 47-63 Hz, 10 VA, 5W maximum
Optional: 11-26 VAC / VDC, 10 VA, 5W maximum

Signal Input

Resolution: 18 bits **Sampling Rate:** 5 samples / second
Accuracy: $\pm 0.24\%$ of span typical
Maximum Rating: -2 VDC minimum, 12 VDC maximum (1 minute for mA input)
Temperature Effect: $\pm 1.5 \mu\text{V} / ^\circ\text{C}$ for all inputs except mA input
 $\pm 3.0 \mu\text{V} / ^\circ\text{C}$ for mA input
Sensor Lead Resistance Effect: T/C: $0.2 \mu\text{V}/\text{ohm}$
 3-wire RTD: $2.6^\circ\text{C}/\text{ohm}$ of resistance difference of two leads
Burn-out Current: 200nA
Common Mode Rejection Ratio (CMRR): 120 dB
Normal Mode Rejection Ratio (NMRR): 55 dB
Sensor Break Detection: Sensor open for TC, RTD and mV inputs; sensor short for RTD input; below 1 mA for 4-20 mA input; below 0.25V for 1-5V input; unavailable for other inputs
Sensor Break Response Time: Within 4 seconds for TC, RTD and mV inputs; 0.1 second for 4-20 mA and 1-5 V inputs

Output 1 / Output 2

Relay Rating: 240 VAC, 2 Amp
Pulsed Voltage: Source voltage 5V, Current limiting resistance 66 Ω

Linear Output — Characteristics

Type	Zero	Span	Load
Tolerance	Tolerance	Capacity	
4-20 mA	3.6-4.0 mA	20-21 mA	500 Ω max
0-20 mA	0 mA	20-21 mA	500 Ω max
0-5 VDC	0 VDC	5-5.25 VDC	10 K Ω min
1-5 VDC	0.9-1.0 VDC	5-5.25 VDC	10 K Ω min
0-10 VDC	0 VDC	10-10.5 VDC	10 K Ω min

Resolution: 15 bit analog to digital converter
Output Regulation: 0.02% for full load change
Output Settling Time: 0.1 sec. (stable to 99.9%)
Isolation Breakdown Voltage: 1000 VAC
Temperature Effect: $\pm 0.01\%$ of span/ $^\circ\text{C}$
Solid State Relay (Triac) Output
Rating: 1A / 240 VAC
Inrush Current: 20A for 1 cycle
Min. Load Current: 50 mA rms
Max. Off-state Leakage: 3 mA rms
Max. On-state Voltage: 1.5 VAC rms
Insulation Resistance: 1000 Megohms minimum at 500 VDC
Dielectric Strength: 2500 VAC for 1 minute

Rear Terminal Connections

Output 2 / Alarm 1 — Programmable

Alarm 1 Relay: Form A, (NO)
 Maximum rating: 240 VAC, 2 Amp
Alarm Functions: Dwell timer
 Deviation High / Low Alarm
 Deviation Band High / Low Alarm
 Process High / Low Alarm
 Sensor Break Alarm
Alarm Mode: Normal, Latching, Hold, Latching / Hold
Dwell Timer: 0 - 4553.6 minutes

Data Communications

Interface: RS-232 (1 unit), RS-485 (up to 247 units)
Protocol: Modbus Protocol – RTU mode
Address: 1-247 **Baud Rate:** 0.3 - 38.4 Kbits/sec
Data Bits: 7 or 8 bits **Parity Bit:** None, Even or Odd
Stop Bit: 1 or 2 bits **Communication Buffer:** 160 bytes

User Interface

Dual 4-digit LED Display: 0.40" (10 mm) Red Process Display
 0.31" (8 mm) Green Setpoint Display

Keypad: 4 keys

Programming Port: For automatic setup, calibration and testing

Control Mode

Output 1: Reverse (heating) or direct (cooling) action
Output 2: PID cooling control, cooling P band 50-300% of PB, dead band -36.0 to 36.0% of PB
On-Off: 0.1 - 90.0 $^\circ\text{F}$ hysteresis control (P band = 0)
P or PD: 0 - 100.0% offset adjustment
PID: Fuzzy logic modified
Proportional band: 0.1 - 900 $^\circ\text{F}$
Integral time: 0 - 1000 seconds
Derivative time: 0 - 360 seconds
Cycle Time: 0.1 - 90 seconds
Manual Control: Heat (MV1) and Cool (MV2)
Auto-tuning: Cold start and warm start
Failure Mode: Auto-transfer to manual mode with sensor break or A-D converter damage
Ramping Control: 0 - 900 $^\circ\text{F}/\text{min}$ or 0 - 900 $^\circ\text{F}/\text{hr}$ ramp rate

Environmental and Physical

Operating Temperature: 14 to 122 $^\circ\text{F}$ (-10 to 50 $^\circ\text{C}$)
Humidity: 0 to 90% RH, non-condensing
Dielectric Strength: 2000 VAC, 50/60 Hz for 1 minute
Dimensions: 1-7/8 \times 1-7/8 \times 4-9/16" (48 \times 48 \times 116 mm) H \times W \times D
 Depth behind panel: 4-1/8" (105 mm)
Panel Cutout: 1-25/32 \times 1-25/32" (45 \times 45 mm) H \times W
Weight: 0.33 lb. (150 grams)

Approval Standards

Safety: UL61010C-1, CSA C22.2 No. 24-93
 EN61010-1 (IEC1010-1)
EMC: EN61326
Protective Class: Front Panel: IP50, optional NEMA 4X/IP65
 Housing and Terminals: IP 20

Model TEC-9090 1/16 DIN Temperature Controller

Dual Display, Configurable for 2 Programmable Outputs!

Design Features

- * 1/16 DIN size – 48 mm × 48 mm
- * Fuzzy Logic PID Autotune heat & cool control
- * Short panel depth – only 3-7/8" (86 mm) required
- * Universal input, field configurable (Type J T/C default, PT100, mA, V) with high accuracy 18-bit D-A
- * Highly versatile – 6 types of inputs available
- * Optional relay alarm output
- * Universal input power 90-264 VAC, 20-32 VAC/VDC or 10-18 VDC
- * Wide variety of alarm mode selections
- * Bright 0.40" (10 mm) red LED process display
0.31" (8 mm) green LED setpoint display
- * High performance at a low price

Agency Approvals

Hardware Code: TEC-9090- 1 2 3 4 5 0 7 0 9

A Part Number based on the hardware code and any software pre-programming will be issued at time of order.

Standard lead time is stock to 2 weeks.

Power Input BOX 1

- 4 = 90-264 VAC
- 5 = 20-32 VAC/VDC
- 6 = 10-18 VDC
- 9 = Other

Signal Input – (hardware jumper change between TC & RTD) BOX 2

- 5 = Thermocouple: Universal Configurable:
J, K, T, E, B, R, S, N (default: Type J)
- 6 = RTD: Universal Configurable: DIN or JIS
(default: alpha 0.00385/DIN)
- 9 = Other

Range code BOX 3

- 1 = Field configurable (default – max per input type)
- 9 = Other

Control Mode BOX 4

- 3 = Field Configurable
(default: PID reverse acting, °F)
- 9 = Other

Output 1 BOX 5

- 1 = Relay: 3A / 240 VAC
- 2 = Pulse DC for SSR drive: 20 VDC (20 mA max)
- 3 = 4-20 mA, linear (max load 500Ω)
- 4 = 0-20 mA, linear (max load 500Ω)
- 5 = 0-10 VDC, linear (min. impedance 10 KΩ)
- 6 = Triac-SSR output 1A / 240 VAC
- 9 = Other

Output 2 BOX 6

- 0 = None

Alarm BOX 7

- 0 = None
- 1 = Relay: 2A / 240 VAC, Field Configurable
- 9 = Other

Data Communications BOX 8

- 0 = None

Units – °F or °C BOX 9

- 1 = °F on faceplate
- 2 = °C on faceplate

Note: Detailed information on features common to digital microprocessor-based TEC temperature controls and the complete Table of Input Range and Accuracy can be found on page 13-46.

Power Input

Standard: 90-264 VAC, 47-63 Hz, 5VA, 5W maximum
Optional: 20-32 VAC/VDC, 5VA, 5W maximum or 10-18 VDC, 5W maximum

Signal Input

Accuracy: ±.24% of span typical
Cold Junction Compensation: 0.1°C /°C ambient typical
Sensor Break Detection: Protection mode configurable
External Resistance: 100 ohms maximum
Normal Mode Rejection: 60 dB
Common Mode Rejection: 120 dB
Sampling Rate: 5 samples / second

Output 1

Relay Rating: 240 VAC, 3 Amp
Pulsed Voltage: Source voltage 20V (20 mA max)
Current: 4 - 20 mA, at 500Ω max
Current: 0 - 20 mA, at 500Ω min
Voltage: 0 - 10 VDC, at 10 KΩ min
Solid State Relay (Triac) Output
Rating: 1A / 240 VAC
Inrush Current: 20A for 1 cycle
Min. Load Current: 50 mA rms
Dielectric Strength: 2500 VAC for 1 minute

Approval Standards

Safety: UL873, CSA22.2/142-87, IEC1010-1
EMC Emission: EN50081-1
EMC Immunity: EN50082-1
Protective Class: Front Panel: IP30
 Housing and Terminals: IP 20

Alarm – Programmable

Alarm Relay: Form A, (NO)
Maximum rating: 240 VAC, 3 Amp
Alarm Functions: Dwell timer
 Deviation High or Low Alarm
 Deviation Band High or Low Alarm
 Process High Alarm
 Sensor Break Alarm
Dwell Timer: 0 - 6553.5 minutes

User Interface

Dual 4-digit LED Display: 0.40" (10 mm) Red Process Display
 0.31" (8 mm) Green Setpoint Display
Keypad: 4 keys

Control Mode

Output 1: Reverse (heating) or direct (cooling) action
On-Off: 0 - 20% of span hysteresis control (P band = 0)
P or PD: 0 - 100.0% offset adjustment
PID: Fuzzy logic modified
Proportional band: 0.1 - 360°F (0 - 200°C)
Integral time: 0 - 3600 seconds
Derivative time: 0 - 1000 seconds
Cycle Time: 0 - 120 seconds
Auto-tuning: Cold start and warm start
Ramping Control: 0 - 360°F/min (200°C/min)

Environmental and Physical

Operating Temperature: 14 to 122°F (-10 to 50°C)
Humidity: 0 to 90% RH, non-condensing
Dielectric Strength: 2000 VAC, 50/60 Hz for 1 minute
Dimensions: 1-7/8 × 1-7/8 × 3-3/4" (48 × 48 × 94 mm) H×W×D
 Depth behind panel: 3-3/8" (86 mm)
Panel Cutout: 1-25/32 × 1-25/32" (45 × 45 mm) H×W
Weight: 0.37 lb. (170 grams)

Stock and Common Part Numbers (Power Input: 90-264 VAC)

Rear Terminal Connections

Model TEC-9300 1/16 DIN Temperature Controller

Configurable with 4 Programmable Outputs and Standard NEMA 4X/IP65 Front Panel!

Design Features

- * 1/16 DIN size – 48 mm × 48 mm
- * Fuzzy Logic PID Autotune heat and cool control
- * Short panel depth – only 3" (75 mm) required
- * Universal input, field configurable (Type J T/C default, PT100, mA, V) with high accuracy 18-bit D-A
- * Heater Break Alarm using 0-50 Amp current transformer
- * Output 2 can be programmed as output or alarm
- * NEMA 4X / IP65 gasketed front panel
- * Alarm 1 – programmable NO or NC relay
- * Universal input power, 90-264 VAC or 11-26 VAC/VDC
- * Bumpless transfer to manual mode during sensor failure
- * Power limiter output
- * Wide variety of alarm mode selections
- * RS-485 and RS-232 data communications interface
- * Bright 0.40" (10 mm) red LED process display, 0.31" (8 mm) green LED setpoint display
- * Fast input sample rate (5 samples/second)
- * Automatic programming
- * Differential control
- * "Soft-Start" ramp and dwell timer
- * Analog input for remote setpoint and current transformer
- * Event input for changing functions and setpoint
- * Hardware lockout plus remote lockout protection
- * Loop break alarm
- * Analog retransmission
- * DC power supply outputs
- * Tempco's most highly featured 1/16 DIN control

Hardware Code: TEC-9300- 1 2 3 4 5 6

A Part Number based on the hardware code and any software pre-programming will be issued at time of order.

Standard lead time is stock to 2 weeks.

Power Input BOX 1

- 4 = 90-264 VAC
- 5 = 11-26 VAC / VDC
- 9 = Other

Signal Input – Universal, can be programmed in the field BOX 2

- 1 = Input 1 – Universal input (factory default = tc type J) Thermocouple: J, K, T, E, B, R, S, N, L
RTD: PT100 DIN, PT100 JIS
Current: 4-20 mA, 0-20 mA
Voltage: VDC, 0-1, 0-5, 1-5, 0-10
- Input 2 – CT: 0 - 50A AC current Transformer (factory default)
Linear Input: 0-1V, 0-5V, 1-5V, 0-10V, 0-20mA, 4-20mA
- Input 3 – Event Input, not available if RS-232 is specified
- 9 = Other

Output 1 BOX 3

- 1 = Relay: 2A / 240 VAC
- 2 = Pulse DC for SSR drive: 5 VDC (30 mA max)
- 3 = Isolated, 4-20 mA (default), 0-20 mA
- 4 = Isolated, VDC, 1-5 (default), 0-5, 0-1
- 5 = Isolated, VDC, 0-10
- 6 = Triac-SSR output 1A / 240 VAC
- C = Pulse DC for SSR drive: 14 VDC (40 mA max)
- 9 = Other

Output 2 / Alarm 2 BOX 4

- 0 = None
- 1 = Relay: 2A / 240 VAC

Transformer for Heater Break Alarm

(0-50 Amp current)

Part Number: TEC99999

Specifications on page 13-47

Note: Detailed information on features common to digital microprocessor-based TEC temperature controls and the complete Table of Input Range and Accuracy can be found on page 13-46.

Power Input

Standard: 90-264 VAC, 47-63 Hz, 15 VA, 7W maximum
Optional: 11-26 VAC / VDC, 15 VA, 7W maximum

Signal Input

Input 1

Resolution: 18 bits **Sampling Rate:** 5 samples / second
Accuracy: ±.24% of span typical
Maximum Rating: -2 VDC minimum, 12 VDC maximum (1 minute for mA input)

Temperature Effect: ±1.5 μV / °C for all inputs except mA input
 ±3.0 μV / °C for mA input

Sensor Lead Resistance Effect: T/C: 0.2μV/ohm
 3-wire RTD: 2.6°C/ohm of resistance difference of two leads

Burn-out Current: 200nA

Common Mode Rejection Ratio (CMRR): 120 dB

Normal Mode Rejection Ratio (NMRR): 55 dB

Sensor Break Detection: Sensor open for TC, RTD and mV inputs; sensor short for RTD input; below 1 mA for 4-20 mA input; below 0.25V for 1-5V input; unavailable for other inputs

Sensor Break Response Time: Within 4 seconds for TC, RTD and mV inputs; 0.1 second for 4-20 mA and 1-5 V inputs

Input 2

Resolution: 18 bits **Sampling Rate:** 1.66 times per second

Sensor Break Response Time: 0.5 second

Types: **Current Transducer:** 0 to 50 Amp
 mA: -3 to 27 mA V: -1.3 to 11.5 VDC

Input 3

Event Input Functions: Select 2nd setpoint and/or PID, disable output 1 and/or output 2, remote lockout reset alarm 1 and/or alarm 2

Logic Low: -10V min., 0.8V max.

Logic High: 2V min., 10V max.

External Pull-Down Resistance: 400KΩ max

External Pull-Up Resistance: 1.5MΩ min

Output 1 or Output 2 / Alarm 2

Relay Rating: 240 VAC, 2 Amp

Pulsed Voltage: Source voltage 5V, Current limiting resistance 66Ω

Linear Output — Characteristics

Type	Tolerance	Zero Tolerance	Span Capacity	Load
4-20 mA		3.6-4.0 mA	20-21 mA	500Ω max
0-20 mA		0 mA	20-21 mA	500Ω max
0-5 VDC		0 VDC	5-5.25 VDC	10 KΩ min
1-5 VDC		0.9-1.0 VDC	5-5.25 VDC	10 KΩ min
0-10 VDC		0 VDC	10-10.5 VDC	10 KΩ min

Resolution: 15 bit analog to digital converter

Isolation Breakdown Voltage: 1000 VAC

Solid State Relay (Triac) Output

Rating: 1A / 240 VAC **Inrush Current:** 20A for 1 cycle

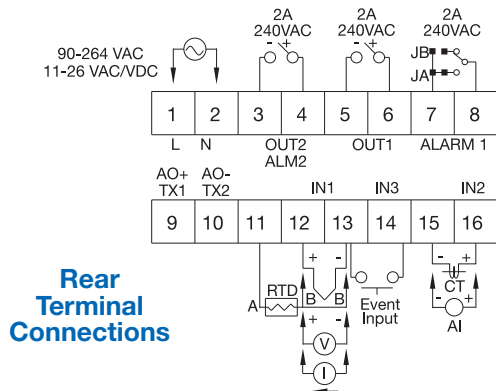

Min. Load Current: 50 mA rms

Max. Off-state Leakage: 3 mA rms

Max. On-state Voltage: 1.5 VAC rms

Insulation Resistance: 1000 Megohms minimum at 500 VDC

Dielectric Strength: 2500 VAC for 1 minute

Rear Terminal Connections

Alarm 1 / Alarm 2

Alarm 1 Relay: Form A, (NO) Maximum rating: 240 VAC, 2 Amp

Alarm 1 Relay: Form A, (NC) Maximum rating: 240 VAC, 2 Amp

Alarm Functions:

Dwell timer PV1-PV2 High / Low Alarm
 Deviation Band High / Low Alarm Loop Break Alarm
 PV2 High / Low Alarm Sensor Break Alarm

Alarm Mode: Normal, Latching, Hold, Latching / Hold

Dwell Timer: 0 - 6553.5 minutes

Data Communications

Interface: RS-232 (1 unit), RS-485 (up to 247 units)

Protocol: Modbus Protocol – RTU mode

User Interface

Dual 4-digit LED Display: 0.40" (10 mm) Red Process Display

Keypad: 3 keys 0.31" (8 mm) Green Setpoint Display

Programming Port: For automatic setup, calibration and testing

Control Mode

Output 1: Reverse (heating) or direct (cooling) action

Output 2: PID cooling control, cooling P band 1-255% of PB

On-Off: 0.1 - 100.0°F hysteresis control (P band = 0)

P or PD: 0 - 100.0% offset adjustment

PID: Fuzzy logic modified

Proportional band: 0.1 - 900°F (500°C)

Integral: 0 - 1000 seconds **Derivative:** 0 - 360 seconds

Cycle Time: 0.1 - 100 seconds

Manual Control: Heat (MV1) and Cool (MV2)

Auto-tuning: Cold start and warm start

Failure Mode: Auto-transfer to manual mode with sensor break or A-D converter damage

Ramping Control: 0 - 900°F/min or 0 - 900°F/hr ramp rate

Power Limit: 0 - 100% for output 1 and output 2

Remote Setpoint: Programmable range for voltage or current input

Digital Filter: Time constant: settable from 0.2 to 60 seconds

Analog Retransmission

Analog Retransmission Functions: PV1, PV2, PV1-PV2, PV2-PV1, Setpoint, MV1, MV2, PV-SV deviation value

Output Signal: 4-20 / 0-20 mA, 0-1, 0-5, 1-5, 0-10 VDC

Accuracy: ±0.05 % of span, ±0.0025 %/°C

Environmental and Physical

Operating Temperature: 14 to 122°F (-10 to 50°C)

Storage Temperature: -40 to 140°F (-40 to 60°C)

Humidity: 0 to 90% RH, non-condensing

Dielectric Strength: 2000 VAC, 50/60 Hz for 1 minute

Dimensions: 2 × 2 × 3-1/2" (51 × 51 × 89 mm) H×W×D
 Depth behind panel: 3" (75 mm)

Panel Cutout: 1-25/32 × 1-25/32" (45 × 45 mm) H×W

Weight: 0.33 lb. (150 grams)

Approval Standards

Safety Standard: UL3121-1 and CSA: C22.2 No. 24-93
 EN61010-1 (IEC1010-1)

Protective Class: **Front panel:** NEMA 4X / IP65
Housing and Terminals: IP 20

EMC: EN61325

Temperature Controllers

Models TEC-410 & TEC-910

Model TEC-410 1/4 DIN & Model TEC-910 1/16 DIN High Limit Temperature Controls

*FM Approved
High Limit Control
with External Reset!*

Agency Approvals 910

Common Design Features

- * High Limit Control protects personnel, equipment and materials from over-temperature process conditions
- * Universal programmable thermocouple sensor input
- * Versatile – 2 types of outputs available
- * Highly accurate universal input with 18 bit analog to digital converter
- * FM approved for electric & gas heat systems
- * Bright 0.40" (10 mm) red LED process display
- * Short panel depth required
- * Output 2 can be programmed as output or input

TEC-410 Design Features

- * Universal input power – 90-250 VAC or 11-26 VAC/VDC
- * Event input for remote reset
- * Two programmable outputs
- * Optional RS-485 or RS-232 communications interface
- * Optional retransmission
- * Optional NEMA 4X/IP65 front face

TEC-910 Design Features

- * Universal input power – 90-264 VAC or 11-26 VAC/VDC
- * Optional event input for remote reset
- * Optional RS-485 communications interface
- * Output 2 can be programmed as output or input

Hardware Code: TEC-410-

A Part Number based on the hardware code and any software pre-programming will be issued at time of order.

Standard lead time is stock to 2 weeks.

Note: The use of solid state relays/contactors are highly discouraged for high limit safety circuits as solid state devices can fail in the closed position.

Hardware Code: TEC-910-

A Part Number based on the hardware code and any software pre-programming will be issued at time of order.

Standard lead time is stock to 2 weeks.

Power Input BOX 1

- 4** = 90-250 VAC (TEC-410)
90-264 VAC (TEC-910)
- 5** = 11-26 VAC / VDC

Signal Input – Universal, can be programmed in the field BOX 2

- 1** = Input 1 – Universal input (factory default = TC type J)
Thermocouple: J, K, T, E, B, R, S, N, L, C, P
mV: 0 to 60
- 9** = Other

Output 1 BOX 3

- 1** = Relay: 2A / 240 VAC, Form C
- 6** = Triac-SSR output 1A / 240 VAC
- 9** = Other

Output 2 BOX 4

For TEC-410

- 0** = None
- 1** = Relay: 2A / 240VAC, Form C
- 6** = Triac-SSR output 1A / 240VAC
- 7** = Isolated 20V @ 25mA DC, Output Power Supply
- 8** = Isolated 12V @ 40mA DC, Output Power Supply
- 9** = Isolated 5V @ 80mA DC, Output Power Supply

For TEC-910

- 0** = None
- 1** = Form A Relay: 2A / 240 VAC
- 6** = Triac Output 1A / 240VAC, SSR
- 7** = Isolated 20V @ 25mA DC Output Power Supply
- 8** = Isolated 12V @ 40mA DC Output Power Supply
- 9** = Isolated 5V @ 80mA DC Output Power Supply
- A** = RS-485
- B** = Event Input
- D** = Retransmit 4-20mA/0-20mA
- E** = Retransmit 1-5V/0-5V
- F** = Retransmit 0-10V
- H** = Special order

Communications BOX 5 (TEC-410 only)

- 0** = None
- 1** = RS-485 Interface
- 2** = RS-232 Interface
- 3** = Retransmission 4-20 mA, 0-20 mA
- 4** = Retransmission 1-5 VDC, 0-5 VDC
- 5** = Retransmission 0-10 VDC
- 9** = Other

Mounting Option BOX 6 (TEC-410 only)

- 0** = Standard Mounting, IP50
- 1** = NEMA 4X/IP65

Note: Detailed information on features common to digital microprocessor-based TEC temperature controls and the complete Table of Input Range and Accuracy can be found on page 13-46.

Power Input

Standard: (TEC-410) 90-250 VAC, 47-63 Hz, 10 VA, 5W maximum
(TEC-910) 90-264 VAC, 47-63 Hz, 10 VA, 5W maximum

Optional: 11-26 VAC / VDC, 10 VA, 5W maximum

Signal Input

Resolution: 18 bits **Sampling Rate:** 5 samples / second

Accuracy: $\pm 0.24\%$ of span typical

Maximum Rating: -2 VDC minimum, 12 VDC maximum (1 minute for mA input)

Temperature Effect: $\pm 1.5 \mu\text{V} / ^\circ\text{C}$ for all inputs except mA input
 $\pm 3.0 \mu\text{V} / ^\circ\text{C}$ for mA input

Sensor Lead Resistance Effect: T/C: $0.2 \mu\text{V}/\text{ohm}$

Burn-out Current: 200nA

Common Mode Rejection Ratio (CMRR): 120 dB

Normal Mode Rejection Ratio (NMRR): 55 dB

Sensor Break Detection: Sensor open for TC inputs

Sensor Break Response Time: Within 4 seconds for TC and mV inputs; 0.1 second for 4-20 mA and 1-5 V inputs

Output 1 / Output 2

Relay Rating: 240 VAC, 2 Amp

Solid State Relay (Triac) Output

Rating: 1A / 240 VAC **Inrush Current:** 20A for 1 cycle

Min. Load Current: 50 mA rms

Max. Off-state Leakage: 3 mA rms

Max. On-state Voltage: 1.5 VAC rms

Insulation Resistance: 1000 Megohms minimum at 500 VDC

Dielectric Strength: 2500 VAC for 1 minute

VDC Voltage Supply (Output 2 only)

20 VDC, $\pm 0.5\text{V}$, at 25 mA

12 VDC, $\pm 0.3\text{V}$, at 40 mA

5 VDC, $\pm 0.15\text{V}$, at 80 mA

Event Input (standard TEC-410, optional TEC-910)

Resolution: 18 bits

Logic Low: -10 VDC minimum, 0.8 VDC maximum

Logic High: 2 VDC minimum, 10 VDC maximum

Functions: Remote reset, remote lockout

Limit Control

Modes available: High Limit, Low Limit and High/Low Limit

Data Communications

Interface: RS-485 (up to 247 units), RS-232, *TEC-410 only*

Protocol: Modbus Protocol – RTU mode

Address: 1-247

Baud Rate: 0.3 - 38.4 Kbits/sec

Data Bits: 8 bits

Parity Bit: None, Even or Odd

Stop Bit: 1 or 2 bits

Communication Buffer: 50 bytes

User Interface

Single 4-digit LED Displays: 0.4" / 10 mm

Keypad: 4 keys

Programming Port: For automatic setup, calibration and testing

Environmental and Physical

Operating Temperature: 14 to 122°F (-10 to 50°C)

Humidity: 0 to 90% RH, non-condensing

Dielectric Strength: 2000 VAC, 50/60 Hz for 1 minute

Dimensions:

TEC-410: 3-3/4 × 3-3/4 × 2-9/16" (96 × 96 × 65 mm) H×W×D

Depth behind panel: 2" (53 mm)

Panel Cutout: 3-21/32" × 3-21/32" (93 × 93 mm) H×W

Weight: 0.55 lb. (250 grams)

TEC-910: 1-7/8 × 1-7/8 × 3-3/4" (48 × 48 × 94 mm) H×W×D

Depth behind panel: 3-3/8" (86 mm)

Panel Cutout: 1-25/32" × 1-25/32" (45 × 45 mm) H×W

Weight: 0.33 lb. (150 grams)

Approval Standards

Safety: FM Class 3545 (OCT. 1998)

CSA: C22.2 No. 24-93

EN61010-1 (IEC1010-1)

TEC-410: UL61010C-1

TEC-910: UL873

Protective Class: IP30 front panel, indoor use,
IP20 housing and terminals (with protective cover)

EMC: EN61326

TEC-410 Stock and Common Part Numbers (Power Input: 90-250 VAC)

Part Number	Signal Input	Out 1	Out 2
TEC51001	tc	relay	none
TEC51002	tc	relay	relay
TEC51005	tc	SSR-1A	none
TEC51006	tc	SSR-1A	relay

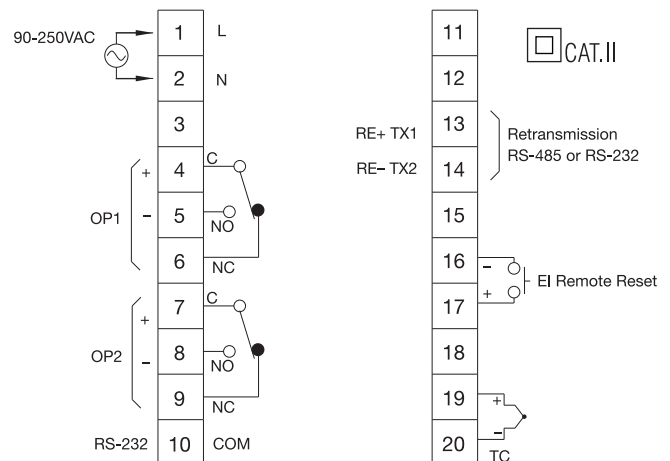

TEC-910 Stock and Common Part Numbers (Power Input: 90-264 VAC)

Part Number	Signal Input	Out 1	Prog. I/O
TEC16001	tc	relay	event input
TEC16003	tc	SSR-1A	event input
TEC16004	tc	relay	none
TEC16006	tc	SSR-1A	none

NOTE: See page 13-46 for features common to TEC digital microprocessor-based temperature controls and the complete Table of Input Range and Accuracy.

TEC-410 1/4 DIN Rear Terminal Connections

TEC-910 1/16 DIN Rear Terminal Connections

Temperature Controllers

Models TEC-4500 & TEC-9500

Model TEC-4500 1/4 DIN & Model TEC-9500 1/16 DIN Ramp & Soak Temperature Controls

Configurable for 5 Programmable Outputs

Configurable for 4 Programmable Outputs

Design Features

- * Ramp & Soak Programmable Control
- * Nine recipes (profiles) available using 64 segments maximum per recipe
- * Event Input – one of 8 functions can be chosen: start run mode, hold mode, abort recipe, manual mode, failure transfer, turn off, segment advance, select 2nd set of PID parameters
- * Event Output – 3 relays are available. Can be programmed to any segment or end of recipe
- * Analog Retransmission – optional mA or VDC transfer of PV or SV values
- * Highly accurate universal input with 18 bit analog to digital converter
- * Bright 0.40" (10mm) red LED process display
- * Fast sample rate – 200ms
- * Fuzzy Logic PID Autotune heat and cool control – 2 sets of values can be used
- * Optional RS-485 or RS-232 communications interface
- * Programming port available for PC connection allowing quick set-up
- * Lockout protection guards against unauthorized setting changes
- * Bumpless transfer allows continued temperature control if sensor fails
- * Universal input, field configurable (Type J T/C default, PT100, mA, V) with high accuracy 18-bit D-A
- * Short panel depth required

Note: Detailed information on features common to digital microprocessor-based TEC temperature controls and the complete Table of Input Range and Accuracy can be found on page 13-46.

Power Input BOX 1

- 4 = 90-250 VAC, 50-60 Hz
- 5 = 11-26 VAC / VDC

Signal Input – Universal, can be programmed in the field BOX 2

- 1 = Universal input (factory default = TC type J)
Thermocouple: J, K, T, E, B, R, S, N, L, C, P
RTD: PT100 DIN, PT100 JIS (0 to 60mV)
- 5 = Voltage: 0-10V, 0-5V, 1-5V, 0-1V
- 6 = DC Current: 0-20 mA (default), 4-20 mA
- 9 = Other

Output 1 BOX 3

- 1 = Relay: 2A / 240 VAC
- 2 = Pulse DC for SSR drive: 5 VDC (30 mA max)
- 3 = Isolated 4-20mA / 0-20 mA
- 4 = Isolated 1-5V / 0-5V/0-10VDC
- 6 = Triac-SSR output 1A / 240 VAC
- C = Pulse DC for SSR drive: 14 VDC (40 mA max)
- 9 = Other

Output 2 BOX 4

- 0 = None
- 1 = Relay: 2A / 240 VAC
- 2 = Pulse DC for SSR drive – 5 VDC (30 mA max)
- 3 = Isolated 4-20mA / 0-20 mA
- 4 = Isolated 1-5V / 0-5V/0-10V
- 6 = Triac-SSR output 1A / 240 VAC
- 7 = Isolated 20V @ 25 mA DC, Output Power Supply
- 8 = Isolated 12V @ 40 mA DC, Output Power Supply
- A = Isolated 5V @ 80 mA DC, Output Power Supply
- C = Pulsed voltage to drive SSR, 14V/40mA
- 9 = Other

Output 3 BOX 5

- 0 = None
- 1 = Relay: 2A / 240 VAC
- 2 = Pulse DC for SSR drive – 5 VDC (30 mA max)
- 6 = Triac-SSR output 1A / 240 VAC
- 7 = Isolated 20V @ 25 mA DC, Output Power Supply
- 8 = Isolated 12V @ 40 mA DC, Output Power Supply
- A = Isolated 5V @ 80 mA DC, Output Power Supply
- C = Pulsed voltage to drive SSR, 14V/40mA
- 9 = Other

Output 4 BOX 6 (TEC-4500 only)

- 0 = None
- 1 = Relay: 2A / 240 VAC
- 2 = Pulse DC for SSR drive – 5 VDC (30 mA max)
- 3 = Retransmission 4-20mA (default), 0-20 mA
- 4 = Retransmission 1-5 VDC (default)/ 0-5VDC, 0-10 VDC
- 6 = Triac-SSR output 1A / 240 VAC
- 7 = Isolated 20V @ 25 mA DC, Output Power Supply
- 8 = Isolated 12V @ 40 mA DC, Output Power Supply
- A = Isolated 5V @ 80 mA DC, Output Power Supply
- C = Pulsed voltage to drive SSR, 14V/40mA
- 9 = Other

A Part Number based on the hardware code and any software pre-programming will be issued at time of order.

Standard lead time is stock to 2 weeks.

Temperature Controllers

Models TEC-905 & TEC-900 1/16 DIN

Model TEC-905 1/16 DIN Controller & Model TEC-900 1/16 DIN Indicator Only

Simple Setpoint and Display!

Display only!

Design Features

- * 1/16 DIN size – 48 mm × 48 mm
- * Short panel depth – only 3-3/8" (86 mm) required
- * Laser trimmed ASIC components
- * On-off or time proportional selections
- * Wide selection of output options
- * Universal power input, 90-264 VAC
- * Sensor break protection
- * Good performance at a very low price
- * Model TEC-905 control with pushwheel setpoint
- * Model TEC-900 indicator only

Agency Approvals

Temperature Controller
Hardware Code: TEC-905-

A Part Number based on the hardware code and any software pre-programming will be issued at time of order.

Standard lead time is stock to 2 weeks.

Temperature Indicator
Hardware Code: TEC-900-

A Part Number based on the hardware code and any software pre-programming will be issued at time of order.

Standard lead time is stock to 2 weeks.

Power Input BOX 1

4 = 90-264 VAC 50/60 Hz

Signal Input BOX 2

- 1** = Thermocouple: Type J
- 2** = Thermocouple: Type K
- 3** = RTD: 100 ohm PT, DIN 0.00385
- 4** = RTD: 100 ohm PT, JIS 0.00392
- 9** = Other

Control Mode BOX 4

(TEC-905 only)

- 1** = On - Off (used for valves & solenoids)
- 2** = Proportional (common for electric heaters)

Range code (TEC-905 only) BOX 3

- X** = 0 to 499°F **C** = 0 to 299°C
- V** = 0 to 999°F **E** = 0 to 499°C
- W** = 0 to 1999°F **H** = 0 to 999°C

Other ranges are available for large volume orders. Consult Tempco for more information.

Range code (TEC-900 only) BOX 3

- Thermocouple**
- A** = 0 to 1200°F – Type J
- B** = 0 to 600°C – Type J
- C** = 0 to 2000°F – Type K
- D** = 0 to 1100°C – Type K
- RTD**
- E** = -32 to 752°F
- F** = 0 to 400°C

Output 1 (TEC-905 only) BOX 5

- 1** = Relay: 5A / 240 VAC
- 2** = Pulse DC for SSR drive: 20 VDC (20 mA max)
- 3** = 4-20 mA, linear (max load 500 ohms)
- 4** = 0-20 mA, linear (max load 500 ohms)
- 5** = 0-10 VDC, linear (min. impedance 500K ohms)
- 9** = Other

Output 2 BOX 6

Alarm BOX 7

Communication BOX 8

0 = Not Available

Power Input

Standard: 90-264 VAC, 50/60 Hz, 5VA

Signal Input

Accuracy: $\pm 1.0\%$ of full scale at 77°F/25°C

Thermocouple: Type J or K

RTD: 3-wire Pt100 DIN or JIS

Sampling Rate: 3 samples / second

Cold Junction Compensation: $\pm 0.1^\circ\text{C} / 1^\circ\text{C}$

Common Mode Rejection Ratio (CMRR): 120 dB

Normal Mode Rejection Ratio (NMRR): 60 dB

Sensor Break Protection: Upscale

Output 1 (for TEC-905 only)

Relay Rating: 240 VAC, 5 Amp

SSR drive: Pulsed DC, 20 V at 20 mA maximum

Current: 4 - 20 mA, 0 - 20 mA, maximum load: 500Ω

Voltage: 0 - 10 VDC, minimum load 500KΩ

Control (for TEC-905 only)

Proportional Band: 2.2% of span

ON-OFF Hysteresis: 1% of span

Cycle time: 20 seconds for relay output, 1 second for pulsed voltage output, 0.02 second for linear current or voltage output

Control Action: Reverse Action

Approval Standards

Safety Standard: UL3121-1

Protective Class: Front panel: IP 30

Housing and Terminals: IP 20

EMC: EN61326

Adjustment (for TEC-905 only)

Setpoint: 3-digit or 4-digit pushwheel switch

Manual Reset: Adjustable up to 2.6% of span

Setpoint Resolution: ± 1 Least Significant Digit

Accuracy of Setpoint: $\pm 1\%$ of span

Repeatability of Setpoint: ± 1 Least Significant Digit

Display

Process Indicator: 3-1/2 digit, 0.4" / 10 mm red LED display

Output Status Indicator: Red LED lamp (for TEC-905 only)

Environmental and Physical

Operating Temperature: 32 to 122°F (0 to 50°C)

Humidity: 0 to 90% RH, non-condensing

Dielectric Strength: 2000 VAC, 50/60 Hz for 1 minute

Vibration: 10 - 55 Hz, amplitude 1mm

Shock: 200 m/s² (20g)

Dimensions: 1-7/8 × 1-7/8 × 3-3/4" (48 × 48 × 94 mm) H×W×D
Depth behind panel: 3-3/8" (86 mm)

Panel Cutout: 1-25/32" × 1-25/32" (45 × 45 mm) H×W

Weight: 0.42 lb. (190 grams)

Rear Terminal Connections

NOTE: Terminals 8, 9 and 10 are not used for Model TEC-900.

TEC-905 Stock and Common Part Numbers (Power Input: 90-264 VAC, Proportional Mode)

Part Number	Signal Input	Range	Output

Model TEC-8100 1/8 DIN Temperature Controller

**Configurable for
4 Programmable
Outputs and optional
NEMA 4X/IP65
Front Panel!**

Agency Approvals

Design Features

- * 1/8 DIN size – 96 mm × 48 mm
- * Fuzzy Logic PID Autotune heat and cool control
- * Short panel depth – only 2-9/16" (65 mm) required
- * Universal input, field configurable (Type J T/C default, PT100, mA, V) with high accuracy 18-bit D-A
- * Highly versatile – 6 types of inputs available
- * Output 2 can be used for cooling function
- * Universal input power – 90-250 VAC or 11-26 VAC/VDC
- * Optional NEMA 4X/IP65 front panel
- * Bumpless transfer to manual mode during sensor failure
- * Wide variety of alarm mode selections
- * Optional RS-232 or RS-485 communications interface
- * Bright 0.40" (10 mm) red LED process display, 0.31" (8 mm) green LED setpoint display
- * High performance at a very low price

Power Input BOX 1

- 4 = 90-250 VAC
- 5 = 11-26 VAC / VDC
- 9 = Other

Hardware Code: TEC-8100-

A Part Number based on the hardware code and any software pre-programming will be issued at time of order.

Standard lead time is stock to 2 weeks.

Signal Input – Universal, can be programmed in the field for item 5 or 6 BOX 2

- 5 = Thermocouple: *J, K, T, E, B, R, S, N, L
0-60 mV
 - 6 = RTD: *PT100 DIN, PT100 JIS
 - 7 = 0-1 VDC
 - 8 = *0-5, 1-5 VDC
 - A = 0-10 VDC
 - B = *4-20, 0-20 mA
 - 9 = Other
- * indicates default value

Alarm BOX 5

- 0 = None
- 1 = Relay: 2A / 240 VAC, SPDT
- 9 = Other

Output 1 BOX 3

- 1 = Relay: 2A / 240 VAC
- 2 = Pulse DC for SSR drive: 5 VDC (30 mA max)
- 3 = Isolated, 4-20 mA (default), 0-20 mA
- 4 = Isolated, VDC, 1-5 (default), 0-5, 0-1
- 5 = Isolated, VDC, 0-10
- 6 = Triac-SSR output 1A / 240 VAC
- C = Pulse DC for SSR drive: 14 VDC (40 mA max)
- 9 = Other

Communication BOX 6

- 0 = None
- 1 = RS-485 Interface
- 2 = RS-232 Interface
- 3 = Retransmission 4-20 mA (default), 0-20 mA
- 4 = Retransmission 1-5 VDC (default), 0-5 VDC
- 5 = Retransmission 0-10 VDC
- 9 = Other

Output 2 BOX 4

- 0 = None
- 1 = Relay: 2A / 240 VAC
- 2 = Pulse DC for SSR drive: 5 VDC (30 mA max)
- 3 = Isolated, 4-20 mA (default), 0-20 mA
- 4 = Isolated VDC, 1-5 (default), 0-5, 0-1
- 5 = Isolated VDC, 0-10
- 6 = Triac-SSR output 1A / 240 VAC
- 7 = Isolated 20V @ 25 mA DC, Output Power Supply
- 8 = Isolated 12V @ 40 mA DC, Output Power Supply
- 9 = Isolated 5V @ 80 mA DC, Output Power Supply
- C = Pulse DC for SSR drive: 14 VDC (40 mA max)
- A = Other

NEMA 4X / IP65 BOX 7

- 0 = No
- 1 = Yes

Note: Detailed information on features common to digital microprocessor-based TEC temperature controls and the complete Table of Input Range and Accuracy can be found on page 13-46.

Power Input

Standard: 90-250 VAC, 47-63 Hz, 12 VA, 5W maximum
Optional: 11-26 VAC / VDC, 12 VA, 5W maximum

Signal Input

Resolution: 18 bits **Sampling Rate:** 5 samples / second
Accuracy: ±.24% of span typical
Maximum Rating: -2 VDC minimum, 12 VDC maximum (1 minute for mA input)
Temperature Effect: ±1.5 μV / °C for all inputs except mA input ±3.0 μV / °C for mA input

Sensor Lead Resistance Effect: T/C: 0.2μV/ohm
 3-wire RTD: 2.6°C/ohm of resistance difference of two leads

Burn-out Current: 200nA

Common Mode Rejection Ratio (CMRR): 120 dB

Normal Mode Rejection Ratio (NMRR): 55 dB

Sensor Break Detection: Sensor open for TC, RTD and mV inputs; sensor short for RTD input; below 1 mA for 4-20 mA input; below 0.25V for 1-5V input; unavailable for other inputs

Sensor Break Response Time: Within 4 seconds for TC, RTD and mV inputs; 0.1 second for 4-20 mA and 1-5 V inputs

Output 1 / Output 2

Relay Rating: 240 VAC, 2 Amp

Pulsed Voltage: Source voltage 5V, Current limiting resistance 66Ω

Linear Output — Characteristics

Type	Tolerance	Zero Tolerance	Span Capacity	Load
4-20 mA		3.6-4.0 mA	20-21 mA	500Ω max
0-20 mA		0 mA	20-21 mA	500Ω max
0-5 VDC		0 VDC	5-5.25 VDC	10 KΩ min
1-5 VDC		0.9-1.0 VDC	5-5.25 VDC	10 KΩ min
0-10 VDC		0 VDC	10-10.5 VDC	10 KΩ min

Resolution: 15 bit analog to digital converter

Output Regulation: 0.0% for full load change

Output Settling Time: 0.1 sec. (stable to 99.9%)

Isolation Breakdown Voltage: 1000 VAC

Temperature Effect: ±0.01 % of span/°C

Solid State Relay (Triac) Output

Rating: 1A / 240 VAC

Inrush Current: 20A for 1 cycle

Min. Load Current: 50 mA rms

Max. Off-state Leakage: 3 mA rms

Max. On-state Voltage: 1.5 VAC rms

Insulation Resistance: 1000 Megohms minimum at 500 VDC

Dielectric Strength: 2500 VAC for 1 minute

Alarm 1 — Programmable

Alarm 1 Relay: Form A, (NO)

Maximum rating: 240 VAC, 2 Amp

Alarm Functions: Dwell timer

Deviation High / Low Alarm
 Deviation Band High / Low Alarm
 Process High / Low Alarm
 Sensor Break Alarm

Alarm Mode: Normal, Latching, Hold, Latching / Hold

Dwell Timer: 0 - 4553.6 minutes

Data Communications

Interface: RS-232 (1 unit), RS-485 (up to 247 units)

Protocol: Modbus Protocol – RTU mode

Address: 1-247

Baud Rate: 0.3 - 38.4 Kbits/sec

Data Bits: 7 or 8 bits

Parity Bit: None, Even or Odd

Stop Bit: 1 or 2 bits

Communication Buffer: 160 bytes

User Interface

Dual 4-digit LED Display: 0.40" (10 mm) Red Process Display
 0.31" (8 mm) Green Setpoint Display

Keypad: 4 keys

Programming Port: For automatic setup, calibration and testing

Control Mode

Output 1: Reverse (heating) or direct (cooling) action

Output 2: PID cooling control, cooling P band 50-300% of PB

On-Off: 0.1 - 90°F hysteresis control (P band = 0)

P or PD: 0 - 100.0% offset adjustment

PID: Fuzzy logic modified

Proportional band: 0.1 - 900°F

Integral time: 0 - 1000 seconds

Derivative time: 0 - 360 seconds

Cycle Time: 0.1 - 90 seconds

Manual Control: Heat (MV1) and Cool (MV2)

Auto-tuning: Cold start and warm start

Failure Mode: Auto-transfer to manual mode with sensor break or A-D converter damage

Ramping Control: 0 - 900°F/min or 0 - 900°F/hr ramp rate

Environmental and Physical

Operating Temperature: 14 to 122°F (-10 to 50°C)

Storage Temperature: -40 to 140°F (-40 to 60°C)

Humidity: 0 to 90% RH, non-condensing

Dielectric Strength: 2000 VAC, 50/60 Hz for 1 minute

Dimensions: 3-3/4 × 1-7/8 × 3-1/8" (96 × 48 × 80 mm) H×W×D
 Depth behind panel: 2-9/16" (65 mm)

Panel Cutout: 3-5/8" × 1-25/32" (92 × 45 mm) H×W

Weight: 0.46 lb. (210 grams)

Approval Standards

Safety Standard: UL61010C-1 and CSA C22.2 No. 24-93
 EN61010-1 (IEC1010-1)

Protective Class: **Front panel:** IP 50, optional NEMA 4X/IP65
Housing and Terminals: IP 20

EMC: EN61326

Design Features

- * 1/8 DIN size – 48 mm × 96 mm
- * Fuzzy Logic PID Autotune heat and cool control
- * Short panel depth – only 2-9/16" (65 mm) required
- * Universal input, field configurable (Type J T/C default, PT100, mA, V) with high accuracy 18-bit D-A
- * Heater Break Alarm using 0-50 Amp current transformer
- * Output 2 can be programmed as cooling output only
- * 2 optional alarms – programmable NO or NC relay
- * Wide variety of alarm mode selections
- * Bumpless transfer to manual mode during sensor failure
- * Universal input power, 90-264 VAC
- * Power limiter output
- * RS-485 and RS-232 data communications interface
- * Bright 0.40" (10 mm) red LED process display, 0.31" (8 mm) green LED setpoint display stabilized with a digital filter if required
- * Fast input sample rate (5 samples/second)
- * Automatic programming
- * Differential control
- * "Soft-Start" ramp and dwell timer
- * Analog input for remote setpoint and current transformer
- * Event input for changing functions and setpoint
- * Hardware lockout plus remote lockout protection
- * Loop break alarm
- * Analog retransmission
- * DC power supply outputs
- * Tempco's most highly featured 1/8 DIN control

Power Input BOX 1

- 4 = 90-264 VAC
- 5 = 11-26 VAC / VDC
- 9 = Other

Signal Input – Universal, can be programmed in the field BOX 2

- 1 = Input 1 – Universal input (factory default = tc type J)
Thermocouple: J, K, T, E, B, R, S, N, L
RTD: PT100 DIN, PT100 JIS
Current: 4-20 mA, 0-20 mA
Voltage: VDC, 0-1, 0-5, 1-5, 0-10
- Input 2 – CT: 0 - 50A AC current Transformer (factory default)

**Transformer for
Heater Break Alarm**

(0-50 Amp current)

Part Number: TEC99999

Specifications on page 13-47

Note: Detailed information on features common to digital microprocessor-based TEC temperature controls and the complete Table of Input Range and Accuracy can be found on page 13-46.

View Product Inventory @ www.tempco.com

Power Input

Standard: 90-264 VAC, 47-63 Hz, 15 VA, 7W maximum
Optional: 11-26 VAC / VDC, 15 VA, 7W maximum

Signal Input

Input 1

Resolution: 18 bits **Sampling Rate:** 5 samples / second
Accuracy: ±.24% of span typical
Maximum Rating: -2 VDC minimum, 12 VDC maximum (1 minute for mA input)

Temperature Effect: ±1.5 μV / °C for all inputs except mA input
 ±3.0 μV / °C for mA input

Sensor Lead Resistance Effect: T/C: 0.2μV/ohm
 3-wire RTD: 2.6°C/ohm of resistance difference of two leads
Burn-out Current: 200nA

Common Mode Rejection Ratio (CMRR): 120 dB

Normal Mode Rejection Ratio (NMRR): 55 dB

Sensor Break Detection: Sensor open for TC, RTD and mV inputs; sensor short for RTD input; below 1 mA for 4-20 mA input; below 0.25V for 1-5V input; unavailable for other inputs

Sensor Break Response Time: Within 4 seconds for TC, RTD and mV inputs; 0.1 second for 4-20 mA and 1-5 V inputs

Input 2

Resolution: 18 bits **Sampling Rate:** 1.66 times per second

Sensor Break Response Time: 0.5 second

Types: **Current Transducer:** 0 to 50 Amp
 mA: -3 to 27 mA **V:** -1.3 to 11.5 VDC

Input 3

Event Input Functions: Select 2nd setpoint, and/or PID, disable output 1 and/or output 2, remote lockout, reset alarm 1 and/or alarm 2

Output 1 or Output 2

Relay Rating: 240 VAC, 2 Amp

Pulsed Voltage: Source voltage 5V, Current limiting resistance 66Ω

Linear Output — Characteristics

Type	Tolerance	Zero Tolerance	Span Capacity	Load
4-20 mA		3.6-4.0 mA	20-21 mA	500Ω max
0-20 mA		0 mA	20-21 mA	500Ω max
0-5 VDC		0 VDC	5-5.25 VDC	10 KΩ min
1-5 VDC		0.9-1.0 VDC	5-5.25 VDC	10 KΩ min
0-10 VDC		0 VDC	10-10.5 VDC	10 KΩ min

Resolution: 15 bit analog to digital converter

Isolation Breakdown Voltage: 1000 VAC

Solid State Relay (Triac) Output

Rating: 1A / 240 VAC **Inrush Current:** 20A for 1 cycle

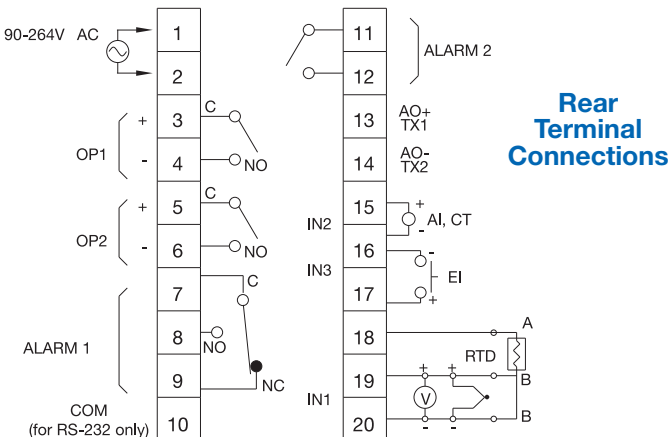

Min. Load Current: 50 mA rms

Max. Off-state Leakage: 3 mA rms

Max. On-state Voltage: 1.5 VAC rms

Insulation Resistance: 1000 Megohms minimum at 500 VDC

Dielectric Strength: 2500 VAC for 1 minute

Alarm 1 / Alarm 2

Relay: 2 Amp, 240 VAC **Alarm 1:** SPDT **Alarm 2:** SPST (NO)

Alarm Functions:

Dwell timer PV1-PV2 High / Low Alarm
 Deviation Band High / Low Alarm Loop Break Alarm
 PV2 High / Low Alarm Sensor Break Alarm

Alarm Mode: Normal, Latching, Hold, Latching / Hold

Dwell Timer: 0 - 6553.5 minutes

Data Communications

Interface: RS-232 (1 unit), RS-485 (up to 247 units)

Protocol: Modbus Protocol – RTU mode

User Interface

Dual 4-digit LED Display: 0.40" (10 mm) Red Process Display

Keypad: 3 keys 0.31" (8 mm) Green Setpoint Display

Programming Port: For automatic setup, calibration and testing

Control Mode

Output 1: Reverse (heating) or direct (cooling) action

Output 2: PID cooling control, cooling P band 1 - 255% of PB

On-Off: 0.1 - 100.0°F hysteresis control (P band = 0)

P or PD: 0 - 100.0% offset adjustment

PID: Fuzzy logic modified

Proportional band: 0.1 - 900°F (500°C)

Integral: 0 - 1000 seconds **Derivative:** 0 - 360 seconds

Cycle Time: 0.1 - 100 seconds

Manual Control: Heat (MV1) and Cool (MV2)

Auto-tuning: Cold start and warm start

Failure Mode: Auto-transfer to manual mode with sensor break or A-D converter damage

Ramping Control: 0 - 900°F/min or 0 - 900°F/hr ramp rate

Power Limit: 0 - 100% for output 1 and output 2

Remote Setpoint: Programmable range for voltage or current input

Digital Filter: Time constant: settable from 0.2 to 60 seconds

Analog Retransmission

Analog Retransmission Functions: PV1, PV2, PV1-PV2, PV2-PV1, Setpoint, MV1, MV2, PV-SV deviation value

Output Signal: 4-20 / 0-20 mA, 0-1, 0-5, 1-5, 0-10 VDC

Accuracy: ±0.05 % of span, ±0.0025 %/°C

Environmental and Physical

Operating Temperature: 14 to 122°F (-10 to 50°C)

Storage Temperature: -40 to 140°F (-40 to 60°C)

Humidity: 0 to 90% RH, non-condensing

Dielectric Strength: 2000 VAC, 50/60 Hz for 1 minute

Dimensions: 3-3/4 × 1-7/8 × 3-1/8" (96 × 48 × 80 mm) H×W×D
 Depth behind panel: 2-9/16" (65 mm)

Panel Cutout: 3-5/8" × 1-25/32" (92 × 45 mm) H×W

Weight: 0.49 lb. (220 grams)

Approval Standards

Safety: UL873, CSA C22.2 No. 24-93

EN61010-1 (IEC1010-1)

Protective Class: IP 20 housing & terminals with protective covers

EMC: EN61326

Stock and Common Part Numbers

Model TEC-805 1/8 DIN Temperature Controller

Simple Setpoint and Display!

Agency Approvals

Design Features

- * 1/8 DIN size – 48 mm × 96 mm
- * Short panel depth – only 2-9/16" (65 mm) required
- * Laser trimmed ASIC components
- * On-off or time proportional selection
- * Digital input by pushwheel switch
- * Digital display on 0.4" (10 mm)
- * Wide selection of output options
- * Universal power input, 90-264 VAC
- * Sensor break protection
- * Good performance at a very low price

Hardware Code: TEC-805- 1 2 3 4 5 0 7 8 0

A Part Number based on the hardware code and any software pre-programming will be issued at time of order.

Standard lead time is stock to 2 weeks.

Power Input BOX 1

4 = 90-264 VAC 50/60 Hz

Signal Input BOX 2

- 1** = Thermocouple: Type J
- 2** = Thermocouple: Type K
- 3** = RTD: 100 ohm PT, DIN 0.00385
- 4** = RTD: 100 ohm PT, JIS 0.00392
- 9** = Other

Range code BOX 3

- X** = 0 to 499°F **C** = 0 to 299°C
- V** = 0 to 999°F **E** = 0 to 499°C
- W** = 0 to 1999°F **H** = 0 to 999°C

Other ranges are available for large volume orders. Consult Tempco for more information.

Control Mode BOX 4

- 1** = On - Off (used for valves & solenoids)
- 2** = Proportional (common for electric heaters)

Output 1 BOX 5

- 1** = Relay: 5A / 240 VAC
- 2** = Pulse DC for SSR drive: 20 VDC (20 mA max)
- 3** = 4-20 mA, linear (max load 500 ohms)
- 4** = 0-20 mA, linear (max load 500 ohms)
- 5** = 0-10 VDC, linear (min. impedance 500K ohms)
- 9** = Other

Output 2 BOX 6

0 = Not Available

Alarm BOX 7

- 0** = None
- 1** = Relay: 2A / 240 VAC Deviation alarm

Communication BOX 8

0 = Not Available

Power Input

Standard: 90 - 264 VAC, 50/60 Hz, 5VA

Signal Input

Accuracy: $\pm 1.0\%$ of full scale at 77°F/25°C

Thermocouple: Type J or K

RTD: 3-wire Pt100 DIN or JIS

Sampling Rate: 3 samples per second

Cold Junction Compensation: $\pm 0.1^\circ\text{C} / 1^\circ\text{C}$

Common Mode Rejection Ratio (CMRR): 120 dB

Normal Mode Rejection Ratio (NMRR): 60 dB

Sensor Break Protection: Upscale

Output

Relay Rating: 240 VAC, 5 Amp

SSR drive: Pulsed DC, 20 V at 20 mA maximum

Current: 4 - 20 mA, 0 - 20 mA, maximum load: 500Ω

Voltage: 0 - 10 VDC, minimum load 500KΩ

Control

Proportional Band: 2.2% of span

ON-OFF Hysteresis: 1% of span

Cycle time: 20 seconds for relay output, 1 second for pulsed voltage output, 0.02 second for linear current or voltage output

Control Action: Reverse Action

Approval Standards

Safety Standard: UL3121-1

Protective Class: Front panel: IP 30

Housing and Terminals: IP 20

EMC: EN61326

Adjustment

Setpoint: 3-digit or 4-digit pushwheel switch

Manual Reset: Adjustable up to 2.6% of span

Setpoint Resolution: ± 1 Least Significant Digit

Accuracy of Setpoint: $\pm 1\%$ of span

Repeatability of Setpoint: ± 1 Least Significant Digit

Alarm

Type: Deviation $\pm 10\%$ of span **Relay:** 2A / 240 VAC

Display

Process Indicator: 3-1/2 digit, 0.4" / 10 mm red LED display

Output Status Indicator: Red LED lamp

Alarm Status Indicator: Red LED lamp

Environmental and Physical

Operating Temperature: 32 to 122°F (0 to 50°C)

Humidity: 0 to 90% RH, non-condensing

Dielectric Strength: 2000 VAC, 50/60 Hz for 1 minute

Vibration: 10 - 55 Hz, amplitude 1 mm

Shock: 200 m/s² (20g)

Dimensions: 3-3/4 × 1-7/8 × 3-1/8" (96 × 48 × 80 mm) H×W×D
Depth behind panel: 2-9/16" (65 mm)

Panel Cutout: 3-5/8" × 1-25/32" (92 × 45 mm) H×W

Weight: 0.42 lb. (190 grams)

Rear Terminal Connections

Model TEC-7100 3/16 DIN Temperature Controller

Configurable for 4 Programmable Outputs and optional NEMA 4X/IP65 Front Panel!

Agency Approvals

Design Features

- * 3/16 DIN size – 72 mm × 72 mm
- * Fuzzy Logic PID Autotune heat and cool control
- * Short panel depth – only 2-9/16" (65 mm) required
- * Universal input, field configurable (Type J T/C default, PT100, mA, V) with high accuracy 18-bit D-A
- * Highly versatile – 6 types of inputs available
- * Output 2 can be used for cooling function
- * Universal input power – 90-250 VAC or 11-26 VAC/VDC
- * Optional NEMA 4X/IP65 front panel
- * Bumpless transfer to manual mode during sensor failure
- * Wide variety of alarm mode selections
- * Optional RS-485 communications interface
- * Bright 0.40" (10 mm) red LED process display
0.31" (8 mm) green LED setpoint display
- * High performance at a low price

Power Input BOX 1

- 4 = 90-250 VAC
- 5 = 11-26 VAC / VDC
- 9 = Other

Hardware Code: TEC-7100-

A Part Number based on the hardware code and any software pre-programming will be issued at time of order.

Standard lead time is stock to 2 weeks.

Signal Input— Universal, can be programmed in the field for item 5 or 6 BOX 2

- 5 = Thermocouple: *J, K, T, E, B, R, S, N, L
0-60mV
 - 6 = RTD: *PT100 DIN, PT100 JIS

Note: Detailed information on features common to digital microprocessor-based TEC temperature controls and the complete Table of Input Range and Accuracy can be found on page 13-46.

Power Input

Standard: 90-250 VAC, 47-63 Hz, 10 VA, 5W maximum
Optional: 11-26 VAC / VDC, 10 VA, 5W maximum

Signal Input

Resolution: 18 bits **Sampling Rate:** 5 samples / second
Accuracy: ±.24% of span typical
Maximum Rating: -2 VDC minimum, 12 VDC maximum (1 minute for mA input)

Temperature Effect: ±1.5 μV / °C for all inputs except mA input
 input ±3.0 μV / °C for mA input

Sensor Lead Resistance Effect: T/C: 0.2μV/ohm
 3-wire RTD: 2.6°C/ohm of resistance difference of two leads

Burn-out Current: 200nA

Common Mode Rejection Ratio (CMRR): 120 dB

Normal Mode Rejection Ratio (NMRR): 55 dB

Sensor Break Detection: Sensor open for TC, RTD and mV inputs; sensor short for RTD input; below 1 mA for 4-20 mA input; below 0.25V for 1-5V input; unavailable for other inputs

Sensor Break Response Time: Within 4 seconds for TC, RTD and mV inputs; 0.1 second for 4-20 mA and 1-5 V inputs

Output 1 / Output 2

Relay Rating: 240 VAC, 2 Amp

Pulsed Voltage: Source voltage 5V, Current limiting resistance 66Ω

Linear Output — Characteristics

Type	Tolerance	Zero Tolerance	Span Capacity	Load
4-20 mA		3.6-4.0 mA	20-21 mA	500Ω max
0-20 mA		0 mA	20-21 mA	500Ω max
0-5 VDC		0 VDC	5-5.25 VDC	10 KΩ min
1-5 VDC		0.9-1.0 VDC	5-5.25 VDC	10 KΩ min
0-10 VDC		0 VDC	10-10.5 VDC	10 KΩ min

Resolution: 15 bit analog to digital converter

Output Regulation: 0.02% for full load change

Output Settling Time: 0.1 sec. (stable to 99.9%)

Isolation Breakdown Voltage: 1000 VAC

Temperature Effect: ±0.01% of span/°C

Solid State Relay (Triac) Output

Rating: 1A / 240 VAC

Inrush Current: 20A for 1 cycle

Min. Load Current: 50 mA rms

Max. Off-state Leakage: 3 mA rms

Max. On-state Voltage: 1.5 VAC rms

Insulation Resistance: 1000 Megohms minimum at 500 VDC

Dielectric Strength: 2500 VAC for 1 minute

Approval Standards

Safety Standard: UL61010C-1
 CSA C22.2 No. 24-93
 EN61010-1 (IEC1010-1)

Protective Class: IP65 front panel with additional option
 IP 50 front panel without additional option, all indoor use
 IP 20 housing and terminals with protective cover

EMC: EN61326

Alarm 1 — Programmable

Alarm 1 Relay: Form A, (NO)

Alarm 1 Relay: Form A, (NC), Maximum rating: 240 VAC, 2 Amp

Alarm Functions: Dwell timer
 Deviation High / Low Alarm
 Deviation Band High / Low Alarm
 Process High / Low Alarm
 Sensor Break Alarm

Alarm Mode: Normal, Latching, Hold, Latching / Hold

Dwell Timer: 0 - 4553.6 minutes

Data Communications

Interface: RS-485 (up to 247 units)

Protocol: Modbus Protocol – RTU mode

Address: 1-247 **Baud Rate:** 0.3 - 38.4 Kbits/sec

Data Bits: 7 or 8 bits **Parity Bit:** None, Even or Odd

Stop Bit: 1 or 2 bits **Communication Buffer:** 160 bytes

User Interface

Dual 4-digit LED Display: 0.40" (10 mm) Red Process Display
 0.31" (8 mm) Green Setpoint Display

Keypad: 4 keys

Programming Port: For automatic setup, calibration and testing

Control Mode

Output 1: Reverse (heating) or direct (cooling) action

Output 2: PID cooling control, cooling P band 50-300% of PB

On-Off: 0.1 - 100.0°F hysteresis control (P band = 0)

P or PD: 0 - 90.0% offset adjustment

PID: Fuzzy logic modified

Proportional band: 0.1 - 900°F

Integral time: 0 - 1000 seconds

Derivative time: 0 - 360 seconds

Cycle Time: 0.1 - 90 seconds

Manual Control: Heat (MV1) and Cool (MV2)

Auto-tuning: Cold start and warm start

Failure Mode: Auto-transfer to manual mode with sensor break or A-D converter damage

Ramping Control: 0 - 900°F/min or 0 - 900°F/hr ramp rate

Environmental and Physical

Operating Temperature: 14 to 122°F (-10 to 50°C)

Storage Temperature: -40 to 140°F (-40 to 60°C)

Humidity: 0 to 90% RH, non-condensing

Dielectric Strength: 2000 VAC, 50/60 Hz for 1 minute

Dimensions: 2-27/32 × 2-27/32 × 3" (72 × 72 × 78 mm) H×W×D
 Depth behind panel: 2-9/16" (65 mm)

Panel Cutout: 2-11/16" × 2-11/16" (68 × 68 mm) H×W

Weight: 0.44 lb. (200 grams)

Rear Terminal Connections

Model TEC-704 3/16 DIN Temperature Controller

Simple Setpoint and Display!

Design Features

- * 3/16 DIN size – 72 mm × 72 mm
- * Laser trimmed ASIC components
- * Short panel depth – only 2-9/16" (65 mm) required
- * On-off or time proportional selection
- * Digital display, 0.4" (10 mm) red LEDs
- * Wide selection of output options
- * High precision wire wound dial/potentiometer setpoint
- * Sensor break protection
- * Good performance at a very low price

Agency Approvals

Power Input

Standard: 90 - 264 VAC, 50/60 Hz, 5VA

Signal Input

Accuracy: $\pm 1.0\%$ of full scale at 77°F/25°C

Thermocouple: Type J or K

RTD: 3-wire Pt100 DIN or JIS

Sampling Rate: 3 samples per second

Cold Junction Compensation: $\pm 0.1^\circ\text{C} / 1^\circ\text{C}$

Common Mode Rejection Ratio (CMRR): 120 dB

Normal Mode Rejection Ratio (NMRR): 60 dB

Sensor Break Protection: Upscale

Output

Relay Rating: 240 VAC, 5 Amp

SSR drive: Pulsed DC, 20 V at 20 mA maximum

Current: 4 - 20 mA, 0 - 20 mA, maximum load: 500Ω

Voltage: 0 - 10 VDC, minimum load: 500KΩ

Control

Proportional Band: 2.2% of span

ON-OFF Hysteresis: 1% of span

Cycle Time: 20 seconds for relay output, 1 second for pulsed voltage output, 0.02 second for linear current or voltage output

Control Action: Reverse Action

Approval Standards

Safety Standards: EN61326

Protective Class: Front panel: IP 30

Housing and Terminals: IP 20

Adjustment

Setpoint: Single turn wirewound potentiometer

Manual Reset: Adjustable up to 2.6% of span

Setpoint Resolution: 0.2% of span

Accuracy of Setpoint: $\pm 2\%$ of span

Repeatability of Setpoint: $\pm 0.1\%$ of span

Alarm

Type: Deviation $\pm 10\%$ of span Relay: 2A / 240 VAC

Display

Process Indicator: 3-1/2 digit, 0.4" / 10 mm red LED display

Output Status Indicator: Red LED lamp

Alarm Status Indicator: Red LED lamp

Environmental and Physical

Operating Temperature: 32 to 122°F (0 to 50°C)

Humidity: 0 to 90% RH, non-condensing

Dielectric Strength: 2000 VAC, 50/60 Hz for 1 minute

Vibration: 10 - 55 Hz, amplitude 1mm

Shock: 200 m/s² (20g)

Dimensions: 2-27/32 × 2-27/32 × 3" (72 × 72 × 78 mm) H×W×D
Depth behind panel: 2-9/16" (65 mm)

Panel Cutout: 2-11/16" × 2-11/16" (68 × 68 mm) H×W

Weight: 0.53 lb. (240 grams)

Model TEC-4100 1/4 DIN Temperature Controller

Design Features

- * 1/4 DIN size – 96 mm × 96 mm
- * Fuzzy Logic PID Autotune heat and cool control
- * Short panel depth – only 2" (53 mm) required
- * Universal input, field configurable (Type J T/C default, PT100, mA, V) with high accuracy 18-bit D-A
- * Highly versatile – 6 types of inputs available
- * Output 2 can be used for cooling function
- * Universal input power – 90-250 VAC or 11-26 VAC/VDC
- * Optional NEMA 4X/IP65 front panel
- * Bumpless transfer to manual mode during sensor failure
- * Wide variety of alarm mode selections
- * Optional RS-232 or RS-485 communications interface
- * Bright 0.55" (14 mm) red LED process display and 0.40" (10 mm) green LED setpoint display
- * High performance at a low price

Configurable for 4 Programmable Outputs and NEMA 4X/IP65 Front Panel!

Agency Approvals

Model TEC-4300 1/4 DIN

Configurable for 5 Programmable Outputs!

Agency Approvals

Model TEC-4300 1/4 DIN Temperature Controller

Design Features

- * 1/4 DIN size – 96 mm × 96 mm
- * Fuzzy Logic PID Autotune heat and cool control
- * Short panel depth – only 2" (53 mm) required
- * Universal input, field configurable (Type J T/C default, PT100, mA, V) with high accuracy 18-bit D-A
- * Heater Break Alarm using 0-50 Amp current transformer
- * Output 2 can be programmed as cooling output only
- * 2 optional alarms – programmable NO or NC relay
- * Wide variety of alarm mode selections
- * Bumpless transfer to manual mode during sensor failure
- * Universal input power, 90-264 VAC or 11-26 VAC/VDC
- * Power limiter output
- * RS-485 and RS-232 data communications interface
- * Bright 0.55" (14 mm) red LED process display 0.40" (10 mm) and green LED setpoint display stabilized with a digital filter if required
- * Fast input sample rate (5 samples/second)
- * Differential control
- * "Soft-Start" ramp and dwell timer
- * Analog input for remote setpoint and current transformer
- * Event input for changing functions and setpoint
- * Hardware lockout plus remote lockout protection
- * Loop break alarm
- * Analog retransmission
- * DC power supply outputs
- * Tempco's most highly featured 1/4 DIN control

Power Input BOX 1

- 4 = 90-264 VAC

- 1 = Relay: 2A/240 VAC, SPST
- 9 = Other

Communications BOX 7

- 0 = None
- 1 = RS-485 Interface
- 2 = RS-232 Interface
- 3 = Retransmission 4-20 mA (default), 0-20 mA
- 4 = Retransmission 1-5 VDC (default), 0-5 VDC
- 5 = Retransmission 0-10 VDC
- 9 = Other

Transformer for Heater Break Alarm

(0-50 Amp current)

Part Number: TEC99999

Specifications on page 13-47

Note: Detailed information on features common to digital microprocessor-based TEC temperature controls and the complete Table of Input Range and Accuracy can be found on page 13-46.

View Product Inventory @ www.tempco.com

Power Input

Standard: 90 - 264 VAC, 47-63 Hz, 15 VA, 7W maximum
Optional: 11 - 26 VAC / VDC, 15 VA, 7W maximum

Signal Input

Input 1

Resolution: 18 bits **Sampling Rate:** 5 samples / second
Accuracy: $\pm 0.24\%$ of span typical
Maximum Rating: -2 VDC minimum, 12 VDC maximum (1 minute for mA input)

Temperature Effect: $\pm 1.5 \mu\text{V} / ^\circ\text{C}$ for all inputs except mA input
 $\pm 3.0 \mu\text{V} / ^\circ\text{C}$ for mA input

Sensor Lead Resistance Effect: T/C: $0.2 \mu\text{V}/\text{ohm}$
 3-wire RTD: $2.6^\circ\text{C}/\text{ohm}$ of resistance difference of two leads

Burn-out Current: 200nA

Common Mode Rejection Ratio (CMRR): 120 dB

Normal Mode Rejection Ratio (NMRR): 55 dB

Sensor Break Detection: Sensor open for TC, RTD and mV inputs; sensor short for RTD input; below 1 mA for 4-20 mA input; below 0.25V for 1-5V input; unavailable for other inputs

Sensor Break Response Time: Within 4 seconds for TC, RTD and mV inputs; 0.1 second for 4-20 mA and 1-5 V inputs

Input 2

Resolution: 18 bits **Sampling Rate:** 1.66 times per second

Sensor Break Response Time: 0.5 second

Types: **Current Transducer:** 0 to 50 Amp
 mA: -3 to 27 mA V: -1.3 to 11.5 VDC

Input 3

Event Input Functions: Select 2nd setpoint, and/or PID, disable output 1 and/or output 2, remote lockout

Output 1 or Output 2

Relay Rating: 240 VAC, 2 Amp

Pulsed Voltage: Source voltage 5V, Current limiting resistance 66 Ω

Linear Output — Characteristics

Type	Tolerance	Zero	Tolerance	Span	Capacity	Load
4-20 mA		3.6-4.0 mA		20-21 mA		500 Ω max
0-20 mA		0 mA		20-21 mA		500 Ω max
0-5 VDC		0 VDC		5-5.25 VDC		10 K Ω min
1-5 VDC		0.9-1.0 VDC		5-5.25 VDC		10 K Ω min
0-10 VDC		0 VDC		10-10.5 VDC		10 K Ω min

Resolution: 15 bit analog to digital converter

Isolation Breakdown Voltage: 1000 VAC

Solid State Relay (Triac) Output

Rating: 1A / 240 VAC **Inrush Current:** 20A for 1 cycle

Min. Load Current: 50 mA rms

Max. Off-state Leakage: 3 mA rms

Max. On-state Voltage: 1.5 VAC rms

Insulation Resistance: 1000 Megohms minimum at 500 VDC

Dielectric Strength: 2500 VAC for 1 minute

Rear Terminal Connections

Alarm 1 / Alarm 2

Relay: 2 Amp, 240 VAC **Alarm 1:** SPDT **Alarm 2:** SPST (NO)

Alarm Functions:

Dwell timer PV1-PV2 High / Low Alarm
 Deviation Band High / Low Alarm Loop Break Alarm
 PV2 High / Low Alarm Sensor Break Alarm

Alarm Mode: Normal, Latching, Hold, Latching / Hold

Dwell Timer: 0 - 6553.5 minutes

Data Communications

Interface: RS-232 (1 unit), RS-485 (up to 247 units)

Protocol: Modbus Protocol – RTU mode

User Interface

Dual 4-digit LED Display: 0.55" (14 mm) Red Process Display

Keypad: 3 keys 0.40" (10 mm) Green Setpoint Display

Programming Port: For automatic setup, calibration and testing

Control Mode

Output 1: Reverse (heating) or direct (cooling) action

Output 2: PID cooling control, cooling P band 255% of PB

On-Off: 0.1 - 100.0°F hysteresis control (P band = 0)

P or PD: 0 - 100.0% offset adjustment

PID: Fuzzy logic modified

Proportional band: 0.1 - 932°F (500°C)

Integral: 0 - 1000 seconds **Derivative:** 0 - 360 seconds

Cycle Time: 0.1 - 100 seconds

Manual Control: Heat (MV1) and Cool (MV2)

Auto-tuning: Cold start and warm start

Failure Mode: Auto-transfer to manual mode with sensor break or A-D converter damage

Ramping Control: 0 - 900°F/min or 0 - 900°F/hr ramp rate

Power Limit: 0 - 100% for output 1 and output 2

Remote Setpoint: Programmable range for voltage or current input

Digital Filter: Time constant: settable from 0.2 to 60 seconds

Analog Retransmission

Analog Retransmission Functions: PV1, PV2, PV1-PV2, PV2-PV1, Setpoint, MV1, MV2, PV-SV deviation value

Output Signal: 4-20 / 0-20 mA, 0-1, 0-5, 1-5, 0-10 VDC

Accuracy: $\pm 0.05\%$ of span, $\pm 0.0025\%$ /°C

Environmental and Physical

Operating Temperature: 14 to 122°F (-10 to 50°C)

Humidity: 0 to 90% RH, non-condensing

Dielectric Strength: 2000 VAC, 50/60 Hz for 1 minute

Dimensions: 3-3/4 x 3-3/4 x 2-9/16" (96 x 96 x 65 mm) HxWxD
 Depth behind panel: 2" (53 mm)

Panel Cutout: 3-5/8" x 3-5/8" (92 x 92 mm) HxW

Weight: 0.56 lb. (255 grams)

Approval Standards

Safety: UL873, CSA C22.2 No. 24-93
 EN61010-1 (IEC1010-1)

Protective Class: IP 20 housing & terminals with protective covers

EMC: EN61326

Stock and Common Part Numbers

(Power Input: 90-264 VAC, no alarm 2, no data com)

Part Number	Signal Input	Out 1	Out 2	Alarm 1

Temperature Controllers

Models TEC-404 & TEC-405 1/4 DIN

Models TEC-404 & TEC-405 1/4 DIN Temperature Controllers

With Dial or Pushwheel Setpoint and Display!

Design Features

- * 1/4 DIN size – 96 mm × 96 mm
- * Model TEC-404 Temperature Control with dial/potentiometer setpoint
- * Model TEC-405 Temperature Control with pushwheel setpoint
- * Laser trimmed ASIC components
- * On-off or time proportional selection
- * Short panel depth – only 2.0" (51 mm) required
- * Digital display, 0.56" (14 mm) red LED
- * Wide selection of output options
- * Universal power input, 90-264 VAC or 20-32 VAC/VDC
- * Sensor break protection
- * Good performance at a very low price

Potentiometer Setpoint

Hardware Code: TEC-404-

Standard lead time is stock to 2 weeks.

Agency Approvals

Power Input BOX 1

- 4 = 90-264 VAC 50/60 Hz
- 5 = 20-32 VAC 50/60 Hz, 20 - 32 VDC

Signal Input BOX 2

- 1 = Thermocouple: Type J
- 2 = Thermocouple: Type K
- 3 = RTD: 100 ohm PT, DIN 0.00385
- 4 = RTD: 100 ohm PT, JIS 0.00392
- 9 = Other

Standard Range Code

- (TEC-404 only) BOX 3
- 4 = 0 to 300°C C = 50 to 550°F
 - 6 = 0 to 600°C E = 50 to 850°F

Below available for large volume orders. Consult Tempco for more information.

- 2 = 0 to 100°C A = 50 to 200°F
- 3 = 0 to 200°C B = 50 to 400°F
- 5 = 0 to 400°C D = 50 to 750°F
- 7 = 0 to 800°C F = 50 to 1100°F
- 8 = 0 to 1200°C G = 50 to 1400°F
- 9 = Other H = 0 to 2200°F

Range code (TEC-405 only) BOX 3

- X = 0 to 499°F C = 0 to 299°C
- V = 0 to 999°F E = 0 to 499°C
- W = 0 to 1999°F H = 0 to 999°C

Other ranges are available for large volume orders. Consult Tempco for more information.

Control Mode BOX 4

- 1 = On - Off (used for valves & solenoids)
- 2 = Proportional (common for electric heaters)

Output 1 BOX 5

- 1 = Relay: 5A / 240 VAC
- 2 = Pulse DC for SSR drive: 20 VDC (20 mA max)
- 3 = 4-20 mA, linear (max load 500 ohms)
- 4 = 0-20 mA, linear (max load 500 ohms)
- 5 = 0-10 VDC, linear (min. impedance 500K ohms)
- 9 = Other

Output 2 BOX 6

- 0 = Not Available

Alarm BOX 7

- 0 = None
- 1 = Relay: 3A / 240 VAC Deviation alarm

Communication BOX 8

- 0 = Not Available

Power Input

Standard: 90 - 264 VAC, 50/60 Hz, 5VA
Optional: 20 - 32 VAC 50/60 Hz, 20 - 32 VDC, 5VA

Signal Input

Accuracy: $\pm 1.0\%$ of full scale at 77°F/25°C
Thermocouple: Type J or K
RTD: 3-wire Pt100 DIN or JIS
Sampling Rate: 3 samples per second
Cold Junction Compensation: $\pm 0.1^\circ\text{C} / 1^\circ\text{C}$
Common Mode Rejection Ratio (CMRR): 120 dB
Normal Mode Rejection Ratio (NMRR): 60 dB
Sensor Break Protection: Upscale

Output 1

Relay Rating: 5 Amp, 240 VAC
SSR drive: Pulsed DC, 20 V at 20 mA maximum
Current Loop: 4 - 20 mA, 0 - 20 mA, maximum load: 500Ω
Voltage: 0 - 10 VDC, minimum load 500 KΩ

Control

Proportional Band: 2.2% of span
ON-OFF Hysteresis: 1% of span
Cycle time: 20 seconds for relay output, 1 second for pulsed voltage output, 0.02 second for linear current or voltage output
Control Action: Reverse Action

Approval Standards

Safety Standard: UL3121-1
 EN61326
Protective Class: Front panel: IP 30
 Housing and Terminals: IP 20

Adjustment

Setpoint: Single turn wirewound potentiometer (TEC-404)
Setpoint Resolution: 0.2% of span
Accuracy of Setpoint: $\pm 2\%$ of span
Repeatability of Setpoint: $\pm 0.1\%$ of span
Setpoint: 3-digit or 4-digit pushwheel switch (TEC-405)
Manual Reset: Adjustable up to 2.6% of span
Setpoint Resolution: ± 1 Least Significant Digit
Accuracy of Setpoint: $\pm 1\%$ of span
Repeatability of Setpoint: ± 1 Least Significant Digit

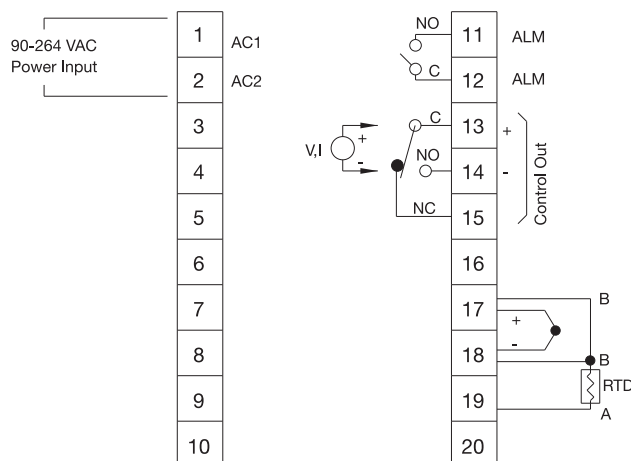

Display

Single 4-digit LED Display: 0.56" (14 mm) Red

Environmental and Physical

Operating Temperature: 32 to 122°F (0 to 50°C)
Humidity: 0 to 90% RH, non-condensing
Dielectric Strength: 2000 VAC, 50/60 Hz for 1 minute
Vibration: 10 - 55 Hz, amplitude 1 mm
Shock: 200 m/s² (20g)
Dimensions: 3-3/4 × 3-3/4 × 2-9/16" (96 × 96 × 65 mm) H×W×D
 Depth behind panel: 2" (53 mm)
Panel Cutout: 3-5/8" × 3-5/8" (92 × 92 mm) H×W
Weight: 0.55 lb. (250 grams)

Model TBC-41 Board PID Temperature Control

*Board Control Fuzzy Logic PID,
Configurable for 4 Programmable Outputs!*

Design Features

- * Easy to use high performance at a low price
- * Fuzzy Logic PID Autotune heat and cool control
- * Fast A-D sampling rate (5 samples/second)
- * Universal input, field configurable (Type J T/C default, PT100, mA, V) with high accuracy 18-bit D-A
- * Analog output (linear current or voltage) uses high accuracy 15-bit D-A Converter
- * Optional RS-232 or RS-485 communications interface
- * Universal input power— 90-250 VAC 50/60HZ or 11-26 VAC/VDC
- * Programming port provided on board
- * Supports manual control & auto-tune functions
- * Wide variety of alarm mode selections
- * Lockout Protection
- * Bumpless transfer
- * Soft-start ramp and dwell timer
- * Bright 0.55" (14 mm) red LED process display
- * Available from Stock
- * Agency Approvals:

Ordering Code:

TBC-41 - 1 2 3 4 5 6 7

Power Input BOX 1

- 4 = 90-250 VAC, 50-60 Hz
- 5 = 11-26 VAC / VDC

Signal Input — BOX 2

- 1 = Thermocouple: J (default), K, T, E, B, R, S, N, L, RTD PT100 DIN
- 2 = 0-60mV
- 3 = 0-1 VDC
- 4 = 0-5 VDC
- 5 = 1-5 VDC
- 6 = 4-20 mA
- 7 = 0-20 mA
- 8 = 0-10 VDC
- 9 = Other

Output 1 BOX 3

- 1 = Relay: 2A / 240 VAC
- 2 = Pulse DC for SSR drive: 5 VDC (30 mA max)
- 3 = Isolated 4-20 mA (default), 0-20 mA
- 4 = Isolated VDC, 1-5 (default), 0-5
- 5 = Isolated VDC, 0-10
- 6 = Triac-SSR output 1A / 240 VAC
- C = Pulse DC for SSR drive: 14 VDC (40 mA max)

Output 2 BOX 4

- 0 = None
- 1 = Relay: 2A / 240 VAC Form A
- 2 = Pulse DC for SSR drive: 5 VDC (30 mA max)
- 3 = Isolated 4-20 mA (default), 0-20 mA
- 4 = Isolated VDC, 1-5 (default), 0-5
- 5 = Isolated VDC, 0-10
- 6 = Triac-SSR output 1A / 240 VAC
- 7 = Isolated 24V @ 25 mA DC, Output Power Supply
- 8 = Isolated 12V @ 40 mA DC, Output Power Supply
- 9 = Isolated 5V @ 80 mA DC, Output Power Supply
- C = Pulse DC for SSR drive: 14 VDC (40 mA max)

Alarm BOX 5

- 0 = None
- 1 = Relay: 2A / 240 VAC, Form C

Communication BOX 6

- 0 = None
- 1 = RS-485 Interface
- 2 = RS-232 Interface
- 3 = Retransmission 4-20 mA (default), 0-20 mA
- 4 = Retransmission 1-5 VDC (default), 0-5 VDC
- 5 = Retransmission 0-10 VDC

Display Board and Cable BOX 7

- 0 = None
 - 3 = With Display Board and 12" (300 mm) Cable (default)
- Consult Tempco for other cable lengths.

View Product Inventory @ www.tempco.com

The new Tempco TBC-41 PID board temperature controller has been designed to be built into equipment by OEMs. This highly accurate electronic controller can easily be installed behind an overlay or control panel to allow for a very smooth and built-in look. Its many features can easily control electric or gas heating & cooling devices.

The fuzzy logic plus PID microprocessor-based controller series incorporates two bright, easy to read 4-digit LED displays, indicating process value and setpoint value. The fuzzy logic technology enables a process to reach a predetermined setpoint in the shortest time with the minimum of overshoot during power-up or external load disturbance.

The unit is powered by 11-26 or 90-250 VDC /VAC supply.

The second output can be used as cooling control or an alarm. Both outputs can select relay, triac, 5V logic output, linear current or linear voltage to drive an external device. There are six types of alarms, plus a dwell timer, that can be configured for the third output. The units are fully programmable for PT100 and thermocouple types J, K, T, E, B, R, S, N and L. The input signal is digitized by using an 18-bit A to D converter. Its fast sampling rate allows the unit to control fast processes.

Optional digital communications via RS-485 or RS-232 are available. These options allow the units to be integrated with supervisory control systems and software.

A programming port is available for automatic configuration, calibration and testing without the need to access the keys on the front panel.

By using proprietary fuzzy logic modified PID technology, this control will minimize the overshoot and undershoot in the shortest time.

High Accuracy

The TBC series controls are manufactured with custom designed ASIC (Application Specific Integrated Circuit) technology which contains an 18-bit A to D converter for high resolution measurement (true 0.1°F resolution for thermocouple and PT100) and a 15-bit D to A converter for linear current or voltage control output. The ASIC technology provides improved operating performance, low cost, enhanced reliability and higher density.

Fast Sampling Rate

The sampling rate of the input A to D converter is 5 samples/second. The fast sampling rate allows this series to control fast processes.

Fuzzy Control

The function of fuzzy logic control is to continually vary the PID parameters in a slight manner to allow for a more precise control of your process, over time. Also, this allows your process to reach the setpoint in the shortest amount of time with minimal overshoot during initial heat-up or setpoint and load changes.

Digital Communication

Optional RS-232 or RS-485 interface modules allow for Modbus RTU digital communications. The RS-485 interface allows for a maximum of 247 controllers to be connected to a host computer.

Programming Port

A programming port is used to connect the unit to a PC for quick configuration.

Auto-tune

The auto-tune function allows the user to simplify initial setup for a new system. A clever algorithm is provided to obtain an optimal set of control parameters for the process, it can be applied either as the process is warming up (cold start) or if the process has been in steady state (warm start).

Lockout Protection

According to the actual security requirement, one of four lock-out levels can be selected to prevent the unit from being changed by unauthorized persons.

Bumpless Transfer

Bumpless transfer allows the controller to continue to control by using its previous value if the sensor breaks. Hence, the process can be well controlled temporarily.

Soft-start Ramp

The ramping function can be performed during power-up as well as any time the setpoint is changed. The ramp function works during heat-up and cool-down.

Digital Filter

A first order low pass filter with a programmable time constant is used to improve the stability of process value. This is particularly useful in certain applications where the process value is too unstable to read.

SEL Function

The units have the flexibility for the user to move as many as 8 parameters, which are the most significant, from the set-up menu and place them in the front of the display sequence in the user menu.

Stock and Common Part Numbers

Part Number	Signal Input	Output 1	Output 2	Alarm
TBC10001	tc	relay	none	none
TBC10002	tc	relay	relay	none
TBC10003	tc	relay	relay	relay
TBC10010	tc	5VDC Pulse	none	none

TBC-41 Board PID Control

Continued from previous page...

Power

90-250 VAC, 47-63 Hz, 12VA, 5W max.
11-26 VAC / VDC, SELV, Limited Energy, 12VA, 5W max.

Input

Resolution: 18 bits
Sampling Rate: 5 samples/second
Max. Rating: -2 VDC min, 12 VDC max.
(1 minute for mA input)
Temperature Effect: $\pm 1.5\text{uV}/^\circ\text{C}$ for all inputs except mA
 $\pm 3.0\text{uV}/^\circ\text{C}$ for mA input
Sensor Lead Resistance Effect:
T/C: 0.2uV/ohm
3-wire RTD: 2.6°C/ohm of resistance difference of two leads
2-wire RTD: 2.6°C/ohm of resistance sum of two leads

Burn-out Current: 200 mA

Common Mode Rejection Ratio (CMRR): 120dB

Normal Mode Rejection Ratio (NMRR): 55dB

Sensor Break Detection:

Sensor open for TC, RTD and mV inputs
Sensor short for RTD input
Below 1 mA for 4-20 mA input
Below 0.25V for 1-5 V input
Unavailable for other inputs

Sensor Break Responding Time:

Within 4 seconds for TC, RTD and mV inputs
0.1 second for 4-20 mA and 1-5 V inputs

Output 1 / Output 2

Relay Rating: 2A/240 VAC, life cycles 200,000 for resistive load

Pulsed Voltage: Source Voltage 5V
current limiting resistance 66Ω

Linear Output

Resolution: 15 bits
Output Regulation: 0.02% for full load change
Output Settling Time: 0.1 sec. (stable to 99.9%)
Isolation Breakdown Voltage: 1000 VAC
Temperature Effect: $\pm 0.01\%$ of SPAN / °C

Triac (SSR) Output

Rating: 1A / 240 VAC
Inrush Current: 20A for 1 cycle
Min. Load Current: 50 mA rms
Max. Off-state Leakage: 3 mA rms
Max. On-state Voltage: 1.5 V rms
Insulation Resistance: 1000 Mohms min. at 500 VDC
Dielectric Strength: 2500 VAC for 1 minute

Alarm

Alarm Relay: Form C Rating
2A/240VAC, life cycles 200,000 for resistive load
Alarm Functions: Dwell timer, Deviation High / Low Alarm
Deviation Band High / Low Alarm
PV High / Low Alarm
Alarm Mode: Normal, Latching, Hold, Latching / Hold
Dwell Timer: 0.1-4553.6 minutes

Data Communication

Interface: RS-232 (1 unit), RS-485 (up to 247 units)
Protocol: Modbus Protocol RTU mode
Address: 1-247
Baud Rate: 2.4~38.4 Kbits/sec
Data Bits: 7 or 8 bits
Parity Bit: None, Even or Odd
Stop Bit: 1 or 2 bits
Communication Buffer: 160 bytes

Analog Retransmission

Output Signal: 4-20 mA, 0-20 mA, 0-5V
1 - 5V, 0 - 10V
Resolution: 15 bits
Accuracy: $\pm 0.05\%$ of span $\pm 0.0025\%$ / °C
Load Resistance:
0 - 500 ohms (for current output)
10 K ohms minimum (for voltage output)
Output Regulation: 0.01% for full load change
Output Settling Time: 0.1 sec. (stable to 99.9%)
Isolation Breakdown Voltage: 1000 VAC min.
Integral Linearity Error: $\pm 0.005\%$ of span
Temperature Effect: $\pm 0.0025\%$ of span / °C
Saturation Low: 0 mA (or 0V)
Saturation High: 22.2 mA (or 5.55V, 11.1V min.)
Linear Output Range: 0-22.2mA (0-20mA or 4-20mA)
0-5.55V (0-5V, 1-5V)
0-11.1 V (0-10V)

User Interface

Dual 4-digit LED Displays
Keypad: 4 keys
Programming Port: For automatic setup, calibration and testing
Communication Port: Connection to PC for supervisory control

Control Mode

Output 1: Reverse (heating) or direct (cooling) action
Output 2: PID cooling control, cooling P band 50~300%
of PB, dead band -36.0~36.0% of PB
ON-OFF: 0.1-90.0 (°F) hysteresis control (P band = 0)
P or PD: 0-100.0% offset adjustment
PID: Fuzzy Logic modified
Proportional band 0.1~900.0°F
Integral time 0-3600 seconds
Derivative time 0-360.0 seconds
Cycle Time: 0.1-90.0 seconds
Manual Control: Heat (MV1) and Cool (MV2)
Auto-tuning: Cold start and warm start
Failure Mode: Auto-transfer to manual mode while
sensor break or A-D converter damage
Ramping Control: 0-900.0°F/minute or
0-900.0°F/hour ramp rate

Digital Filter

Function: First order
Time Constant: 0, 0.2, 0.5, 1, 2, 5, 10, 20, 30, 60
seconds programmable

Environmental & Physical

Operating Temperature: -10°C to 50°C

Storage Temperature: -40°C to 60°C

Humidity: 0 to 90% RH (non-condensing)

Altitude: 2000m maximum

Pollution: Degree 2

Insulation Resistance: 20 Mohms min. (at 500 VDC)

Dielectric Strength: 2000 VAC, 50/60 Hz for 1 minute

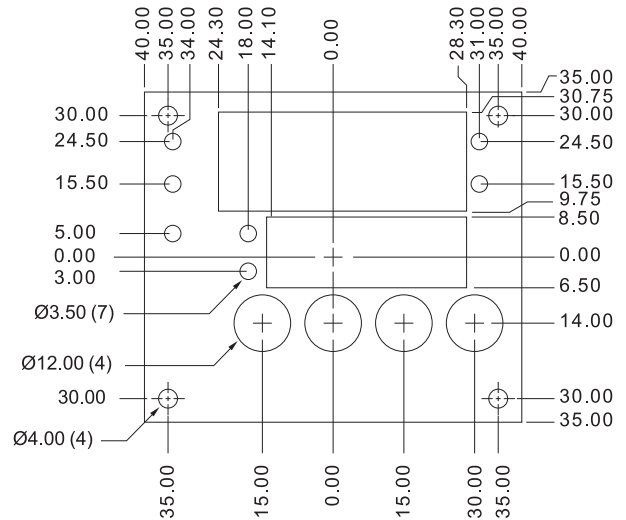

Vibration Resistance: 10-55 Hz, 10 m/s² for 2 hours

Shock Resistance: 200 m/s² (20 g)

Approval Standard

EMC: EN61326

Control PC Board Dimensions (mm)

TEC Family of Controllers — Common Design Features for the Models Listed

1/32 DIN: TEC-220, TEC-2400, TEC-2500

1/16 DIN: TEC-920, TEC-9100, TEC-9090, TEC-9300, TEC-9400

1/8 DIN: TEC-8100, TEC-8300, TEC-8400, TEC-8450

3/16 DIN: TEC-7100, TEC-7400

1/4 DIN: TEC-4100, TEC-4300, TEC-4400

DIN Rail Mount: TEC-6400

High Accuracy

The TEC Series is manufactured with custom-designed ASIC (Application Specific Integrated Circuit) technology, which contains an 18-bit Analog to Digital converter for high resolution measurement (true 0.1°F resolution for thermocouple and PT100 RTDs) and a 15-bit D to A converter for linear current or voltage control outputs. The ASIC technology provides improved operating performance, low cost, enhanced reliability and higher component density.

Auto-Tune

The auto-tune function allows the user to simplify initial setup for a new system by automatically determining the optimum set of PID settings for the thermodynamic system. A unique algorithm is programmed into the microprocessor to obtain an optimal set of control parameters for the process, and it can be applied either as the process is warming up (cold start) or if the process has been in a steady state (warm start).

Fuzzy Logic Control

The function of Fuzzy Logic Control is to adjust the PID parameters from time to time in order to make the modulated output value more flexible and adaptive to various processes. The result is to enable a process to reach a predetermined setpoint in the shortest time, with the minimum of overshoot and undershoot during power-up or external load disturbances.

Digital Filter

A first-order low-pass digital filter with a programmable time constant is a standard function of the software developed for the TEC controllers. It is used to improve the stability of the process value, especially in electrically noisy environments.

Lockout Protection

According to the actual security requirements, one of four lockout levels can be selected to prevent the unit from being changed erroneously.

None: No parameter is locked.

Set: User data is accessible, but setup data is locked.

User: All user and setup parameters are locked, except setpoint.

All: All user and setup parameters are locked, including setpoint.

Bumpless Transfer

Bumpless transfer allows the controller to continue to control the process by using the last known good output percentage value if the temperature sensor should fail. Hence, the process transfers from feedback closed loop control to open loop control and the process can be kept running until the sensor can be replaced.

Soft Start Ramp

The ramping function is performed during power up as well as any time the setpoint is changed. It can be ramping up or ramping down. The process value will reach the setpoint with a predetermined constant rate of rise or fall.

Digital Communications

The units can be equipped with a RS-485 or RS-232 interface card to provide digital communications. By using only twisted pair wires, up to 247 controllers can be connected together via the RS-485 interface to a host computer.

Table of Input Range and Sensor Accuracy

Type	Range	Accuracy @ 25°C	Input Impedance
J	-184 to 1832°F -120 to 1000°C	±3.6°F ±2.0°C	2.2MΩ
K	-328 to 2498°F -200 to 1370°C	±3.6°F ±2.0°C	2.2MΩ
T	-418 to 752°F -250 to 400°C	±3.6°F ±2.0°C	2.2MΩ
E	-148 to 1652°F -100 to 900°C	±3.6°F ±2.0°C	2.2MΩ
B	32 to 3272°F 0 to 1800°C	±3.6°F ±2.0°C	2.2MΩ

Type	Range	Accuracy @ 25°C	Input Impedance
R	32 to 3214°F 0 to 1767°C	±3.6°F ±2.0°C	2.2MΩ
S	32 to 3214°F 0 to 1767°C	±3.6°F ±2.0°C	2.2MΩ
N	-418 to 2372°F -250 to 1300°C	±3.6°F ±2.0°C	2.2MΩ
L	-328 to 1652°F -200 to 900°C	±3.6°F ±2.0°C	2.2MΩ
PT100 (DIN)	-346 to 1292°F -210 to 700°C	±0.7°F ±0.4°C	1.3KΩ
PT100 (JIS)	-328 to 1112°F -200 to 600°C	±0.7°F ±0.4°C	1.3KΩ
mV	-8 to 70mV	±0.05%	2.2MΩ
mA	-3 to 27mA	±0.05%	70.5Ω
VDC	-1.3 to 11.5Vdc	±0.05%	650KΩ

DIN Rail/Surface Mount Adapter for 1/16 DIN Controls

Cutout for Control – 45 mm/1.772" square
Maximum DIN Control Depth – 120 mm/4.72"
Material – Fire Retardant Polycarbonate GE Lexan® 940
Part Number: TEC99920

Polycarbonate Touchsafe Terminal Covers

Part Number: TEC99921 (sold per piece)
1/8 and 1/4 DIN – Fits Controller Models:
 TEC-8100, TEC-8300, TEC-805, TEC-4100,
 TEC-4300, TEC-401, TEC-402, TEC-404,
 TEC-405, TEC-4500

Part Number: TEC99922 (sold per piece)
1/16 DIN – Fits Controller Models:
 TEC-9090, TEC-910, TEC-920,
 TEC-901, TEC-902, TEC-905

Adapter Plates

18 gauge Stainless Steel Adapter Plates
 with (4) #8 self-tapping sheet metal
 screws for mounting

TEC99901
 Adapts a 1/4 DIN cut-out
 to a 1/16 DIN cut-out.

TEC99902
 Adapts a 1/8 DIN cut-out
 to a 1/16 DIN cut-out.

Model TEC 99999 Current Transformer/Transducer for use with Heater Break Alarm

Design Features

- * High Accuracy: $\pm 2\%$ of Reading $\pm 0.2A$
- * Wide Measuring Range: 0 – 50 Amps AC
- * DC Voltage Output: 0 – 5 VDC
- * 35 mm DIN Rail Mount or Surface Mount
- * 7/16" (12.5mm) diameter maximum cable size

Note:
 1 required for 1 Phase – 50A Max.
 3 required for 3 Phase – 100A Nominal Max.

TEC Accessories

Data Communication Accessories

TEC99001 — Smart Network Adapter for third party SCADA software which converts 255 channels of RS-485 or RS-422 to RS-232 Network.

TEC99003 — Smart Network Adapter for connecting the TEC controller's programming port to the RS-232 PC serial port. Allows downloading and reading of configuration information directly from a personal computer. Can be used with TEC-220, TEC-410, TEC-910, TEC-920, TEC-2500, TEC-4100, TEC-4300, TEC-4500, TEC-7100, TEC-8100, TEC-8300, TEC-9100, TEC-9300, TEC-9500 and TBC-41.

TEC99030 — "Tempco Config Set" PC software for use with TEC99003 Smart Network Adapter

Minimum System Requirements:
Microsoft Windows XP, 2000, NT, 98, 95
Pentium 200 MHz or faster
32 MB RAM (64 MB recommended)
Hard disk space: 2 MB

Note: Can be downloaded at no charge from www.tempco.com

Programming Port Cables

TEC99011 — Used for models TEC-220, TEC-4100, TEC-7100, TEC-8100 and TEC-9100.

TEC99012 — Used for model TEC-920 only.

TEC99013 — Used for models TEC-2500, TEC-4300, TEC-8300 and TEC-9300.

TEC99014 — RS-232 interface cable for models TEC-220, TEC-410, TEC-2500, TEC-4100, TEC-4300, TEC-4500, TEC-8100, TEC-8300, TEC-9100, TEC-9300, TEC-9500 and TBC-41.

Part Number TEC99927 — Converter Connects RS232/RS422/RS485 Devices To PC Via USB Port

Part Number TEC99928 — Converter Connects RS422/RS485 Devices To PC Via USB Port

Part Number TEC99927

Design Features

- * Ideal for interfacing with TEC controllers, PPR chart recorders, PLCs, and general protocol conversion to a USB port
- * Full-Speed USB operation at up to 12 Mbps
- * Additional I/O or IRQ not required
- * Serial transmission speed up to 921.6 Kbps
- * 64-byte FIFO and built-in hardware and software flow control
- * Built-in 15 KV ESD protection
- * Support for RS-232, RS-422, 2-wire RS-485, and 4-wire RS-485
- * Terminal block adapter

Part Number TEC99928

Specifications TEC99927

USB

Version: 900/1800 MHz, dual band
Connector: USB type B
Speed: 12 Mbps

Serial Interface

Number of Ports: 1
RS-232: Tx/D, Rx/D, RTS, CTS, DTR, DSR, DCD, GND
RS-422: TxD+(B), TxD-(A), RxD+(B), RxD-(A), GND
RS-485: 4-wire: TxD+(B), TxD-(A), RxD+(B), RxD-(A), GND
2-wire: Data+(B), Data-(A), GND
Connector: Male DB9
FIFO: 64 bytes
Serial Line Protection: 15 KV ESD for all signals

Serial Communications Parameters

Parity: None, Even, Odd, Space, Mark
Data Bits: 5, 6, 7, 8
Stop Bits: 1, 1.5, 2
Flow Control: RTS/CTS, XON/XOFF
Speed: 50 bps to 921.6 Kbps

Power Requirements

Power Consumption: 30 mA@5 VDC

Mechanical

Dimensions: 37.5 × 20.5 × 60 mm (L × W × H)

Specifications TEC99928

Chipset: Silicon Laboratories CP2102
Compliant: USB 1.0, 1.1, 2.0
Connector: USB type A
Baud Rates: Full Speed 12 Mbps

RS232/485 To Ethernet Converter

Tempco Ethernet converter / Gateway is capable of linking any serial (RS-232 or RS485) devices to your computer network via Ethernet for remote access, control, and/or monitoring purposes. Works with Tempco electronics (controllers, data loggers, etc.) using our Data Acquisition Software (Part Number TEC99923).
Part Number TEC99930

Design Features

- * *Serial to Ethernet communication*
- * *DIN Rail/Panel Mount*
- * *COM1: RS232/RS485, RJ45 for Ethernet connectivity*
- * *Application: Connects IO modules, controllers, and HMIs to an Ethernet Network*
- * *Function: Transparent data link or Gateway to convert Modbus RTU to Modbus TCP messages*
- * *Supports Multiple sockets and enables up to 4 Masters to communicate with slaves connected to PC-E converter*
- * *Web server for Configuration*

Specifications

- Power Supply:** 90mA @ 10VDC / 40mA @ 26VDC
- Ethernet:** 10/100 Mbits, Connector RJ45
- Maximum Ambient Temperature:** 257°F/ 125°C
- Serial:** RS232, 3 Wire, TX, RX & GND
 RS485, 2 Wire Multi drop twisted pair
 Baud Rate 2400, 4800, 9600, 19200, 38400, 57600, 115200
 Communication Settings Data Bits: 5, 6, 7, 8
 Parity None, Even, Odd
 Stop Bits 1, 2
- Operating Temperature:** -10°C to + 50°C
- Storage Temperature:** -40°C to + 85°C
- Connectors:** Power and Communication: 8 way screw connector
- Protection Class:** IP20
- Humidity:** Up to 95% non-condensing

Temperature Controllers

Encapsulated Temperature Controller

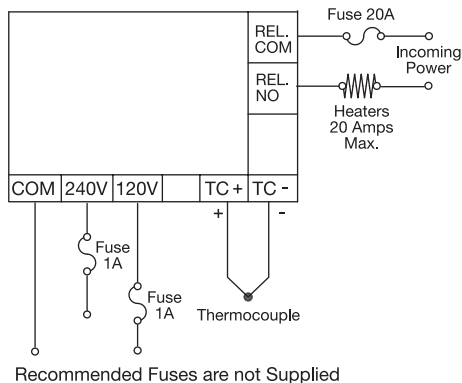

Series TKZ Encapsulated Temperature Controller

Shown with
Optional Dial & Knob
with 24" Cord Length

Typical Applications

- Appliances
- Commercial Cooling
- Cooking Equipment
- Environmental Chambers
- Gas Analyzers
- Hot Stamping Machines
- Laboratory Baths
- Packaging Machines
- Refrigerators and Freezers
- Water Heaters

Tempco's Series TKZ temperature controllers' small size and low cost make them ideal for OEM applications or thermostat replacement requiring the accuracy, reliability and versatility only available in an electronic control. The control incorporates highly reliable state-of-the-art analog electronic circuitry in a very economical open board, potted design.

Design Features

- * *The Encapsulated Design allows for use in areas of high humidity and components are less likely to be damaged in handling*
- * *1/4" Quick Disconnect terminals make installation a snap*
- * *Heavy duty 30 Amp (UL rated 20 Amp) relay output*
- * *Compact footprint can easily fit into most commercial or industrial equipment: 3.625" x 2.625" (92 x 67 mm)*
- * *120/240VAC Field Selectable*
- * *Local, remote or fixed setpoint*

Specifications

- Power Input:** 120/240 VAC $\pm 10\%$, 50/60 Hz
- Control Output:** 30 Amp SPST Relay, UL rated 20 Amp, rated for 100,000 cycles
- Control Mode:** On-Off with 4° hysteresis typical; contact factory for other hysteresis values
- Cold Junction Compensation:** Automatic
- Sensor Fault Protection:** Output de-energizes (contacts open) on thermocouple break
- Ambient Operating Temperature:** 0 to 70°C
- Field Wiring Terminals:** .250" male quick connects
- Agency Approvals:** UL and C-UL Recognized

Stock Controllers

All controls listed below have 120/240 input voltage, remote setpoint with 24" leads and a 30 Amp (UL rated 20 Amp) relay output.

Part Number	Signal Input	Dual Range
TKZ10001	J tc	32 to 500°F/0-260°C
TKZ10002	J tc	32 to 1000°F/0-550°C
TKZ10003	K tc	32 to 500°F/0-260°C
TKZ10004	K tc	32 to 1000°F/0-550°C
TKZ10205	K tc	32 to 175°F/0-80°C

Stock Dials and Knobs (Dual Range °C/°F)

Part Number	Dual Range
TKZ99001	32 to 500°F/0-260°C
TKZ99002	32 to 1000°F/0-550°C

Ordering Information

Choose a Part Number from the stock list. Tempco also welcomes large volume OEM inquiries for TKZ controls built to your specific requirements (50 pc. minimum).

"Infinite" Heat Switch for Open Loop Temperature Control

The Infinite Heat Switch is a unique control designed to modulate power to the resistive load without feedback, open loop style. Rotating the dial clockwise increases the modulated/cycle power delivered to the load.

The control contains a heat sensitive bimetal switch which regulates the running cycles. The bimetal blade has a resistance wire heater wrapped around it which is connected in parallel with the heater load being controlled and is cycled in unison with the heater load. A second bimetal is used as an ambient temperature compensator to neutralize the effect of the surrounding temperature.

Rotate the dial to an ON position and the contacts close for the load and resistance wire. The resistance wire heats up, causing the bimetal blade to flex, opening the contacts. The bimetal blade cools off, the contacts close and the cycle repeats.

The dial position determines the on to off cycle rate.

An optional pilot lamp terminal is connected in parallel to the heater load circuit to indicate when power is connected to the heater load.

The controls are position sensitive. The top is clearly marked on the back of the housing.

Typical Applications

- ➔ *Cooking Appliances*
- ➔ *Hot Plates/Platens*
- ➔ *Space Heaters*
- ➔ *Glue Pots*
- ➔ *Simple Ovens*
- ➔ *Electric Grills*

Specifications

Electrical Rating: 15 Amps, Resistive

Voltage: 120 or 240 VAC, ±10%

Maximum Ambient Temperature: 257°F/ 125°C

Three Indexing Positions: Off

Low: 5%
High: 100%

Duty Cycle: Nominal 15-20 seconds

Shaft: 1.812 long, square with break off grooves

Rotation: Clock, full 360°

Mounting: Hardware included for screw or bushing mount

Knob: Black with white markings: HI-OFF-LOW, 2-6
Kit includes adapters for use with other knobs

Terminals: 1/4" male spade quick disconnects (5)

Dimensions: 1.75" x 1.75" x 1.45" thick + shaft length

Agency Approval: UL

Optional Pilot Lamp Wiring (not included):

- For 120V application with 120V lamp, connect to P and L2.
- For 240V application with 120V lamp, connect to P and ground.
- For 240V application with 240V lamp, connect to P and L2.

Part Number: 120V HSC10001
240V HSC10002

Includes: control unit, knob, break off shaft, mounting and knob hardware.

Benchtop Point-of-Use Temperature Control Consoles

CONSOLE TYPES

2

Type 1—Self-Powered “Plug & Play” Output

Heater power is drawn from console input power.
Maximum current available for heaters: 12 Amps/console
Optional models available to 16 Amps

Construction Characteristics

Tempco TPC Portable Temperature Control Consoles are quality built self-contained systems for monitoring and controlling process temperatures in a wide range of fixed or portable applications.

These 1- to 4- zone units use our reliable next generation TEC-9400 1/16 DIN auto-tuning fuzzy logic PID temperature controllers with user-friendly programming and bright LCD displays using NFPA/IEC standard colors.

Model TPC-1000
1-Zone Control Console
4-7/8" H x 9" D x 5" W

Model TPC-3000
3-Zone Control Console
4-7/8" H x 9" D x 11-1/4" W

Model TPC-2000
2-Zone Control Console
4-7/8" H x 9" D x 8-1/4" W

Model TPC-4000
4-Zone Control Console
4-7/8" H x 10" D x 14-13/16" W

Typical Applications

- ↪ Dryers
- ↪ Platen Heating
- ↪ Ovens and Furnaces
- ↪ Heating of Tanks
- ↪ R & D Laboratory
- ↪ Educational Facilities
- ↪ Packaging Sealing Equipment
- ↪ Semiconductor Processing Equipment

Type 2—Switched Plug Output

Heater power is independent of console input power.
Maximum current available for heaters: 12 Amps/zone

Design Features

- * Front-mounted rocker panel switch
- * Retractable legs for easy benchtop viewing
- * Carrying handle
- * 60-inch-long power cord with standard U.S. straight-blade plug configuration for 120V or 240V. Other country standards available.
- * Miniature jack and plug for temperature sensor input (one per zone)
- * Power output plug (one per zone)
- * Can customize with high limits, alarms, etc.
- * Fast cycling solid state relay

Console Advantages

- * Cost Effective
- * Compact Size
- * Easy to Use
- * Safe to Operate
- * Portable
- * Three Year Warranty

Typical Rear View

NEW DESIGN

Extra Rugged 20 Amp Unit with Mechanical Relay and 12 Gauge 3-Wire Cord

Design Features

- * 2000W/120V, 4000W/240V Maximum load capacity
- * Ideal for Race Teams and Construction Site Heaters
- * Hooded overhang front and rear for protection
- * Plug & Play

Zones	Voltage Input	Controlled Amps	Watts Max.	Part Number Type J Input	Part Number Type K Input

1	240	16	3840	PCM10086	PCM10087

NEW DESIGN

Benchtop Point-of-Use Temperature Control Consoles

TYPE

1

Self-Powered Output (True Plug & Play Operation)

Heater power is drawn directly through the console's 15 amp line cord. Our standard TPC is also fused at 15 amps (12 amps useable). Units fused at 20 amps (16 amps useable) are also available. For these consoles the customer must have access to receptacles rated at 20 amps. For 120 volt operation these are NEMA 5-20, for 240 volt operation these are NEMA 6-20.

True Plug & Play Operation: The heater is simply wired to the supplied plug and plugged in to the rear mounted receptacle.

Self-Powered Output Consoles

Heater Power is Drawn from Console Input Power

Zones	Console Voltage Input	Controlled Voltage per Zone	Output per Zone Amps (max)	Watts per Zone (max)	Part Number and Sensor Input		
					Type J Input	Type K Input	RTD Input

Stock Items Are Shown In **RED**

TYPE

2

Switched Plug Output Only

The heater power is independent of the console controller input power. A Solid State Relay closure is provided per zone for external control switching. Each zone is fused at 15 Amps. External 120, 208 or 240 VAC must be provided to the heater power circuit.

You must install a switch into the heater circuit to disconnect power to the heater output when the console is not in use. The internal solid-state relay should not be relied on to disconnect heater power.

Switched Plug Output Consoles

Heater Power is Independent of Console Input Power

Specifications

- Output Power Switching:** Solid State Relay with heat sink
- Optional Sensor Inputs:** Consult Tempco
- Power Input:** Rear panel mounted fused power inlet, cord supplied
- Control Options:** FM High Limit Controller, 2nd Output, Alarm, Data Communications or other special requirements; consult Tempco.

Ordering Information

- Standard Consoles** – Order by specifying part number. Standard lead time is Stock to 2 weeks.
- Custom Made Consoles.** Custom consoles can be manufactured with electrical components to meet your specific requirements. **Consult Tempco.**

PCT Series Thermostat and Temperature Controls

PCT-1000 Series (120 VAC) Bulb & Capillary Type Single-Pole Thermostat

- * 5-foot, 3-conductor line cord
- * 15 Amp straight-blade heater receptacle with ground
- * 3/8" x 4" bulb with 48" long capillary
- * Positive Off detent
- * Heater On pilot light

- * 15 Amp heater fuse
- * Black powder coat metal housing for indoor use
- * Dimensions: 7"H x 3-1/2"W x 3"D (120V units)
9-1/2"H x 3-1/2"W x 3"D (240V units)
- * Wall mounting slots: 6-1/2" centers (120V units)
9-1/2" centers (240V units)

Part Number PCT10001

- * Voltage: 120 VAC (1 Phase)
- * Maximum Wattage: 1440W
- * Temperature Range: 60-250°F

Part Number PCT10003

- * Voltage: 240 VAC (1 Phase)
- * Maximum Wattage: 2880 W
- * Temperature Range: 60-250°F

Part Number PCT10002

- * Voltage: 120 VAC (1 Phase)
- * Maximum Wattage: 1440W
- * Temperature Range: 150-550°F

Part Number PCT10004

- * Voltage: 240 VAC (1 Phase)
- * Maximum Wattage: 2880 W
- * Temperature Range: 150-550°F

PCT-2000 Series — TKZ Encapsulated Electronic Temperature Control

- * Temperature Range: 32-1000°F (0-550°C)
- * 5-foot, 3-conductor line cord
- * 15 Amp straight-blade heater receptacle with ground
- * Heater On pilot light
- * 15 Amp heater fuse

- * Thermocouple mini-jack
- * Black powder coat metal housing for indoor use
- * Dimensions: 7-1/4"H x 3-1/2"W x 3-3/4"D
- * Wall mounting slots: 6-3/4" centers
- * Off switch supplied by customer

Part Number PCT20001

- * Voltage: 120 VAC (1 Phase)
- * Maximum Wattage: 1440W
- * Type J thermocouple jack

Part Number PCT20003

- * Voltage: 240 VAC (1 Phase)
- * Maximum Wattage: 2880 W
- * Type J thermocouple jack

Part Number PCT20002

- * Voltage: 120 VAC (1 Phase)
- * Maximum Wattage: 1440W
- * Type K thermocouple jack

Part Number PCT20004

- * Voltage: 240 VAC (1 Phase)
- * Maximum Wattage: 2880 W
- * Type K thermocouple jack

PCT-3000 Series TEC-2400 Programmable PID Temperature Control

- * 5-foot, 3-conductor line cord
- * 15 Amp heater receptacle with ground
- * 15 Amp heater fuse
- * 1 Amp controller power fuse
- * Heavy duty relay output
- * Thermocouple mini-jack

- * TEC-2400 control with bright LCD Display using NFPA/IEC standard colors
- * Grey polycarbonate housing for use with wall mounting kit
- * Audible alarm
- * Dimensions: 5" square

Part Number PCT30017

- * Voltage: 120 VAC (1 Phase)
- * Maximum Wattage: 1440W
- * Temperature Range: 0-1200°F
- * Type J thermocouple jack

Part Number PCT30019

- * Voltage: 120 VAC (1 Phase)
- * Maximum Wattage: 1440W
- * Temperature Range: 0-2400°F
- * Type K thermocouple jack

Part Number PCT30018

- * Voltage: 240 VAC (1 Phase)
- * Maximum Wattage: 2880 W
- * Temperature Range: 0-1200°F
- * Type J thermocouple jack

Part Number PCT30020

- * Voltage: 240 VAC (1 Phase)
- * Maximum Wattage: 2880 W
- * Temperature Range: 0-2400°F
- * Type K thermocouple jack

PCM-1000 Series Pre-Wired Power Control Boxes (NEMA 12 Indoor Use)

16 Amp Rating

- * TEC-9400 PID temperature control with bright LCD Display using NFPA/IEC standard colors
- * Standard size thermocouple jack
- * 5-foot, 3-conductor line cord
- * 20A straight-blade heater receptacle with ground
- * Fused at 20A
- * 25A mechanical relay
- * Enclosure Dimensions: 6"H x 6"W x 6"D
- * Wall mounting slots: 4" centers side to side, 6-3/4" centers top to bottom
- * Agency Approval: 

Part Number PCM10076

- * Voltage: 120 VAC (1 Phase)
- * Maximum Wattage: 1920 W
- * Temperature Range: 0-1200°F
- * Type J thermocouple jack

Part Number PCM10077

- * Voltage: 240 VAC (1 Phase)
- * Maximum Wattage: 3840 W
- * Temperature Range: 0-1200°F
- * Type J thermocouple jack

Part Number PCM10078

- * Voltage: 120 VAC (1 Phase)
- * Maximum Wattage: 1920 W
- * Temperature Range: 0-2400°F
- * Type K thermocouple jack

Part Number PCM10079

- * Voltage: 240 VAC (1 Phase)
- * Maximum Wattage: 3840 W
- * Temperature Range: 0-2400°F
- * Type K thermocouple jack

24 Amp Rating

- * Temperature Range: 0-2400°F
- * TEC-9400 PID temperature control with bright LCD Display using NFPA/IEC standard colors
- * NO-NC alarm contacts
- * Terminal blocks for incoming power, heater power and universal sensor

- * 32A magnetic contactor
- * BX connectors for sensor, incoming & heater leads
- * Disconnect & 30A heater fusing to be supplied by customer
- * Agency Approval: 

Part Number PCM10080

- * Voltage: 240 VAC (1 or 3 Phase)
- * Maximum Wattage: 5760 or 9970 W
- * Enclosure Dimensions: 10"H x 10"W x 6"D
- * Wall mounting slots: 8" centers side to side, 10-3/4" centers top to bottom

Part Number PCM10081

- * Voltage: 480 VAC (1 or 3 Phase)
- * Maximum Wattage: 11,520 or 19,930 W
- * Enclosure Dimensions: 14"H x 12"W x 6"D
- * Wall mounting slots: 10" centers side to side, 14-3/4" centers top to bottom

48 Amp Rating

- * Temperature Range: 0-2400°F
- * TEC-9400 PID temperature control with bright LCD Display using NFPA/IEC standard colors
- * NO-NC alarm contacts
- * Terminal blocks for incoming power, heater power and universal sensor

- * 65A magnetic contactor
- * BX connectors for sensor, incoming & heater leads
- * Disconnect & 60A heater fusing to be supplied by customer
- * Agency Approval: 

Part Number PCM10082

- * Voltage: 240 VAC (1 or 3 Phase)
- * Maximum Wattage: 11,520 or 19,930 W
- * Enclosure Dimensions: 14"H x 12"W x 6"D
- * Wall mounting slots: 10" centers side to side, 14-3/4" centers top to bottom

Part Number PCM10083

- * Voltage: 480 VAC (1 or 3 Phase)
- * Maximum Wattage: 23,000 or 39,900 W
- * Enclosure Dimensions: 14"H x 12"W x 6"D
- * Wall mounting slots: 10" centers side to side, 14-3/4" centers top to bottom

IMPORTANT: BEFORE TURNING ON POWER, CHECK TIGHTNESS OF ALL ELECTRICAL CONNECTIONS (SOME MAY LOOSEN DURING SHIPPING).

Custom Engineered Process Control Panels

Circulation
Heating Systems

Application: Cleaning and applying chromate coating to aircraft parts

Tempco's process controllers provide integrated solutions to manage your thermal loop system.

Why spend your valuable time engineering, designing, sourcing components and building Industrial Power Control Panels? Our UL 508A Certified Panel Shop can meet all your requirements for a multitude of processing control applications, from the simplest single zone panel to the most complex thermal loop system.

We offer general purpose or custom engineered power control panels backed by over 35 years of experience in the process heating industry. We apply our vast knowledge and expertise to every system we design and manufacture.

**Consult us with your requirements.
We welcome your inquiries.**

Custom Designed Portable Heat Treat System

Ramp/Soak Temperature Controllers and other electronics are mounted in a custom sized portable stainless steel cabinet to power silicone rubber electric heating elements.

Panel with Air Conditioner Cooling

This 304 Stainless Steel, NEMA 4X control panel features a thermostat-controlled, side mounted air conditioner that maintains safe interior temperatures for the electrical components while operating in high outdoor ambient temperatures.

Control Panels
are Engineered &
Manufactured in our 508A
Certified Panel Shop.

YOUR SATISFACTION IS GUARANTEED!

Most Items

Application: Outdoor Control Panel for a 1,000 gallon water holding tank with internal temperature control, NEMA 4 construction and enclosure heater

Application: paint curing for decorative landscaping rocks and stone.

Common Designs

Obtaining the leading edge process control panel that you need is one thing.

Acquiring it at the cost and time you have in mind is quite another.

**Achieve your goals with TEMPCO.
One Company, One Solution.**

TEMPCO 90KW Skid Mounted Fuel Circulation Heating System

Application: Hot air heating for waste reduction management.
Features: NEMA 4 Control Panel, Purge & Pressurization Enclosure Protection System, TEC-4100 PID Temperature Controller, TEC-410 FM High Limit Control, PPR-1800 Videographic Data Logger, Intrinsically Safe Sensor Barriers

Tempco Power Control Systems:
A Convenient Package For Virtually Any Thermal Loop Application

Temperature Control Panels — Designed for Industrial Process Applications

Design Features

- * NEMA 12 enclosure
- * Model TEC-4400 1/4 DIN or TEC-9400 1/16 DIN temperature control, dual display with auto-tuning and bright LCD displays using NFPA/IEC standard colors
- * Model TEC-410 1/4 DIN or TEC-910 1/16 DIN high limit control with FM approval and manual reset pushbutton switch
- * Main Power: 240 or 480 VAC, single or three phase
- * High limit safety contactor
- * Fused turn handle disconnect
- * Class CC & J fusing offers best-in-class current limitation offering reliable interruption of all overcurrents with protection up to 200kA

Heater Power Output

- SCR output device and fused sub-circuits
- Solid state relays with individual relays per fused sub-circuit
- Mechanical Contactors or optional Mercury relays

These general purpose control panels range in capacity from 4.8KW through 332KW.

They are set up to run process heating systems using circulation heaters, duct heaters or any other resistive load.

All control panels are shipped factory pre-wired according to the National Electrical Code, eliminating the need to design your own control system, purchase separate components and construct your own working temperature control system.

These general purpose temperature control systems are based on SCR power controls, solid state relays or mechanical contactor and are supplied with the standard features listed.

- * Power On pilot lamp
- * Control transformer, fused primary and secondary
- * Power output connections hardwired to fuse holders
- * Sensor input connections hardwired to labeled terminal blocks
- * High quality Hoffman enclosures & components
- * Ventilation fan and filter standard for SCR & SSR systems
- * Tagging of door-mounted parts with 2-color, laser-etched, aluminum labels
- * 1 set of wiring schematics and control manuals
- * Agency Approvals:

Silicon Controlled Rectifier (SCR) Power Controls are solid state devices that provide infinitely variable power to accurately maintain setpoint temperature and extend heater life by maintaining a stable process temperature.

- Single-phase systems use single-phase zero cross SCRs.
- Three-phase systems use 2-leg zero cross or 3-leg phase-angle SCRs dependant on load type.

Solid State Relays offer many of the benefits of SCRs often at a lower cost, but are limited to an 80 Amp load.

Mercury Relays offer a low-cost alternative to SCRs and SSRs for process heating applications and provide longer life than a mechanical contactor due to their self-renewing mercury contacts.

See page 13-61 for some of the more common control panel options.

See page 13-60 for Custom Control Panels

Enclosure dimensions are for reference only.

Notes: Control panels that utilize cooling fans require a minimum of 6" clearance on both sides to allow for proper air flow.

Panels designed using Mercury Relays are available on request.

Please specify your 3rd party approval requirements.

Temperature Control Panels **Custom Designed/Manufactured for any Industrial Process Applications**

Typical Design Features

- * *NEMA enclosure*
- * *Choice of temperature controller*
- * *Circuit breaker or fused disconnect*
- * *Main Power: Up to 600 VAC three-phase*
- * *Heater Power: Up to 600 VAC three-phase*
- * *Paperless data logger*
- * *PLC based control with touch panel display*
- * *Fan, heat-tube, air conditioning or other cooling methods*
- * *Anti-condensation enclosure heater*
- * *Twist-lock or jack panel connections available for external connection*
- * *Audible/Visual alarms*
- * *Hazardous Locations*

Tempco's made-to-order control panels are engineered to solve practically every process heating application including zoned infrared arrays for thermoforming and drying ovens. Output power devices can be contactors, SCR, solid state relays or mercury relays. It is recommended that for infrared arrays, only SCRs or solid state relays be used for the most stable element temperature. For halogen (tungsten) elements, phase angle fired SCRs with soft start capability should be used.

All control panels are shipped factory pre-wired in accordance with the National Electrical Code, NFPA79, UL508A and any special local electrical codes required by the customer. UL508A certification available only when requested.

Ordering Information

To request a quote see page 13-62

Custom Temperature Control Panels — Typical Options

- 1. Pre-wired outlets for heater power** Female twist lock style panel mount connectors and male plugs can be added to the exterior of the enclosure for circuits of 480 VAC and 30 Amp and under.
- 2. Pre-wired panel jacks for temperature sensors** Female panel mount jack connectors and plugs can be added to the exterior of the enclosure.
- 3. Other standard voltages** such as 208, 380, 415, 575 or 600 VAC — Special single or three-phase systems can be manufactured to customer requirements.
- 4. Current meter, single phase** A current transformer and a door-mounted analog or digital meter reads the average load current.
- 5. Current meter, three phase** A set of three current transformers, a door-mounted analog or digital meter and a four-position switch allows the customer to read the average load current on all three phases.
- 6. Voltage meter, single phase** A door-mounted analog or digital meter reads the voltage applied to the main input of the control panel.
- 7. Voltage meter, three phase** A door-mounted analog or digital meter and a four-position switch allows the customer to read the voltage applied to the main input on all three phases.
- 8. Optional controls** The standard 1/16th DIN control can be replaced by 1/8 or 1/4 DIN size controls.
- 9. Base—Load—Controller** When used with a zero-fired SCR Power Controller, a base-load-controller can help eliminate light flicker normally associated with large zero-fired loads. High harmonics and low power factor caused by large phase-fired loads can also be improved using a base-load-controller.
- 10. Heater power lamp** Door-mounted pilot lamp gives an indication of applied heater power.
- 11. Circuit breaker instead of main fused disconnect** Replaces the standard fused disconnect with a circuit breaker to provide automatic overcurrent protection.
- 12. Individual sub-circuit circuit breakers instead of fusing** Replaces the standard sub-circuit fusing with internally mounted circuit breakers.
- 13. Annunciation, audible horn** Provides for an audible horn to sound based on the temperature control's alarm condition. An acknowledge pushbutton switch is included. The horn would be mounted on the exterior of the enclosure.
- 14. Annunciation, flashing beacon** Provides for a flashing light to turn on based on the temperature control's alarm condition. An acknowledge pushbutton switch is included. The beacon would be mounted on the exterior of the enclosure.
- 15. Enclosure heater for outdoor use** A silicone rubber heater with thermostat or ceramic bulb enclosure heater to prevent freeze and condensation protection is mounted inside the enclosure. It would be properly sized for the enclosure used.

- 16. Mechanical cooling** For control systems that are used in hot environments or require complete enclosure sealing, active or passive cooling can be incorporated into the control panel. This includes cooling fans, air conditioners or vortex cooling.
- 17. Integral liquid level controls** Basic one-level liquid level controls can be incorporated into the safety contactor circuit to turn off the heater if the tank reaches a dangerously low level. Multi-level liquid level switch systems can be incorporated to provide pump or valve controls to maintain required levels.
- 18. Chart recorder** A PPR type data logger recorder (see page 12-2) can be mounted in the door to provide historical data records of the process being controlled.
- 19. Special paint** The enclosure can be custom painted to provide environmental protection or a unique color.
- 20. Tagging internal parts** Engraved phenolic tags can be added to the subpanel to identify components as depicted on the drawings provided. The tags will be attached to the subpanel near the identified part.
- 21. Utility outlet** 120 VAC for maintenance instruments, powered externally or internally. If powered internally, limited to 2 Amps.
- 22. Internal lighting package** A useful option for routine maintenance or troubleshooting.
- 23. Floor stand kit** This option provides a 12" stand kit for any wall-mounted enclosure, making it a free-standing floor model.
- 24. Enclosure mechanical options** Miscellaneous options such as a drip or solar shield can be added to the enclosure.

- 25. Approval drawings** This option is for when the customer requires approval drawings prior to release for manufacturing. (Standard documents are normally shipped with each control panel). With this option, Tempco will provide a copy of the proposed general layout drawing and electrical schematic for customer approval. The production process would not begin until after the *approval drawings* are signed and returned to Tempco.
- 26. HMI Operator Interface** Operator Interface touch screens are available and come pre-programmed by our engineers. A detailed description must be provided by the customer if a custom layout of the HMI is required. Otherwise, general controls and indicators will be included. Works well with or without a PLC option. Available in 4 full color sizes: 4.3", 7", 10" & 15". Built-in paperless data logger included.
- 27. PLC Automation/Process Control** If complex automation is needed, a PLC may be necessary. The PLC will be pre-programmed in-house by our engineering staff. As with the HMI option, a detailed description is required of the customer as to the specifics of the PLC program. Interfaces very well with our HMI option.

Please Consult Tempco if the Option You Require is Not Listed.

Control Panel Quote Request

Temperature Control Panel Quote Request Worksheet

1. General Information: Customer: _____ Date: _____
Contact Person: _____ Phone _____ E-mail: _____
Quote Number: _____ Quote Required By: _____ Salesperson: _____

2. Operating Environment:

Description of Application: _____
Heated Medium (liquid, solid, vapor) & Name _____ Process temperature _____
Installation Environment: indoor, wet, dry _____ NEMA rating _____
Hazardous Location Rating (if required) Class, Division, Group, Zone _____
Minimum & Maximum Ambient Temperatures _____

3. Control Panel Requirements:

Tempco Catalog Number (if applicable) _____ Quantity _____ Drawing Available _____
Any Enclosure Size Limitations _____ Wall Mounted Floor Mounted
Fused Disconnect or Main Circuit Breaker Required Yes No
Number of Controlled Zones _____ Heater Catalog Number _____
Heater Specifications: Watts _____ Volts _____ Phase _____ Amps _____ Number of Circuits _____ Quantity _____
Output Control Device: Magnetic Contactor SCR SSR Mercury Displacement Relay
Temperature Controller Model Number _____ Temperature Controller Sensor Type _____
Maximum Available Short Circuit Current Rating (SCCR) at Panel _____ KA (SCCR requirement)
FM High Limit Required (K t/c standard input) _____ Agency Approval(s) Required _____

4. Other Special Features Required: _____

Ordering Information

**Custom Engineered/Manufactured
Power Control Panels
Available From Tempco.
We Welcome Your Inquiries!**

1. For **Standard Process Control Panels** with the standard list of features, match your heater requirements to the control panels listed on page 13-59. Verify that the number of circuits match between the process heater and control panel and the watts and volts are sufficient.
2. If you require a **Standard Control Panel with Optional Features**, fill out a copy of the Quote Request Worksheet and E-mail it to Tempco. We will review your requirements and return to you a quote for a temperature control system matched to your needs.
3. If you require a **Custom Control Panel**, fill out a copy of the Quote Request Worksheet and fax it to Tempco. Include as much information as you can regarding the heater and application requirements. We will review your requirements and return to you a quote for a temperature control system matched to your needs.

WARNING: Cancer and Reproductive Harm - www.P65Warnings.ca.gov.

Temperature Control Panels — Enclosure Options

Tempco's **Control Panels** are built using NEMA 12 manufactured enclosures. Tempco can also design and manufacture panels to other standard NEMA ratings as described below.

The **Standard NEMA Enclosure Definitions** are listed for your convenience. Also included are comparison charts for indoor and outdoor enclosures.

Include the **NEMA Enclosure Rating** required on your Request for Quote.

Standard NEMA (National Electrical Manufacturers' Association) Enclosure Ratings

Type 1 General Purpose

Enclosures are intended for indoor use primarily to provide a degree of protection against contact with the enclosed equipment in locations where unusual service conditions do not exist.

Type 3 Weather Resistant & Windblown Dust Resistant

Enclosures are intended for outdoor use primarily to provide a degree of protection against windblown dust, rain, and sleet; and to be undamaged by the formation of ice on the enclosure.

Type 3R Weather Resistant

Enclosures are intended for outdoor use primarily to provide a degree of protection against falling rain and sleet, and to be undamaged by the formation of ice on the enclosure.

Type 4 Moisture & Windblown Dust Resistant

Enclosures are intended for indoor or outdoor use primarily to provide a degree of protection against windblown dust and rain, splashing water, and hose-directed water; and to be undamaged by the formation of ice on the enclosure.

Type 4X Moisture & Corrosion Resistant

Enclosures are intended for indoor or outdoor use primarily to provide a degree of protection against corrosion, windblown dust and rain, splashing water, and hose-directed water; and to be undamaged by the formation of ice on the enclosure.

Type 7 Explosion Resistant

Enclosures are capable of withstanding the pressures resulting from an internal explosion of specified gas, and containing such an explosion sufficiently that an explosive gas-air mixture existing in the atmosphere surrounding the enclosure will not be ignited.

Type 12 Resistant to Dirt & Dripping Non-Corrosive Liquids

Enclosures are intended for indoor use primarily to provide a degree of protection against dust, falling dirt, and dripping non-corrosive liquids.

Standard Supplied Enclosure: Type 12

Comparison of Outdoor Rated Enclosures

Provides a degree of protection against the following conditions:	Type of Enclosure			
	3	3R	4	4X
Incidental contact with enclosed equipment	X	X	X	X
Rain, snow and sleet	X	X	X	X
Windblown dust	X		X	X
Hosedown (hose-directed water)			X	X
Corrosive agents				X

Comparison of Indoor Rated Enclosures

Provides a degree of protection against the following conditions:	Type of Enclosure				
	1	4	4X	7	12
Incidental contact with enclosed equipment	X	X	X	X	X
Falling dirt	X	X	X	X	X
Falling liquids and light splashing		X	X	X	X
Dust, lint, and fibers		X	X	X	X
Hosedown (hose directed water)		X	X		
Oil and coolant seepage				X	X
Corrosive agents			X	X	
Potentially explosive gas-air mixture				X	
Windblown dust				X	X

Five-stage heater control panel with PC controlled SCR for Class 8 truck wind tunnel testing.

MX Hot Runner Controls

MX HOT RUNNER

Injection Molding Temperature Control Systems

Improve your injection molding output...switch to Tempco's MX Hot Runner Temperature Control System

The MX System includes:

- ▶ Mainframes
- ▶ 2 types of Temperature Control Modules
- ▶ Cables—Heater Power and Thermocouple
- ▶ Wiring Junction Boxes
- ▶ Input Connectors
- ▶ Floor Stands
- ▶ Accessories

Temperature Control Modules

Tempco's **IMP Series Module** provides one of the most technically advanced temperature controls available today. IMP modules use state-of-the-art microprocessor-based circuitry to perform all required PID functions. Units have built-in diagnostics and are fully self-tuning. Setpoint temperatures are maintained without the need to manually preset or adjust the control temperature. Merely set the desired temperature and turn the power on. The module will automatically sense the heat-up rate and control any setpoint temperature deviation.

Design Features

- * *PID Control*
- * *CompuStep® Soft Start*
- * *CompuCycle®*
- * *Manual Control*

Part Number: TKA20001

Specifications

Temperature Range: Ambient to 999°F (535°C)

Sensor Input: Type J thermocouple

Control Accuracy: ±1.0°F (±0.5°C), dependent on total thermal system

Calibration Accuracy: Better than 0.2% of full scale

Voltage: 240 VAC standard, 120 VAC available

Power Output: 15A @ 240 or 120 VAC 50/60 Hz

Output Switch: Internal zero cross triac

Fusing: High speed fuses on both sides of line

Setpoint Control: Precision 3-digit pushbutton

Manual Power Control: Single turn potentiometer

Mode Control:

3 Positions: Top—Manual mode; Middle—Auto mode; Bottom—Auto mode with soft start

Tempco's **RMB Temperature Control Module** represents the state of the art in Hot Runner temperature control technology. Virtually every feature a moldmaker could want is contained in the module. The RMB's flexible microprocessor-based programming allows the user to modify 17 parameters via the front panel. Once entered, the non-volatile memory automatically saves the parameter modifications.

Design Features

- * *CompuStep®*
- * *CompuCycle® Soft Start*
- * *Easy Start-Up Procedure*
- * *High and Low Deviation Alarms*
- * *Open Thermocouple Error Programming*
- * *Dual Digital Display*
- * *Advanced Diagnostics*
- * *Current Monitor*

Part Number: TKA20005

Specifications

Temperature Range: 32 to 999°F (0 to 535°C)

Sensor Input: Type J or K thermocouple, switch selectable

Control Accuracy: ±0.1°F (±0.1°C) dependent on total thermal system

Calibration Accuracy: Better than 0.2% of full scale

Voltage: 115 to 230 VAC, ±10%

Power Output: 15A @ 240 or 120 VAC 50/60 Hz

Output Switch: Internal zero cross triac

Fusing: High speed fuses on both sides of line

Setpoint Control: two buttons—up and down

Manual Power Control: two buttons—up and down

Mode Control:

3 LEDs: Top/Manual mode

Middle—Auto mode

Bottom—Auto mode with soft start

Improve your injection molding output...switch to Tempco's MX Hot Runner Temperature Control System

Mainframes

The configurations illustrated below provide a wide selection of zone capacities to suit almost any control application. The 5, 8 and 12 zone frames use individual frame sections. The 16 through 48 zone frames use 2, 3 or 4 frame sections rigidly fastened together into one prewired integral unit which requires only one main AC power input connection.

Ordering Information

The following mainframes are set up for 15 Amp per zone IMP or RMB control modules, 240 VAC 3-phase 60 Hz power input. Other power configurations are available; consult Tempco for more information.

Standard lead time is 3 to 4 weeks.

Description	Standard
5-Zone	TKA21005
8-Zone	TKA21008
12-Zone	TKA21012
16-Zone	TKA21016
20-Zone	TKA21020
24-Zone	TKA21024
28-Zone	TKA21028
32-Zone	TKA21032
36-Zone	TKA21036
40-Zone	TKA21040
44-Zone	TKA21044
48-Zone	TKA21048

Note: To order a complete Hot Runner Control System the following must be ordered separately:

- Control Modules
- Mainframe
- Power Mold Cable
- Thermocouple Mold Cable
- Mold Wiring Junction Box (if required)

Mainframe Zone Configurations

⚠ WARNING: Cancer and Reproductive Harm - www.P65Warnings.ca.gov.

Mold Cables

Power Cables

Used to connect the mainframe to the hot runner injection mold for heater power.

Number of control zones	10 ft.	20 ft.
5-Zone	TKA22105	TKA22205
8-Zone	TKA22108	TKA22208
12-Zone	TKA22112	TKA22212

Thermocouple Cables

Used to connect the mainframe to the hot runner injection mold for thermocouple signal.

Number of control zones	10 ft.	20 ft.
5-Zone	TKA23105	TKA23205
8-Zone	TKA23108	TKA23208
12-Zone	TKA23112	TKA23212

Mold Connectors

Power Connector

Used to connect the heater wiring to the power mold cable. Mounts directly on the mold or a wiring junction box.

Part Number	
5-Zone	TKA24005
8-Zone	TKA24008
12-Zone	TKA24012

Thermocouple Connector

Used to connect the thermocouples to the thermocouple mold cable. Mounts directly on the mold or a wiring junction box.

Part Number	
5-Zone	TKA24105
8-Zone	TKA24108
12-Zone	TKA24112

Mold Wiring Junction Boxes

Mold Wiring Junction Boxes are mounted directly on the injection mold. The heaters and thermocouples are wired to the connectors and are ordered separately.

Mold Wiring Junction Box for Power Input Connectors

(for 5-, 8- or 12-zone connectors)

Part Number	"X"	"Y"
TKA25001	4.250"	4.875"

Mold Wiring Junction Box for Thermocouple Input Connectors

Zones	Part Number	"X"	"Y"
5	TKA25005	4.250"	4.875"
8	TKA25008	4.990"	5.614"
12	TKA25012	6.052"	6.676"

Combination Mold Wiring Junction Box for Thermocouple and Power Input Connectors

Zones	Part Number	"X"	"Y"
5	TKA25105	8.031"	8.655"
8	TKA25108	8.843"	9.467"
12	TKA25112	9.906"	10.530"

Solid State Variable Power Controllers

Tempco's Solid State Variable Power Controllers are an excellent value for your power controlling needs. Used in an open loop, non-feedback control system, these power controllers regulate input versus output voltage for controlling any of a number of processes where a fixed applied voltage is desired. The solid state technology allows these controllers to be smaller and lighter than ever, and useful in areas where variable voltage transformers are not a viable choice.

Surface Panel Mount 10 Amp Unit

Design Features

- * 2400 Watts @ 240 Volts
- * Compact 2" Cube Size
- * Two-Wire Termination
- * Environmentally Protected
- * 1200 Watts @ 120 Volts
- * One-Hole Mounting
- * High Thermal Efficiency
- * Built-In Fuse for Protection

Part Number 120V: **SRS00010** (Discontinued)

Part Number 240V: **SRS00020**

Specifications

- Input Voltage:** 120V and 240V AC, single phase, 50/60 Hz
- Current Rating:** 10 Amps @ 75°C
- Maximum Load:** 120V-1200 Watts / 240V-2400 Watts
- Output Voltage:** 120V=0 to 118V / 240V=0 to 238V
- Operating Temp. Range:** -40 to 80°C
- Dielectric Insulation:** 1600 Volts RMS @ 80°C for 1 min.
- Control Mode:** Phase Angle

Typical Applications

- ◆ Heaters – Injection and Blow Molding
- ◆ Hot-Runner Mold Cartridge
- ◆ Machine Nozzle
- ◆ Platen Heaters
- ◆ Other Resistive Loads

Recess Mount with Remote Knob 25 Amp Unit

Design Features

- * Solid State Circuit
- * Modified Transient Suppression
- * Remote Mounting Capabilities
- * Knob and Dial Plate
- * Aluminum Heat Sink

Power Controller Part Number: **SRS00030**

Optional Heat Sink Part Number: **SRS00035**

Heat Sink Dimensions: 3" x 5-1/4" x 2-3/8"H (76 x 133 x 60 mm)

Specifications

- Input Voltage:** 120V and 240V AC, single phase, 50/60 Hz
- Current Rating:** 15 Amps, 25 Amps with optional heat sink
- Power Consumption:** 50 Watts (maximum)
- Output Voltage:** Adjustable from 17 to 99% of applied voltage
- Maximum Temperature:** 167°F (75°C) at base plate center
- Dimensions:** 3-1/2" x 2-1/2" x 2-1/8"H (89 x 63 x 54 mm)
- Mounting Centers:** 2-5/8" (137.5 mm)

Contract Manufacturing Through Tempco for Electronic OEM Control Systems

*Is your company an OEM that utilizes Electronic Control Systems for the manufacturing of your products?
Are you interested in reducing your costs without compromising quality? Let Tempco help you achieve your goals!*

We can provide you with Electronic Control Systems from Printed Circuit Board Assemblies to Full Blown Sub-Assemblies, including Metal Brackets, Injection Molded Parts, Wire Harnesses and Connectors, through our overseas affiliated manufacturing partners. Taking advantage of the labor rates available globally, Tempco offers extremely competitive prices without compromising quality.

Tempco has had components manufactured internationally for years and has developed a network of qualified affiliated manufacturing partners. Let Tempco assume all of the responsibilities associated with doing business overseas, such as overcoming language barriers, controlling quality, and eliminating problems with payment, importing and shipping.

OEM Advantages of working with Tempco:

- * *Tempco will inventory the product locally*
- * *Contracted delivery for one year or longer*
- * *Just-in-Time shipping schedules*
- * *Uninterrupted supply of product*

In order to develop a quote for your OEM Electronic Control System, Tempco requires submission of a sample and any documentation you have, as described below.

Confidentiality:

To protect your proprietary design information and product, Tempco will sign and honor a Non-Disclosure Agreement with your company.

Limited Sample of Manufacturing Capabilities

Full Range of Standard Test Equipment

Quality Control using Automated Test Equipment in a Clean Room Environment

Environmental Test Chamber for Product Burn-In

Information Required for Quote Request

In order to provide you with a quote on a contract manufacturing project, the following information should be provided to Tempco.

- 1. Physical Sample** – Illustrates how the components of the assembly work together.
- 2. Electronic Design Schematic** – Defines how the components on the PCB are connected together.
- 3. Bill of Material** – Defines all the components used in the assembly from the parts on the PCB to brackets, switches, knobs, etc., in addition to the PCB assembly.
- 4. Written Description of the Product Requirements and Specifications** – Defines the purpose of the assembly.
- 5. Written Description of all Functions and Background Information** – Describes how the product requirements and specifications are to be accomplished.
- 6. Wiring Diagram** – Defines how the assembly fits into the rest of the system.
- 7. Microprocessor Software Source Code** – If the electronic assembly includes a microprocessor (single chip micro industrial computer) there is a software program to make it run, commonly referred to as the "source code." If the source code is not provided,

engineering may be able to "lift" it from the sample for a fee. The source code is usually provided as a file on a disk.

8. Sources and Manufacturer's Part Numbers – A list for any required critical external connectors and required components such as knobs or switches to maintain continuity.

9. Manufactured Mechanical Components – An engineering drawing that defines material, finish, dimensions for overall size, mounting hole locations, etc. for any required sheet metal bracket or faceplate to be manufactured.

10. Artwork – Engineering artwork for any unique silkscreen printing, label or logos involved in the project (if no drawing is provided the sample may be copied).

11. Printed Circuit Board Drawing – An engineering drawing that defines material, overall size, mounting holes, etc.

Any additional information provided to Tempco will assist us in reducing your cost and expediting the project by eliminating engineering time spent on redesigning components.

We Welcome Your Inquiries!

Modular Temperature Process Control Boards

Product Examples

Organic Fuel Cooking Controller

- * *Temperature Adjustment by Selector Switch*
- * *Multiple Outputs for Heater Ignitor, Feed Motor and Ventilation Fan*
- * *3 - Digit LED Display*
- * *Input Connector for 1000 ohm RTD Temperature Sensor*
- * *120 and 240 VAC Versions*

Specialized Industrial Process Controller

- * *PID Temperature Control*
- * *2 Motor Control Outputs*
- * *4 Alarm Relay Outputs*
- * *3 Sensor Inputs*
- * *3 Proximity Switch Inputs*
- * *3 Internal Timer Circuits*
- * *Emergency Modem Connection*

Industrial Equipment Digital Controller

- * *High Precision and Wide Range*
- * *Wide Timer*
- * *LED Display with Clock Setting*
- * *Memory Backup and Auto Resume*

Commercial Furnace Controller

- * *Membrane Switch Front Panel Overlay with LED Windows*
- * *Heat/Temperature Setting*
- * *Fan Speed Setting*
- * *2 Printed Circuit Board Assemblies*
- * *3-Part Injection Molded Housing*
- * *Shipped Completely Assembled*

Environmental Test Chamber

- * *Heat or Cool Setting*
- * *Blower Speed Setting*
- * *Digital Temperature Display*
- * *Set Back/Sleep Mode*
- * *Multiple Relay Outputs*

*This represents a small portion of the various products
Tempco has provided to our customers.
We welcome your inquiries!*

Introduction to Silicon Controlled Rectifier (SCR) Power Controllers

Features and Benefits of SCRs

- * **High reliability**
Because the SCR power controller is a solid-state device, it provides virtually limitless, trouble-free operation with a minimum of maintenance.
- * **Infinite resolution**
Power, current or voltage can be controlled from zero to 100% with infinite resolution.
- * **Extremely fast response**
The SCR controller can toggle-load power on and off rapidly, providing the means to respond quickly to command, load and power supply changes.

The SCR

The SCR has two states, *On* and *Off*, and allows current to flow in only one direction. An SCR unit is composed of two SCRs arranged to control AC power. SCRs can remain in the off state even though the applied potential may be several thousand volts; in the on state, they can pass several thousand amperes. When a small signal is applied the SCR will turn on in 10-100 microseconds. Once turned on it will remain on until the current through it is reduced below a very low value called the holding current.

Basically, an SCR power controller consists of the following:

- Semiconductor power devices (SCRs and diodes)
- A control circuit normally referred to as the firing circuit
- A means to dissipate the generated heat
- Protective circuits (fuses and transient suppressors)

True Power Regulation / Current Limit It uses output voltage, current, conduction angle, phase shift, and power factor to monitor and regulate the output. It will provide output power that is constant, regulated and linear to the command signal. This option includes an RMS current limit (adjustable from 35 to 125% of the unit's rating) and has a 0-5 VDC output that is proportional to the load power.

Over-Current Trip Tempco's over-current trip is peak current sensing. The circuit will shut down the SCR within a half-cycle of AC current. It includes an automatic or manual reset that allows the user to select the reset mode after an alarm. A relay output is available for alarming or shutdown. Adjustable from 100 to 300% of the unit's rating.

RMS Current Regulation / Over-Current Trip It will hold the output current constant regardless of the load resistance, based upon the command signal input. This option includes an RMS current trip adjustable from 35 to 125% of the unit's rating.

Distributive Zero-Cross Control

The term zero-cross or synchronous operation of SCRs is derived from the fact that the SCRs are turned on only when the instantaneous value of the AC sinusoidal waveform is zero. Zero-cross controllers can provide two rather distinctively different types of control: time proportioning control, and distributive control.

The Distributive Control Technique combines power pulses of short duration to obtain the exact power level proportional to the command signal or setpoint.

Phase-Angle Control

In phase-angle control the SCR unit is turned on at a certain phase angle of the AC power supply that provides the correct percentage of power. Power is regulated by advancing or delaying the point at which the SCR is turned on within each half cycle. Shown is an example of this for 50% power output.

Phase-angle control provides a very fine resolution of power and is used to control fast responding loads such as tungsten-filament lamps or loads in which the resistance changes as a function of temperature. Phase-angle control is required if the load is transformer-coupled or inductive.

Phase-angle controllers are typically more expensive than zero-cross controllers because the phase-angle circuit requires more sophistication than a zero-cross circuit. Phase-angle control of three-phase power requires SCRs in all three legs and is appreciably more expensive than zero-cross control, which only requires SCRs in two of the three legs.

Optional (SCR) Features

RMS Current Limit / Over-Current Trip The output current can be adjusted to automatically limit or clamp the maximum RMS current available from the SCR power control. It is settable from 35 to 125% of the unit's rating. This option includes an RMS current trip adjustable from 35 to 125% of the unit's rating.

Over-Temperature Thermostat These are bi-metal snap action thermostats that open or close when the heat sink's temperature exceeds its maximum operating temperature. Standard on all SCR power controls starting at 90 Amps. Specify NO or NC when ordering, or a NO thermostat will be included.

Load Unbalance Alarm The unbalance alarm monitors and compares the current in each of the three phases. If the current deviates more than the setpoint allows, an alarm relay is actuated.

SCR Module Failure Alarm This option monitors the voltage drop across each of the SCRs. Since most SCRs fail shorted (zero voltage drop) this is the most accurate method to detect a failed SCR module. A relay output is provided.

SCR Power Controller "A" Series — Single Phase 15 through 70 Amp

Design Features

- * Electrically Isolated Heat Sink
- * Conservative Thermal Design
- * Voltage Squared Linearity
- * Transient Voltage Protection
- * Multi-Turn Zero & Span Adjustments
- * UL, cUL, CE Compliant

The "A" Series SCR Power Controllers are a compact and economical power control solution for industrial applications that require high reliability and long life. The fast solid state switching provides superior performance over relays, contactors and other slower cycling controllers by reducing temperature variations associated with the longer on-off cycles of those devices. The result is a more precise control of the heating process and extended heater life.

- Fast Cycling Distributive Zero Cross or Phase Angle Firing Control Modes
- Line Voltage Compensation
- Compact Size; Diagnostic LED; Increased Heater Life

Specifications

Command Signals: 4-20mA; 0-5 VDC; 0-10 VDC; potentiometer

Control Mode: Distributive Zero Cross; Phase Angle Firing

Load Current: 15, 25, 40 or 70 Amps

Line Voltage: 120, 240, 480, or 575 VAC; +10% -20% 50/60 Hz

Zero and Span: Factory pre-set. User adjustable over a range of 20% of span.

Transient Voltage and dv/dt: 200 volts/microsecond minimum. Uses a dv/dt snubber and a metal oxide varistor. (MOV)

Control Range

Zero Cross: 0 to 100% of line voltage

Phase Angle Firing: 0 to 97% of line voltage

Linearity

Zero Cross: Linear with respect to the command signal

Phase Angle Firing: RMS load voltage is linear within 2% of the command signal.

Temperature

Operating: 32 to 122°F (0 to 50°C)

Storage: 14 to 198°F (-10 to 70°C)

Cooling: Convection

Mounting: Panel mount with heat sink fins vertical

Dimensions

15-40 Amp units—Overall: 4.75"W × 6.0"H × 3.1"D

Mounting Centers: 4.35"W × 4.5"H

70 Amp units—Overall: 8.5"W × 10"H × 5"D

Mounting Centers: 8.0"W × 8.75"H

Weight

15-40 Amp units: 1.2 lb.

70 Amp units: 3 lb

Notes: Fusing is not included. Class T fuses are recommended.

All control input configurations require 24 VAC power supply except zero cross with 4-20mA input.

"A" Series SCR Power Controllers are offered with the options listed in the worksheet below. Fill in the boxes with the appropriate number and/or letter designation for your requirements and a part number will be assigned.

Ordering Code: **SRSA** -

Control Mode BOX 1

Z: Distributive Zero Cross
P: Phase Angle Fire

Load Current BOX 2

xx: 15, 25, 40 or 70 Amps

Line Voltage BOX 3

1: 120 VAC
2: 240 VAC
3: 480 VAC
4: 575 VAC

Control Input BOX 4

A: 4 to 20 mA
B: 0 to 5 VDC
C: 0 to 10 VDC
D: Potentiometer

Note: All control input types require additional 24 VAC power input, except zero cross firing with 4-20mA.

Options (up to two) BOXES 5, 6

(for zero cross or phase angle fire models)
E: Over-Temperature Thermostat – N.O. Contacts
F: Over-Temperature Thermostat – N.C. Contacts
N: None
(for phase angle fire models only)
C: RMS Current Limit
J: Over-Current Trip

COMMON CONFIGURATIONS — "A" SERIES 240 VAC; 1-phase; 4-20 mA input

Load Current:	Zero Cross	Phase Angle	Part Number
15 Amp	SRS01101	SRS02101	
25 Amp	SRS01102	SRS02102	
40 Amp	SRS01103	SRS02103	
70 Amp	SRS01104	SRS02104	

Potentiometer Kit (ordered separately): 5KΩ potentiometer and knob
Part number: SRS99001

Multi-Tap Transformer **Input:** 120/240V, 400V, 480V or 575V
Output: 24VAC
Part number: SRS99002

Standard lead time is 2 to 3 weeks.

Temperature Controllers

Single Phase SCR Power Controllers

SCR Power Controller "B" Series—Single Phase 60 through 1200 Amp

The "B" Series SCR Power Controllers are a compact and economical power control solution for industrial applications that require high reliability and long life. The fast solid state switching provides superior performance over relays, contactors and other slower cycling controllers by reducing temperature variations associated with the longer on-off cycles of those devices. The result is a more precise control of the heating process and extended heater life.

Design Features

- * Conservative Thermal Design
- * Compact Size
- * Voltage Squared Linearity
- * Line Voltage Protection
- * Includes Semiconductor I²T Fuses
- * Diagnostic Indicators
- * Multi-Turn Zero & Span Adjustments
- * UL, cUL Compliant

Specifications

Command Signals: 4-20mA; 0-5 VDC; 0-10 VDC; potentiometer

Control Mode: Distributive Zero Cross; Phase Angle Firing

Load current: Zero Cross or Phase Angle Fire Output

Amperage Ratings: 60, 90, 120, 180, 225, 350, 500, 650, 800, 1000, 1200

Line Voltage: 120, 240, 480, or 575 VAC; 10% to 20% 50/60 Hz

Zero and Span: Factory pre-set. User adjustable over a range of 20% of span.

Transient Voltage and dv/dt: 200 volts/microsecond minimum. Uses a dv/dt snubber and a metal oxide varistor (MOV).

Control Range

Zero Cross: 0 to 99.5% of line voltage

Phase Angle Firing: 0 to 97% of line voltage

Linearity

Zero Cross: Linear with respect to the command signal

Phase Angle Firing: RMS load voltage is linear within 2% of the command signal.

"B" Series SCR Power Controllers are offered with the options listed in the worksheet below. Fill in the boxes with the appropriate number and/or letter designation for your requirements and a part number will be assigned.

Temperature

Operating: 32 to 122°F (0 to 50°C)

Storage: 14 to 158°F (-10 to 70°C)

Cooling: 60 Amp convection; all others fan cooled

Mounting: Panel mount with heat sink fins vertical

Dimensions

60-225 Amp units—Overall: 9.5"W × 16.25"H × 9.25"D

Mounting Centers: 7.0"W × 15.69"H

350 and 500 Amp units—Overall: 14.75"W × 20.125"H × 8.5"D

Mounting Centers: 13.0"W × 18.375"H

650 Amp units—Overall: 16.75"W × 23.0"H × 11.5"D

Mounting Centers: 15.75"W × 22.0"H

800-1200 Amp units: Overall: 16.75"W × 29.0"H × 12.0"D

Mounting Centers: 15.75"W × 13.0" Top/15.0" Bottom

Weight

60-225 Amp units: 22 lbs

350-500 Amp units: 24 lbs

600 Amp units: 47 lbs

800-1200 Amp units: 71 lbs

SCR Power Controller "C" Series — Three Phase 15 through 70 Amp (2-Leg – Zero Cross)

Design Features

- * Electrically Isolated Heat Sink
- * Conservative Thermal Design
- * Voltage Squared Linearity
- * Transient Voltage Protection
- * Multi-Turn Zero & Span Adjustments
- * UL, cUL, CE Compliant
- * Ideal for: Electric Ovens, Furnaces and Kilns, Environmental Chambers and Extruders

The "C" Series SCR Power Controllers are two-leg zero cross SCR power controllers that linearly control, proportional to the command signal, the power applied to a 3-phase electrical load. The controller consists of a master and slave assembly. Each assembly consists of a heat sink and an SCR module. The master assembly contains the control circuit card which controls the on-off cycles for both assemblies.

Specifications

- Command Signals:** 4-20mA; 0-5 VDC; 0-10 VDC; potentiometer
Control Mode: Distributive Zero Cross
Load Current: 15, 25, 40 or 70 Amps
Line Voltage: 208, 240, 277, 480 or 575 VAC; 10% to 20% 50/60 Hz
Zero and Span: Factory pre-set. User adjustable over a range of 20% of span.
Transient Voltage and dv/dt: 500 volts/microsecond minimum.
 Uses a dv/dt snubber and a metal oxide varistor (MOV).
Control Range: 0 to 100% of line voltage
Linearity: Average load voltage is linear within 1% of the command signal.

- Temperature**
Operating: 32 to 122°F (0 to 50°C)
Storage: 14 to 158°F (-10 to 70°C)
Cooling: Convection
Mounting: Panel mount with heat sink fins vertical
Dimensions
15-40 Amp units—Overall: 9.61"W x 6.0"H x 3.1"D
Mounting Centers: 4.35"W x 4.5"H (each heat sink)
70 Amp units—Overall: 17.25"W x 10"H x 5"D
Mounting Centers: 8.0"W x 8.75"H (each heat sink)

- Weight**
15-40 Amp units: 2.5 lbs **70 Amp units:** 5.7 lbs

"C" Series SCR Power Controllers are offered with the options listed in the worksheet below. Fill in the boxes with the appropriate number and/or letter designation for your requirements and a part number will be assigned.

Notes: Fusing is not included. Class T fuses are recommended. All control input configurations require 24 VAC power supply except zero cross with 4-20mA input.

Ordering Code: **SRTC** - 1 2 3 4 5

Control Input BOX 1
A: 4 to 20 mA
B: 0 to 5 VDC
C: 0 to 10 VDC
D: Potentiometer

Note: All control input types require additional 24 VAC power input, except 4-20mA.

Load Current BOX 2
xx: 15, 25, 40 or 70 Amps

Line Voltage BOX 3

Temperature Controllers

Three Phase SCR Power Controllers

SCR Power Controller "D" Series — Three-Phase 60 through 1200 Amp (2-leg – Zero Cross)

The "D" Series SCR Power Controllers are two-leg zero cross SCR power controls that linearly control, proportional to the command signal, the power applied to a 3-phase electrical load.

The Series "D" controller features a compact design, a single plug-in circuit card for ease of operation and an electrically isolated heat sink. All three leads are fused.

Design Features

- * Back to Back SCRs
- * Includes 3 Semiconductor P²T fuses
- * Line Voltage Compensation
- * Diagnostic Indicators (Control Power, Command Signal, Blown Fuse)
- * Fan Cooled on 90 Amp and higher units
- * Transient Voltage Protection
- * Voltage Squared Linearity
- * Electrically Isolated Heat Sink
- * Multi-Turn Zero & Span Adjustments
- * UL, cUL, CE Compliant

Partial case shown for 60 to 225 Amp units. 350 Amp and up use a caseless, open panel mount design.

Specifications

Command Signals: 4-20 mA; 0-5 VDC; 0-10 VDC; potentiometer

Control Mode: Distributive Zero Cross

Load Current per Leg: 60, 90, 120, 180, 225, 350, 500, 650, 800, 1000, 1200 Amps

Line Voltage: 208, 240, 480 or 575 VAC; 10% to 20% 50/60 Hz

Zero and Span: Factory pre-set. User adjustable over a range of 20% of span.

Transient Voltage and dv/dt: 200 volts/microsecond minimum. Uses a dv/dt snubber and a metal oxide varistor (MOV).

Control Range: 0 to 99.5% of line voltage

Linearity: Average load voltage is linear within 2% of the command signal.

Temperature

Operating: 32 to 122°F (0 to 50°C)

Storage: 14 to 158°F (-10 to 70°C)

Cooling: 60A convection; all others fan cooled

Mounting: Panel mount with heat sink fins vertical

Dimensions

(60 to 225 Amp units use a partial case design. 350 Amp and up use a caseless, open panel mount design.)

60-225 Amp units—Overall: 12.5"W × 16.25"H × 9.25"D
Mounting Centers: 10.0"W × 15.69"H

350 and 500 Amp units—Overall: 19.0"W × 20.125"H × 8.5"D
Mounting Centers: 17.25"W × 18.375"H

650 Amp units—Overall: 24.0"W × 23.0"H × 11.5"D
Mounting Centers: 23.0"W × 22.0"H

800-1200 Amp units: Overall: 27.0"W × 29.0"H × 11.75"D
Mounting Centers: 26.0"W × 13.75" Top/14.25" Bottom

Weight

60-225 Amp units: 31 lbs

350-500 Amp units: 41 lbs

650 Amp units: 87 lbs

800-1200 Amp units: 180 lbs

Ordering Code: SRTD - 1 2 3 4 5

SCR Power Controller "E" Series — Three-Phase 60 through 1200 Amp (3-leg – Phase Angle Fire)

The "E" Series SCR Power Controllers are three-phase, six SCR, phase angle power controls. 5 LEDs monitor line, command signal, 3-line current. They are ideal for electric ovens, furnaces and kilns, silicone carbide, transformer coupled loads.

Design Features

- * Back to Back SCRs
- * Includes 3 Semiconductor I²T Fuses
- * Line Voltage Compensation
- * Diagnostic Indicators (Control Power, Command Signal, Blown Fuse)
- * Fan Cooled on 90 Amp and Higher Units
- * Transient Voltage Protection
- * Voltage Squared Linearity
- * Electrically Isolated Heat Sink
- * Multi-Turn Zero & Span Adjustments
- * UL, cUL, CE Compliant

Partial case shown for 60 to 225 Amp units. 350 Amp and up use a caseless, open panel mount design.

Specifications

- Command Signals:** 4-20 mA; 0-5 VDC; 0-10 VDC; potentiometer
- Control Mode:** 3-Leg – Phase Angle Fire
- Load Current:** 60, 90, 120, 180, 225, 350, 500, 650, 800, 1000, 1200 Amps
- Line Voltage:** 120, 208, 240, 380, 415, 480 or 575 VAC; 10 to 20% 50/60 Hz
- Zero and Span:** Factory pre-set. User adjustable over a range of 25% of span.
- Transient Voltage and dv/dt:** 200 volts/microsecond minimum. Uses a dv/dt snubber and a metal oxide varistor (MOV).
- Control Range:** 0 to 98% of line voltage
- Linearity:** Average load voltage is linear within 2% of the command signal.
- Options Available:** See Ordering Box
- Temperature**
Operating: 32 to 122°F (0 to 50°C)
Storage: 14 to 158°F (-9 to 70°C)
- Cooling:** 60A convection; All others fan cooled)

Mounting: Panel mount with heat sink fins vertical, or any position if fan cooled

Dimensions

(60 to 225 Amp units use a partial case design. 350 Amp and up use a caseless, open panel mount design.)

- 60-225 Amp units—Overall:** 17.5"W × 16.25"H × 9.25"D
Mounting Centers: 15.0"W × 15.69"H
- 350 and 500 Amp units—Overall:** 19.0"W × 31.0"H × 8.5"D
Mounting Centers: 17.25"W × 14.37" Top/14.37" Bottom
- 650 Amp units—Overall:** 24.0"W × 34.75"H × 11.25"D
Mounting Centers: 23.0"W × 16.25" Top/17.5" Bottom
- 800-1200 Amp units: Overall:** 27.0"W × 38.75"H × 11.75"D

Bulb and Capillary Thermostats

Thermostat Styles and Selection

Construction Characteristics

This type of control operates by expansion and contraction of a liquid in response to temperature change. Liquid contained within the sensing bulb and capillary flexes a diaphragm,

causing the opening and closing of a snap-action switch. For heating applications the contacts are normally closed and open on temperature rise. See Page 13-77 for typical wiring diagrams.

Style A
Single-Pole Thermostat

- * General purpose thermostat recommended for most applications.
- * Capable of controlling loads from 120V/30A up to 480V/20A

Style B
Double-Pole Thermostat

- * Recommended for directly controlling high wattage loads due to its heavy duty contacts.
- * Capable of controlling loads up to 30 Amps at 277 VAC and 10 Amps at 480 VAC

Thermostat Electrical Ratings: Normally Closed Contacts, Open on Temperature Rise – Adjustable

- NOTES:**
- Knobs, Bezels and Pilot Lamps are optional and must be ordered separately from the thermostat.
 - Knob TST-104-119 graduated in °C (15-120) is available as an alternate for the standard TST-104-103 knob graduated in °F (60-250).
 - For Thermostat Enclosures refer to page 13-79.

Thermostat Style A (Single Pole—Single Throw)

Typical circuit when voltage and/or line current does not exceed thermostat ratings

1Ø or 3Ø circuit if line voltage and/or current exceeds thermostat rating

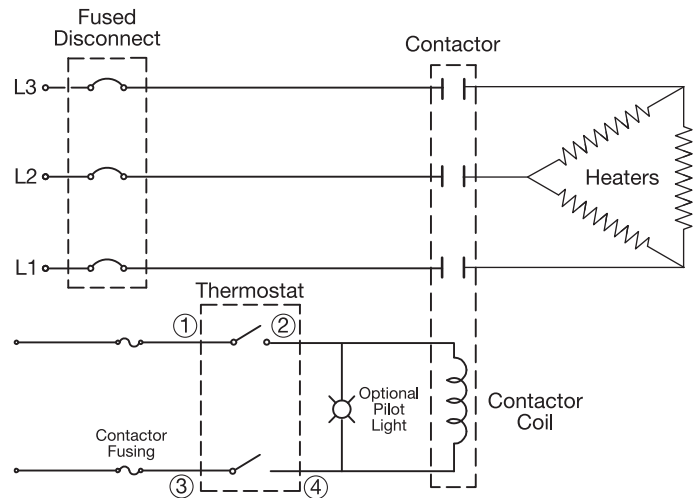

Thermostat Style B (Double Pole—Single Throw)

Typical circuit when voltage and/or line current does not exceed thermostat ratings

1Ø or 3Ø circuit if line voltage and/or current exceeds thermostat rating

Stock Thermostat Kits

Double-Pole Thermostat Kits include the following components:

Part Number TSTR-1008 with Style B Thermostat	
TST-110-103	Thermostat with 100 to 550°F Range
TST-104-104	Knob
EHD-109-103	Pilot lamp
TST-111-101	Bezel

Part Number TSTR-1009 with Style B Thermostat	
TST-110-102	Thermostat with 60 to 250°F Range
TST-104-103	Knob
EHD-109-103	Pilot lamp
TST-111-101	Bezel

NOTE: Double-Pole Thermostat Kits can also be installed separately from the heater in housing HSGR-1004 shown on page 13-79.

Bulb & Capillary Thermostats

Thermostat Styles and Selection

Style C Double-Pole Thermostat

- * Secondary high limit circuit with manual reset
- * High limit tracks 25°F above setpoint temperature
- * High limit latches open until manual reset is pushed in the event that temperature exceeds 25°F above setpoint
- * Capable of controlling loads up to 30 Amps at 277 VAC

Style D Single-Pole Thermostat

- * General purpose thermostat recommended for most applications
- * Capable of controlling loads up to 25 Amps at 240 VAC

Thermostat Electrical Ratings: Normally Closed Contacts, Open on Temperature Rise – Adjustable

NOTES:

1. Knobs, Bezels and Pilot Lamps are optional and must be ordered separately from the thermostat.
2. Knob TST-104-119 graduated in °C (15-120) is available as an alternate for the standard TST-104-103 knob graduated in °F (60-250).
3. Knob TST-104-105 is a plain pointer knob, not calibrated for the range.
4. Knob TST-104-102 is printed with 4 through 10, not calibrated for the range.
5. For Thermostat Enclosures refer to page 13-79.

Thermostat Style C (Double Pole—Single Throw) with Reset

Typical circuit when voltage and/or line current does not exceed thermostat ratings

1Ø or 3Ø circuit if line voltage and/or current exceeds thermostat rating

Thermostat Style D (Single Pole—Single Throw)

Typical circuit when voltage and/or line current does not exceed thermostat ratings

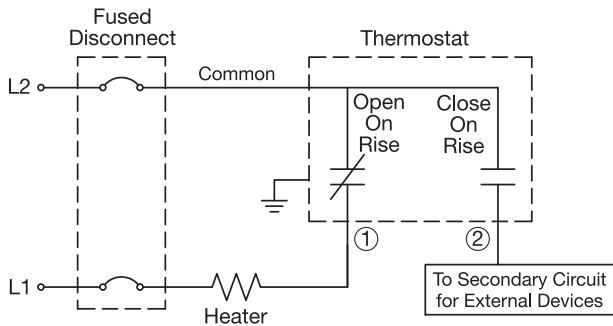

1Ø or 3Ø circuit if line voltage and/or current exceeds thermostat rating

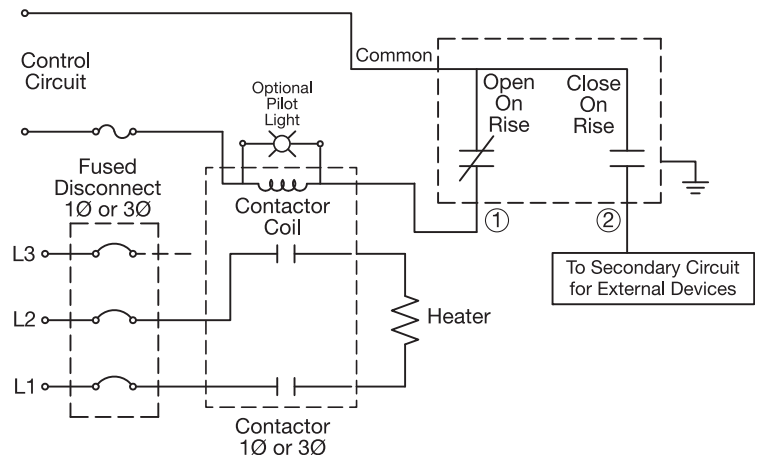

Thermostat Style D (Single Pole—Double Throw)

Typical circuit when voltage and/or line current does not exceed thermostat ratings

1Ø or 3Ø circuit if line voltage and/or current exceeds thermostat rating

Thermostat Installation Warnings & Recommendations

1. Do not use the thermostat as a power switch. Use some other means of disconnecting power to the heater for servicing.
2. Thermostats are not a fail-safe device. Use an approved high temperature limit control and/or pressure limit control for safe operation.
3. Avoid kinking or bending the capillary tube too sharply as this will alter the calibration and/or render the thermostat inoperable.
4. Excess capillary tube should be coiled neatly in junction box.
5. The capillary tube must never touch the thermostat contacts as this will create an electrical short capable of harming personnel and/or equipment.

Stock Thermostat Enclosures

Thermostats and accessories sold separately

NEMA 1 Enclosure For Single-Pole Style A Thermostats

Size: 4-1/4"H × 3"W × 2"D
with 3/4" trade size knockout
Part Number: **HSGR-1003**

NEMA 1 Enclosure

For Double-Pole Thermostats
Size: 5-3/4"H × 3"W × 2"D
with 1/2" trade size knockout
Used with Style B Thermostats
and Thermostat Kits TSTR-1008
and TSTR-1009 shown on page
13-79.

Part Number: **HSGR-1004**

Style F Temperature High Limit Switch with Manual Reset

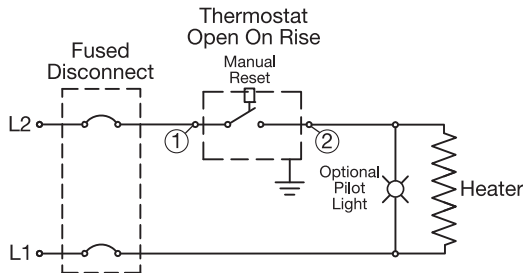

- * General purpose high limit switch with manual reset
- * Once fixed trip point is reached, the high limit switch will remain open until the manual reset button is pushed

Thermostat Electrical Ratings: High Limit – Manual Reset, Normally Closed Contacts, Open on Temperature Rise at Fixed Temperature

NOTES: F2 style has a side vertical mounting bracket instead of #8 tapped holes for mounting. Refer to IDP-119-104 for mounting details.

Hi-Limit Thermostat Style F (Single Pole—Single Throw)

Thermowells (Stainless Steel or Plain Steel)

Welded thermowells provide simple protection for bulb and capillary sensors.

They are supplied with a 1/2" NPT male thread for mounting and a 3/8" NPT internal thread that can be used with the stuffing box assembly to secure the capillary to the well. ID: 0.50", OD: 0.56" See pages 14-76 through 14-83 for thermowells manufactured from bar stock.

36	MPT-120-104	MPT-121-104

An * indicates a stock item.

Stuffing Box Assembly

The Stuffing Box Assembly is used to seal the thermostat capillary when the sensing bulb (3/8" max. OD) is immersed directly in a liquid rather than in a thermowell. The Stuffing Box consists of six slotted washers used to compress a graphite packing into a 3/8" NPT male pipe thread fitting.

Assembly Instructions

Feed sensing bulb through hole in upper and lower fitting. Insert washers and packing into top cavity of lower fitting. Upper fitting then screws into lower fitting, creating the seal.

Part Number: TST-109-101

Conduction Type Thermostats B2 Series — Surface Mounted

Tempco Conduction Thermostats do not use only a bonded bimetal strip. The contacts are opened and closed by the expansion and contraction of the base plate in conjunction with the thermal strip. Single pole, single throw contacts open with temperature rise, providing minimum overshoot, smaller cycling differential and faster response to heat load.

Installation Note: The heat-sensitive base plate of the thermostat must be mounted in full contact with the heated surface. This surface should be flat and smooth, and screws should be used for mounting.

Agency Approvals:  File Number E224645

Typical Applications

- ➔ Flat Irons
- ➔ Ironers
- ➔ Deep Fryers
- ➔ Roasters
- ➔ Solder Pots
- ➔ Vulcanizers
- ➔ Sealing Machines
- ➔ Sealing Irons
- ➔ Ovens
- ➔ Hot Plates
- ➔ Industrial and Laboratory Applications

Optional Knob

Part Number: TST-104-118
 Markings: 0-10
 For 1/4" shaft, with set screw
 Material: Phenolic
 0.9" Diameter x 0.667" Height

Standard Models with Shaft

Designed for installation with the base plate in full contact with heated surface. Pre-drilled holes facilitate mounting.

Temperature Range °F (°C)	Amp Rating @ 120 VAC	Amp Rating @ 240 VAC	Overall Shaft Length	Part Number
50 to 525°F (10 to 274°C)	13.75	6.87	1.5"	TEB30001
50 to 425°F (10 to 218°C)	13.75	6.87	1.5"	TEB30002

Specifications

Voltage: 120 VAC @ 13.75A / 240 VAC @ 6.87A
Wattage: 1650
Temperature Tolerance: ±5°F / 2.7°C
Operation Range: 50 to 570°F (10 to 300°C)
Wiring: Tapped for #6-32 screws (included)
Endurance: 100,000 cycles

Contact Tempco for your OEM requirements such as special range calibrations or shaft lengths.

Screwdriver Adjustment (optional preset calibration)

Available with factory preset temperature calibration. This feature is optional—if required, specify temperature setting from 72°F (22°C) to 570°F (300°C).

The screw-adjust thermostat is offered in three temperature ranges:

Temperature Range °F (°C)	Pre-Set Tolerance	Amp Rating @ 120 VAC	Amp Rating @ 240 VAC	Part Number
50 to 249°F (10 to 121°C)	±10°F / 6°C	13.75	6.87	TEB32000
250 to 399°F (121 to 204°C)	±15°F / 8°C	13.75	6.87	TEB33000
400 to 570°F (204 to 300°C)	±20°F / 11°C	13.75	6.87	TEB34000

Ordering Information

Choose the **Part Number** of the conduction thermostat that is correct for your application.

For pre-set TEB32XXX, TEB33XXX and TEB34XXX thermostats consult Tempco with your desired setpoint for a Part Number.

Surface Mount 1/2" Disc Pre-Set Snap Action Thermostats

Typical Applications

- Vacuum Cleaners
- Food Service Equipment
- Fireplaces
- Hot Plates
- Laboratory Applications

Construction Characteristics

This line of highly reliable switches utilizes a temperature sensitive disc electrically isolated from the switch. Contacts will open when surface or ambient temperatures increase to the snap point of the calibrated bimetal disc. The entire switch assembly is enclosed in a dust-free housing. The thermostats under 350°F setpoint have a phenolic housing. The thermostats with a setpoint of 350° and over have a ceramic housing. The bimetal disc is retained by a metal heat-conducting end cap.

These thermostats are used in a variety of applications. They are produced in an ISO 9000 certified factory to insure safe and reliable operation. All models are 100% factory inspected for temperature, continuity and function.

Specifications

Electrical Ratings Type S: 125 VAC, 15 Amps, Resistive

High Limit Surface Mount Disc Thermostats with Manual Reset

Construction Characteristics

This line of highly reliable switches utilizes a snap-action bimetal disc electrically and thermally isolated from the switch. The contacts are normally closed and open on rise when surface or ambient temperature setpoint is reached. The circuit will remain open until the manual reset button is depressed at approximately 30% below its operating temperature. All models are 100% temperature tested and can be calibrated to your specification at the factory. Many popular settings are available from stock.

Specifications

- Electrical Ratings Type U:** 125 VAC, 15 Amps, Resistive

One Shot Thermal Cutoffs

Design Features

- * *Low Cost*
- * *Excellent Contact Rating*
- * *Quick & Easy Installation*

Typical Applications

- *Personal Care*
- *Appliances*
- *Motors*

Thermal cutoffs are designed to provide upper limit temperature protection for many electronic products. Under normal operating temperature, the solid pellet compresses a spring which holds the star contact against the isolated lead. When a fault temperature is reached, the pellet melts and the circuit is opened permanently.

It is important to allow sufficient time to determine the proper and best location for a thermal cutoff. The location will affect the cutoff's ability to protect your product. Placement in the highest temperature area is usually best. Use a thermal cutoff that is higher than your target operating temperature, as a thermal cutoff is supposed to be a fail-safe to protect the system from catastrophic failure.

Specifications

Electrical ratings: 120/250 VAC, 10 Amps, Continuous duty
120/250 VAC, 15 Amps, Interrupting current

Temperature tolerance: +0°C/-4°C
(+0°F/-7°F)

Approvals: UL, CSA, VDE

Ordering Information

Choose the **Part Number** of the thermal cut-off that best meets the requirements on your application from the chart above.

Differential Expansion Cartridge Type Thermostats

Widely Used in Industrial, Scientific and Commercial Temperature Control Applications

Typical Applications

- ✦ Packaging Machinery
- ✦ Laminating Equipment
- ✦ Photographic Processing
- ✦ Hot Stamping
- ✦ Plastic Processing Machines
- ✦ Vending Machines
- ✦ Food Service Equipment
- ✦ Medical & Dental Equipment
- ✦ Code Dating Equipment

Design Features

A

Flexible leads externally connected to terminal pins provide high pull strength, eliminating pulled out leads.

B

Setpoint adjustment allows the setting of the temperature required without transmitting force to the contact mechanism, which can interfere with the accuracy of the unit.

C

Terminals are embedded in fused glass, providing a seal and strain relief to eliminate lead tension that can interfere with the accuracy of the unit.

D

One-piece strut made from low expansion alloy is assembled under tension. The strut and contacts operate by slow make and break, responding to the smallest temperature changes, accounting for quick response and sensitivity to within $\pm 1.0^{\circ}\text{F}$.

E

Wire braid provides the flexibility required in order to withstand the expansion and contraction of the outer shell without interfering with the ability of the unit to handle the load capacity under maximum operating temperature.

F

The expanding shell is the heat sensing component and not just a housing, being responsive to the slightest temperature changes and leading the strut by an interval that varies with the range of temperature.

G

Silver alloy contacts mounted on a one-piece strut. They open and close by the expansion and contraction of the outer shell, instantaneously responding to temperature changes.

H

Heli-arc welded end disc provides a positive seal against moisture and other contaminants.

Temperature Controllers

Cartridge Type Thermostats

Thermostatic Cartridge Type Temperature Controls

Tempco Thermostatic Temperature Controls are proven, simple, sensitive temperature controls with an adjustable setpoint. The sheath is a temperature sensor that responds to the tempera-

ture of its environment by expanding and contracting, thereby mechanically actuating a set of contacts within. Use to accurately control temperature on hundreds of applications.

Specifications

Temperature Range:

1/4" dia. models: -100 to 500°F (-73 to 260°C)
1/2" and 5/8" dia. models: -100 to 600°F (-73 to 315°C)

Tube Shell Diameters:

1/4" dia. model: 0.249" +.000/- .004" actual
1/2" dia. model: 0.499" +.000/- .004" actual
5/8" dia. model: 0.625" +.000/- .004" actual

Contact Action: Slow make and break

External Materials: 304 Stainless Steel

Agency Approvals:

Sensitivity:

1/4" dia. model: As low as 1°F depending on application
1/2" and 5/8" dia. models: As low as 0.5°F depending on application

Accuracy: Dependent on application

Standard Termination:

1/4" dia. model: 8" long - #26 ga silver plated copper with Teflon® insulation
1/2" dia. model: 8" long - #20 ga stranded nickel clad copper with fiberglass insulation
5/8" dia. model: 8" long - #16 ga stranded nickel clad copper with fiberglass insulation

Ordering Information

State part number and special features if required. For special Thermostatic Controls, consult Tempco.

- * The 1/2" and 5/8" dia. models are UL recognized.
- * The 5/8" dia. model is CSA certified.
- * Factory pre-set temperature setpoint: specify temperature setpoint.
- * Extra lead length: specify length required.
- * Extended shell length, with sensitivity at the top or bottom: specify length required and sensitivity.

⚠ WARNING: Cancer and Reproductive Harm - www.P65Warnings.ca.gov.

Design Features

- * Flexible armor cable over leads: blockhead style B only. Specify length required.
- * Moisture resistant seal.
- * Moisture resistant or explosion resistant, N7, attached to a Type C coupling head thermostat; specify requirements.
- * Ground wire attached to the shell; specify length required.

SELECTION GUIDE

Type S Cartridge

Temperature controller for applications in metal, air, gas and many other mediums.

Type B Block Head

The block head style allows the thermostat to be mounted without the use of bushings. Also excellent for making right-angle connections.

Type P Pipe Thread

Designed for mounting in tanks for temperature control of liquids or gases. A stainless steel bushing affords ease of mounting and a positive seal.

Type C Coupling Head

Designed to accept conduit or plumbing fittings to protect the screw and lead wires in adverse conditions.

Type F Flange

Designed to mount directly to duct or oven wall for the sensing of air or gas temperatures.

All Items Available from Stock

Dimensional Specifications

Type S — Cartridge Style

Diameter	Overall Length (Reference Only)	Insertion Depth
5/8"	4-3/8"	3-5/8"
1/2"	3-1/4"	2-1/2"
1/4"	1-5/8"	1-7/16"

Type B — Block Head Style

Diameter	Overall Length (Reference Only)	Insertion Depth	Flange Dia.	Mounting Holes (3)
5/8"	4-3/8"	3-5/16"	1-3/4"	.156" dia. on a 1.25" DBC
1/2"	3-1/4"	2-5/16"	1-1/2"	.156" dia. on a 1" DBC
1/4"	1-5/8"	1-1/4"	1"	.144" dia. on a 5/8" DBC

Installation Guidelines and Observations

- Do not expose the thermostat to more than 100°F / 38°C above the setpoint temperature.
- On 1/2" and 5/8" diameter thermostats, do not turn the adjusting screw more than 7 revolutions in either direction from room temperature.
- On 1/4" diameter thermostats, do not turn the screw more than 1/4 revolution in either direction from room temperature without checking temperature setpoint.
- Removal of the adjusting screw may render the thermostat inoperative.
- System vibration can cause contact bounce. The addition of a capacitor will reduce the bouncing and overshooting. The recommended capacitor is 0.1 μF rated at 600VDC for 120 VAC applications and 1000VDC for 240 VAC applications. The capacitor should be attached parallel across the thermostat's leads.
- Optimum performance will result when the amperage load is half of the maximum rating.
- Do not attempt to seal the lead end with silicone materials such as caulking or grease.

Solid State Relays

Single-Phase Solid State Relays (SSRs)

Tempco's Solid State Relays are a highly reliable alternative to mechanical or mercury contactors in high amperage or harsh environments. They offer years of trouble-free service and millions of cycles with no moving parts to wear out.

- * 1-phase normally open models – current ratings from 10 Amp through 75 Amp
- * Zero-cross outputs for general applications
- * UL/cUL Recognized, CE Compliant
- * Back-to-back SCR output stage
- * AC or DC control inputs
- * 240 or 480 Volt Outputs

- Select a **DC control** input relay to work with a temperature control having an **SSR drive output**.
- Choose an **AC control** input relay to work with a temperature control having a **mechanical relay output**.

All Items Available from Stock

Standard Stock Single-Phase Relays

Nominal Output Voltage	240 VAC		480 VAC		Load Current
	DC	AC	DC	AC

Operating Temp. Range (°C)	-20 to +80, (°F) -4 to +176		Line Frequency Range (Hz)		47 to 63

Notes:

1. DC control input = 3-32 VDC
2. AC control input = 90-280 VAC
3. Adequate heat sinking, including consideration of air temperature and flow, is essential to the proper operation of a solid state relay.

Ordering Information

Choose the **Part Number** of the relay from the table that matches the needs for your application. We also offer other styles of Solid State Relays, such as random turn on; consult Tempco with your requirements. **Standard lead time is stock to 3 weeks.**

Accessories

For solid state relays Tempco offers a snap-on cover made of high impact, flame retardant polycarbonate that will provide "finger-safe" operation.

Snap-on Cover

For 1-phase SSR: **RLS90001**

Thermal Compound: RLS90003

2-ounce container

Thermal Heat Transfer Pads:

For 1-Phase SSR: **RLS90004**

For 3-Phase SSR: **RLS90005**

De-Rating Curves for Single Phase Solid State Relays

Solid state relay de-rating curves are used to determine the actual current the relay is capable of carrying vs. the ambient temperature in the enclosure. It also indicates the heat sink required to

dissipate the heat the relay produces at the ambient temperature. Failure to dissipate the internally generated heat will result in solid state relay failure.

WARNING: Cancer and Reproductive Harm - www.P65Warnings.ca.gov.

Standard Stock Heat Sinks for Solid State Relays

Part Number: RLS90017
Size: 1.77"W × 3.19"L × 3.15"H
Rating: 2.0°C/W
 Pre-drilled for 1-phase SSR (8-32)
 DIN rail or panel mount

Part Number: RLS90018
Size: 1.77"W × 3.19"L × 3.74"H
Rating: 1.5°C/W
 Pre-drilled for 1-phase SSR (8-32)
 DIN rail or panel mount

Part Number: RLS90019
Size: 4.75"W × 5.50"L × 2.63"H
Rating: 0.70°C/W
 Pre-drilled for one or two 1-phase SSR (8-32)
 Panel mount 4.50" × 4.42" centers

Part Number: RLS90020
Size: 3.00"W × 5.20"L × 2.37"H
Rating: 1.0°C/W
 Pre-drilled for one 3-phase SSR (8-32)
 DIN rail mount

Three-Phase Solid State Relays (SSRs)

Tempco's Three-phase Solid State Relays are a highly reliable alternative to mechanical or mercury contactors in high amperage or harsh environments. They offer years of trouble-free service and millions of cycles with no moving parts to wear out.

- * 3-phase normally open models—current ratings 25 Amp and 50 Amp
- * Zero-cross outputs for general applications
- * UL recognized, CSA certified and CE compliant
- * Back-to-back SCR output stages
- * AC or DC control inputs
- * Single output type for 48 through 530 VAC
- Select a **DC control** input relay to work with a temperature control having an **SSR drive output**.
- Choose an **AC control** input relay to work with a temperature control having a **mechanical relay output**.

All Items Available from Stock

De-Rating Curves for 3-Phase Solid State Relays

Solid state relay de-rating curves are used to determine the actual current the relay is capable of carrying vs. the ambient temperature in the enclosure. It also indicates the heat sink required to dissipate the heat the relay produces at the ambient temperature. Failure to dissipate the internally generated heat will result in solid state relay failure.

“Power Pack” DIN Rail Mount Solid State Relay Modules

The **Power Pack** combines in one easy-to-use compact package the traditional hockey puck style solid state relay and required heat sink. This combination eliminates having to mount the SSR to a separate heat sink. It also incorporates the finger-safe cover into the housing’s design. Each Power Pack takes up much less room than the standard SSR and heat sink combination.

Available from Stock

Design Features

- * Self-Contained Solid State Relay and Heat Sink
- * Standard 35mm DIN Rail or Panel Mount
- * 1-phase Units with Zero-Cross Firing Output
- * 3-Phase Units Control All 3 Phases
- * Current Ratings from 12 through 45 Amp
- * 3 Compact Sizes: 22.5mm, 45.0mm, and 90.0mm
- * Triac or Back-to-Back SCR Outputs
- * UL, cUL Recognized

Mercury Relays

Mercury Displacement Relays — 35 & 60 Amp Resistive Loads

Tempco's Mercury Displacement Relays are specifically designed for resistive loads typical of heating and process equipment. These mercury relays are available in 35 and 60 amp models with single, double and triple pole configurations. Coil voltages range from 24 to 480 Volts AC at 50/60 Hz and 24 Volts DC.

Features

Mercury contact action relays are superior to open contact electro-mechanical relays. Mercury relays do not contain springs or button contacts, which tend to wear, weld and burn out. Mercury contacts are capable of rapid on-off cycling in excess of 6 times per minute under resistive loads. This provides more precise process temperature control, and eliminates the noise from the on-off operating cycles of electro-mechanical relays and contactors.

Typical Applications

- ➔ Industrial Process Equipment Utilizing Resistive Loads
- ➔ Industrial Ovens
- ➔ Duct Heaters
- ➔ Plastic Injection and Extrusion Machinery
- ➔ Food Processing Equipment

⚠ WARNING: Cancer and Reproductive Harm - www.P65Warnings.ca.gov.

High Performance Economical Mercury Relays — 30 Amp Resistive Loads

The 30 Amp model is designed to save space and simplify mounting methods. It is also extremely economical due to the use of a single coil for 1-, 2- or 3-pole relays. The universal mounting bracket used on the 2- and 3-pole relays has various mounting holes and keyhole slots to meet a variety of mounting centers.

The 30 Amp Series is a more compact line with a well-proven switch, which is the heart of mercury relays. It is the same switch design that drives our 35 and 60 Amp encapsulated **Mercury Displacement Relays**, which have withstood the test of time and millions of cycles in many different applications.

2 Poles N.O.	24 VDC	260 mA	92	230NO-24DU	RLY12305
	24 VAC	580 mA	15	230NO-24AU	RLY12303
	120 VAC	115 mA	367	230NO-120AU	RLY12301
	220 VAC	53 mA	1550	230NO-220AU	RLY12302
3 Poles N.O.	24 VDC	217 mA	110	330NO-24DU	RLY13305
	24 VAC	815 mA	7.6	330NO-24AU	RLY13303
	120 VAC	140 mA	215	330NO-120AU	RLY13301
	220 VAC	66 mA	766	330NO-220AU	RLY13302

Note: The 220 VAC coil is used from 208 to 240 VAC.

Ordering Information

Choose the **Part Number** of the relay from the table above that matches the needs for your application.

Standard lead time is stock to 5 days.

Specifications

Pull In Voltage: 90% of nominal (Min. AC)

Operate (pull in) Time: 50 mSec

Release Time: 80 mSec

Operating Ambient

Temperature Range: -35 to 85°C
(-31 to 185°F)

Typical Contact Resistance: 3 mΩ

Contact Rating: 30 Amps

Dielectric Breakdown: 2500 VAC RMS

Mount: Vertical ±10°

Coil terminals: #6 binding head screws

Load terminals: #8 binding head screws

Agency Approvals: UL, CSA

WARNING: Cancer and Reproductive Harm - www.P65Warnings.ca.gov.

DIN Rail Mounted Mechanical Relays

Design Features

- * 10 and 15 Amp Models with 24 VDC, 120 and 240 VAC Coils
- * Sockets Mount on Standard 35 mm DIN Track
- * Silver-Cadmium Oxide Contacts
- * Socket and Relay Separation Fast and Easy
- * UL and CSA Component Recognition
- * Compact for Easy DIN Rail Installation
- * Contact Arrangement Up to 3PDT
- * Enclosed to Prevent Contamination

Standard DIN Rail Mount Relay Specifications

Common Usage @ 240VAC	Coil Voltage	Poles	Potter & Brumfield Cross Reference Number	TEMPCO Part Number

DIN Rail Mounted Mechanical Relay Accessories

Universal Rail Mounted Socket

Universal socket for mounting 1- to 3-pole relays to a 35mm DIN rail track or surface mounted directly to a panel. A spring-loaded latch allows for easy installation or removal from a DIN mounting track. High strength, durable plastic body with 3/16" quick connect/solder; silver-cadmium oxide terminals for relay mounting.

Dimensions with Relay (approximate): 3" x 1-1/2" x 3"

Part Number: RLM90001

Part Number: RLM90004 — Relay Hold Down Spring

Universal 35 mm DIN Rail Track

Made out of extruded aluminum with holes on 6" centers. Holes accept #8 screws and the rail accepts the offered socket as a simple clip-on mount.

Dimensions: 36" (914mm) long

Part Number: EHD-134-102

Ordering Information

Choose the **Part Number** of the Relays and accessories that best fit the needs of your application.

Standard lead time is stock to 5 days.

IEC Style Enclosed Contactors - 3 pole, 25A to 100A

Design Features

- * Regular and alternate coil termination locations
- * Contactors supplied with auxillary contacts as standard
- * Mounting - DIN rail or back panel
- * Coil Voltage Limits: Pick up - 85% to 110%
Drop-out - 30% to 60%
- * Operating Time: Closing - 12 to 22 mSec
Opening - 4 to 19 mSec
- * Contactors listed have screw clamp wiring terminals
- * Approvals: UL, cUL, CE
- * Auxiliary Switch Rating: 120VAC/6A, 240VAC/3A

3-Pole, 25 & 40 Amp

Maximum Voltage: 690VAC

2.89 x 1.77 x 3.39" / 73.5 x 45 x 86 mm (H x W x D)

3-Pole, 70 & 100 Amp

Maximum Voltage: 690VAC

4.17 x 3.11 x 4.80" / 106 x 79 x 122 mm (H x W x D)

Tube and Wire Thermocouples

Design Features

- * Economical & versatile for a variety of applications.
- * For use up to 900°F (482°C).
- * Optional process fittings available. See pages 14-88 and 14-89.
- * Available with single or dual element.

Ordering Information

TTW and TCP Thermocouples are offered with the options listed in the worksheets. Create an ordering code by filling in the boxes with the appropriate number and/or letter designation for your requirements, and a part number will be assigned.

Stock Bayonet Style Thermocouples — Type J

Design Features

- * **Standard—ANSI Type J Grounded Junction**
- * **Standard Probe Material—304 Stainless Steel**
- * **Standard Probe Diameter 3/16" (1/8" optional)**
- * **For use up to 900°F (482°C)**

Style 1—Spring Adjustable Bayonet Thermocouple

Design Features

- * **Insertion length adjustable from 1" to 10".**
- * **Forms easily to any angle.**
- * **One style can replace several fixed length thermocouples.**
- * **Use with bayonet adapters on page 14-87.**

Melt Bolt Thermocouples

Melt Bolt Thermocouples for Plastic Extruders or Injection Molding Machines

Design Features

*** Bolt Material**

Stainless Steel
1/2-20 UNF Thread

*** Probe Material**

Stainless Steel

*** Probe Diameters**

Standard 1/8"

*** Calibration**

ANSI Type J
(Iron-Constantan)

*** Junction Style**

Closed End Grounded

Style A—Adjustable Tip

- * Eliminates excess inventory.
- * Tip can be field adjusted from flush to 2 inches.
- * MgO insulated.
- * Can be installed wherever standard melt thermocouples are in use.
- * Bolt with Teflon® insert at tip has a maximum operating temperature of 500°F (260°C). Without insert 1400°F (760°C).

Thermocouple Diameter	Part Number			
	Without Teflon® Insert		With Teflon® Insert	
	L = 3"	L = 6"	L = 3"	L = 6"
1/8"†	TMB00001	TMB00002	TMB00003	TMB00004
3/16"	TMB00005	TMB00006	N/A	N/A

†For 1/8" diameter, it is not recommended to immerse tip more than 1" due to bending and breakage in melt flow.

Style R—Fixed Immersion with No Extension

Insulation—MgO or Fiberglass

MI Cable Thermocouple Assemblies

Mineral Insulated Metal-Sheathed Cable

Thermocouple Assemblies are made from TEMPCO's high quality Tempco-Pak and will incorporate all the same outstanding features.

Important Features:

- * *Accurate*
- * *High Temperature Rating*
- * *Fast Response*
- * *Moisture Proof*
- * *Thermal Shock Resistant*
- * *Can Be Formed*
- * *Weldable*
- * *High Pressure Rated*
- * *Compact*
- * *Durable*

Typical Applications

- ↔ *Bearing Temperature*
- ↔ *Diesel Engines*
- ↔ *Food Processing*
- ↔ *Furnaces*
- ↔ *Glass Manufacturing*
- ↔ *Heat Treating*
- ↔ *Kilns*
- ↔ *Metal Processing*
- ↔ *Oil Processing*
- ↔ *Ovens*
- ↔ *Petrochemicals*
- ↔ *Power Stations*
- ↔ *Refineries*
- ↔ *Research Laboratories*
- ↔ *Steam Generators*
- ↔ *Turbines*

Hot Junctions

(Hot or Measuring Junctions available on single or dual element cable)

Choose the measuring junction that best suits your particular needs:

Exposed Junction (E)

Thermocouple wires are butt-welded. Insulation is sealed against liquid or gas penetration prior to use.

This junction style provides the fastest possible response time but leaves the thermocouple wires unprotected against corrosive or mechanical damage.

Grounded Junction (G)

The sheath and thermocouple wires are welded together, forming a completely sealed integral junction. Recommended in presence of liquids, moisture, gas or high pressure. The wire is protected from corrosive or erosive conditions. In the Grounded Junction, response time approaches that of the Exposed Junction.

Ungrounded Junction (U)

Thermocouple junction is fully insulated from welded sheath end. Excellent for applications where stray emf's would affect the reading and for frequent or rapid temperature cycling. With the Ungrounded Junction, response time is slightly longer than for the Grounded Junction.

Selecting the Correct Tempco-Pak Thermocouple Assembly

Thermocouples must be selected to meet the conditions of each particular application. The environment, operating temperature and atmosphere, response time and length of service must be considered when selecting the sheath, insulation, calibration, junction and termination of the thermocouple assembly.

Refer to the Mineral Insulated Thermocouples and Cable section regarding sheath, insulation and calibration (pages 14-114 through 14-118).

TEMPCO's engineering staff will be happy to assist you with the design and selection of your thermocouple requirements.

Sheath Materials

The most commonly used sheath materials and their maximum continuous operating temperatures in an oxidizing atmosphere are as follows:

Sheath Material	Max. Operating Temperature
Alloy 600	2150°F (1177°C)
304 Stainless Steel	1650°F (899°C)
316 Stainless Steel	1650°F (899°C)
310 Stainless Steel	2100°F (1150°C)

Note: For temperatures exceeding 2200°F (1204°C), Noble or Refractory metal sheaths are normally used.

Formability

Because Tempco-Pak is fully annealed it can normally be formed around a mandrel 4 times the sheath diameter. Consult TEMPCO if special forming is required.

Weldability

The thermocouple sheath can be brazed, soldered or welded. Welding the thermocouple sheath in the field is not recommended on diameters less than .093 in. All welding should be done in an inert atmosphere.

Calibrations

The table shows the standard temperature ranges for the various ANSI thermocouple calibrations:

ANSI Letter	Thermocouple Type	Temperature Range	
		°F	(°C)
J	Iron-Constantan	32-1400	(0-760)
K	CHROMEL P®-ALUMEL®	32-2300	(0-1260)
N	Nicrosil-Nisil	32-2300	(0-1260)
T	Copper-Constantan	32-660	(0-350)
E	CHROMEL P®-Constantan	32-1600	(0-871)
R	Pt 13% Rhodium-Platinum	32-2700	(0-1482)
S	Pt 10% Rhodium-Platinum	32-2700	(0-1482)
B	Pt 30% Rh-Pt 6% Rh	1600-3100	(871-1704)

Assembly Tolerances: Sheath Length Dimensions

Sheath O.D.	"L" Tolerance Up to 24"	"L" Tolerance Over 24"
Up to .038"	±½"	±2%
.038" to .065"	±¾"	±1½%
Larger than .065"	±¼"	±1%

Flexible Lead Dimensions

Lead Length (ft.)	Tolerance
Up to 5	+6", -1"
5 to 10	+6", -2"
over 10	+5%, -2%

Style MTA1 — Transition to Lead Wire (Stock)

Ordering a Stock MTA1 Thermocouple

(Thermocouples not available from stock can be custom manufactured—see page 14-15)

TEMPCO stocks **MTA1 style Thermocouples** in type J and K in the standard lengths listed in the following two tables. These thermocouples have Teflon® insulated leads with a 2-1/2" split lead termination.

Order a stock unit from the tables after completing the ordering code with the Junction Type Code from Box 5 and Optional Compression Fitting Code from Box 6 below.

Type J — 316 SS Sheath

Diameter	"L" Dimension			
	6"	12"	18"	24"
0.063"	ST1-JD06B <input type="checkbox"/>	ST1-JD12B <input type="checkbox"/>	ST1-JD18B <input type="checkbox"/>	ST1-JD24B <input type="checkbox"/>

Optional Installation Compression Fitting
See Box 6

WARNING: Cancer and Reproductive Harm - www.P65Warnings.ca.gov.

Style MTA1 — Transition to Lead Wire (Custom Manufactured)

Ordering Information

Thermocouples are offered with the options listed in the worksheet below. Create an ordering code by filling in the boxes with the appropriate number and/or letter designation for your requirements, and a part number will be assigned.

Optional Installation Compression Fitting
See Box 13

Design Features

- * Mineral insulated sheath provides flexibility to form and bend the thermocouple to meet design requirements.
- * Stainless steel transition with optional Strain Relief Spring
- * Standard epoxy potting transition provides greater moisture resistance rated to 450°F (232°C). Optional ceramic based potting rated to 1000°F (538°C). Ceramic potting not recommended with Teflon® leads, nor for high humidity applications.

Style MTA2 Plug or Jack Termination (Custom Manufactured)

Standard Plug

Standard Jack

Miniature Plug and Jack

Optional Installation
Compression Fitting
See Box 12

Design Features

- * Pins are made with matching thermocouple alloys.
- * Standard plugs come with hollow pins as standard and solid pins as an option.
- * Standard size and miniature plugs and jacks have a 350°F (177°C) continuous and 400°F (204°C) intermittent temperature rating.
- * High temperature plugs and jacks are rated for 500°F (260°C) continuous operation and 550°F (288°C) intermittent (brown only).
- * Ultra high temperature plugs and jacks are rated for 800°F (427°C) continuous operation and 1000°F (538°C) intermittent (all are reddish-brown in color).
- * Dual element available for sheath O.D. of 0.063" to 0.375".
- * 0.020" to 0.250" use crimp insert—0.313" and 0.375" use tube adapters.
- * Miniature plugs have solid flat pins.

Style MTA4 Stripped Cold End (Stock)

Design Features

- * Standard strip length is 1/2 inch.
- * Stripped end sealed with resin to inhibit moisture penetration.

All Items Available from Stock

Ordering a Stock MTA4 Thermocouple

(Thermocouples not available from stock can be custom manufactured—see page 14-19)

TEMPCO stocks **MTA4 style Thermocouples** in type J and K in the standard lengths listed in the following two tables. These thermocouples have a 1/2-inch strip length.

Order a stock unit from the tables after completing the ordering code with the Junction Type Code from Box 4 and Optional Compression Fitting Code from Box 5 below.

Stock Type J – 316 SS Sheath

Diameter	"L" Dimension			
	7"	13"	19"	25"
0.063"	ST4JD07 <input type="checkbox"/>	ST4JD13 <input type="checkbox"/>	ST4JD19 <input type="checkbox"/>	ST4JD25 <input type="checkbox"/>

Thermocouples with Transmitter and Connection Head

Design Features

- * 4-20mA Programmable Linear Output Transmitter
- * Available with Spring-Loaded Sheath
- * For field programming of the temperature transmitter see Part Number ETM90006 on page 12-45
- * Transmitter Accuracy of $\pm 0.2\%$ of temperature span
- * 1/2" NPT Process Connection

Transmitter Ambient Temperature Range:
 -40° to +185°F (-40° to +85°C)
 Refer to page 12-44 for complete details.

EMT10001

EMT20001

See Connection Head Box 9 below.

Refer to page 12-50 for complete Indicator specifications.

Ordering Information

Thermocouples are offered with the options listed in the worksheet below. Create an ordering code by filling in the boxes with the appropriate number and/or letter designation for your requirements, and a part number will be assigned.

Series TCM Multipoint Thermocouple Assemblies

Multipoint Thermocouples are used in a broad range of processes and installations to monitor the temperature in multiple positions or elevations. These sensors are used in a variety of applications such as Petroleum, Chemical Processing, Furnaces, Storage Tanks and Air Flow Ducts.

These sensors are made-to-order to meet the requirements of the specific application. The styles depicted below are the most common constructions. Consult Tempco for other sizes and construction methods. To order, simply fill out the specification sheet on page 14-31.

Style 1 – Standard Miniature Style Assembly

This Multipoint Assembly uses numerous individual mineral insulated thermocouple elements contained in a tube. Individual thermocouples are made with the largest possible Mineral Insulated Cable in order to maximize contact with Protection Tube.

Tube OD	Maximum Number of Points
.125"	13
.188"	20
.250"	20
.312"	20
.375"	20
.500"	20

Style 2 – Free-Hanging Assembly In A Pipe

This Heavy Duty Multipoint Assembly uses several individual Mineral Insulated Thermocouple Elements contained in a Standard Protection Pipe. Thermocouple bundles are replaceable.

Pipe Size	Maximum Number of Points
1/2" NPT SCH. 40	12
3/4" NPT SCH. 40	20
1" NPT SCH. 40	20

Style 3 – Protection Pipe With Guide Tubes

This Multipoint Assembly is mostly used in the Petrochemical Industry. Guide Tubes are positioned at specific locations and enable the replacement of individual sensors in the field. This Multipoint Style is ideal in high temperature and pressure applications and provides a quick thermal response.

Pipe Size	Maximum Number of Points
1/2" NPT SCH. 40	10
3/4" NPT SCH. 40	20
1" NPT SCH. 40	20

Describe any Pertinent Information or Special Requirements:

Industrial Process Thermocouples

Tempco manufactures many styles of industrial thermocouple assemblies for a wide range of industries, from petrochemical to textile applications, where one or more protection tubes may be necessary to protect the thermocouple.

Metal Protecting Tube Assemblies

Thermowell Assemblies

Thermocouple Head, Nipple, Thermowell

Thermocouple Head, Metal Protecting Tube

Thermocouple Head, Nipple, Union, Nipple, Thermowell

Ceramic Tube Assemblies

Thermocouple Head, Fixed Bushing, Ceramic Tube

Thermocouple Head, Ceramic Tube

Thermocouples for Thermowells and Protection Tubes

Design Features

- * Ceramic Insulator to Insulate Wires
- * Galvanized 1/2" Pipe Nipple & Union
- * Cast Iron or Aluminum Head
- * Used with protection tubes and thermowells shown on pages 14-76 through 14-86

Ordering Information

Thermocouples are offered with the options listed in the worksheet below. Create an ordering code by filling in the boxes with the appropriate number and/or letter designation for your requirements, and a part number will be assigned.

Ordering Code: **TCS** -

Style BOX 1

Base Metal — Bare and Fiberglass or Ceramic Insulated Thermocouple Wire

Tempco offers general purpose thermocouple elements in ANSI Type J and K. The general purpose elements are available with

a twisted and welded or butt-welded junction. Available in 8 ga., 14 ga. and 20 ga. with standard calibration tolerances.

Style B — Bare Thermocouple Wire

Twisted and Welded Junction

Butt-Welded Junction

Style F — Thermocouple Wire with Fiberglass Sleaving

Twisted and Welded Junction

Butt-Welded Junction

Style O — Thermocouple Wire with 2-Hole Oval Insulator

Twisted and Welded Junction

Butt-Welded Junction

• 8 ga. insulator P/N COR-120-105

• 14 ga. insulator P/N COR-120-104

• 20 ga. insulator P/N COR-120-106

* See Page 14-96 for Insulator Dimensions. *

Style R — Thermocouple Wire with 2-Hole Round Insulator

Twisted and Welded Junction

Butt-Welded Junction

• 8 ga. insulator P/N COR-127-102

• 14 ga. insulator P/N COR-126-102

• 20 ga. insulator P/N COR-125-102

* See Page 14-96 for Insulator Dimensions. *

OEM Replacement Thermocouples

Direct Replacement Thermocouples

- * All the following thermocouples are manufactured with the highest quality materials and workmanship.
- * The thermocouple wire is stranded (for flexibility) ANSI Type J thermocouple grade, with ANSI color-coded fiberglass insulation (White=Positive, Red=Negative).
- * All hot junctions are grounded. Spade lugs where required are insulated and accept a No. 6 stud.

OEM Replacement Thermocouples (Type J)

Specialty Application

The following **Runnerless Mold Thermocouples** are manufactured using Tempco's high quality, mineral insulated thermocouple wire "Tempco-Pak." The Tempco-Pak is .062" diameter 304 stainless steel sheathed, MgO insulated, ANSI Type J thermocouple wire.

Notes: All hot junctions are grounded.

The lead wire is ANSI Type "J" thermocouple grade with ANSI color-coded fiberglass insulation and an additional high temperature outer fiberglass sleeve. The transition area (potting adapter) between the Tempco-Pak and lead wire is potted with high temperature cement rated to 900°F (482°C).

Comparing Three Types Of Temperature Sensors

RTDs VS. THERMOCOUPLES VS. THERMISTORS

RTDs

Resistance Temperature Detectors (RTDs) are temperature sensing devices consisting of a wire coil or deposited film of pure metal, usually platinum. The element's resistance increases with temperature in a known and repeatable manner. RTDs exhibit excellent accuracy over a wide temperature range, -200 to 650°C (-328 to 1202°F).

RTDs offer

Stability and repeatability: The platinum RTD is the primary interpolation instrument used by the National Institute of Standards and Technology from -260 degrees Celsius to 630 degrees Celsius. Precision RTDs can be manufactured with a stability of 0.0025 degrees Celsius per year. However, most industrial models drift less than 0.1 degrees Celsius per year.

Linearity: The platinum RTD produces a more linear curve than thermocouples or thermistors. The RTD's non-linearities can be corrected through proper design of resistive bridge networks.

Sensitivity: The voltage drop across an RTD provides a much larger output than a thermocouple. Since thermistors have a higher resistance than RTDs, the measuring current through them may be so low as to limit self-heating, making their voltage drop less than that of an RTD.

Standardization: RTDs are manufactured to industry standard curves, usually 100 ohm platinum to IEC 751, which makes them very interchangeable.

System Cost: RTDs usually offer a lower system cost than do thermocouples as they use ordinary copper extension leads and require no cold junction compensation.

Thermocouples

A thermocouple consists of two wires of dissimilar metals welded together into a junction. At the other end of the signal wires, usually as part of the input instrument, is another junction called the reference junction. Heating the sensing junction generates a thermoelectric potential (emf) proportional to the temperature difference between the two junctions. This millivolt-level emf, when compensated for the known temperature of the reference junction, indicates the temperature at the sensing tip. Published millivolt tables assume the reference junction is at 0 degrees Celsius.

Thermocouples are simple and familiar. Designing them into systems, however, is complicated by the need for special extension wires and reference junction compensation.

Thermocouple advantages include

Extremely high temperature capability: Thermocouples with a noble metal junction may be rated as high as 1700°C (3100°F).

Ruggedness: The inherent simplicity of thermocouples makes them resistant to shock and vibration.

Small size/fast response: A fine-wire thermocouple junction takes up little space and has low mass, making it suitable for point sensing and fast response.

Thermistors

Thermistors are resistive devices usually made of metal oxides formed into a bead and encapsulated in epoxy or glass. Thermistors show a large negative temperature coefficient. Their resistance drops dramatically and non-linearly with a temperature increase. A thermistor's sensitivity is many times that of an RTD, but its useful temperature range is limited.

Because of wide variations of performance and cost among thermistors, generalized advantages and disadvantages may not always apply.

Typical benefits are

Lower Sensor Cost: Basic thermistors are less costly than RTDs and thermocouples, but when assembled in protective sheaths or wells the price difference narrows. Thermistors with tighter interchangeability or extended temperature ranges often cost more than RTDs.

High Sensitivity: Resistance may be several thousand ohms, which provides a larger output than RTDs with the same measuring current, offsetting lead wire resistance problems. Caution must be taken to limit measuring current because thermistors are more susceptible to self-heating than are RTDs.

Point Sensing: A thermistor bead may be the size of a pinhead, allowing for small area sensing.

TEMPCO'S ACCU-OHM™ RTD

All of Tempco's Accu-Ohm RTDs comply with the following specifications:

IEC publication 751 issued by the International Electrotechnical Commission (dated 1983).

This is the widest international scope of any RTD standard. This publication sets the tolerance for platinum RTDs with a value of 100 ohms at 0°C with a temperature coefficient of resistance (TCR) of 0.00385 ohms/ohm/°C in one of two classes:

Class A: Plus or minus 0.06% at 0°C

Class B: Plus or minus 0.12% at 0°C

All Tempco RTDs meet class B; class A is optional.

DIN 43760 issued by Deutsches Institute für Normung (Germany), dated 1987. The platinum resistance curves are now covered under DIN IEC 751.

JIS 1604-1989 issued by the Japanese Standards Association (dated 1989).

The Platinum resistance curves are in accordance with IEC 751 but there is also a provision for TCR 0.003916 ohms/ohm/°C which can be supplied in most of Tempco's standard designs on special request.

BS 1904-1984 issued by the British Standard Institute (dated 1984). This specification is identical to IEC 751.

What is Temperature Coefficient of Resistance (TCR)?

Temperature coefficient differentiates between resistance/temperature curves of RTDs. It is also called ALPHA and may be specified in various ways by different manufacturers. Here TCR is the RTDs resistance change from 0 to 100°C, divided by the resistance at 0°C, divided by 100°C:

$$TCR (\Omega/\Omega/^\circ C) = \frac{R_{100^\circ C} - R_{0^\circ C}}{R_{0^\circ C} \times 100^\circ C}$$

Example: A platinum RTD measuring 100 Ω's at 0°C and 138.5 Ω's at 100°C has TCR 0.00385 Ω/Ω/°C

$$TCR = \frac{138.5 \Omega - 100 \Omega}{100 \Omega \times 100^\circ C} = 0.00385 \Omega/\Omega/^\circ C$$

Stated another way, TCR is the average resistance increase per degree of a hypothetical RTD measuring 1 ohm at 0°C.

The most common use of TCR is to distinguish between curves for platinum, which is available with TCRs ranging from 0.00375 to 0.003927. The highest TCR indicates the highest purity platinum, and is mandated by ITS-90 for standard platinum thermometers.

There are no technical advantages of one TCR versus another in practical industrial applications. 0.00385 platinum is the most popular worldwide standard and is available in both wire-wound and thin-film elements.

In most cases, all you need to know about TCR is that it must be properly matched when replacing RTDs or connecting them to instruments.

Interchangeability and Repeatability

Interchangeability and accuracy are commonly cited as the RTDs most distinguishing attributes. Because of the tight tolerances of the Class A and Class B, RTDs are quite interchangeable. Their accuracy is also very good because of the RTD's repeatability over the standard temperature scale from -260°C to 630°C. Ordinary industrial RTDs tend to show a drift of less than 0.1°C per year in normal use.

Because RTDs are exactly what the name implies (Resistance Temperature Detectors), a resistance type sensor, any resistance introduced by the addition of extension wires between the RTD and the control or measuring instrument will add to the readings. This added resistance is not constant since the extension wires, usually copper, change their resistance values with changing ambient temperature. Extension wire errors can be significant, particularly with small gauge wires or elements with low sensitivity. Fortunately most of these errors may be nearly canceled by using a three wire system.

The majority of RTDs in today's industry are 3- or 4-wire systems; the 2-wire lead system is the least efficient unless the leads are heavy gauge, very short, or both.

In 3- or 4-wire circuits, common leads, connected to the same end of the RTD element, are the same color.

Tolerances for 100Ω RTDs

Temperature (°C)	Tolerance			
	Class A		Class B	
	(± °C)	(± Ω)	(± °C)	(± Ω)
-200	0.55	0.24	1.3	0.56
-100	0.35	0.14	0.8	0.32
0	0.15	0.06	0.3	0.12
100	0.35	0.13	0.8	0.30

800	—	—	4.3	1.28
850	—	—	4.6	1.34

Tolerance Values as a Function of Temperature for 100Ω RTDs

Wiring Diagrams

2-wire circuit

Shown is a 2-wire RTD connected to a typical Wheatstone bridge circuit. E_s is the supply voltage; E_o is the output voltage; R_1 , R_2 , and R_3 are fixed resistors; and RT is the RTD. In this uncompensated circuit, lead resistance L_1 and L_2 add directly to RT .

3-wire circuit

In this circuit there are three leads coming from the RTD instead of two. L_1 and L_3 carry the measuring current while L_2 acts only as a potential lead. No current flows through it while the bridge is in balance. Since L_1 and L_3 are in separate arms of the bridge, resistance is canceled. This circuit assumes high impedance at E_o and close matching of resistance between wires L_2 and L_3 . TEMPACO matches RTD leads within 5%. As a rule of thumb, 3-wire circuits can handle wire runs up to 100 feet.

4-wire circuit

4-wire RTD circuits not only cancel lead wires but remove the effects of mismatched resistances such as contact points. A common version is the constant current circuit shown here. I_s drives a precise measuring current through L_1 and L_4 ; L_2 and L_3 measure the voltage drop across the RTD element. E_o must have high impedance to prevent current flow in the potential leads. 4-wire circuits may be usable over a longer distance than 3-wire, but you should consider using a transmitter in electrically noisy environments.

If necessary you can connect a 2-wire RTD to a 3-wire circuit or 4-wire circuit, as shown. As long as the junctions are near the RTD, as in a connection head, errors are negligible.

Style RTD3 — Open Disc Termination

**Optional Installation
Compression Fitting**
See Box 9

Ordering Information

RTDs are offered with the options listed in the worksheet below. Create an ordering code by filling in the boxes with the appropriate number and/or letter designation for your requirements, and a part number will be assigned.

Design Features

- * *Platinum Resistance Element*
- * *Ceramic disc 1-1/8" O.D. for 2-, 3- and 4-wire designs, 2-1/32" O.D. for dual 6-wire design (.188" and .250" O.D. sheath); consult factory for 1/8" sheath O.D.*

Two Construction Styles to Suit Any Application

(See Ordering Code Box 8)

- * *Standard Industry Tube and Wire construction with fiberglass 900°F (482°C) or Teflon® 392°F (200°C) lead wires*
- * *Mineral Insulated construction rated up to 1200°F (650°C). This construction type allows forming and bending the sheath to meet design requirements.*

Ordering Code:

RTD3 -

Element BOX 1

S = 100Ω Single **K** = 1000Ω Single
D = 100Ω Dual **L** = 1000Ω Dual
 TCR = .00385 ohm/ohm/°C

Sheath Length "L" BOX 6

Whole inches
01 to 99
 For lengths over 99 in. consult TEMPCO.

RTDs with Transmitter and Connection Head

Design Features

- * 100 ohm RTD
- * 4-20mA Programmable Linear Output Transmitter
- * Available with Spring-Loaded Sheath
- * Temperature Range of -58°F to 500°F (-50° to 260°C)
- * Transmitter Accuracy of +/0.2% of temperature span
- * For field programming of the temperature transmitter see Part Number ETM90006 on page 12-45
- * Available in Single 3-wire Circuit only
- * 1/2" NPT process connection

Transmitter Ambient Temperature Range:
-40° to +185°F (-40° to +85°C)
Refer to page 12-44 for complete details.

EMT10001

EMT20001

Sanitary RTDs

Design Features

- * Platinum Resistance Element
- * Ideal for Food and Dairy Applications
- * 316 SS Construction
- * Available in Standard .250 dia. Tip or Optional .500 dia. Reduced to .250 dia.
- * Improved Response Time
- * Welded and Highly Polished Components
- * Operating Temperature Range of -58° to 500°F (-50° to 260°C)

Ordering Code: **RTS** -

Diameter BOX 1

- 1** = 0.250"
- 2** = 0.500" with .250" tip

Element BOX 2

- S** = 100Ω Single **K** = 1000Ω Single
- D** = 100Ω Dual **L** = 1000Ω Dual
- TCR** = .00385 ohm/ohm/°C

Element Class BOX 3

- A** = ±0.06% at 0°C, Optional
- B** = ±0.12% at 0°C, Standard

Number of Leads BOX 4

- 2** = 2-wire circuit
- 3** = 3-wire circuit
- 4** = 4-wire circuit (*Dual Circuit not available*)

Sanitary Cap Type BOX 5

- (Standard Finish)
- A** = 16 AMP Tri-Clover
- X** = Other (Specify)

Sanitary Cap Size BOX 6

- A** = 1-1/2"
- B** = 2"
- C** = 2-1/2"
- D** = 3"
- X** = Other (Specify)

Sheath Length "L" BOX 7

- Whole inches
- 01 to 99**

Sheath Length "L" BOX 8

- Fractional inches
- 0** = 0" **3** = 3/8" **6** = 3/4"
- 1** = 1/8" **4** = 1/2" **7** = 7/8"
- 2** = 1/4" **5** = 5/8"

Connection Head BOX 9

- P** = Polypropylene Head (FDA Approved)
- A** = Standard Die Cast Aluminum Head
- S** = Stainless Steel
- Note: Conduit connection for A & S is 1/2", and for B is 3/4". For overall dimensions see pages 14-98 to 14-100.

Special Requirements BOX 10

- X** = Specify
- 0** = None

Bayonet Style RTDs for the Plastics Industry

Design Features

- * 3/16" diameter stainless steel probe
- * 3-wire circuit
- * Operating temp. 392°F (200°C); 900°F (482°C) available
- * 100 ohms Class B element per IEC 751
- * Can be installed wherever existing thermocouples of similar design are used

Style 1 – Adjustable Spring Bayonet RTD

- * Insertion length adjustable from 1" to 10"
- * One can replace several fixed-length thermocouples
- * Forms easily to any angle

See Page 14-87 for Bayonet Adapters.

Stock Items Are Shown In **RED**

Part Number	Termination Style [†]	"L" Dim. (in)

Melt Bolt RTDs for Plastics Extruders or Injection Molding Machines

Design Features

- * 3/16" diameter Probe
- * 100 ohm Class B element per IEC 751
- * 3-wire circuit
- * Can be installed wherever standard melt thermocouples are used
- * Operating temp. 392°F (200°C), 900°F (482°C) available
- * Available in 3" and 6" bolt designs
- * Bolts and Probes are 300 series stainless steel

Style RT1—Adjustable Tip

- RTD tip immersion length can be field adjusted from flush to 2"
- Eliminates excess inventory

⚠ WARNING: Cancer and Reproductive Harm - www.P65Warnings.ca.gov.

Precision Centigrade Temperature Sensor

This sensor probe utilizes a dual precision integrated-circuit temperature sensor, whose output voltage is linearly proportional to the Celsius temperature.

This sensor does not require any external calibration or trimming to provide typical accuracies of $\pm 1/4^\circ\text{C}$ at room temperature or $\pm 3/4^\circ\text{C}$ over a full -55°C to 150°C temperature range. This sensor includes a Molex 4-pin connector.

Design Features:

- * Calibrated directly in $^\circ\text{C}$
- * Linear $+10.0\text{mv}/^\circ\text{C}$ scale factor
- * $\pm 1/4^\circ\text{C}$ accuracy (at 25°C)
- * Rated to full -55°C to 150°C range
- * Suitable for remote applications
- * Operates from 4 to 30 volts
- * Less than $60\mu\text{A}$ current drain
- * Low self-heating, 0.08°C in still air
- * Nonlinearity only $\pm 1/4^\circ\text{C}$ typical
- * Low impedance output, 0.1Ω for 1mA load

This Sensor is available in other designs and configurations. Consult Tempco with your requirements.

Part Number: STS00001

2000 Ohm RTD Sensor

This sensor probe is a fast responding 2000 ohm RTD sensor used widely in the HVAC, appliance and automotive industries. Sensor is protected in a 316 SS housing and supplied with 22 ga. Teflon® leads.

Design Features:

- * 2000 ohm nominal resistance at 20°C
- * Accurate to $\pm 0.7^\circ\text{C}$ at 20°C
- * Near linear temperature sensitivity; provides $8\Omega/^\circ\text{C}$ sensitivity
- * $\pm 3\%$ max. linearity (can be linearized to $\pm 0.2\%$)
- * Long term stability
- * Interchangeable without sensor-to-sensor recalibration
- * Operating temperature range of -40°C to $+150^\circ\text{C}$

Part Number	Probe Length	Lead Length
STS00002	8"	10-1/2"
STS00003	4"	13"

This type of sensor is also available in other designs and configurations. Consult Tempco with your requirements.

Special Application Thermocouples

Spring-Loaded Surface Contact Thermocouple

This Type J thermocouple is used to sense the temperature of moving drums or rollers. Spring-loaded tip provides free movement and proper contact of the sensing tip. The sensing tip is made of copper for fast response time. Thermocouple wires are terminated in a miniature connection head and connected to a terminal block. This thermocouple can be operated up to 500°F (260°C).

Part Number: TCP90185

Type J calibration; consult Tempco for other calibrations.

Compound Mixer Thermocouple

This Type J thermocouple is used in mixers and pelletizers. The body is made of 416 SS. The ungrounded junction, and sensing tip, is isolated from the body with a high temperature thermal barrier to ensure accuracy.

Maximum Operating Temperature: 750°F (400°C).

Part Number: TCP90231

10" Long Bezel Jack Panel for Standard Thermocouple Connectors

Design Features:

- * Accepts standard plugs.
- * Jacks are ANSI color coded, glass-filled nylon with a temperature rating of 350°F (177°C) continuous and 400°F (204°C) intermittent.
- * Panels are manufactured from rugged, .090" thick aluminum.
- * Brushed and anodized finishes are available at an additional cost. Consult TEMPCO with your requirements.
- * Panels are normally supplied unassembled with all necessary hardware to assemble and install included. Can be furnished assembled at an additional cost.

Standard Sizes

Part Number	Number of Rows	Panel Height H x L (in)	Number of Jacks	Cutout Size H x L (in)
JP(✚)00001	1	3½ x 10	12	1⅞ x 9¼
JP(✚)00002	2	5⅜ x 10	24	3⅜ x 9¼
JP(✚)00003	3	8⅞ x 10	36	6½ x 9¼
JP(✚)00004	4	9⅞ x 10	48	8¼ x 9¼
JP(✚)00005	5	12¾ x 10	60	11⅞ x 9¼
JP(✚)00006	6	14⅞ x 10	72	12⅞ x 9¼

- ✚ Insert calibration code (J, K, T, E, R, S, U) in Part Number, "U" is designated for RTDs and type B thermocouples

Notes: Mounting Hole Spacing: 3/16" in from each side to center of 13/64" hole (for #10 screw)

Bezel Panel Jacks are retained by a spring clip, which is installed from the rear of the panel.

Wire may be attached after jacks are installed in panel.

5-1/2" Long Bezel Jack Panel for Standard Thermocouple Connectors

Standard Sizes

Part Number	Number of Rows	Panel Height H x L (in)	Number of Jacks	Cutout Size H x L (in)
JP(✚)00007	1	3½ x 5½	6	1⅞ x 4 ²¹ / ₃₂

JP(✚)00011	5	12¾ x 5½	30	11⅞ x 4 ²¹ / ₃₂
JP(✚)00012	6	14⅞ x 5½	36	12⅞ x 4 ²¹ / ₃₂

- ✚ Insert calibration code (J, K, T, E, R, S, U) in Part Number, "U" is designated for RTDs and type B thermocouples

Jack Panels

Jack Panels for Miniature Thermocouple Connectors

Design Features:

- * Designed to be space saving.
- * Complements modern miniature instrumentation.
- * Jack bodies are ANSI color coded, glass-filled nylon with a temperature rating of 350°F (177°C) continuous and 400°F (204°C) intermittent.
- * Panels are manufactured of rugged .090" thick aluminum.
- * Brushed and anodized finishes are available at an additional cost. Consult TEMPCO with your requirements.
- * Panels are supplied unassembled for ease of wiring—all hardware necessary to assemble is included.

Standard Sizes

Part Number	Number of Rows	Panel Height H x L (in)	Number of Jacks	Cutout Size H x L (in)
JP(+)00013	1	2 ²¹ / ₃₂ x 3 ⁵ / ₈	6	1 ⁹ / ₃₂ x 3 ³ / ₃₂

JP(✚)00027	3	8½ x 9¾	36	7¾ x 8¾
JP(✚)00028	4	11½ x 9¾	48	9¾ x 8¾

✚ Insert calibration code (J, K, T, E, R, S, U) in Part Number, "U" is designated for RTDs and type B thermocouples.

Design Features:

- * For use with RTDs and shielded thermocouples requiring 3 wires.
- * Will accept standard 3-Pin connectors.
- * Jack bodies are ANSI color coded, glass-filled nylon with a temperature rating of 350°F (177°C) continuous and 400°F (204°C) intermittent.
- * Panels are manufactured of rugged .090" thick aluminum.
- * Brushed and anodized finishes are available at an additional cost. Consult TEMPCO with your requirements.
- * Panels are supplied unassembled for ease of wiring — all hardware necessary to assemble is included.

Note: Mounting Hole Spacing: 3/16" in from each side to center of 13/64" hole (for #10 screw)

Jack Panels for Miniature 3-Pin Connectors

✚ Insert calibration code (J, K, T, E, R, S, U) in Part Number, "U" is designated for RTDs and type B thermocouples

Design Features:

- * For use with RTDs and shielded thermocouples requiring 3 wires.
- * Complements modern miniature instrumentation.
- * Jack bodies are ANSI color coded, glass-filled nylon with a temperature rating of 350°F (177°C) continuous and 400°F (204°C) intermittent.
- * Panels are manufactured of rugged .090" thick aluminum.
- * Brushed and anodized finishes are available at an additional cost. Consult TEMPCO with your requirements.
- * Panels are supplied unassembled for ease of wiring—all hardware necessary to assemble is included.

Note: Mounting Hole Spacing: 3/16" in from each side to center of 13/64" hole (for #10 screw)

Jack Panels

Jack Panels — Jab-In Style Termination

Design Features:

- * Accepts Standard Plugs.
- * Jacks will accept up to 14-gauge wire.
- * Jack bodies are ANSI color coded, glass-filled nylon with a temperature rating of 350°F (177°C) continuous and 400°F (204°C) intermittent.
- * Panels are manufactured of rugged .090" thick aluminum.
- * Brushed and anodized finishes are available at an additional cost. Consult TEMPCO with your requirements.
- * Jack rows are placed further apart than standard Jack Panels for ease of termination.
- * Panels are supplied unassembled for ease of wiring — all hardware necessary to assemble is included.

Custom Engineered/Manufactured Jack Panels

For sizes and styles not listed, TEMPCO will design and manufacture a Jack Panel to meet your specifications. **Standard lead time is 2 weeks.**

Please Specify the following:

- Overall Dimensions
- Type of Jack (Standard or Miniature)
- Number of Jacks (Circuits)
- Number of Rows
- Calibration

WARNING: Cancer and Reproductive Harm - www.P65Warnings.ca.gov.

Thermocouple and RTD Selector Switch

Design Features:

- * Available in 6 to 36 positions.
- * 2-pole and 3-pole circuits with "OFF" position.
- * Silver-plated blades and contacts with self-cleaning wiper action and low contact resistance.
- * Terminals are silver-plated brass with numbered circuits and polarity identification.
- * "OFF" position has terminals available for shorting input circuit when using it with a digital meter (not available on 3-pole).
- * High-impact GE Noryl™ case.

Number of Positions	Circuit Type	Dimensions Reference	Part Number
6	2-Pole	A	TCA-124-101
10	Break Before Make	A	TCA-124-102

6	3-Pole	B	TCA-124-108
12	3-Pole	B	TCA-124-109
18	Make Before Break	B	TCA-124-110
24	Make Before Break	B	TCA-124-111

Circular Panel Jacks

Design Features:

- * Available in standard and miniature sizes (2-pin only).
- * Used where individual jacks are required to fit in standard electrical knockouts.
- * Standard jack fits in 3/4" (1-1/8" dia.) electrical knockout.
- * Miniature jack fits in 1/2" (7/8" dia.) electrical knockout.
- * Jacks are ANSI color coded with a temperature rating of 350°F (177°C) continuous and 400°F (204°C) intermittent.
- * Both the standard and miniature jacks install from the front of the panel with no additional hardware required.

Example of Electrical Box Mount

Jack Panels

Jack Panels

Panel Only

Panel and Box Assembly

For FS Box

Design Features:

- * Jack Panels are designed to be used with standard FS Style boxes.
- * Panels are manufactured of rugged .090" thick aluminum.
- * Panels are designed to accept the safest maximum number of Jacks.
- * Available for Standard and Miniature Jacks, 2-pin or 3-pin.
- * Rated for 350°F (177°C) continuous and 400°F (204°C) intermittent.
- * Panels measure 2-13/16" high × 4-1/2" long.

+ Insert calibration code (J, K, T, E, R, S, U) in Part Number, "U" is designated for RTDs and type B thermocouples

Custom-Made 19" Rack Panels

Design Features:

- * Panels are made of .090" thick aluminum with a smooth mill finish.
- * All panels have slotted holes positioned at E.I.A. standard spacing.
- * Panels are available with any of the standard or miniature Panel Jacks shown in this section.
- * Rack Panels come in standard heights of 3-1/2", 5-1/4", 7", and 8-1/4".
- * Panels are supplied unassembled for ease of wiring—all hardware to assemble is included.

Panel Mount Standard Jab-In Jack

ANSI Calibration	Body Color	Part Number
J	Black	TCA-102-161
K	Yellow	TCA-102-162
T	Blue	TCA-102-163
E	Purple	TCA-102-164
R/S	Green	TCA-102-165
U*	White	TCA-102-166

Note: All panel jacks have the same high quality features as their non-panel counterparts and include hardware for mounting.

* "U" is designated for RTDs and type B thermocouples

Panel Jacks are rated for 350°F (177°C) continuous and 400°F (204°C) intermittent.

Standard Thermowells for Industrial Applications

Velocity Ratings of Wells

Well failures, in most cases, are not due to the effects of pressure and temperature. The calculations necessary to provide adequate strength under given conditions are familiar enough to permit proper choice of wall thickness and material.

Less familiar, and more dangerous, are the vibrational effects to which wells are subjected. Fluid, flowing by the well, forms a turbulent wake (called the Von Karman Trail) which has a definite frequency based on the diameter of the well and the velocity of the fluid. It is important that the well has sufficient stiffness so that the wake frequency will never equal the natural frequency of the well itself. If the natural frequency of the well were to coincide with the wake frequency, the well would vibrate to destruction and break off in the piping.

On the following pages, a recommended velocity rating can be found for every standard well length and material cataloged. To reduce the complexity of presenting this information, the ratings are based on operating temperatures of 1000°F for wells made of Carbon Steel (C-1018), ANSI 304, and ANSI 316. Values for Brass wells are based on 350°F operation. Limits for Monel are based on 900°F service. Slightly higher velocity is possible at lower temperatures.

Where single values appear in the velocity tables, these may be considered safe for water, steam, air or gas. In the shorter insertion lengths, consideration is given to the velocity pressure effect of water flowing at higher velocities. The values in parentheses, therefore, represent safe values for water flow, while the unbracketed value may be used for steam, air, gas and fluids of similar density.

It should be pointed out that the values given are extremely conservative, and intended primarily as a guide. Wells are also safe if the resonant frequency is well below the wake frequency or if the fluid velocity is constantly fluctuating through the critical velocity point. Nevertheless, if the installation is not hampered by the use of a sufficiently stiff well, we recommend the values should not be exceeded.

If you have operating conditions requiring special well designs, our engineering staff is available to assist you. Consult Tempco with your requirements.

This information is given as a guide only. Final material selection should be made by the user based on their knowledge of the application.

Ceramic Protection Tubes Application Data

Ceramic Protection Tubes are used in applications where contamination from hostile environments or the cutting action of concentrated and direct flame impingement are factors. Such conditions usually require a noble metal thermocouple such as platinum and platinum alloys.

When selecting assemblies using ceramic components, the expected maximum temperatures must be considered. At elevated temperatures, some ceramic materials go through a glass phase. As silica is a prime contaminant of platinum, alumina protecting tubes and insulators are recommended for temperatures exceeding 2000°F (1093°C).

Material	Maximum Operating Temperature	Thermal Shock Characteristics	Maximum Available Length (in)	Typical Applications	Remarks
Alumina (99.7%)	3100°F (1700°C)	Fair (preheating to 900°F [482°C] recommended)	84	Iron, Barium, crown glass; non-ferrous metals; gas-tight protection for noble metal thermocouples in excess of 2400°F (1316°C)	Sags at 2900°F (1593°C) Prevents dry hydrogen penetration
Porcelain (Mullite)	2550°F (1400°C)	Poor (preheating to 900°F [482°C] recommended)	84	Non-ferrous metals; gas-tight protection for noble metal thermocouples to 2400°F (1316°C)	Sags at 2550°F (1400°C) Prone to attack by halogen gases; some penetration of dry hydrogen. Contains silica.

Metal Protection Tubes

Metal Protection Tubes

For longer life and continued accuracy, most thermocouples in industrial applications should be protected from physical damage, corrosion, and contamination by some type of

protecting tube or well. Metal tubes selected to suit the temperature, pressure and atmosphere are generally used with base metal thermocouples.

Typical Metal Protection Tube

Typical Cast Iron Protection Tube

Material	Maximum Operating Temperature	Typical Applications	Remarks
304 Stainless	1800°F (982°C)	Food and Dairy Products, Petroleum Products, Mild Acids, Alkalies	Embrittles in 800°F (427°C) to 1400°F (760°C) range.
Cast Iron	1300°F (704°C)	Molten Aluminum, Gas Ducts	Withstands sulphur and caustic solutions.
316 Stainless	1800°F (982°C)	Food and Dairy Products, Petroleum Products, Mild Acids, Alkalies	Greater corrosion resistance than 304 Stainless.
446 Stainless	2000°F (1093°C)	Sulphurous Atmospheres such as Hydrogen Sulphide, Neutral Salt Baths	Excellent resistance to corrosion and oxidation at high temperatures. Do not use in carburizing atmospheres.
Inconel 601®	2200°F (1204°C)	Neutral Salt Baths, Carburizing and Nitriding Atmospheres	Good resistance to corrosion at high temperatures; excellent resistance to oxidation at high temperatures. Do not use in carburizing atmospheres above 1000°F (538°C).
Black Steel Pipe per ASTM A120	1200°F (649°C)	Molten Babbitt, Tin, Lead, and Magnesium	Low Cost

304 Stainless Steel (8% Nickel-18% Chrome)

Bayonet Type Adapters

Spring-Loaded Bayonet Cap Type Thermocouples are used in conjunction with bayonet adapters. After inserting the thermocouple sheath through the adapter the spring is compressed and locked by the cap, pushing the sensing junction tight against the surface being measured for increased accuracy and faster response time.

Adapter Selection and Installation

1. Select an adapter length by comparing the hole depth and thermocouple probe length in Table 1A.
2. Select from Table 1B a thread type for the adapter length determined in Table 1A.

Table 1A—Adapter Length for Bayonet Type Thermocouples (page 14-4) and RTDs (page 14-62)

Hole "C" (in)	Probe Length A (in)		
	7/8" Long Adapter	1-3/8" Long Adapter	2-1/2" Long Adapter

†Must be used with 12 mm ID bayonet caps

Pipe Clamp Adapters for Bayonet Type Thermocouples

Spring-loaded bayonet cap type thermocouples are used in conjunction with bayonet adapters. After inserting the thermocouple sheath through the adapter the spring is compressed and locked by the cap, pushing the sensing junction tight against the surface being measured for increased accuracy and faster response time.

Pipe Clamp adapters permit thermocouple placement without the drilling and tapping of holes to attach the adapter.

Sensor Mounting Fixed Fittings

Mounting fittings are sometimes necessary for the installation of thermocouple and RTD probes. The two basic types of fixed fittings are the Hex Bushing and the Hex Nipple, most commonly made of either Brass or Stainless Steel.

Fixed fittings are brazed to the sheath of the probe; therefore the immersion length "U" must be specified in inches or millimeters. The immersion length is from the probe tip to the beginning of the thread on the fitting.

Compression Fittings

There are non-adjustable and adjustable compression fittings. Non-adjustable compression fittings have a metal ferrule which is compressed onto the sheath and deformed permanently in the application; the fitting cannot be relocated along the sheath after tightening. Adjustable compression fittings have a Teflon® ferrule and the fitting can be relocated several times if immersion length is changed.

Sheath Diameter (in)	Part Number

Spring-Loaded Hex Nipple

Standard Quick Disconnect Plugs and Jacks

Design Features:

- * Quick, positive connections.
- * Bodies are ANSI color coded, glass filled nylon with a temperature rating of 350°F (177°C) continuous and 400°F (204°C) intermittent.
- * Pins are made from matching thermocouple material except R and S, which are compensated.
- * Plugs available in hollow or solid pins.
- * Plugs and Jacks are interchangeable with other thermocouple connectors with standard 7/16-inch spacing.
- * Can be imprinted with customer's own name (minimum order and tooling charge applies).

Miniature Quick Disconnect Plugs and Jacks

Design Features:

- * Designed to be lightweight and to be space-saving.
- * Bodies are ANSI color coded, glass filled nylon with a temperature rating of 350°F (177°C) continuous and 400°F (204°C) intermittent.
- * Pins are solid flat with 5/16" spacing, made from matching thermocouple material except R and S, which are compensated.
- * Plugs and jacks are interchangeable with other miniature connectors.
- * Will accept wire from .001" to .032" and sheath diameters from .010" to .188".
- * Negative pin marked with red disc.
- * Complements modern miniature instrumentation.

Dual Cable Clamps

- * Assemble Standard Connectors into Dual Connectors
- * Accommodate either One or Two Lead-In Cables
- * Use 2-Pin Connectors only

Part Number: **TCA-107-103**

Thermocouple Bracket

- * Used to mount T/C Probes on Panel or Oven Walls
- * Supplied with two #6 Self-Tapping Screws

Part Number: **SMPR-1062**

Filler Plate Set

- * When combined with Dual Tube Adapter or Dual Cable Clamp, the Filler Plate Set provides the 3/4" pin spacing of a single Duplex Connector.

Part Number: **TCA-107-104**

Accessories for Miniature Plugs and Jacks

Cable Clamps and Grommets

Cable Clamp (For 2-Pin Miniature)

Part Number: **TCA-107-105**

Cable Clamp (For 3-Pin Miniature)

Part Number: **TCA-107-109**

Neoprene Grommet

Part Number: **TCA-109-102**

Neoprene Wire Entrance Grommets Nylon Wire Protection Washers

* For all Miniature Connectors

* Grommet is used in place of cable clamp

* Washer protects fine wire from breakage

Grommet

Part Number: **TCA-109-104**

Washer

Part Number: **TCA-120-102**

Crimping Inserts

* For all Miniature Connectors

* Used primarily with TEMPCO-PAK

Brazing Inserts

* For all Miniature Connectors

* Can be used with Tubing or TEMPCO-PAK

Open Disc Terminal Blocks

The open disc terminal blocks are available for both single and dual element thermocouples or single-element RTD assemblies. They are available in two different materials. Ceramic discs are rated for 1000°F (530°C) and silicone/glass fiber discs are rated for 350°F (117°C). Silicone glass/fiber has a higher resistance to vibration and thermal shock than do the ceramic discs.

Each disc is assembled to a 1" O.D. × 1/8" thick brass (standard) or optional stainless steel back-up plate by two screws, and the plate is directly brazed to the sensor sheath.

Ceramic Open Disc with Brass Back-Up Plate and Mounting Screws

Die Cast Aluminum Heads

Design Features:

- * Plated chain attaches cover to body
- * Body is O-ring gasketed
- * Available in 2-terminal or 4-terminal
- * Comes in three sizes—Standard, Medium and Miniature—to allow for design flexibility
- * Has grommeted conduit entry for lead wire or flexible cable

Type "A" Standard Size Die Cast Aluminum Head

3-1/2"H x 4"L x 3-1/4"W

Thermocouple Wire and Thermocouple Extension Wire

- ◆ **Insulated Thermocouple and Extension Wire Insulation Types** — See Page 14-104
- ◆ **Thermocouple Wire and Extension Grade Thermocouple Wire Color Codes** — See Pages 14-105 and 14-106
- ◆ **Thermocouple Grade Wire** — See Pages 14-107 through 14-109
- ◆ **Thermocouple Extension Grade Wire** — See Pages 14-110 and 14-111
- ◆ **Coil Cords and RTD Wires** — See Page 14-112

Using Thermocouple Extension Wire

Thermocouple extension wire is often used to make the connection between the thermocouple and the measuring instrument, especially when long distances are involved, due to its cost advantage. Thermocouple extension wire has approximately the same characteristics as thermocouple wire but its accuracy is guaranteed over a more limited range of temperatures.

For base metal thermocouples, extension wire is of essentially the same composition as the corresponding thermocouple wire. Because of the high cost of noble metals, noble metal thermocouple extension wires are made from alloys that match the noble metal thermocouple characteristics.

Note: Thermocouple Extension Wire should never be used in place of thermocouple wire as the actual sensor because it will not generate accurate temperature information.

Protective Wraps for Thermocouple Wire and Thermocouple Extension Wire

Many of the insulated thermocouple wire and extension wire constructions listed on the following pages are available with the following two wraps as an option.

Stainless Steel or Tinned Copper Overbraid

Stainless Steel Wrap

Tolerances and Temperatures

Table 1 Tolerances on Initial Values of Emf vs. Temperature

- NOTE 1** Tolerances in this table apply to new essentially homogeneous thermocouple wire, normally in the size range 0.25 mm to 3 mm in diameter (No. 30 to No. 8 Awg) and used at temperatures not exceeding the recommended limits of Table 2. If used at higher temperatures these tolerances may not apply.
- NOTE 2** The Fahrenheit tolerance is 1.8 times larger than the °C tolerance at the equivalent °C temperature. Note particularly that percentage tolerances apply only to temperatures that are expressed in °C.
- NOTE 3** **Caution:** Users should be aware that certain characteristics of thermocouple materials, including the emf versus temperature relationship, may change with time in use; consequently, test results and performance obtained at time of manufacture may not necessarily apply throughout an extended period of use. Tolerances given in this table apply only to new wire or MI cable or thermocouples as delivered to the user and **do not allow for changes in characteristics with use.** The magnitude of such changes will depend on such factors as wire size, temperature, time of exposure, and environment. It should be further noted that due to possible changes in homogeneity, attempting to recalibrate **used** thermocouples is likely to yield irrelevant results, and is not recommended. However, it may be appropriate to compare used thermocouples **in-situ** with new or known good ones to ascertain their suitability for further service under the conditions of the comparison.

Thermocouple Type	Temperature Range		Tolerances—Reference Junction 0°C (32°F)			
			Standard Tolerances		Special Tolerances	
	°C	°F	°C (whichever is greater)		°C (whichever is greater)	
T	0 to 370	32 to 700	±1 or ±0.75%	Note 2	±0.5 or 0.4%	Note 2
J	0 to 760	32 to 1400	±2.2 or ±0.75%		±1.1 or 0.4%	
E	0 to 870	32 to 1600	±1.7 or ±0.5%		±1 or ±0.4%	
K or N	0 to 1260	32 to 2300	±2.2 or ±0.75%		±1.1 or ±0.4%	
R or S	0 to 1480	32 to 2700	±1.5 or ±0.25%		±0.6 or ±0.1%	
B	870 to 1700	1600 to 3100	±0.5%			
T ^A	-200 to 0	-328 to 32	±1 or ±1.5%		B	
E ^A	-200 to 0	-328 to 32	±1.7 or ±1%		B	
K ^A	-200 to 0	-328 to 32	±2.2 or ±2%		B	

^A Thermocouples and thermocouple materials are normally supplied to meet the tolerances specified in the table for temperatures above 0°C. The same materials, however, may not fall within the tolerances given for temperatures below 0°C in the second section of the table. If materials are required to meet the tolerances stated for temperatures below 0°C the purchase order must so state. Selection of materials usually will be required.

^B Special tolerances for temperatures below 0°C are difficult to justify due to limited available information. However, the following values for Types E and T thermocouples are suggested as a guide for discussion between purchaser and supplier:

Type E -200 to 0°C ±1°C or ±0.5% (whichever is greater) **Type T** -200 to 0°C ±0.5°C or ±0.8% (whichever is greater)

Initial values of tolerance for Type J thermocouples at temperatures below 0°C and special tolerances for Type K thermocouples below 0°C are not given due to the characteristics of the materials.

Table 2 Suggested Upper Temperature Limits for Protected Thermocouples

- NOTE 1** This table gives the recommended upper temperature limits for the various thermocouples and wire sizes. These limits apply to protected thermocouples: that is, thermocouples in conventional closed-end protection tubes. They do not apply to sheathed thermocouples having compacted mineral oxide insulation.
- NOTE 2** The temperature limits given here are intended only as a guide to the user and should not be taken as absolute values nor as guarantees of satisfactory life or performance. These types and sizes are sometimes used at temperatures above the given limits, but usually at the expense of stability or life or both. In other instances, it may be necessary to reduce the given limits in order to achieve adequate service. ASTM MNL-12^c and other literature sources should be consulted for additional application information.

Thermocouple Type	Upper Temperature Limit for Various Wire Sizes (Awg), °C (°F)					
	No. 8 Gauge 3.25 mm (0.128 in)	No. 14 Gauge 1.63 mm (0.064 in)	No. 20 Gauge 0.81 mm (0.032 in)	No. 24 Gauge 0.51 mm (0.020 in)	No. 28 Gauge 0.33 mm (0.013 in)	No. 30 Gauge 0.25 mm (0.010 in)
T		370 (700)	260 (500)	200 (400)	200 (400)	150 (300)
J	760 (1400)	590 (1100)	480 (900)	370 (700)	370 (700)	320 (600)
E	870 (1600)	650 (1200)	540 (1000)	430 (800)	430 (800)	370 (700)

†Thermocouple extension grade wire is only calibrated up to 400°F (204°C).

Thermocouple Wire Color Code & Specifications (United States, Canada & Mexico)

ANSI Code	Color Code	Positive (+) Lead	Negative (-) Lead	Temperature Range	Initial Calibration Tolerances	
					Standard °C (whichever is greater)	Special °C (whichever is greater)
J		Iron	Constantan (45% Nickel, 55% Copper)	32-1382°F (0-750°C)	±2.2°C or ±0.75%	±1.1°C or ±0.4%
K		Chromel® (90% Nickel, 10% Chromium)	Alumel (95% Nickel, 2% Aluminum, 2% Manganese, 1% Silicon)	32-2282°F (0-1250°C)	±2.2°C or ±0.75%	±1.1°C or ±0.4%
E		Chromel® (90% Nickel, 10% Chromium)	Constantan (45% Nickel, 55% Copper)	32-1652°F (0-900°C)	±1.7°C or ±0.5%	±1.0°C or ±0.4%
T		Copper	Constantan (45% Nickel, 55% Copper)	32-662°F (0-350°C)	±1°C or ±0.75%	±.5°C or ±0.4%
N		Nicrosil (84.6% Nickel, 14% Chromium, 1.4% Silicon)	Nisil (95.6% Nickel, 4.4 % Silicon)	32-2282°F (0-1250°C)	±2.2°C or ±0.75%	±1.1°C or ±0.4%

Thermocouple Extension Wire Color Code & Specifications (United States, Canada & Mexico)

ANSI Code	ANSI Color Code	Positive (+) Lead	Negative (-) Lead	Temperature Range	Initial Calibration Tolerances	
					Standard	Special
JX		Iron	Constantan (45% Nickel, 55% Copper)	32-392°F (0-200°C)	±2.2°C	±1.1°C
KX		Chromel® (90% Nickel, 10% Chromium)	Alumel (95% Nickel, 2% Aluminum, 2% Manganese, 1% Silicon)	32-392°F (0-200°C)	±2.2°C	±1.1°C
EX		Chromel® (90% Nickel, 10% Chromium)	Constantan (45% Nickel, 55% Copper)	32-392°F (0-200°C)	±1.7°C	±1.1°C
TX		Copper	Constantan (45% Nickel, 55% Copper)	32 to 212°F (0-100°C)	±1.0°C	±0.5°C
NX		Nicrosil (84.6% Nickel, 4% Chromium, 1.4 % Silicon)	Nisil (95.6% Nickel, 4.4 % Silicon)	32-392°F (0-200°C)	±2.2°C	±1.1°C
Compensating Extension Wire Type						
RX*		Copper	Copper Alloy	32-392°F (0-200°C)	±9°F (±5°C)	N/A
SX*		Copper	Copper Alloy	32-392°F (0-200°C)	±9°F (±5°C)	N/A
BX†*		Copper	Copper	32 to 212°F (0-100°C)	+0°F -6.7°F (+0°C -3.7°C)	N/A

* Due to the non-linearity of the types R, S, and B temperature-emf curves, the error introduced into a thermocouple system by the compensating wire will be variable when expressed in degrees. The degree C tolerances are based on the following measuring junction temperatures.

†Copper versus copper compensating extension wire, usable to 100°C (212°F) with maximum deviations as indicated, but with no significant deviation over 0°C to 50°C (32°F to 122°F) range.

Type Wire	Measuring Junction Temperature
SX	Greater than 1598°F (870°C)
BX	Greater than 1832°F (1000°C)

Thermocouple Tolerances and Calibration

ANSI Tolerances

All thermocouple wire and extension wire is supplied to meet Standard Tolerances of ANSI Circular MC96.1–1982. Special tolerances are also available per ANSI MC96.1 at an extra charge. The standard and special tolerances for thermocouple and extension wires are given in the accompanying tables — see pages 14-103 and 14-105. Where tolerances are given in percent, the percentage applies to the temperature being measured.

Calibration and Certification

Thermocouple wire and elements can be factory calibrated and certified at an extra charge. Each thermocouple, coil, reel, or spool of wire is then tagged to show the individual departure from curve. The normal calibrating temperature range is 32°F–2000°F (0°C–1093°C), depending on wire type, gauge size and insulation type. A certificate of calibration is furnished upon request for all calibrated items. Each item calibrated is also tagged with the results.

Coil Cord for Thermocouples and RTDs

Design/Special Features

- * Complements modern instrumentation.
- * Designed to be space saving and convenient with excellent retractability.
- * Rated for 221°F (105°C) upper limit (above 104°F [40°C], coil form may change if stretched).
- * ANSI Color Coded Outer Jacket.
- * Wire is 26 gauge stranded with PVC insulation and the outer jacket is polyurethane.
- * Available with mini plug molded on one end only for thermocouples and has open ends only for 3-wire RTDs.
- * Can be used with all available thermocouple or RTD plugs, jacks and cable clamps, standard or miniature.
- * Open ends have approximately 4 inches straight.

Tempco's Metal Sheathed, Mineral Insulated Thermocouple Cable

Tempco-Pak Thermocouples and cable are manufactured using premium quality materials along with rigid quality control standards to ensure a reliable product that is state of the art. The metal outer sheath protects the thermocouple wires and insulation from contamination and mechanical damage as well as hostile and oxidizing environments while allowing the cable to be moisture proof, formable, weldable, compact and have fast response. The mineral insulation isolates the conductors from the sheath and each other while providing excellent high temperature insulation resistance.

Tempco offers a wide variety of sheath materials to choose from as there is no single sheath material that is suitable for all conditions. The most commonly stocked sheath materials are 304 SS, 316 SS and alloy 600. These are offered in all ANSI recognized thermocouple calibrations.

As a standard, Tempco-Pak Thermocouple cable is made with high purity 94% minimum MgO insulation. Other types and purities are available; however, when selecting a mineral insulation, the environment, temperature rating and cost must be taken into consideration.

Quality Assurance

All Tempco-Pak Thermocouple cable is inspected for appearance, physical and electrical characteristics, as well as conformity to calibration.

Each coil or batch of Tempco-Pak is made from the same production lot of raw materials and processed together. This eliminates the need to calibrate each length cut from the same coil. Samples from each coil are calibrated as shown in the chart.

Tempco-Pak Thermocouple Calibration Temperatures

ANSI Calibration	Standard Calibration Points	Optional Points
T	200°F (93°C), 400°F (204°C)	—
J	200°F (93°C), 500°F (260°C), 1000°F (537°C), 1500°F (815°C)	—
E	300°F (149°C), 500°F (260°C), 1000°F (537°C), 1600°F (871°C)	—
K	300°F (149°C), 500°F (260°C), 1000°F (537°C), 1600°F (871°C), 2000°F (1093°C)*	2200°F (1204°C)*
R	1000°F (537°C), 1600°F (871°C), 2000°F (1093°C)*	2600°F (1426°C)*
S	1000°F (537°C), 1600°F (871°C), 2000°F (1093°C)*	2600°F (1426°C)*
B	1600°F (871°C), 2000°F (1093°C)*, 2600°F (1426°C)*	
N	300°F (149°C), 500°F (260°C), 1000°F (537°C), 1600°F (871°C), 2000°F (1093°C)*	2200°F (1204°C)*

* These calibration points will be checked if the sheath and insulation are rated to this temperature.

Tempco-Pak

Thermocouple Data, Care and Handling

Calibration

Tempco-Pak Thermocouple Cable is normally supplied to ANSI standard limits (tolerances) of error as set forth in ANSI circular MC96.1-1982 and duplicated in ASTM E230. Special limits (tolerances) per ANSI MC96.1 are available at extra cost (See Table 1 on page 14-103).

Annealing

Unless otherwise specified all Tempco-Pak will be furnished in a fully annealed condition.

Formability

Because Tempco-Pak is fully annealed it can normally be formed around a mandrel 4 times the sheath diameter without loss of insulation resistance or the sheath's integrity.

Weldability

Tempco-Pak can be brazed, soldered or welded upon its sheath. However, because of the delicate nature of the fabricating of hot junctions, it is recommended they be done at the factory. Brazing or soldering material should not come in contact with the mineral insulation as the flux or resin will contaminate the insulation.

Insulation Resistance

Tempco-Pak should have a minimum insulation resistance wire to wire and wire to sheath at room temperature of 100 megohms at 50 VDC for 0.093" O.D. and smaller and 100 megohms at 100 VDC for .100" O.D. and larger.

Shipping and Packaging

Tempco-Pak is stocked in random lengths with the maximum stock lengths listed in the tables showing the varieties of commonly available material. Tempco reserves the right to supply random lengths of our choice unless specific lengths are specified on your order. Tempco-Pak can be furnished in coil form or in straight lengths. Normally .375" diameter and .312" diameter are shipped in straight lengths. Longer lengths are available on special order.

Handling and Storage

To prevent moisture from being absorbed by the hygroscopic insulation, both ends of the lengths of Tempco-Pak are sealed at the factory with a suitable sealer. Under some conditions, moisture absorption could take place that would lower the insulation resistance and may prove to be troublesome in subsequent assembly and welding, so it is advisable to store Tempco-Pak in a dry place. Slight moisture penetration can be remedied by removing approximately 3 inches from each end. Apply heat (approx. 300°F) 6 to 7 inches from the open end and slowly work heat toward and over the open end. Allow end to cool to approximately 180°F and reseal end. When pieces are cut from stock lengths, the exposed ends should be squared and resealed immediately to prevent contamination or moisture absorption. For deeper moisture penetration, bake entire length of material with both ends open for 24 hours at 250°F to 300°F to remove moisture and bring up insulation resistance. If baking does not bring the insulation resistance to acceptable levels, discard the material. As an option Tempco can provide Tempco-Pak with the ends seal welded.

Selecting the Mineral Insulated Thermocouple Cable Suited to Your Requirement

Tempco offers a wide variety of sheathed, mineral insulated thermocouple cable. We stock many varieties of sheath diameters and materials in ANSI recognized thermocouple types and can manufacture a multitude of non-stock combinations of sheath materials, O.D.s, insulations, wire types and wire configurations on special request. Consult Tempco with your specific requirements.

When selecting a cable for an application there are four things that must be considered:

Sheath Material

The outer sheath protects the insulation and wires from physical damage, contamination and the environment, all of which affect the service life and cost. As there isn't any one particular sheath material that is appropriate for all conditions, Tempco offers you a choice.

Wire Types (Calibration)

Selecting the proper conductors can be crucial to the function the MI cable is to perform. Where thermocouple cable is concerned, selecting the appropriate calibration for the temperature to be measured, the instrumentation available, and the environment will be a significant factor in the accuracy, life and cost.

Insulation Material

The insulation material isolates the wires from each other and the sheath. Because the wires are used as conductors, the insulating material becomes important in preventing electrical shorts and dielectric breakdown, particularly at elevated temperatures.

Physical Parameters

The four main physical characteristics of the MI cable that should be taken into account are:

- a. Sheath Diameter
- b. Sheath Wall Thickness
- c. Conductor Size
- d. Conductor Location (4 and 6 wires)

These will directly affect service life, flexibility, time response, weldability, strength and cost.

The following pages will serve as a guide for sheath materials, insulation materials and the various ANSI thermocouple calibrations.

The following information is designed to be used as a guide and may not be correct in every application. If in doubt, consult with your Tempco sales engineer or the factory. Temperatures shown are maximum recommended operating temperatures.

Sheath Material

NOTE: Letters in parentheses following the sheath material are used with the Ordering Worksheet on page 14-119.

Alloy 600 (A)

Maximum temperature: 1177°C (2150°F). Most widely used thermocouple sheath material. Good high temperature strength, corrosion resistance, resistance to chloride-ion stress corrosion cracking and oxidation resistance to high temperatures. Do not use in sulfur-bearing environments. Good in nitriding environments.

304 SS (B)

Maximum temperature: 900°C (1650°F). Most widely used low temperature sheath material. Extensively used in food, beverage, chemical and other industries where corrosion resistance is required. Subject to damaging carbide precipitation in 482° to 871°C (900° to 1600°F) range. Lowest-cost corrosion resistant sheath material available.

316 SS (C)

Maximum temperature: 900°C (1650°F). Best corrosion resistance of the austenitic stainless steel grades. Good corrosion resistance in H₂S. Widely used in the food and chemical industry. Subject to damaging carbide precipitation in 482° to 871°C (900° to 1600°F) range.

304L (D)

Maximum temperature: 900°C (1650°F). Low-carbon version of 304 SS (B). Low carbon content allows this material to be welded and heated in the 482° to 871°C (900° to 1600°F) range without damage to corrosion resistance.

316L (E)

Maximum temperature: 900°C (1650°F). Same as 316 SS (C) except low-carbon version allows for better welding and fabrication.

CONTINUED

Sheath Material (continued)

NOTE: Letters in parentheses following the sheath material are used with the Ordering Worksheet on page 14-119.

310 SS (F)

Maximum temperature: 1150°C (2100°F). Mechanical and corrosion resistance, similar to but better than 304 SS. Very good heat resistance. This alloy contains 25% Cr, 20% Ni. Not as ductile as 304 SS.

321 SS (G)

Maximum temperature: 871°C (1600°F). Similar to 304 SS except titanium stabilized for intergranular corrosion. This alloy is designed to overcome susceptibility to carbide precipitation in the 482°C to 871°C (900°F to 1600°F) range. Used in aerospace and chemical applications.

347 SS (H)

Maximum temperature: 871°C (1600°F). Similar to 304 SS except nickel columbium stabilized. This alloy is designed to overcome susceptibility to carbide precipitation in the 482°C to 871°C (900°F to 1600°F) range. Used in aerospace and chemical applications.

446 SS (L)

Maximum temperature: 1150°C (2100°F). Ferritic stainless steel, which has good resistance to sulfurous atmospheres at high temperatures. Good corrosion resistance to nitric acid, sulfuric acid and most alkalis. 27% chromium content gives this alloy the highest heat resistance of any ferritic stainless steel.

Hastelloy X® (Q)

Maximum temperature: 1204°C (2200°F). Widely used in aerospace applications. Resistant to oxidizing, reducing and neutral atmospheric conditions. Excellent high temperature strength along with superior oxidation resistance. Resistant to stress corrosion cracking in petrochemical applications.

Incoloy® 800 (S)

Maximum temperature: 1093°C (2000°F). Widely used as heater sheath material. Minimal use in thermocouples. Superior to Alloy 600 in sulfur, cyanide salts and fused neutral salts. Susceptible to intergranular attack in some applications by exposure to the temperature range of 538°C to 760°C (1000° to 1400°F).

Incoloy® 800HT (T)

Maximum temperature: 1093°C (2000°F). Same as Incoloy 800® (S) except carbon content is limited to upper end of range. This provides significantly higher creep and rupture strength. Used in the chemical and petrochemical industry for long-term exposure to high temperatures.

Inconel® 601 (R)

Maximum temperature: 1177°C (2150°F) Continuous; 1260°C (2300°F) Intermittent. Similar to Alloy 600 with the addition of aluminum for outstanding oxidation resistance. Designed for high temperature corrosion resistance. This material is good in carburizing environments, and has good creep rupture strength. Do not use in vacuum furnaces! Susceptible to intergranular attack by prolonged heating in 538°C to 760°C (1000°F to 1400°F) temperature range.

Molybdenum (V)

Maximum temperature in air: 399°C (750°F). Melting point: 2610°C (4730°F). Refractory metal. Brittle; cannot be bent. Use only in inert, vacuum or reducing atmospheres. Most commonly used with BeO insulation and Tungsten Rhenium conductors. Uncompacted assemblies only.

Nickel 200 (J)

Maximum temperature: 315°C (600°F). Commercially pure wrought Nickel with good resistance to a wide range of corrosive materials. For temperatures above 600°F use Nickel 201 to prevent embrittlement by intergranular corrosion.

Nickel 201 (K)

Maximum temperature: 1093°C (2000°F). Commercially pure wrought nickel with low carbon. Used in molten salt bath furnaces. Offers good resistance to caustic alkalines and fluorine.

Platinum 10% Rhodium (N)

Maximum temperature: 1552°C (2825°F). Excellent oxidation resistance. Same type of uses as platinum 20% rhodium except lower cost and reduced operating range.

Platinum 20% Rhodium (P)

Maximum temperature: 1649°C (3000°F). Excellent oxidation resistance. Very expensive oxidation resistant alloy used in glass manufacturing and in research applications. Also used for gas turbine test thermocouples.

Pure Platinum (M)

Maximum temperature: 1482°C (2700°F). Platinum is the only metallic material capable of operating in an oxidizing atmosphere above 1260°C (2300°F) for extended periods of time. Normally used with type R, S or B conductors. Used in glass manufacturing, high temperature furnaces and as control standards.

Tantalum (U)

Maximum temperature in air: 482°C (900°F). Melting point: 2996°C (5425°F). Refractory metal. Very ductile. Use only in inert or very good vacuums—10-3 torr or better. Most commonly used with BeO and Tungsten Rhenium conductors. Do not use in environments containing nitrogen above 371°C (700°F).

Mineral Insulated Cable Calibration

NOTE: Letters in parentheses following the sheath material are used with the Ordering Worksheet on page 14-119.

ANSI Type (J) Standard; Special Tolerance (3)

Type J is composed of a positive leg (JP) which is iron and a negative leg (JN) which is approximately 45% nickel, 55% copper. When protected by the compacted mineral insulation and appropriate outer sheath, Type J is usable from 32°F to 1500°F. Type J is not susceptible to short range ordering in the 700 to 1000°F temperature range (+2°F to +4°F drift), which occurs with ANSI Type E and K. This low-cost, stable thermocouple calibration is primarily used with 94% minimum purity MgO insulation and a stainless steel sheath.

ANSI Type (K) Standard; Special Tolerance (4)

Type K is composed of a positive leg (KP) which is approximately 90% nickel, 10% chromium and a negative leg (KN) which is approximately 95% nickel, 2% aluminum, 2% manganese and 1% silicon. When protected by the compacted mineral insulation and appropriate outer sheath, Type K is usable from 32°F to 2300°F and is one of Tempco's most popular calibration types. If the application temperature is between 600°F and 1100°F, we recommend using Type J or Type N because of short range ordering that can cause drift of +2°F to +4°F in a few hours' time. Type K is relatively stable to radiation transmutation and is used in nuclear environments. For applications below 32°F, special alloy selections are usually required.

ANSI Type (E) Standard; Special Tolerance (5)

Type E is composed of a positive leg (EP) which is approximately 90% nickel, 10% chromium and a negative leg (EN) which is approximately 45% nickel, 55% copper. When protected by the compacted mineral insulation and appropriate outer sheath, Type E is usable from 32°F to 1650°F. This thermocouple has the highest EMF output per degree of all ANSI recognized thermocouples. If the application temperature is between 600°F and 1100°F, we recommend using Type J or Type N because of short range ordering that can cause drift of +2°F to +4°F in a few hours' time. For applications below 32°F, special alloy selections may be required.

ANSI Type (T) Standard; Special Tolerance (6)

Type T is composed of a positive leg (TP) which is pure copper and a negative leg (TN) which is approximately 45% nickel, 55% copper. When protected by the compacted mineral insulation and appropriate outer sheath, Type T is usable from 32°F to 662°F. Type T is very stable and is used in a wide variety of cryogenic and low temperature applications. For applications below 32°F special alloy selections may be required.

ANSI Type (N) Standard; Special Tolerance (7)

Type N is composed of a positive leg (Nicrosil) which is approximately 14% chromium, 1.4% silicon, 84.6% nickel and a negative leg (Nisil) which is approximately 4.4% silicon, 95.6% nickel. When protected by compacted mineral insulation and appropriate outer sheath, Type N is usable from 32°F to 2300°F. Type N was designed to overcome several problems inherent in Type K thermocouples. Short range ordering (+2°F to +4°F drift) in the 600°F to 1100°F temperature range is greatly reduced, and the drift rate at high temperatures is considerably less. Type N has also been found to be more stable than Type K in nuclear environments.

ANSI Type (R) Standard Tolerance

Type R is composed of a positive leg (RP), which is 87% platinum, 13% rhodium and a negative leg (RN), which is 100% platinum. When protected by compacted mineral insulation and appropriate outer sheath, Type R is usable from 32°F to 2700°F. Type R is available as standard limits only, ITS90.

ANSI Type (S) Standard Tolerance

Type S is composed of a positive leg (SP), which is 90% platinum, 10% rhodium and a negative leg (SN), which is 100% platinum. When protected by compacted mineral insulation and appropriate outer sheath, Type S is usable from 32°F to 2700°F. Type S has a lower EMF output than Type R and is available as standard limits only, ITS90.

ANSI Type (B) Standard Tolerance

Type B is composed of a positive leg (BP) which is approximately 70% platinum, 30% rhodium and a negative leg (BN) which is approximately 94% platinum, 6% rhodium. When protected by compacted mineral insulation and appropriate outer sheath, Type B is usable from 1600°F to 3100°F. Type B is available as standard limits only, IPTS 1968 scale.

Tungsten—5% Re/Tungsten, 26% Re (C)

This calibration has not been given a letter designation by ANSI. When this calibration is protected by mineral insulation and appropriate outer sheath, it is usable from 32°F to 4200°F. Calibration is used most often with Beryllium Oxide insulation and either molybdenum or tantalum sheath. These combinations can only be used in an inert or vacuum environment.

Miscellaneous (O)

Consult Tempco with your requirements.

Mineral Insulated Thermocouple Cable

Insulation

NOTE: Letters in parentheses following the sheath material are used with the Ordering Worksheet on page 14-119.

Magnesium Oxide — MgO 96% Typical (M)

This insulation is widely used in thermocouple and heater applications below 2000°F. SiO₂ is the major impurity that provides excellent insulation resistance. Do not use with platinum or in nuclear application.

High Purity Magnesium Oxide — MgO 99.4% Minimum Purity (H)

Low impurity levels make this insulation very useful for all thermocouple calibrations up to 2500°F. Above 2500°F we recommend using Hafnia Oxide (HfO₂) insulation because of MgO's low resistivity. This material meets the requirements established in ASTM E-235-82.

Alumina Oxide — Al₂O₃ 99.6% Minimum Purity (A)

Although this material is comparable to MgO in its electrical properties and cost, it does not compact as well and tends to "powder out." This undesirable characteristic has made this insulation unpopular in industry so cable with this type of insulation is available only as a "special."

Ordering Information

Standard Thermocouple Cable

Order by Part Number from the Lists on Pages 14-120 through 14-123.

Thermocouple wire is sold by the foot and is subject to minimum billing.

Tempco-Pak is stocked in random lengths with the maximum stock lengths listed in the tables showing the varieties of commonly available material. Tempco reserves the right to supply random lengths of our choice unless specific lengths are indicated on your order. Tempco-Pak can be furnished in coil form or in straight lengths. Normally .375" diameter and .312" diameter are shipped in straight lengths. Longer lengths are available on special order.

Custom Manufactured Thermocouple Cables

For sizes and specifications not listed, Tempco will design and manufacture a Mineral Insulated Thermocouple Cable to meet your requirements. Please refer to the ordering worksheet on page 14-119 and follow the model as diagrammed to specify your requirements with the Tempco code number.

In addition, refer to page 14-124 and **specify the following:**

- Configuration type
- Sheath wall thickness
- Conductor Configuration and Size
- Minimum acceptable lengths and total length required

⚠ WARNING: Cancer and Reproductive Harm - www.P65Warnings.ca.gov.

(800) 323-6859 • Email: sales@tempco.com

Made-To-Order Mineral-Insulated Cable

In addition to the standard line of Tempco-Pak Thermocouple Cables, we can also manufacture metal sheathed, mineral insulated cable in special configurations using a wide variety of sheath materials and conductor alloys such as copper, nickel, alloy 600, CHROMEL-A®, nickel clad copper, 304 SS and virtually any other malleable metal.

Properly selected combinations of materials (sheath, insulation and wire) will exhibit the same outstanding qualities and performance as our standard Tempco-Pak.

Shown below are standard and special Tempco-Pak configurations. *Consult Tempco with your specific requirements.*

Ordering Information

Made-To-Order Mineral-Insulated Cable

Custom Manufactured Mineral-Insulated Cable

Supply the following information when requesting a quotation on made-to-order mineral-insulated cable:

- Configuration type
- Sheath material
- Insulation type and purity
- Calibration type or conductor material
- Conductor configuration and size
- Sheath wall thickness
- Minimum acceptable lengths and total length required

⚠ WARNING: Cancer and Reproductive Harm - www.P65Warnings.ca.gov.

Glossary of Temperature Sensing Terms

Absolute Zero — Theoretically, the lowest possible temperature. A body at absolute zero would have no molecular motion or heat energy. It is the zero point on the Kelvin and Rankine scales, and is estimated to be -273.15°C or -459.67°F .

Accuracy — A statement that is used to define the largest allowable error in a device or system. It is an indication of how close measured values are to true values. It can be expressed in both measured units and in percentages.

Alloy #11 — A Harrison Alloys trademark for a low-cost negative thermoelement used with copper for a compensating extension wire used with thermocouple types R and S. The EMF characteristics are similar to R and S up to approximately 204°C .

Alpha (α) — The temperature coefficient of resistance of a material, derived from measurements at 0°C and at 100°C : $\{R_{\text{sub}(100)} - R_{\text{sub}(0)}\}$ over $\{100 \text{ times } R_{\text{sub}(0)}\}$. It indicates the basic change in resistance in a material for each $^{\circ}\text{C}$ change in temperature. It is a defining parameter for resistance temperature detectors (RTDs).

ANSI — An abbreviation for American National Standards Institute.

ASTM — An abbreviation for American Society for Testing and Materials.

AWG — An abbreviation for American Wire Gauge.

Boiling Point — The equilibrium temperature between a liquid and its vapor. It is commonly associated with water at 100°C , and 1 standard atmosphere.

Callendar - van Dusen Equation — An interpolation equation that provides resistance values as a function of temperature for RTDs.

Celsius Temperature Scale — A temperature scale with the ice point at 0 and the boiling point of water at 100. The formula for conversion to the Fahrenheit scale is $F = 1.8C + 32$. Formerly referred to as "Centigrade."

Ceramic Insulation — Crystalline compounds of both metallic and nonmetallic elements that serve as dielectric insulators. Two of the most common single oxide ceramics are alumina (Al_2O_3) and magnesium oxide (MgO). Ceramics are the primary insulation used to isolate sheathed thermocouple alloys.

Compensated Connector — A thermocouple connector that utilizes either actual thermocouple material contacts or compensating alloy contacts. By maintaining uniform circuit properties throughout the connection systems, errors due to mismatched materials are reduced.

Compensating Alloy — An alloy that has similar EMF characteristics to an actual thermocouple alloy. It is usually a low-cost alternative for some types of thermocouple alloy extension lead wires. An example would be the use of Alloy #11 as compensating lead wire for platinum thermocouple sensors.

Compensating Loop — Utilized in RTDs, a compensating loop is an extra pair of lead wires that have the same resistance as the actual lead wires, but which are not connected to the RTD element. Its purpose is to correct for lead wire resistance errors when making temperature measurement.

Connection Head — A housing on a sensor assembly that provides a terminal block for electrical connections and allows the attachment of protection tubes and cable or conduit hookups.

Constantan — The negative leg of types E, J and T thermocouples. Constantan is 55% copper and 45% nickel. The emf values can be significantly different for this material depending upon with which type of thermocouple alloy it is intended to be matched.

Copper — The positive leg of type T thermocouple.

Cryogenic — A term that usually refers to temperatures in the range of -183°C or lower.

Dielectric Strength — A measure of the voltage that an insulating material can withstand before an electrical breakdown occurs. It is sometimes referred to as breakdown potential.

DIN 43760 — German Institute for Standards document that covers nickel and platinum resistance elements. This is the most popular specification for 100 ohm platinum RTDs with a resistance vs. temperature curve specified by 0.00385 ohms/ohm $^{\circ}\text{C}$.

Drain Wire — An uninsulated wire used in a cable construction as a ground connection.

Duplex Construction — A cable or wire constructed with two insulated conductors running parallel or twisted together.

Exposed Junction — A specific type of thermocouple junction where the measuring junction is exposed to the environment without any protecting sheath or outer tube. An exposed junction offers the fastest response time.

Extension Wire — A pair of wires connecting a thermocouple sensor to its reference junction or instrumentation. The emf characteristics of the extension wire must be similar to the thermocouple emf characteristics.

Fahrenheit Temperature Scale — A temperature scale with the ice point at 32 and the boiling point of water at 212. The formula for conversion to the Celsius scale is $C = 5/9 (F - 32)$.

FEP — An abbreviation for Fluorinated Ethylene Propylene. This component is commonly referred to as "Teflon[®]."

Fixed Point — A very reproducible temperature at the equilibrium point between phase changes in a material. The triple point of water (0.01°C) is an example of a fixed point.

Freezing Point — The fixed temperature point of a material that occurs during the transition from a liquid to a solid state. This is also known as the melting point for pure materials.

Giga- — A prefix meaning billion, or 10^9 . The symbol is G.

Ground — A conducting connection to earth or to some other large conducting object. Its purpose is to maintain an earth potential on the conductors connected to it, and to conduct the ground current to and from the earth.

Grounded Junction — A specific type of thermocouple junction in which the sheath and conductors are welded together, forming a completely sealed integral junction. A grounded junction is recommended for use in liquids, gas, and high pressure environments.

Hi-Pot Test — A test that determines the largest potential that can be applied to a conductor without breaking down the insulation (see Dielectric Strength).

Ice Point — The melting (and freezing) point of ice, 0°C . The ice point is frequently used as a calibration check point on resistance temperature detectors and as the reference junction for thermocouples.

Initial Calibration Tolerances — The allowable deviation from the theoretical emf value generated by any particular calibration thermocouple at a given temperature (previously referred to as limits of error).

Insulation Resistance — A ratio of the applied voltage to the total current flow between two conductors separated by insulation or any conductor and the sheath.

Interchangeability — A statement that describes how closely a sensor adheres to its defining equation, and the maximum variation that would exist in the readings of identical sensors mounted side-by-side under identical conditions.

IPTS- 68, 48 — Abbreviations for the International Practical Temperature Scales of 1968 and 1948. IPTS-68 is the most recent revision of the temperature scale, which is a standard scale made up of fixed points that closely approximate thermodynamic temperatures. All temperatures between the fixed points are derived by interpolation using the assigned interpolation instrument.

Iron — The positive leg of a type J thermocouple.

ISA — An abbreviation for the Instrument Society of America.

Junction (thermocouple) — The point at which two thermocouple alloys are joined. In a typical thermocouple circuit there is a measuring junction and a reference junction.

Kelvin Temperature Scale — Also known as the thermodynamic temperature scale, the Kelvin Scale is an absolute temperature scale in which temperature differences are proportional to the amount of heat energy converted to mechanical work by a Carnot engine. The ice point on the Kelvin Scale is 273.15K . A useful approximation for conversion of the Kelvin Scale to the Celsius scale is $T(\text{K}) = T(\text{C}) + 273.15$.

KN — The negative leg of a type K thermocouple. It is predominantly nickel with small added amounts of aluminum, manganese, and silicon. Company trade names are Alumel, Nial, and HAI-KN.

KP — The positive leg of a type K thermocouple. It is predominantly nickel with added chromium. Company trade names are Chromel, Tophel, and HAI-KP.

Limit of Error — The allowable error in a thermocouple, expressed as a percentage or a specific degree value throughout defined temperature ranges. See Initial Calibration Tolerances.

CONTINUED 

Glossary of Temperature Sensing Terms (continued)

Linearity — An instrument or transducer's deviation in response from straight line values.

Loop Resistance — The total resistance of the thermocouple materials in a thermocouple circuit or heater in a heater circuit.

Measuring Junction — The junction in a thermocouple circuit that senses the temperature of the unknown object. It is commonly referred to as the hot junction.

Mega- — A prefix meaning million, or 10^6 . The symbol is M.

Mica — A silicate mineral used mainly as an electrical and heat insulator.

Microvolt (μV) — One millionth of a volt (10^{-6} volt). In thermocouple measurements, a microvolt is the smallest common increment of output.

Millivolt (mV) — One thousandth of a volt.

Mineral-Insulated Thermocouple — A thermocouple that is manufactured by loading a metal sheath with conductors and insulators, and then compacting the entire assembly.

Negative Temperature Coefficient — A characteristic of a material in which a decrease in resistance accompanies an exposure to increased temperatures.

NEMA — An abbreviation for the National Electrical Manufacturers Association.

Nicrosil — The positive leg of a type N thermocouple. It is predominantly nickel with added chromium and silicon.

NISIL — The negative leg of a type N thermocouple. It is predominantly nickel with added silicon and magnesium.

NIST — National Institute of Standards and Technology.

Noise — Unwanted electrical interference picked up on a signal cable.

NPT — An abbreviation for American National Standard taper pipe thread.

OFHC — An abbreviation for oxygen free high conductivity copper.

Parallel Pair — A wire construction where two single conductors are laid parallel.

Platinel — An Englehard Industries trade name for a platinum thermocouple alloy with thermoelectric characteristics that closely match type K thermocouples at temperatures above 800°C .

Platinum — The negative leg in types R and S thermocouples. A noble metal, symbol Pt, with excellent chemical and heat resistance. It is more ductile than silver, gold, or copper.

Platinum 6% Rhodium — The platinum-rhodium alloy that forms the negative leg on type B thermocouple.

Platinum 10% Rhodium — The platinum-rhodium alloy that forms the positive leg on a type S thermocouple.

Platinum 13% Rhodium — The platinum-rhodium alloy that forms the positive leg on a type R thermocouple.

Platinum 30% Rhodium — The platinum-rhodium alloy that forms the positive leg on a type B thermocouple.

Platinum 67 — The platinum standard used by the NIST. Platinum 67 is used to interpolate the temperature scale between 630.74 and 1064.43°C . Previously called Platinum 27, Platinum 67 (IPTS-68) is 9 microvolts negative to Platinum 27 (IPTS-48) at 1200°C .

Positive Temperature Coefficient — A characteristic of a material in which an increase in resistance accompanies exposure to an increase in temperature.

Primary Standard — A term that applies to an instrument that meets conditions required for establishing the International Practical Temperature Scale.

Protection Tube — A tube that is designed to protect a sensor from any harsh environment or process conditions.

PTFE — An abbreviation for polytetrafluoroethylene. One of the most chemically resistant carbon based insulations.

PVC — An abbreviation for polyvinyl chloride, a thermoplastic with excellent dielectric strength and flexibility.

Rankine Temperature Scale — A temperature scale with its 0 at the absolute zero of temperature. Its degree is equal to a Fahrenheit degree, thus $T(\text{R}) = T(\text{F}) + 459.67$.

Reference Junction — The junction in a thermocouple circuit that is maintained at a constant, known temperature. It is also referred to as the cold junction and as a standard it is usually maintained at 0°C ; however, any temperature can be used.

Refractory Metal Thermocouple — A thermocouple made from materials that melt above 1935°C .

Repeatability — The ability of a sensor or system to indicate the same reading under repeated identical conditions.

Resistance — A property of conductors that determines the current produced by a given difference of potential. Dimensions, material and temperature all influence resistance.

Response Time — The time required for a sensor to reach 63.2% of the step change in temperature for a particular set of test conditions.

Rhenium — An elementary metal that when added to tungsten, forms an alloy with better ductility and improved high temperature strength over tungsten alone.

Rhodium — A platinum group metal added to pure platinum as a mild hardware and to increase high-temperature strength.

Ro — The resistance measurement taken on an RTD at 0°C .

RTD — An abbreviation for resistance temperature detector. It is a circuit element whose resistance increases with increasing temperature in a predictable manner. Platinum is the most popular material used in RTDs.

Secondary Standard — A measurement device that has been referenced to a primary standard.

Seebeck Coefficient — The rate of change of thermal emf with temperature at a given temperature.

Seebeck emf — The net thermal emf in a thermocouple under zero current conditions.

Shield — A metallic foil or braided wire layer surrounding a conductor or a group of conductors to prevent electrostatic or electromagnetic interferences from external sources.

Stability — The ability of an instrument or a sensor to maintain a consistent output with the application of a constant input.

Temperature Calibration Point — A temperature at which the output of a sensor is compared or determined by comparison against a standard.

Tera- — A prefix meaning trillion, or 10^{12} . The symbol is T.

Thermal Gradient — The distribution of differential temperatures in and across an object.

Thermistor — A contraction for thermally sensitive resistor. A thermistor is a semiconducting circuit element that typically exhibits a high negative coefficient of resistance.

Thermocouple — A temperature sensor formed by joining two dissimilar metals and applying a temperature differential between the measuring junction and the reference junction.

Thermopile — Multiple thermocouples connected in series so that alternate junctions are at the reference and measuring points. The result of this type of arrangement is an increased output for a given temperature differential.

Thermowell — A closed-end tube that will accept a temperature sensor and provide a pressure-tight connection at the well's point of installation.

Transducer — A device that receives and transmits energy. In many instances, the energy that is received is transmitted in a different form.

Transmitter — An externally powered device that transmits a signal from a thermocouple or an RTD via a two-wire current loop.

Triple Point of Water — A thermodynamic state (of water) in which the gas, liquid, and solid phases all occur in equilibrium. For water, the triple point is 0.01°C .

Twisted Pair — Two insulated conductors twisted together. Twisted wires in thermocouple circuits minimize magnetic noise produced from current carrying conductors.

Ungrounded Junction — A thermocouple junction that is fully insulated from the capped sheath end. An ungrounded junction is often specified for applications involving frequent or rapid temperature cycling, and for protection against stray emf signals.

Working Standard — A measurement device that has been referenced to a secondary standard.

High Temperature Lead Wire

High Temperature Type MG (550°C), Type MG (450°C) and Type TGGT (250°C) Lead Wire

All of Tempco's High Temperature Lead Wires are designed for:

- > Internal wiring for commercial and industrial heating products
- > Heaters
 - > Heat treating furnaces and kilns
 - > Commercial food service equipment
 - > Oven Wiring

Stock Lead Wire

Type MG – 600 Volt, 550°C (1022°F), UL 5400

Insulation Type – Mica/Glass (MG) Composite
 Conductor Material – Nickel Clad Copper (NCC)
 (27% Nickel by weight)

Wire Gauge	Nominal OD (in)	Stranding Num./Ga.	Maximum Amps @40°C	Feet per Spool	Part Number	Feet per Spool	Part Number	Feet per Spool	Part Number	Feet per Spool	Part Number

Note: Recommended Maximum Amperage is based on an Ambient Temperature of 40°C (104°F) and not more than three current carrying conductors in a raceway/conduit or bundled and directly buried. For de-rating factors for higher ambient temperatures consult Tempco's engineering data on page 16-10. For more information consult the National Electrical Code, Articles 310-15 through 310-84.

NOTE: For nickel wire conductor and other high temperature lead wire—consult Tempco.

Thermocouple Wire

ANSI Type J and K Duplex Thermocouple Wire — Stocked on 100 and 250 Foot Spools

Can be used for manufacturing thermocouple assemblies or as hook up wire between a thermocouple assembly and display instrumentation or a temperature control. The calibration is guaranteed to the full temperature range of the thermocouple type.

TC Type	Wire Type	Insulation	Insulation Temperature Limits (°F/°C)	Nominal Overall Dimensions (inches)	Part Number	
					100 Foot Spool	250 Foot Spool
J	20 Gauge Solid	Fiberglass	900/482	.060 × .106	TCWR-1028	TCWR-1032

ANSI Type JX and KX Thermocouple Extension Wire — Stocked on 100 and 250 Foot Spools

Due to its cost advantage thermocouple extension wire is used to make the connection between the thermocouple assembly and the measuring instrument, especially when long distances are involved. Thermocouple extension wire has approximately the same characteristics as thermocouple wire but its accuracy is guaranteed over a limited temperature range.

TC Type	Wire Type	Insulation	Insulation Temperature Limits (°F/°C)	Nominal Overall Dimensions (inches)	Part Number

Tempco's Thermocouple Wire and Extension Wire is supplied to meet Standard Tolerances of ANSI Circular MC96.1-1982.

For Thermocouple Wire Types and Special Limits/Tolerances not shown, refer to catalog pages 14-102 through 14-113 in the Temperature Sensors section.

High Temperature Wire Harness

Tempco's High Temperature Ceramic Insulated Wire Harnesses are designed from the ground up, starting with specially selected High Temperature Alloy Wire chosen for its ability to carry the rated current at the required temperature and provide long life.

- Ceramic beads are used for making turns and to provide flexibility at the terminal area.
- Solid ceramic pieces are used for straight runs.
- Ceramic terminal blocks are used for lead connections.

Ordering Information

Send all requirements, drawings or samples to Tempco for a fully detailed quote proposal that will meet your requirements. **Standard lead time is typically 2 weeks.**

Are You Having Problems With Your Wire Harnesses In High Temperature Applications?

Tempco has the design experience in the plastics industry and the manufacturing capability to handle your OEM requirements for many types of wire harness.

Due to our many years of manufacturing electric heaters, we are very familiar with the problems high temperature environments can cause to wiring and connectors.

We have the solutions to your difficult wiring applications!

Applications

- * Injection Molding Barrel
- * Plastic Extrusion Barrel
- * Aircraft Industry Composite Resin Lamination
- * Food Service Equipment
- * Furnaces
- * Ovens
- * Heat Treatment
- * Foundry Industry

Services Rendered

- * Custom Harness Manufacturing
- * Contract Assembly & Manufacturing
- * Automatic Cut & Strip
- * Wire Processing
- * Automatic & Hand Termination
- * Wire Bundling: Fiberglass Tape, Metal Strapping, Tie Wraps
- * Individual Wire ID Markings

Materials Used

- * Specially Selected High Temperature Conductors
- * UL and CSA Rated Wire
- * High Temperature Insulation
- * 600-Volt Gated Insulation
- * Sleeving and Tubing
- * Armor and Braid
- * UL and CSA Rated Connectors
- * Multi-Pin Connectors

TEMPCO HAS THE SOLUTION TO POWER UP YOUR INSTALLATION!

Resistance Wire

Resistance Wire

TEMPCO stocks a large amount of resistance wire that is required in our own manufacturing. We have made this inventory available to you for use in applications such as industrial heating, kilns, process heating and small-scale manufacturing.

The resistance wire is offered both in round wire and ribbon.

Type A: Wire only 2190°F (1200°C)

Type C: Wire 2100°F (1150°C) Ribbon 2055°F (1125°C)

Type D: Wire only 2370°F (1300°C)

"A" Wire (Kanthal Nikrothal 80 or Equivalent)

Composition: 80% Nickel, 20% Chromium

Specific Resistance: 650 Ohms / circ. mil foot @ 68°F / 20°C

Maximum continuous

operating temperature: 2190°F / 1200°C
(element temperature in air)

Melting Point: 1400°C / 2552°F

Density: (lbs/in³): 0.304

Specific Gravity: 8.41

Resistance Tolerance: 8 ga. through 23 ga. ±3%, 24 ga. through 36 ga. ±5%, 37 ga. through 43 ga. ±8%

Note: To obtain the working temperature resistance, multiply the factor by the room temperature resistance.

Ceramic Terminal Blocks & Connectors

Standard Ceramic Terminal Blocks for Internal Wiring

Used for wiring of heater power and thermocouple wiring in high temperature locations.

Design Features

- * **Maximum Voltage:** 600 VAC
- * **Maximum Current:** 20 Amp
- * **Maximum Temperature:** 450°C/842°F
- * **Wire Gauge:** 20 to 12 ga.
- * **Hardware:** Stainless Steel
- * **Terminals:** #8 Screw
- * **Body Material:** Steatite

Part Number: EHD-108-101

Mounting Hardware Supplied

Part Number: SCW-102-109

#8 x 7/8 Pan Head Sheet Metal Screw

Part Number: WAS-119-106

#8 External Tooth Lockwasher

Part Number: EHD-108-121

Mounting Hardware Supplied per Mounting Hole

Part Number: SCW-102-109

#8 x 7/8 Pan Head Sheet Metal Screws

Part Number: WAS-119-106

#8 External Tooth Lockwashers

Ceramic Wire Nut Connectors

SPECIFICATIONS

Material: Porcelain

Maximum Temperature Rating: 1200°F (645°C)

Maximum Voltage: 300V

Agency Approvals: UL and CSA for EHD-114-102, EHD-114-103 and EHD-114-104 (UL File E9809)

All Items Available from Stock

View Product Inventory @ www.tempco.com

Ceramic Terminal Blocks (Enclosed Terminals)

Used for wiring of heater power and thermocouple wiring in high temperature locations.

Design Features

- * **Maximum Voltage:** 380 VAC
- * **Maximum Current:** 30 Amp
- * **Maximum Temperature:** 240°C/464°F
- * **Wire Gauge:** 26 to 12 ga. stranded, 26-14 solid
- * **Screw:** M3, zinc plated steel
- * **Terminal Body:** Nickel plated brass
- * **Body Material:** Porcelain
- * **Agency Approvals:** CE & VDE

Part Number: EHD-108-116

Part Number: EHD-108-117

Part Number: EHD-108-118

Ceramic Heavy Duty Terminal Blocks (Enclosed Terminals)

Used for wiring of heater power and thermocouple wiring in high temperature locations.

Design Features

- * **Maximum Voltage:** 600 VAC
- * **Maximum Current:** 50 Amp
- * **Maximum Temperature:** 200°C/392°F
- * **Wire Gauge:** 14 to 8 ga.
- * **Screw:** M4, zinc plated steel
- * **Terminal Body:** Nickel plated brass
- * **Body Material:** Porcelain
- * **Agency Approval:** UL, File # E69841

Stock Number: EHD-108-114

Stock Number: EHD-108-115

MFR Part Number: 4010-B

MFR Part Number: 4011-B

All Items Available from Stock

Ceramic Terminal Blocks

Heavy Duty High Temperature Ceramic Line Wiring Blocks (Exposed Terminals)

Used for interfacing heater assemblies, CRA housings and ARA arrays to external line wiring.

Design Features

- * **Maximum Voltage:** 500 VAC
- * **Maximum Current:** 44 Amp @ 104°F ambient
- * **Maximum Temperature:** 240°C/464°F
- * **Wire Gauge:** 18 to 8 ga.
- * **Terminal Screw:** M4, zinc-plated steel
- * **Body Material:** Steatite
- * **Agency Approvals:** None

Optional Terminal Hardware

Stainless Steel Flat Washer — Part Number: WAS-109-101

Spring Lock Washers — Part Number: WAS-118-108

Part Number: EHD-108-106

Part Number: EHD-108-107

Part Number: EHD-108-108

Part Number: EHD-108-109

Part Number: EHD-108-105

All Items Available from Stock

Stock Ceramic Accessories

Screw Size:
10-32 x 1-3/4" long

Secondary Insulating Bushings

Used to mount finned strip heaters in air heating applications. Also can be used when it is necessary to electrically isolate the heater from ground.

When Insulating Bushings are required, a 1/2" x 5/8" slot is substituted for the standard slot size (5/16" x 1/2").

Insulating Bushing Assembly

Part Number: CERR-1001

NOTE: Two assemblies are required for each heater.

When using secondary insulating bushings, the heater must be guarded to avoid any accidental contact. The guard must be electrically isolated from the heater and must be properly grounded.

Beads in shipping sleeve

Ceramic Beads

Used to insulate bare lead wire at extremely high temperatures.

Ceramic Covers for Insulating Screw Terminals

Used on the following heaters:

Mica Band • Ceramic Band • Mi-Plus® • Channel Strip • Finned Strip • Mica Strip

Provides an electrically safe environment on standard screw terminals.

Can be field retrofit or factory installed.

Igloo™ Ceramic Caps

Thread	Part Number
10-32	CER-102-101
10-24	CER-102-104
8-32	CER-102-105

Caps fit all Igloo™ bases below.

Ceramic Cap

Thread	Part Number
10-32	CER-102-101
10-24	CER-102-104
8-32	CER-102-105

All three caps fit conventional base.

Igloo™ Ceramic Bases

Type	Part Number
Double Port In-Line	CER-101-104
Double Port 90°	CER-101-106
Single Port	CER-101-107

Conventional Ceramic Base

Use with insulated terminals only.

Part Number: CER-101-101

Ceramic Cap CER-102-103 and Base CER-101-103 below are primarily used on cast-in .430 diameter tubular heating elements

Description	Part Number
Ceramic Cap w/10-32 thread	CER-102-103
Ceramic Base – .430 diameter	CER-101-103

All Items Available from Stock

Lead Wire Protection and Plugs

Lead Wire Protection and High Temperature Electrical Plugs

High Temperature Fiberglass Slewing

The fiberglass slewing is first annealed to remove all organic matter and then uniformly coated with highly abrasion-resistant silicone rubber, which provides an excellent secondary insulation for greater dielectric strength and added protection against abrasion and wire contamination.

Temperature Range: -70°C to 180°C (-94°F to 356°F)

Order by the foot: 50 ft. minimum

Stock Quick-Disconnect High Temperature Electrical Plugs

Quick-Disconnect High Temperature Plugs provide the simplest and safest way to apply power to heater installations. The combination of plug and cup assembly along with armor cable covered leads eliminates all live exposed terminals or wiring that can be a potential hazard to employees or machines.

- * *Replace Exposed Terminals*
- * *Durable Cast Aluminum Body*
- * *High Temperature Ceramic Insulators*
- * *Solid Brass Contacts*
- * *Replace Exposed Lead Wires*
- * *Temperature Exposure Up to 300°C (572°F)*
- * *Available on Many Tempco Heater Products*

Right-Angle Plug

Electrical Rating: 25 Amp – 380 Volt
Part Number: EHD-101-103

Straight Plug

Electrical Rating: 25 Amp – 380 Volt
Part Number: EHD-101-102

16 Amp Cup Assembly

Electrical Rating: 10 Amp – 250VDC
16 Amp – 250VAC
Cutout size: 1.495" x .790"
Part Number: EHDR-1001

25 Amp Cup Assembly

Electrical Rating: 25 Amp – 400 Volt
Cutout size: 1.495" x .790"
Part Number: EHDR-1231

Plugs can be prewired and fitted with armor cable or wire braid leads.

Part Number: assigned when ordered

Notes: Type P2 twist lock plug is not listed by UL, and is recommended for replacement use only in existing installations. Connectors are cable mount only.

General Purpose Terminal Boxes (Can be field retrofit or factory installed)

Housings that Fit – Mica Bands, Ceramic Bands, Mi-Plus® Bands and Mica Strip Heaters

For use on **Std. T3 Screw Termination with 10-32 studs.**
Terminal mounting centers: 7/8"
Two Knockouts:
1/2" conduit, One on each side
Part Number: HSGR-1149

For use on **Std. T2 Screw Termination with 10-32 studs.**
Terminal mounting centers: 7/8"
Two Knockouts:
1/2" conduit, One on each side
Part Number: HSGR-1013

Box HSGR-1005 w/ EHDR-1001 cup assembly (see pg. 15-14).
For use on **Std. T3 Screw Termination with 10-32 studs.**
Terminal mounting centers: 7/8"
Part Number: EHDR-1002

Box HSGR-1227 w/ EHDR-1231 cup assembly (see pg. 15-14).
For use on **Std. T3 Screw Termination with 10-32 studs.**
Terminal mounting centers: 7/8"
Part Number: EHDR-1005

Housings that Fit – Channel Strip and Finned Channel Strip Heaters

For use on **Standard T3 Screw Termination with 10-32 studs.**
Terminal mounting centers: 3/4"
One Knockout:
1/2" conduit, One as shown
Part Number: HSGR-1008

For use on **Standard T2 Screw Termination with 10-32 studs.**
Terminal mounting centers: 3/4"
Two Knockouts:
1/2" conduit, One on each side
Part Number: HSGR-1068

Other style boxes such as PVC, drawn aluminum or, explosion-proof are available.

Insulation Blankets

High Temperature Insulation Systems Save Money!

Modular Insulation Blankets are a new concept in insulation systems that will allow you to insulate most typical plastic molding machines with ease.

Tempco offers a line of Modular Insulating Blankets designed to contain the heat generated by industrial elements in various applications, thereby conserving energy and cooling the environment.

Simply measure the outside diameter of your heater bands and the width between thermocouples. The distance between thermocouples is critical because the modular blankets should be sized to fit between them. To insulate an 8" width, you would utilize two blankets, for instance, a 2" and 6" wide blanket.

Example (refer to the drawing)

- The length of the plastic injection machine barrel to insulate is 48".
- From the hopper end, the thermocouple breaks needed are at 8", 18", 28", 38", 46" and 48". This would yield insulation distances of 8", 10", 10", 10", 8", and 2" between the thermocouples. For the (two) 8" distances, use two 4" blankets each. For the (three) 10" distances use one 4" and one 6" blanket each. For the 2" distance, use one 2" blanket.

To summarize, the total requirement is: one 2" blanket seven 4" blankets three 6" blankets

Typical Applications

- Injection Molding
- Extrusion Barrels and Blow Molding
- Pre-Heaters
- Hoppers and Driers
- Hot Oil Lines
- Manifolds
- Melt Pipe Dies and Adapters

SPECIFICATIONS

- Hot Face/Inside Fabric**
 - Material:** Silica Fabric with Vermiculite
 - Thickness:** .042"
 - Maximum Temperature:** 1800°F (982°C) continuous
- Cold Face/Outside Fabric**
 - Material:** PTFE-Impregnated Fiberglass Cloth
 - Thickness:** .014"
 - Maximum Temperature:** 550°F (288°C) continuous

- Insulation**
 - Material:** Ceramic Fiber
 - Thickness:** 1"
 - Maximum Temperature:** 2300°F (1260°C)

- Straps**
 - Material:** PTFE-Impregnated Fiberglass Cloth

- Buckles**
 - Material:** Nickel-Plated steel wire with loose roller to allow for ease of tightening of straps

Note: When using insulation blankets it is recommended to derate the wattage of the heater bands by 20 to 25% to extend heater life and further reduce power consumption.

Energy Savings Using Insulation Blankets

Injection Molding Barrel Estimated Return on Investment

Estimated Initial Tonnage	Avg. KWh Investment	Avg. KWh Uninsulated	Payback Insulated	Estimated 3 Year Period - months	Savings
150	\$300	1.52	0.52	8.54	\$1,391.81
300	660	3.00	2.05	10.69	2,223.72
500	1,100	7.65	6.02	10.38	3,815.28
850	1,870	9.33	6.79	11.32	5,945.04
1000	2,200	11.35	8.12	10.48	7,560.00
1500	3,300	13.54	9.22	11.75	10,111.32

NOTE: The above information is to be used for comparisons only. Actual results in your plant on your injection molding machines may differ.

Ordering Information

Standard — After determining the diameter and width of the insulation blankets required, select the **Part Number** from the chart above that matches your requirements.

Custom Engineered/Manufactured — Custom Insulation Blankets can also be designed for your application in circumferential or flat applications. Please submit to Tempco your drawing or sketch to quote.

Standard lead time is Stock to 4 weeks.

section

Heat Requirement Calculations

There are two basic heat energy requirements to be considered in the sizing of heaters for a particular application:

1. Start-Up Heat is the heat energy required to bring a process up to operating temperature. Start-up heat requirement calculations which include a material change of state should be calculated in three parts:

- 1) Heat requirement from ambient temperature to change of state temperature
- 2) Heat requirement during change of state (latent heat)
- 3) Heat requirement from change of state temperature to operating temperature

2. Operating Heat is the heat energy required to maintain the desired operating temperature through normal work cycles. The larger of these two heat energy values will be the wattage required for the application.

A safety factor is usually added to allow for unknown or unexpected operating conditions. The safety factor is dependent on the accuracy of the wattage calculation. A figure of 10% is adequate for small systems closely calculated, while 20% additional wattage is more common, and figures of 25% to 35% should be considered for larger systems with many unknown conditions existing.

Start-Up Heat requirements will include one or more of the following calculations, depending on the application:

1. Wattage required to heat material:

$$\frac{\text{Weight of material (lbs)} \times \text{Specific Heat (Btu/lb } ^\circ\text{F)} \times \text{Temperature rise (} ^\circ\text{F)}}{3.412 \text{ btu/watt hr.} \times \text{Heat-up time (hr.)}} = \text{Watts}$$

See page 16-4 for Properties of Materials

2. Wattage required to heat container or tank:

$$\frac{\text{Weight of container (lbs)} \times \text{Specific Heat (Btu/lb } ^\circ\text{F)} \times \text{Temperature rise (} ^\circ\text{F)}}{3.412 \text{ btu/watt hr.} \times \text{Heat-up time (hr.)}} = \text{Watts}$$

3. Wattage required to heat hardware in container:

$$\frac{\text{Weight of hardware (lbs)} \times \text{Specific Heat (Btu/lb } ^\circ\text{F)} \times \text{Temperature rise (} ^\circ\text{F)}}{3.412 \text{ btu/watt hr.} \times \text{Heat-up time (hr.)}} = \text{Watts}$$

4. Wattage required to melt a solid to a liquid at constant temperature:

$$\frac{\text{Heat of fusion (Btu/lb)} \times \text{Weight of material to be melted (lb/hr)}}{3.412 \text{ btu/watt hr.}} = \text{Watts}$$

Heat of Fusion (Latent Heat): The amount of heat required to change one pound of a given substance from solid to liquid state without change in temperature is termed the heat of fusion. It requires 144 Btu to change one pound of ice at 32°F to one

pound of water at 32°F, thus the heat of fusion of ice is 144 Btu per pound.

A change of state is usually accompanied by a change of specific heat. The specific heat of ice is 0.5; while that of water is 1.0.

5. Wattage required to change a liquid to a vapor state at constant temperature:

$$\frac{\text{Heat of vaporization (Btu/lb)} \times \text{Weight of material to be vaporized (lb/hr)}}{3.412 \text{ btu/watt hr.}} = \text{Watts}$$

Heat of Vaporization (Latent Heat): The amount of heat required to change one pound of a given substance from liquid to vapor state without change in temperature is termed the heat

of vaporization.

It requires 965 Btu to change one pound of water at 212°F to one pound of steam at 212°F.

6. Wattage to counteract liquid surface losses: See Graph 3 on opposite page for loss rates of water and oils.

$$\frac{\text{Total liquid surface area (sq. ft.)} \times \text{Loss rate at final temperature (watts/sq. ft.)}}{2} = \text{Watts}$$

7. Wattage to counteract surface losses from container walls, platen surfaces, etc.: See Graph 2 on opposite page for losses from metal surfaces. See Graph 1 for losses from insulated surfaces.

$$\frac{\text{Total surface area (sq. ft.)} \times \text{Loss rate at final temperature (watts/sq. ft.)}}{2} = \text{Watts}$$

Heat Requirement Calculations

Operating heat requirements will include one or more of the following calculations. Any additional losses particular to the application should also be estimated and included.

- 1. Wattage to counteract losses from open liquid surfaces:** See Graph 3 for loss rates of water and oils.

Total liquid surface area (sq. ft.) × Loss rate at operating temperature (watts/sq. ft.) = Watts

- 2. Wattage to counteract container or platen surface losses,** either insulated (See Graph 1) or uninsulated (See Graph 2).

Total surface area (sq. ft.) × Loss rate at operating temperature (watts/sq. ft.) = Watts

- 3. Wattage required to heat material transferred in and out of the system.**

(Metal dipped in heated tanks, air flows, make-up liquids, etc.)

$$\frac{\text{Weight of material to be heated (lbs)} \times \text{Specific Heat (Btu/lb } ^\circ\text{F)} \times \text{Temperature rise (} ^\circ\text{F)}}{3.412 \text{ btu/watt hr.} \times \text{Heat-up time (hr.)}} = \text{Watts}$$

- 4. Heat-up of racks of containers, etc. transferred in and out of the system:**

$$\frac{\text{Weight of items to be heated (lbs)} \times \text{Specific Heat (Btu/lb } ^\circ\text{F)} \times \text{Temperature rise (} ^\circ\text{F)}}{3.412 \text{ btu/watt hr.} \times \text{Heat-up time (hr.)}} = \text{Watts}$$

Specific Heat: The heat necessary to increase the temperature of all other substances has been referred to water as a standard. The ratio of the amount of heat required to increase the temperature of

one pound of any substance by one degree to the amount necessary to increase one pound of water is known as the specific heat of that substance.

Heat Loss Information

Graph 1 Heat Losses through Insulated Walls (based on standard thermal insulations)

Figures are for vertical surfaces.
Multiply by 120% for a horizontal top surface and by 60% for a horizontal bottom surface.

For Water:

Use Equation 1 for heating flowing water.

Use Equation 2 or the table for heating water in tanks.

Equation 1

$$KW = GPM \times \text{Temperature Rise } (^\circ F) \times .16$$

Equation 2

$$KW = \frac{\text{Gallons} \times \text{Temperature Rise } (^\circ F)}{372 \times \text{Heat-up time (hrs.)}}$$

NOTE: 10% safety factor is included.

For Oil:

Use equation or table

$$KW = \frac{\text{Gallons} \times \text{Temperature Rise } (^\circ F)}{860 \times \text{Heat-up time (hrs.)}}$$

NOTE: The above KW values are based on an average specific heat of 0.45 (btu/lb/°F) and a Density of 7.35 lb/gallon plus a 20% safety factor. This table should be used only as a guide; exact wattage requirements can be calculated using the formulas on pages 16-2 and 16-6.

Kilowatts to Heat Air

For free air:

Use equation or table

$$KW = \frac{\text{SCFM} \times \text{Temperature Rise } (^\circ F)}{3000}$$

Use the maximum anticipated airflow. This equation assumes insulated duct (negligible heat loss) and 70°F inlet air at 14.7 PSIA.

For compressed air:

$$KW = \frac{\text{CFM}^* \times \text{Density}^*(\text{lbs/cu. ft.}) \times \text{Temperature rise } (^\circ F)}{228}$$

*At heater inlet temperature and pressure

Amt. of Air SCFM	Temperature Rise (°F)										
	50	100	150	200	250	300	350	400	450	500	600

1100	18.3	36.7	55	73.3	91.7	110	128.3	146.7	165	183.3	220
1200	20	40	60	80	100	120	140	160	180	200	240

NOTE: If air flow is given in CFM at operating temperature and pressure it can be converted to SCFM (Standard Cubic Feet per Minute) with the following formula:

$$\text{SCFM} = \text{CFM} \times \frac{\text{PSIG} + 14.7}{T + 460} \times 35.37$$

PSIG = operating pressure (gauge pressure in lbs/sq.in.)

T = operating temperature in °F

SCFM = flow rate in CFM at standard conditions of 60°F and 14.7 PSIA.

KW Calculations

Calculating KW Requirements for Heating Liquids and Gases

When calculating the required KW, always use the maximum flow of the medium to be heated, the minimum temperature at the heater inlet, and the maximum desired outlet temperature. Also include a 20% Safety Factor to allow for heat losses to jacket and piping, voltage variation and wattage tolerance.

For specific heat and density values see Properties of Materials Tables on page 16-4.

Safe element watt density and sheath material charts are located on pages 16-12 through 16-20.

Formula for Heating Liquids

$$KW = \frac{\text{Flow} \times 60 \text{ minute/hour} \times \text{Density} \times \text{Specific heat} \times \Delta T \times \text{Safety factor}}{3412 \text{ BTU/KWH}}$$

Flow = Flow in gallons/minute

Density = Density of liquid in pounds/gallon

Specific Heat = Specific heat of liquid in BTU/pound °F

ΔT = Temperature rise in °F

Sample problem for heating water:

Calculate KW required to heat 5 gallons/minute of water from 50 to 100°F.

$$KW = \frac{5 \text{ gal/min} \times 60 \text{ min/hr} \times 8.34 \text{ lb/gal} \times 1.0 \text{ BTU/lb}^\circ\text{F} \times 50^\circ\text{F} \times 1.2}{3412 \text{ BTU/KWH}}$$

Total KW required = 44

Water Flow Chart for Tempco 3" and 5" Flanged Circulation Heaters

$$(\text{Gallons}) \text{ HR} = \frac{(\text{KW}) (3412)}{(8.34) (\Delta T)}$$

NOTE: Safety factor not included. Add to suit application.

Formula for Heating Gases

$$KW = \frac{\text{Flow} \times 60 \text{ minute/hour} \times \text{Density} \times \text{Specific heat} \times \Delta T \times \text{Safety factor}}{3412 \text{ BTU/KWH}}$$

Flow = Flow in SCFM (standard cubic feet per minute measured at 14.7 PSIA and 70°F)

Density = Density of gas in pounds/cubic foot at standard conditions.

Specific Heat = Specific heat of gas in BTU/pound °F at standard conditions.

ΔT = Temperature rise in °F

NOTE: If air flow is given in CFM at operating temperature and pressure it can be converted to SCFM (Standard Cubic Feet per Minute) with the following formula:

$$\text{SCFM} = \text{CFM} \times \frac{\text{PSIG} + 14.7}{T + 460} \times 35.37$$

PSIG = operating pressure (gauge pressure in lbs/sq.in.)

T = operating temperature in °F

SCFM = flow rate in CFM at standard conditions of 60°F and 14.7 PSIA.

Calculating KW Requirements to Superheat Steam

Superheated Steam Graph

Problem: Heat 420 lbs/hr of 90% quality steam to 620°F @ 75PSIG

- Plot the pressure on graph **P** and the steam quality on graph **Q**. Draw a straight line from **P** through **Q** and read **W1**.
- Plot the degrees of superheat on graph **S**. The degrees of superheat equals operating temperature minus saturated temperature. Saturated temperature is read beside gauge pressure on graph **P**.
620°F - 320°F = 300°F
Draw a straight line from **P** through **S** and read **W2**.
- Determine the required KW using the following equation:

$$\text{KW} = \text{LBS/HR} \times (\text{W2} - \text{W1}) / 1000 \times \text{Safety factor}$$

$$= 420 \times (114 - 36) / 1000 \times 1.2 = 39.3 \text{ KW}$$

Note: Element watt density is critical in choosing the correct circulation heater and is dependent upon maximum operating temperature and steam velocity.

Barlow's Formula

Pressure ratings of fluid vessels depend mainly on the tensile strength of the material being used at the process temperature, and the wall thickness of the vessel. Normally, the safety factor ratio should be at least 4 to 1 in determining the maximum pressure a vessel may see.

$$\text{Minimum wall thickness (in)} = \frac{\text{Maximum Pressure (PSI)} \times \text{OD of vessel (in)}}{2 \times \text{Tensile Strength (PSI) at process temperature}}$$

Percent of Rated Wattage for Various Applied Voltages

Applied Voltage	Rated Voltage														Applied Voltage

277							133%	100%	53%	45%	40%	36%	33%	25%	277
380								188%	100%	84%	75%	68%	63%	48%	380
415									119%	100%	89%	81%	75%	57%	415
440										112%	100%	91%	84%	64%	440
460										123%	109%	100%	92%	70%	460
480											119%	109%	100%	76%	480
550											156%	143%	131%	100%	550

To determine the resultant wattage on a voltage not shown in the chart above, use the following formula:

$$\text{Actual Wattage} = \frac{\text{Rated Wattage} \times (\text{Applied Voltage})^2}{(\text{Rated Voltage})^2}$$

Applying higher than the actual rated voltage to heating elements will increase the watt density (watts/in.sq.), which can lead to premature heater failure and/or damage the material being heated.

Watt Density Calculations

Band Heaters

$$\text{Watts/In}^2 = \frac{\text{Wattage}}{(\text{Diameter} \times 3.1416 \times \text{Width}) - (\text{Cold Area})}$$

Cartridge and Tubular Heaters

$$\text{Watts/In}^2 = \frac{\text{Wattage}}{\text{Diameter} \times 3.1416 \times \text{Heated Length}}$$

Mica Strip Heaters

$$\text{Watts/In}^2 = \frac{\text{Wattage}}{\text{Heated Length} \times \text{Width}}$$

Channel Strip Heaters

$$\text{Watts/In}^2 = \frac{\text{Wattage}}{\text{Heated Length} \times 3.625}$$

Ohm's Law

Volts

$$\begin{aligned} \text{Volts} &= \sqrt{\text{Watts} \times \text{Ohms}} \\ \text{Volts} &= \frac{\text{Watts}}{\text{Amperes}} \\ \text{Volts} &= \text{Amperes} \times \text{Ohms} \end{aligned}$$

Ohms

$$\begin{aligned} \text{Ohms} &= \frac{\text{Volts}}{\text{Amperes}} \\ \text{Ohms} &= \frac{\text{Watts}}{\text{Amperes}^2} \\ \text{Ohms} &= \frac{\text{Volts}^2}{\text{Watts}} \end{aligned}$$

Amperes

$$\begin{aligned} \text{Amperes} &= \frac{\text{Volts}}{\text{Ohms}} \\ \text{Amperes} &= \frac{\sqrt{\text{Watts}}}{\text{Ohms}} \\ \text{Amperes} &= \frac{\text{Watts}}{\text{Volts}} \end{aligned}$$

Watts

$$\begin{aligned} \text{Watts} &= \text{Volts} \times \text{Amperes} \\ \text{Watts} &= \text{Amps}^2 \times \text{Ohms} \\ \text{Watts} &= \frac{\text{Volts}^2}{\text{Ohms}} \end{aligned}$$

Wiring Hints

- Wire gauge, conductor material, and wire insulation choice depend upon current draw, electric service voltage and operating temperature. In high temperature environments, high temperature insulation and/or nickel coated copper or nickel conductors may be required.
- Heater terminal connections should be tightened with maximum torque consistent with terminal strength. When possible, a wrench or pliers should be used to support the heater terminal to prevent it from twisting when tightening connections.
- It is good wiring practice to run thermocouple circuit wiring in a separate conduit.
- Thermostat capillary tubing must be kept away from heater terminals.
- Safe operation of heaters equipped with NEMA 4 and NEMA 7 terminal housings depends on electrical wiring meeting the national electrical code for these locations and limiting maximum operation temperatures. Approved pressure and/or temperatures limiting controls must be used to assure safe operation in the event of system malfunctions.
- An integral thermostat functions as a temperature control only and is not a fail-safe device. An approved pressure and/or temperature limit control should be used in the event of system malfunctions.
- Never perform any type of service on heaters prior to disconnecting all electrical power.

All wiring should be done in accordance with the National Electrical Code and applicable local codes.

Selection of Hook-Up Lead Wire Gauge

Approximate Current Carrying Capacities of High Temperature insulated Nickel (Grade "A") and Nickel Plated Copper wire based on ambient temperature of 40°C (104°F).

This table should only be used as a starting point when establishing ratings for any given situation. It is recommended that design engineers desiring accurate ampacity data refer to the current National Electric Code Handbook, Article 310-15-310-84.

Current Carrying Capacity Table Ambient Temperature at 40°C (104°F)

Conductor Size AWG	Conductor Type and Temperature Rating			
	250°C (482°F) "A" Nickel	250°C (482°F) NPC 2%-10%	450°C (842°F) "A" Nickel	450°C (842°F) NCC 27%
24	4	8	4.3	9
22	5	10.8	5.6	12
20	7	15	8	18
18	9.4	20	11	23
16	12	26	14	30
14	18	39	21	45
12	25	54	26	56
10	34	73	35	75

For ambient temperatures other than 40°C (104°F), multiply the ampacities shown above by the appropriate factor shown below.

Ambient Temperature Correction Factors

Ambient Temperature °C	Wire Temperature Rating		Ambient Temperature °F

Wiring Diagrams

For current in 3 phase circuits: $I = \frac{W}{1.73E}$

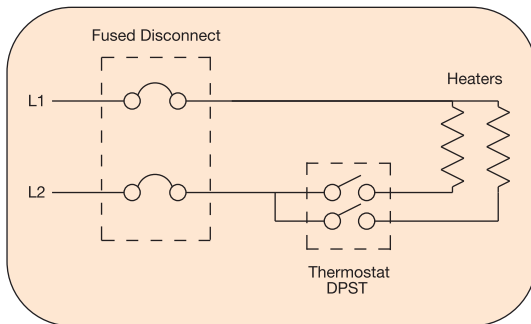

Note: If elements are designed for 3-phase delta connection wattage output may be reduced to 1/3 by rewiring to 3-phase WYE.

Single-phase circuit with SPST thermostat.

Three-phase circuit with DPST thermostat.

Single-phase circuit with thermostat connected for half current load across each contact.

Three-phase circuit when line current exceeds thermostat rating.

Single-phase circuit when line current exceeds thermostat rating.

Dual Voltage

Example: Two 120V heaters wired in parallel for 120V operation or wired in series for 240V operation.

NOTE: To reduce wattage in a system, two heaters rated at 240 volts wired in series to a 240 volt power supply will generate 1/4 of their rated wattage.

Sheath Material Selection Guide

CORROSION POLICY

TEMPCO cannot warrant any electric immersion heater against failure by sheath corrosion if such failure is the result of operating conditions beyond the control of the heater manufacturer. The facts and recommendations appearing in the TEMPCO catalog or any other literature published by TEMPCO are based on our own research and the research of others, and are believed to be accurate. We cannot anticipate all conditions under which this information and our products, or the products of other manufacturers in combination with our products, may be used.

We accept NO responsibility for results obtained by the application of this information or the safety and suitability of our products, either alone or in combination with other products. It is the responsibility of the Purchaser to make the ultimate choice of sheath material based on his/her knowledge of the chemical composition of the corrosive solution, character of materials entering the solution, and controls, which he/she maintains, on the process.

Examples of process variables that can affect heater sheath selection

- * Solution chemistry
- * Solution contamination
- * Temperature
- * Flow rate (velocity) past heater
- * Heater watt density
- * Heating cycle (time-on, time-off)
- * Galvanic behavior
- * Degree of aeration

Key to Notes in Sheath Material Selection Guide:

1. This solution contains a mixture of various chemical compounds whose identity and proportions are unknown or subject to change. Check with chemical supplier to confirm suitability of sheath material chosen.
2. Caution—flammable material.
3. Chemical composition varies widely. Check supplier for specific recommendations.
4. Direct immersion heaters not practical. Use clamp-on heaters on outside surface of cast iron pot.
5. Element surface loading should not exceed 20 watts per square inch.
6. For concentrations greater than 15%, element surface loading should not exceed 20 watts per square inch.
7. See suggested watt density chart.
8. Remove crusts at liquid level.
9. Clean often.
10. Passivate stainless steel, Inconel® and Incoloy®.

Maximum Recommended Watt Densities for Various Materials

Material Being Heated	Maximum Operating Temperature °F	Maximum Watt Density W/in ²
Acid Solutions	180	40
Alkaline Solutions, Oakite	212	40
Ammonia Pltg. Solution	50	25
Asphalt, Tar or Heavy Compounds	200-500	4-10
Caustic Soda 2%	210	45
10%	210	25
75%	180	25
Degreasing Solution Vapor	275	20
Electroplating Solution	180	40
Ethylene Glycol	300	30
Fatty Acids	150	20
Fuel Oils		25-30 circ.
Light Grade	180	8
Heavy (Bunker C)	160	23
Gasoline	300	10
Glycerine	500	

Material Being Heated	Maximum Operating Temperature °F	Maximum Watt Density W/in ²
Machine Oil SAE 30	250	15-20 non-circ.
Metal Melting Pot	500-900	20-27
Mineral Oil	400	16
Molasses	100	4-5
Molten Tin	600	20
Oil Draw Bath	600	20
Paraffin or Wax	150	16
Potassium Hydroxide	160	25
Propylene Glycol	150	20
Steel Tubing Cast Into Aluminum	500-750	50
Steel Tubing Cast Into Iron	750-1000	55
Trichlorethylene	150	20
Water (Process)	35-150	100-125 circ.
	212	75-100 non-circ.
		75 circ.
		50 non-circ.

CORROSION POLICY

TEMPCO cannot warrant any electric immersion heater against failure by sheath corrosion if such failure is the result of operating conditions beyond the control of the heater manufacturer. The facts and recommendations appearing in the TEMPCO catalog or any other literature published by TEMPCO are based on our own research and the research of others, and are believed to be accurate. We cannot anticipate all conditions under which this information and our products, or the products of other manufacturers in combination with our products, may be used.

We accept NO responsibility for results obtained by the application of this information or the safety and suitability of our products, either alone or in combination with other products. It is the responsibility of the Purchaser to make the ultimate choice of sheath material based on his/her knowledge of the chemical composition of the corrosive solution, character of materials entering the solution, and controls, which he/she maintains, on the process.

Frequently Used Conversion Factors

U.S. Customary
1 cu. ft. = 1728 cu. in. = 0.03704 cu. yd.
1 cu. ft. = 7.481 gal.
1 gal. = 231 cu. in. = 0.1337 cu. ft.
1 gal. water = 8.3 lbs.
1 cu. ft. Water = 62.43 lbs.
1 KWH. will evaporate 3.5 lb. of water at 212°F
1 KWH. will raise 22.75 lb. of water from 62°F to 212°F
3412 BTU = 1 KWH = 1.34 HP Hour
1 HP = 745.7 Watts
1 BTU = 252 calories = 0.293 Watt Hours

Metric
1 in. = 2.54 cm = 25.4 mm
1 ft. = 0.3048 m
1 m = 39.37 in.
1 sq. in. = 6.4516 sq. cm.
1 sq. ft. = 0.0929 sq. m.
1 cu. in. = 16.39 cu. cm
1 cu. ft. = 0.02832 cu. m. = 28.32 liters
1 lb. = 453.6 grams
1 gal. (U.S.) = 3.785 liters
1 liter = 61.024 cu. in.

ACCEPTANCE

- A. All orders are accepted in accordance with the Terms and Conditions set forth below.
- B. For all purchase orders received by TEMPSCO, whether they be via the telephone, telefax or in writing, the customer acknowledgment you receive will act as the official document of acceptance of your purchase order. All information typed or printed (description, prices, etc.) on the acknowledgment will be assumed to be correct. This information will override any previous correspondence in writing or telephone conversations. If a discrepancy is found you will have 5 days from the date typed or printed in the box "DATE ENTERED" to bring it to the attention of TEMPSCO. Once we have been notified, and if a change is necessary, you will receive a corrected acknowledgment from TEMPSCO.
- C. Following acceptance by TEMPSCO, orders are not subject to cancellation or modification, except upon written approval by TEMPSCO and shall be subject to cancellation charges as determined by TEMPSCO.

*TEMPSCO RESERVES THE RIGHT TO CORRECT
AND AMEND ANY TYPOGRAPHICAL ERRORS.
APPLICABLE CURRENCY US DOLLARS ONLY.*

ASSIGNMENT

Purchaser shall not assign or transfer this contract or any interest in it, or monies payable under it, without the written consent of TEMPSCO, and any assignment made without such consent shall be null and void.

CANCELLATIONS & PENALTIES

Should the Purchaser decide, for whatever reason to cancel an acknowledged order that has not yet shipped, the following criteria will be applied for disposition of the order:

1. If the product in question is determined to be stock product, such determination to be made solely by TEMPSCO, the Purchaser will be assessed a penalty equal to 10% of the dollar amount of the order plus all other related costs and processing fees. Such penalty shall be immediately due and payable upon order cancellation. Any and all prepayments made to TEMPSCO will be applied toward such penalty and costs.
2. If the product in question is determined to be non-stock (i.e. custom or modified stock), such determination to be made solely by TEMPSCO, Purchaser will reimburse TEMPSCO for all costs incurred as of the date of cancellation with respect to such product, including but not limited to engineering, design and development costs, material costs, freight costs, manufacturing labor and overhead costs, inventory costs, processing fees plus all other costs related to the cancelled order. Such penalty shall be solely determined by TEMPSCO and shall be immediately due and payable upon order cancellation. Any and all prepayments made to TEMPSCO will be applied toward such reimbursements of costs. Purchaser must notify TEMPSCO of intent to cancel in written form within five (5) days of verbal communication.

CORROSION POLICY

TEMPSCO cannot warrant any electric immersion heater against failure by sheath corrosion if such failure is the result of operating conditions beyond the control of the heater manufacturer. The facts and recommendations appearing in the TEMPSCO catalog or any other literature published by TEMPSCO are based on our own research and the research of others, and is believed to be accurate. We cannot anticipate all conditions under which this information and our products, or the products of other manufacturers in combination with our products may be used. We accept NO responsibility for results obtained by the application of this information or the safety and suitability of our products, either alone or in combination with other products. It is the responsibility of the Purchaser to make the ultimate choice of sheath material based on his/her knowledge of the chemical composition of the corrosive solution, character of materials entering the solution, and controls, which he/she maintains, on the process.

CREDIT CONDITIONS

Credit shipments on an open account basis will be made to approved Purchasers who maintain a good credit rating. Purchasers whose credit has not been approved by TEMPSCO will be required to complete a credit application for open account consideration. Shipment of products to unapproved Purchasers will be either Cash In Advance, C.O.D. or Credit Card.

CREDIT TERMS

In God we trust; all others must pay cash. Where credit has been approved by TEMPSCO, Terms of Sale are strictly Net 30 days from date of invoice for all products sold with the exception of the products noted in the paragraph that immediately follows.

For all sales of power control panels of 30 amps or higher, terms are 1/3 payment with purchase order, 1/3 payment received prior to shipment, and 1/3 payment Net 30 days. Such terms for these products shall apply where credit has been approved by TEMPSCO.

All prices are F.O.B. Factory, Wood Dale, Illinois, U.S.A., in U.S. Dollars only. TEMPSCO reserves the right to select means of shipment, consistent with least cost and commensurate service. Prices do not include any city, county, state, or federal taxes imposed upon the sale. Finance charges at the rate of 1 and 1/2% per month shall be charged to all accounts that are unpaid after 30 days or other described due date. Buyer shall be responsible for all costs of collection including reasonable attorney fees.

TEMPSCO also accepts VISA, Master Card, Discover and American Express Credit Cards.

DELIVERY, TITLE AND RISK OF LOSS

Delivery dates are approximate and are based upon prompt receipt of all necessary information from Purchaser. Unless otherwise specified by TEMPSCO, delivery will be made and title will pass F.O.B. point of shipment to Purchaser.

DESIGN CHANGE

The policy of TEMPSCO is one of continuous development and product improvement, and we reserve the right to modify specifications, designs and materials without prior notice and without incurring any obligations or liabilities.

ENGINEERING CHARGE

On complex heating or control systems an engineering charge may be applied to the first order only. If similar items are ordered later, the engineering charge is generally dropped from these items after the first charge has been paid. This charge is not subject to discount.

EXCUSABLE DELAYS

TEMPSCO will notify Purchaser of any material delay and will specify the revised delivery date as soon as possible. TEMPSCO shall not be liable for delays in delivery or for failure to manufacture, or failure to perform due to: acts of God, fire, flood, wind, war, sabotage, civil unrest, disobedience, accidents, government priorities, strikes, or any other causes beyond TEMPSCO'S control, such determination to be made solely by TEMPSCO.

GENERAL

The Terms and Conditions on this page shall, unless otherwise specifically agreed to by TEMPSCO in writing, be the Terms and Conditions governing any purchase and sales contract entered into between the Purchaser and TEMPSCO. Stenographic and clerical errors are subject to correction. No modification of, or addition to, or waiver of any of the Terms and Conditions hereof will be effective unless agreed to in writing by TEMPSCO.

GOVERNING LAWS

These Terms and Conditions of Sale and all dealings between TEMPSCO and the Purchaser and/or recipient of goods and/or the appointed representative(s) acting on behalf of the Purchaser and/or recipient shall be governed by, construed and enforced in accordance with the laws of the United States and the State of Illinois as it applies to a contract/purchase order made and performed in such state. The parties agree that the exclusive forum for any litigation relating to a contract/purchase order shall be the federal or state courts of the State of Illinois. The parties hereby expressly consent to the exclusive jurisdiction of the federal or state courts of the State of Illinois for any litigation relating to this transaction or any other contract/purchase order between the respective parties.

CONTINUED 

Continued from previous page...

INDEMNITY AND WAIVER OF SUBROGATION

Purchaser agrees to indemnify and hold TEMPCO harmless with respect to any third party claims for personal injury (or death), property damage or other loss which claims are based upon defective or allegedly defective design, material or workmanship furnished by TEMPCO. Purchaser represents that any liability insurance policies, which Purchaser may have, provide that subrogation rights against suppliers such as TEMPCO are waived.

MINIMUM ORDER CHARGE

TEMPCO has differing required minimum order values depending on the product type and whether the related product is considered stock or a non-stock/production item. Such minimum order values shall be communicated upon order placement.

ORDER CHANGES

Purchaser shall have the right, by giving written notice to TEMPCO, to make changes in the quantity, drawings, designs, or specifications for the articles to be manufactured. Upon receipt of any such notice, TEMPCO shall notify Purchaser as promptly as possible of changes in the price of, or the time required for performance of the order, and an equitable adjustment determined solely by TEMPCO shall be made in the contract price or delivery schedule, or both, prior to incorporating said changes into the manufactured article.

PATENT INDEMNITY

To the extent that items delivered hereunder are manufactured pursuant to detailed designs furnished by the Purchaser, Purchaser agrees to indemnify TEMPCO and hold TEMPCO harmless from all legal expenses which may be incurred as well as all damages and costs which may be finally assessed against TEMPCO in any action for infringement of any United States Letters Patent by such items delivered hereunder. TEMPCO agrees promptly to inform the Purchaser of any claim for liability made against TEMPCO with respect to such items and TEMPCO agrees to cooperate with Purchaser in every way reasonably available to facilitate the defense against such claim.

PATENT RIGHTS

To the extent that TEMPCO develops a new process while designing a new product on behalf of Purchaser, the rights to the new process and/or product including patent rights shall remain with TEMPCO.

PRICE ADJUSTMENTS AND SURCHARGES

Prices on all TEMPCO products are subject to adjustment at the time of shipment by means of an added surcharge or price adjustment based on the current cost of metals and/or other raw materials.

PRICING

Prices, discounts, delivery and designs are subject to change without notice. The price of any article scheduled for shipment on a date beyond a period of one year from the date of receipt of Purchaser's order, is subject to a price increase by TEMPCO, unless otherwise agreed to in writing. Prices include ordinary packaging only, unless otherwise specified.

PURCHASER'S PROPERTY

Where Purchaser had delivered to TEMPCO parts, equipment, material, jigs, fixtures, wiring or any other item for use by TEMPCO in manufacturing, processing, assembling or modification of products for Purchaser, the Purchaser's property shall be considered personal property and title and the right to possession shall vest in TEMPCO until all payments hereunder (including deferred payments, whether evidenced by notes or otherwise) are accomplished. Purchaser agrees to perform all acts necessary to perfect and maintain such right and title in TEMPCO. TEMPCO shall not be liable for loss or damage to Purchaser's property in its possession.

RESTOCKING CHARGES

Stock products as defined in the cancellations and penalties paragraph, which have not been used or modified, can be returned for a 20% restocking charge, with a minimum charge of \$50.00 net. Any and all returns must be received by TEMPCO within 90 days of customer receipt of the related product to be considered valid. All freight charges related to returned products shall be in addition to the noted restocking charges and shall be Purchaser's responsibility. Non-stock products as defined in the Cancellations and Penalties paragraph are NOT subject to return under any circumstances.

PLEASE NOTE: All returns must be accompanied by an RMA (Returned Material Authorization), obtained from TEMPCO.

RETURNS

No product shall be returned without the proper paperwork issued by TEMPCO. All returned material must be accompanied by an "RMA" (Returned Material Authorization). All unauthorized returns will be refused and returned to the Purchaser at the Purchaser's expense. All returns must be shipped freight prepaid.

SALES THROUGH REPRESENTATIVES

Unless specifically otherwise authorized in writing by TEMPCO, the representative shall have no authority to solicit or take orders for the sale of products covered by his Representative Agreement except at TEMPCO'S established prices and discounts, and in accordance with TEMPCO'S standard conditions of sale as set from time to time in TEMPCO'S published catalogs, price books, quotations, or printed forms. All sales made through the Representative hereunder shall be for direct shipment to Purchaser from TEMPCO'S factories or warehoused stock. The Representative shall have no authority to bind TEMPCO to any contract whatsoever. All orders obtained by the Representative are subject to acceptance by TEMPCO and no order or contract shall be binding upon TEMPCO until so accepted in writing by TEMPCO.

STOCK

Stock items as defined are shipped in exact quantities ordered. All other industrial heaters or related accessories are subject to the provisions of the paragraph titled "Variations in Shipping."

TOOLING, WOOD PATTERNS, AND PERMANENT MOLDS

Applicable customer charges for wood patterns, permanent molds and all other types of tooling represent only a portion of the total cost of the related tools, therefore TEMPCO retains ownership over said tooling. TEMPCO will maintain all tooling used to produce the Purchaser's heaters at no cost to Purchaser, except when the cost of repairing such tooling exceeds a reasonable amount solely determined by TEMPCO.

The cost associated with storing infrequently used tooling may become prohibitive. Tempco therefore reserves the right to dispose of said tooling at a time deemed appropriate by TEMPCO. If new tooling becomes necessary, it is the responsibility of Purchaser to pay a tooling charge. TEMPCO will accept Purchaser's special tooling at our plant, sent freight prepaid. See paragraph titled "Purchaser's Property".

UNLIKE PRODUCTS

- A. Cartridge Heaters, Mica Band, Mica Strip Heaters, and Thermocouples may be combined for maximum discount only if they are all purchased from stock.
- B. For all other products, only items within the same product line may be combined for maximum discount.

VARIATIONS IN SHIPPING

On orders for items carried in stock, TEMPCO will ship the exact quantity specified. However, in the manufacturing of our non-stock products, it is necessary to allow for losses in production and for this reason, we reserve the right to ship as stated below:

Units Ordered	Shipping Variations
1 - 5	No Variation
6 - 10	±1 Unit
11 - 25	±2 Units
26 - 49	±4 Units
50 and Over	±5%

WARRANTY

TEMPCO warrants that at the time of shipment, the products manufactured by TEMPCO and sold hereunder, will be free from defects in material and workmanship and will be in conformity with the applicable printed or written specifications. If it appears that within one (1) year of shipment from TEMPCO'S plant (two years after delivery to the first purchaser for use for TEC Temperature Controllers only), the products sold hereunder do not meet the warranty specified above, and the Purchaser gives written notice to TEMPCO thereof within thirty (30) days of Purchaser's discovery of such non-compliance, then after TEMPCO has examined and tested the allegedly non-complying product and found said to be, in fact, defective within the above warranty period, TEMPCO will at its option, either (A) furnish a replacement for but will not install, any product or components thereof which prove to be not in compliance with the aforesaid warranty, or, (B) issue a credit for the purchase price of any product or components thereof which prove to be not in compliance with the aforesaid warranty. TEMPCO'S liability in all circumstances shall not exceed the dollar amount of the related order. No product claimed by the purchaser to be defective within the above warranty will be accepted for return for replacement or credit without the written authorization (RMA) of TEMPCO, which authorization must be given in advance of Purchaser's return of said product.

THE FOREGOING WARRANTY IS IN LIEU OF ALL OF THE WARRANTIES EXPRESS OR IMPLIED, AND TEMPCO EXPRESSLY DISCLAIMS ALL OTHER WARRANTIES INCLUDING WITHOUT LIMITATION WARRANTIES IMPLIED UNDER LAW SUCH AS BUT NOT LIMITED TO WARRANTIES OF MERCHANTABILITY AND WARRANTIES OF FITNESS FOR A PARTICULAR PURPOSE. TEMPCO WILL NOT BE LIABLE FOR ANY SPECIAL, CONSEQUENTIAL, OR INCIDENTAL DAMAGES RESULTING FROM ITS BREACH OF THE FOREGOING WARRANTY.

TEMPCO will not be liable for any loss, damage, or expense directly or indirectly arising from the use of the products either separately or in combination with any other equipment or material or from any other cause. The foregoing warranty does not extend to any product manufactured by TEMPCO which has been subjected to misuse by Purchaser, neglect, accident, or improper installation; nor does the said warranty extend to or apply to any unit which has been repaired or altered by persons not expressly approved in writing by TEMPCO. Nor does the warranty extend to or apply to any product the identifying symbol of which has been removed, defaced, or changed. Components manufactured by any supplier other than TEMPCO, which are sold hereunder, shall bear only that warranty made by the manufacturer of those components; but in no event shall such a warranty be more extensive in any manner than TEMPCO'S product warranty errors, defects, or omissions in the design of any product sold hereunder irrespective of whether such errors, defects, or omissions in design result from acts or omissions of TEMPCO or of Purchaser or of some other third party. For products damaged in transit, claims must be filed with the common carrier. (All such claims should be filed immediately).

Note: Information in this catalog was deemed correct at the time of printing. The policy of Tempco is one of continuous development and product improvement, and we reserve the right to modify specifications, designs and the terms of conditions of sale without prior notice. In the event of a conflict, the terms and conditions of sale appearing on the reverse side of the order acknowledgement shall prevail. Not responsible for typographical errors.

Fermin Adames Sr. — A True Patriot

Fermin was a man of many talents. He was of course an entrepreneur, engineer, and mentor who spent a part of each day visiting every department at Tempco. He was the ultimate hands-on company president, always making sure we were taking care of our customers.

But to really know who Fermin was, and what was in his heart, one need look no further than the three paintings he commissioned. After immigrating to the US from Mexico in his late teens, Fermin developed a great love of the United States and the many freedoms we enjoy. After the terrorist attacks on September 11, 2001 he commissioned the first painting, titled “This Land is Your Land.” In this painting one or more landmarks from each of the fifty states and the District of Columbia are depicted. The Twin Towers of the World Trade Center are ghosted near the top in front of the American Flag.

The second painting, “Nativity,” depicts a Christmas scene in the small town of Nativity. The inspiration for this painting was the unfortunate political correctness prompting many to replace the word “Christmas” with the word “Holiday,” changing Christmas cards and Christmas trees into Holiday cards and Holiday trees. Christmas is a Christian holiday celebrating the birth of Jesus. As Fermin would say “It is what it is.” Fermin believed people of every religion should be able to celebrate their important days without others changing their meaning.

The third painting, “Defenders of Our Freedom,” was commissioned to honor the men, women and animals (dogs and horses) who have served in the armed forces, winning and preserving our freedoms. Fermin was a veteran and felt a special respect for those who put everything on the line, including their lives, for all of us.

On all three paintings Fermin worked closely with artist Stephen P. Ohlrich on the content and layout of the pieces. The first painting became the back cover of our Visionary Solutions catalog from 2005 to 2011. “Nativity” became the Tempco Christmas Card for 2006. The final painting, “Defenders of Our Freedom,” is on the back cover of this, our 40th Anniversary catalog.

Anyone who ever met Fermin will never forget him. It was an honor and a privilege to work with him.

“This Land is Your Land”

“Nativity”
